It is not a musical instrument or anything like what we understand by that term. There is a keyboard, at which the performer sits, with keys like those of a piano, but it is not a piano or an organ or an orchestra or a brass band, but a clever combination of 150 dynamos controlled through a switchboard in such a way that they will produce vibrations, and, when thrown upon a telephonic surface, these vibrations will produce sounds loud enough to fill the Waldorf Astoria Hotel. The switchboard is on the same principle as that in a telephone exchange, but instead of removing or inserting a plug to make the connection the operator touches a key similar to the key of a piano.

It is the business of the performer to throw the currents of electricity off and on the wire just as a telegraph operator does when he is sending a message; only he has 150 keys, while a telegraph operator has but one, and he touches two or three or six of them at the same time in order to produce harmony. Each of the 150 dynamos is "tuned," as you may say, to a certain tone—that is, it produces a certain vibration, and that vibration represents a certain tone in the musical scale. When several of the dynamos are in operation at the same time they produce a combination of vibrations and consequently a combination of tones like striking a chord upon a piano. Three or four professional pianists have been practicing for several months to operate

be a monthly rate just like that charged for a telephone or an electric light. When a patron signs a contract and pays his rate the wires will be run into his house just like telephone wires. The company is just beginning to string the wires in the subways and on the poles of the Bell Telephone Co., with which it has a working arrangement. The Telharmonic Co. is not controlled by the Bell Co., however. The apparatus is similar to that of the old-fashioned telephone—a box about three feet by ten inches in size. The company will put in one, or several, as a patron may desire. New York offers the most

GROUP OF INDUCTOR ALTERNATORS, THE SOURCE OF POWER.

separate dynamos. Some idea of its size may be gained from a statement of the dimensions, which are: Length, 70 feet; width, 10 feet, and height, 5 feet. A turn of a switch, similar to one used in electric lighting, and you have band music in your home or in a hall, the volume of which can be regulated for a small room or an audience of several thousand. It can be made to afford entertainment for theaters, hotels, saloons, hospitals, barber shops, schools, offices of professional men, department stores and residences. In New York alone there are 125 theaters, over 500 hotels and 625,000 residences that may be supplied from the station in the Audubon. We intend eventually to adopt the system for use in the open air, and then secure contracts for furnishing music in the parks and on the piers. When we are in working order New Yorkers will be quick to realize the value of a

TONE-MIXING TRANSFORMER.

promising field for the first station, as its people are the most music loving in the country, spending over \$37,000,000 for music yearly. Many of the larger hotels spend from \$25,000 to \$50,000 on music alone.

The primary idea of conveying music by means of wires is very old, it being successfully accomplished as far back as 1877 between Philadelphia

and Washington, when a series of six numbers were played in the former city and heard distinctly in the latter. One Elisha Gray was credited with that invention, but its development was not pushed to any extent. Professor Cahill's invention, however, is on an entirely new principle. On rural telephone lines managers have frequently employed musical talent to entertain their subscribers during dull seasons.

Through the courtesy of the Electrical World and Engineer we are enabled to reproduce several views of the Telharmonic system.

### GRAPHOPHONE IN VERSE.

Owner of One of These Machines Grows Eloquent Over the Possibilities.

E. D. Marsden, Mill Ash, Derby, Eng., writes interestingly of his recent effort to arrange a program for a small concert. He says: "In addition to the ordinary songs, etc., a selection of pieces was played on a sound-magnifying Columbia graphophone. The machine started its performance with a record which I had made for the occasion, supposed to be the graphophone's description of itself. This I had written in the form of a piece of poetry, and recited into my machine with all the eloquence I could muster. I do not profess to be a poet, but I managed to compose the following lines, which served my purpose in spite of their shortcomings:

"In me a wondrous instrument behold,  
For though I only do what I am told,  
All music I can play! And such my skill  
That I can talk, or sing, or what you will.  
The different languages—I speak them all  
With joyous laughter or in solemn drawl.  
My voice is ever changeable—loud and strong—  
One moment ringing out in glorious song:  
And then you hear a tender, soft refrain  
That leaves you sad. But now I change again:  
With lovers' vows all passionate I cry,  
Or I can sing with dreamy lullaby.  
I'll sing you anything! Would you be gay?  
The merry music of the dance I'll play.  
No instrument's too difficult for me;  
In bands I play them all in harmony.  
Yes! Every sound I can command, and so  
I'm welcomed and beloved where'er I go.  
As king of entertainers I am known—  
The new Sound-Magnifying Graphophone.

"This left room on the record for a short speech, somewhat as follows: 'Ladies and gentlemen, it gives me much pleasure to be here in to-night in order to contribute to your amusement. I shall do my best to entertain you.' The record was not very loud, but on the 'Magnophone' it was heard distinctly in every part of the room, a large one. For anyone who wishes to make use of the idea, I might say that any local references and jokes are particularly appreciated. It was amusing to watch the puzzled expression on the faces of some of the audience who did not understand how it was done. It is surprising how many people there are who have never realized that the talking machine can be made to say anything by having the record prepared beforehand."

### COIN-SLOT PHONOGRAPHS.

A new catalogue of Edison Coin Slot Phonographs has just been mailed to jobbers, and copies will be mailed to dealers on request. It has not been mailed to the trade for the reason that no discounts are allowed on the three electric current types and dealers have no interest in their sale. The electric current types are the Windsor (battery current), Eclipse (direct current) and Acme (alternating current). The latter is an entirely new machine, and is the first alternating phonograph put out by this company. The Eclipse supersedes the Majestic, which has been discontinued. All of these types are sold singly at \$65 each net and at \$60 each net in lots of ten or more machines.

The Columbia Phonograph Co.'s branch store at 704 Walnut street, Des Moines, Iowa, under the capable management of Charles Moon, has developed until it is one of the leading exclusive talking machine stores in the State.

### NEW USE FOR PHONOGRAPH

Used by Professor for Hearing and Criticising Sermons Delivered by Students.

The Vienna correspondent of the Pall Mall Gazette records a new use for the phonograph by Professor Swoboda, of the Theological Faculty of the University. As head of the homiletical department, much of the professor's work consists in hearing and criticizing sermons delivered by students. In the course of his work the Professor found that certain faults and mistakes were constantly repeated, and all his efforts failed to eradicate them. It occurred to him that the phonograph might be of some assistance, and so he procured one. The students deliver their sermons into this machine, which repeats them with all their failings and errors. These are thus clearly demonstrated. Introduced at the beginning of the present half-year, the phonograph has more than answered the Professor's expectations. After a sermon has been taken in and repeated, the cylinders are "shaved" off for use again, and the students are thereby also assured that nobody will be able in later years to laugh over their maiden efforts.

### SMITH & NIXON BOOMING THINGS.

(Special to The Talking Machine World.)

Cincinnati, O., July 9, 1906.

Smith & Nixon made a big hit, with their advertisement in the Sunday papers of a Victor talking machine, to be had without putting down any money. There was a rush to get the machines and business has been booming ever since. The new talking machine department is located on the third floor, where people are thronging to buy, although the records are not yet all unpacked. The Edison phonograph will also be handled by this firm. H. Clemmer Smith has charge of the Smith & Nixon talking machine department.

### AUGUSTIN OPENS IN FOND-DU-LAC.

W. J. Augustin, formerly manager of the McGreal Bros. talking machine store in Fond-du-Lac, Wis., has purchased the stock and good will of that concern in that city, and will in the future conduct the business under the title of W. J. Augustin & Co. Mr. Augustin is thoroughly experienced in the talking machine business, having been connected with a Milwaukee house for a long time.

### ENTERPRISE NOTED IN NEW YORK.

It is not every talking machine dealer in the smaller town who has his progressiveness noted in the great metropolitan dailies, and we therefore reproduce the following from the New York Evening Telegram of recent date:

"GREAT STUNT OF SUTTON'S.

"For originality R. W. Sutton, of Addison, N. Y., is certainly the real thing. Saturday the people on the street were surprised to hear the sound of a full brass band. The 'band,' however, came from the horn of a phonograph in Sutton's store. The horn was placed up at the top of the door, and was connected to the machine with a long hose."

### A GREETING FROM LONDON.

We are in receipt of a very attractive postal from J. Walters, 103 Acacia road, Wood Green, London, W., England, a subscriber to The Talking Machine World, bearing upon its face a counterfeit of the sender sitting in a leafy bower with a handsome Edison machine as a companion. From his pleased and happy expression, it seems the company is most satisfying.

### SOCIALISTS PUBLICITY SCHEME.

The Socialists of Toledo, O., have a new scheme to make themselves heard. Recently at the postoffice in that city they had a graphophone powerful enough to be heard for six blocks. It rendered Socialist songs and speeches.

"It's the Easiest Thing in the World" to Sell

## Hohner Harmonicas and Accordeons

A Good Side-Line for Talking Machine Dealers

Small Stock  
Little Capital Required  
Big Demand  
Big Profits

### Mr. Talking Machine Dealer:

You have the facilities, why not handle Harmonicas and Accordeons and make an extra profit? There's a demand for these goods everywhere and it will require but a small investment to get a share of the business. The Hohner Harmonicas have been on the market for half a century during which time they have satisfied the desires of the most critical. The name "Hohner" is now a household word amongst the harmonica and accordeon playing public, and the mere announcement of the fact that you have these goods for sale will be sufficient to bring you numerous inquiries for them.

### ANY JOBBER CAN SUPPLY YOU

A Postal Will Bring You  
the Latest Catalogue

## THE AUXETOPHONE EXHIBITED.

A Remarkable Creation Which Is Destined to Play an Important Part in the Talking Machine Trade—Interesting Description of The Instrument—Costs \$500.

(Special to The Talking Machine World.)

World Office, 195 Wabash avenue,  
Chicago, Ill., July 7, 1906.

W. N. Dennison, mechanical engineer in charge of the experimental department of the Victor Co., was here the latter part of this month, exhibiting the Auxetophone, the Victor Co.'s latest and most wonderful invention. In appearance the Auxetophone is similar to an ordinary Victor machine, set in a handsome cabinet, 28 inches wide, 36 inches high and 15 inches deep.

In the cabinet is a one-sixth horse-power motor, operating a rotary pressure blower, which generates a column of air which passes through a pipe into a tank which equalizes the pressure and from thence the air is fed into a filter, where the dirt and oil in the air is eliminated; the air then passes through a pipe into the double sound box, where instead of a diaphragm is a nicely balanced valve, the air passing through this valve and set in motion by the valve operated from the sound waves from the record. There is thus no direct contact with the reproducing parts—the contact is through the column of air. The scratching is thus reduced wonderfully—there is practically none. The scratch caused from roughness of groove or worn records is not reproduced to the extent of the ordinary machine, and besides this the Victor Co. the past year have been able to overcome the scratching caused by defective recording in earlier experiences. It is estimated that while the ordinary machine reproduces 40 per cent. of efficiency of the original voice or instrument, the Auxetophone reproduces 80 per cent. efficiency, meaning, of course, both volume and quality. Notwithstanding the greater volume of sound as compared with the ordinary machine, it is claimed that the Auxetophone can be used in small apartments and residences to even greater advantage than the ordinary machine because of the purity of the quality and the absence of scratching, it being decidedly pleasant, all harshness being eliminated. For large halls the effectiveness is remarkable. The Auxetophone can be connected with an ordinary electric light plug, and can be operated on any style direct current and almost any style alternating current. The price of the Auxetophone is \$500. It has progressed to a point where the Victor Co. consider it ready for the market, although they do not pretend to say that it has reached its ultimate development. Two hundred machines are now coming through the factory.

Considerable work was done on the Auxetophone by Professor Parsons, the inventor of the steam turbine engine, but the Victor Co. acquired all the Parsons patents and have done the final work of developing it into a wonderful commercial machine.

## INVENTED FAMOUS VICTOR DOG.

W. Barry Owen, one time general manager of the Gramophone & Typewriters, Ltd., London, Eng., and now a retired plutocrat on his estate at Martha's Vineyard Island, off the Massachusetts coast, was the originator of the world-famous Victor dog. He picked up the painting in London, and the original now graces President Johnson's private office at the Victor plant in Camden, N. J.

## LARSON & WAGNER DISSOLVE.

The firm of Larson & Wagner, Greenfield, Ia., established several months ago for the purpose of dealing in phonographs, was dissolved by mutual consent Monday, the partners dividing the stock. Both members of the firm will continue in the phonograph business, but Mr. Wagner will devote the greater part of his time to the towns west of Greenfield.

## AN ENTERPRISING CONCERN

Is the Tea Tray Co., of Newark, N. J.—Have Built Up a Great Business in Talking Machine Supplies—An Interesting Chat as to Their Varied Achievements.

The Tea Tray Co., of Newark, N. J., are generally credited with being the pioneer manufacturers of horns, horn cranes, etc., used in connection with talking machines, having been established about forty years. In a chat with a member of the firm recently, he set forth the following reasons why they have achieved success in this industry:

"It has always been the policy of this company to make only the best quality material, and this is the keynote of their success in the talking machine world. The word 'Pioneer' is used because of the fact that this company is acknowledged to be the originators of the accepted standard black and gold horns which are finished with their famous enamel, which enabled them to secure the gold medal at the Centennial Exposition in 1876, over all domestic as well as foreign competitors. They have held their place at the head of the line, and important improvements have been made, and are now being added. They also originated horns with 'reamed-on bells,' which is a great improvement over the old method of soldering bells onto stems. They were the first to make horns with swaged integral ferrules, which again did away with the possibility of ferrules becoming detached from the stems. When flower horns came to the front, this company again showed their originality by making horns with concave petals, upon which they received patents. These horns are by far the strongest and most attractive flower horns made to-day. They are finished with oil colors baked on in their extensive kilns; rather more costly to make, but this method upholds the reputation of this company for high-grade goods.

"Horn cranes and horn stands have also been an important feature with this company. As far back as April, 1903, when cranes came into demand, a patent was issued, which embodies the essential features of the cranes to-day. Since this time, numerous patents have been issued to this company, and their position regarding horn cranes to-day is extremely strong. Other manufacturers have attempted to imitate and to take advantage of these original ideas, and the Tea Tray Co. have found it necessary, and will continue, to maintain their rights by legal processes."

The Tea Tray Co. announce that two new models of clamp horn cranes for the coming sea-

son are now ready. These models show marked improvement over the well-known No. 20 Crane, which has been so popular. Orders are being placed in very large volume for both horns and cranes covering the whole of the next season's requirements. Clement Beecroft, manager of sales of the Tea Tray Co., has just returned from a Western trip and reports business of immense volume, larger than ever before.

During the week of July 16 and the week following, the visiting jobbers will be cordially received by the Tea Tray Co., either at the Hotel Imperial, 32d and Broadway, or at the factory at Newark, N. J., where it will be demonstrated how well prepared they are to care for the trade bestowed by their patrons. A large variety of goods are now on exhibition, which show a decided advance in quality and originality. The Tea Tray Co. have again largely increased their manufacturing facilities, which is a proof of the growing appreciation of their goods by the trade.

## APPROPRIATING "WORLD" ARTICLES.

Some of Our London Contemporaries Use the Talking Machine World as a Source of Information, But Fail to Give Credit.

The July issue of the Edison Phonograph Monthly, of London, England (not Orange, N. J.), which has just come to hand, is a number of more than ordinary interest, because, perhaps, it contains so many articles taken from recent issues of The Talking Machine World, for which, by the way, in no instance, does credit appear. For the benefit of the editor of this publication, we quote the captions of a few of the many items appropriated from The World, namely: "Courtesy," "New Use for the Phonograph," "Sell the Best," "Writes Phonographically," "The Phono in Pawn," "A Missouri Breeze," "Domestic Amenities," "Pointers on Trade Building," "Phonographic Tuning Forks," "Mrs. Edison's Gift," "Talkers for Summer Outfits," etc. The matter referred to covers a number of pages, and was specially written and paid for by The World. This wholesale appropriation, without credit, is a gross breach of journalistic courtesy, and we must appeal to our friends "across the big pond" to be fair.

Another of our London exchanges in its latest issue has a "New York letter" made up entirely of items from our last issue, while spread throughout the pages are several other items, for which we fail to find credit given The Talking Machine World. The reproduction of these items may be a very sincere form of flattery, but we would prefer credit.

## PROGRESSIVE TEXAS HOUSE.

The Texas Phonograph Co. Lease Larger Quarters—Will Increase Capital Stock—Big Summer Trade, Particularly in Outfits, for Vacationists.

(Special to The Talking Machine World.)

Houston, Tex., July 6, 1906.

The Texas Phonograph Co., incorporated, prominent jobbers of the Edison phonograph and Zonophone talking machines, records and supplies, have shown such a material increase in volume of business during the past year that the board of directors, at a meeting, recently authorized the lease of the entire second floor of Mitchell building, located over stores 1017, 1019, 1021 Capitol avenue, and 616, 618 and 620 Fannin street, which, together with their ground floor retail department, will give this progressive concern the largest floor space of any exclusive talking machine house in the Southwest. Their business during the summer months has shown no decrease, which is evidenced by the fact that their

# UDELL CABINETS

FOR HOLDING

## Disk and Cylinder Records

The kind that will make your customers stop and examine them. Just a little more care—in designing, in construction, in the selection of the woods—is what gives Udell Cabinets an individuality—all their own—not attained by other manufacturers.

Do You Want That Kind of Cabinets?

The kind that will sell without tedious salesmanship.

It's up to you, Mr. Dealer.

Write at once—to-day—for catalog

It's no trouble—just send us your address on a postal and we will be glad to send you our catalog.

**THE UDELL WORKS**  
1210 W. 28th Street, INDIANAPOLIS, U. S. A.

No. 519.

Holds 125 Cylinder Records. Quartered Oak. Golden, Fumed or Weathered Oak Finish.

# Do You Want to Make Money, Mr. Talking Machine Dealer?

Good, big money. The men who sent in an order for a sample line of our instruments were delighted with the results.

They found our instruments blended perfectly with the talking machine line, besides helping to make the store attractive. If you want to help out in the profits during the holiday season you can't go at it in a better way than with our specialties; your musical friends will come to you when they learn that you have the Durro violins, bows, strings, etc. They have a high standing.

We are judges of the excellence of all kinds of small goods, such as Accordeons, Mandolins, Guitars and Harmonicas, and carry a large stock, of which we offer at lesser prices, but which are superior to any on the market at the same price.

It will pay you to order a sample line at once. You will then see how profitable it is to devote a portion of your store to the exhibition and sale of small goods. Write for catalogue.

Make good money for the new year. It is easy with our help. We can tell you how and go with the business tide when it serves.

## BUEGELEISEN & JACOBSON

113-115 University Place  
Corner 13th Street, NEW YORK

May orders for Edison records alone was over 23,000, and during the month of May distributed over 400 Edison machines in addition to a large quantity of Zonophones, which line they have but recently acquired. An increase in the capital stock of the corporation has been authorized, and the shares will be on sale during August.

The above concern has been very successful in selling outfits for summer homes, and ascribe their success to the active advertising campaign carried on in the local papers with the object of acquainting the public with this feature of their business. The response to the advertising keeps the store busy all summer, and the scheme is worth adopting by progressive dealers all over the country.

### TRADE NOTES FROM ST. LOUIS.

Trade Uneven—St. Louis Talking Machine Co. Complete Alterations—Columbia Co. News—T. P. Clancy at Edison Reunion—Now the Silverstone Talking Machine Co.

(Special to The Talking Machine World.)  
St. Louis, Mo., July 9, 1906.

The talking machine trade for the month of June has been generally quiet, though here and there a very favorable report is heard. The general feeling, however, is that it is as good as can be expected for this season of the year.

About all the dealers in Edison instruments in the city will attend the meeting of the Edison interests in New York, July 17 to 22.

The St. Louis Talking Machine Co. have completed their alterations at their store, and they are decidedly handsome and up to date. They have four private salesrooms handsomely equipped, including electric fans, etc. This concern reports their trade for June better than that of May. C. P. Ramsdell, of the stock department of this concern, accompanied by his wife, will leave shortly for a two weeks' visit at his old home in Maryland and other points.

W. C. Fuhri, general Western manager of the Columbia Phonograph Co., reports trade throughout his territory good, but local trade rather quiet. J. P. Kelly, formerly connected with the Omaha office of the Columbia Phonograph Co., has been made manager of the St. Louis office, and he is succeeded at the Omaha office by J. L. Burr, of the St. Louis office. Mr. Fuhri will leave about the middle of the month for Kansas City, St. Joseph and Deuver.

The Koerber-Brenner Music Co. report their wholesale talking machine trade very good.

The Val A. Reis Music Co. will make a feature of their talking machine department in their new store at 1005 Olive street.

T. P. Clancy, manager of the talking machine department of the Conroy Piano Co., reports trade only fair for the month of June. He will leave about the middle of this month, accompanied by his wife to attend the Edison agents' meeting in New York, and will visit other points.

E. B. Walthal, manager of the talking machine department of the O. K. Houck Piano Co., reports that their trade for the month of June

was remarkably good, and that it furnished him quite a surprise. He will attend the Edison agents' meeting in New York this month, being away about two weeks.

The Talking Machine Co., at 1010 Olive street, have changed their name to the Silverstone Talking Machine Co., of which Marks Silverstone is president. They are nicely located in their new quarters, and report trade to be fair. This concern is giving a fine concert one night each month, and they say that they are largely attended. The last one took place Friday night, June 29.

M. Neuman, of the Western Talking Machine Co., will leave July 15 for the meeting of the Edison agents in New York, and will be gone about one month, during which time he will visit the Eastern resorts. Miss W. Conway, of this concern, returned recently from a two weeks' vacation.

George Ornstein, traveling manager of the Victor Talking Machine Co., spent one day here during the month.

### COLLAPSIBLE TALKING MACHINE HORN.

Transportation of the talking machine from one point to another has been somewhat unhandy because of the uncompromising character of the horn. For the best results a large horn is necessary, but its shape and unyielding construction made it an awkward article to carry.

With a new horn, recently designed, this trouble will be avoided. This horn is collapsible. It is made of a number of small metal pieces which fit together in such a manner as to answer the purposes demanded of it, the pieces being held together by a leather lining. This permits of turning the horn inside out and rolling it up into a small package.

Another idea by which the same object is accomplished to a minor degree is by making the bell in two parts. When it is desired to dispose of it in as little space as possible, the two parts are collapsed, one within the other.

### Just What All Your Customers Are Looking For!

Sells at once on being heard, with BIG PROFIT TO YOU. Will help you sell more Disc Talking Machines and Records. It will revive the interest of thousands who have given up using them an account of the nuisance of changing the needle after each playing. Reduces the wear on the record and will play at least 500 times without changing.

Made in various tones, to suit all tastes: No. 1, Soft Tone; No. 2, Medium Tone; No. 3, Loud Tone. Any of these needles will fit any make of sound box. Retail Price, \$1 each. Net Price to Dealers, 50c. each.

No. 4, Concert Tone. This needle requires the sound box to be fitted to it. Retail Price, \$5.00; Net Price to the Dealer, \$2.50. Send us your sound box and we will do this free of charge.

Send us \$1.00 and we will mail you, postpaid, one sample each of Nos. 1, 2 and 3.

We furnish Artistic Signs and Literature to all Customers.

The Symphonic Phone-Needle Co., 1907 Park Avenue, NEW YORK CITY.

## LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS.

(Specially prepared for The Talking Machine World.)

Washington, D. C., July 5, 1906.

**TALKING MACHINE WITH ROTATABLE HORN.** Fritz Lochmann and Wm. Lochmann, of Zeulenroda, Germany, assignors to original Musikwerke Paul Lochmann Gesellschaft mit Beschränkter Haftung, of Leipsic, Germany, a firm. Patent No. 824,368.

In talking machines or graphophones in use the horn or sound trumpet is permanently di-

rected to one side, and consequently the machine is generally best heard from this side. If, however, the entire box of the talking machine is mounted on a rotatable base, the winding mechanism partakes of the rotation and is located now at one side and then at another. These objections, according to this invention, are to be overcome by arranging the holder of the horn

rotatably about the center axis of the talking machine, so that by simply turning the holder or carrier the horn can be set to any direction, while the machine itself retains its position undisturbed.

This invention is illustrated in the annexed drawings, in which

Fig. 1 is a sectional view of a talking machine with rotatable or adjustable horn. Fig. 2 is a plan view of Fig. 1.

**RECORD ROLL FOR PHONOGRAPHS.** Cyrus C. Shigley, Grand Rapids, Mich. Patent No. 822,485.

This invention relates to improvements in record rolls for phonographs.

The objects of this invention are, first, to provide an improved record roll for phonographs which will produce loud, distinct and full tones, which is simple in structure, economical to produce, and durable in use; second, to provide an improved record roll for phonographs adapted to be used upon a mandrel or shaft of even diameter from end to end.

We accomplish the objects of our invention by the devices and means described in the following specification.

A structure embodying the features of our invention is clearly illustrated in the accompanying drawings, forming a part of this specification, in which

Fig. 1 is a central longitudinal sectional view

through our improved record roll for phonographs. Fig. 2 is a central longitudinal sectional view through one of our improved record rolls for phonographs in process of manufacture, a portion of the core B' being broken away to show its construction. Fig. 3 is a central longitudinal sectional view through one of the record shells A used in the manufacture of our improved record rolls. Fig. 4 is a side elevation view of the mandrel or shaft sleeve C. Fig. 5 is a side elevation view of a mandrel D, adapted to receive our improved record roll.

### A PHONOGRAPH ALARM CLOCK.

How the Suburbanite May Utilize His Talking Machine and Alarm Clock to Get Him Out of Bed at Any Hour Desired.

Writing to The Talking Machine News of London, a correspondent says: "I happen to be one of those unfortunate persons who have to rise every morning early—at 5.15—and having got tired of hearing the bell of my alarm clock, I thought of an idea by which I could make use

of my phonograph, as a means of awakening me in the morning. I have connected the alarm winding key of the clock with the starting lever of the phonograph in such a manner that when the alarm is set going, it pulls over the starting lever of the phonograph, then the music starts, and I can assure you that listening to an over-

ture, or any other record, is far better than hearing a bell ringing. I also find it very effective as regards waking one up, as I hear it immediately, and the music seems to take away the tired feeling one has on awakening.

"My machine is a new pattern Gem, and I am enclosing a sketch of how it is connected to the clock, which is very simple. All that is necessary is to take the bell off the clock and fix a piece of stiff wire to the alarm winding key, and another piece of wire to the starting lever of the phonograph, so that when the alarm key winds round it pulls over the starting lever, thereby setting the machine in motion. Of course, the machine has to be wound up at night, and the record that is to be played in the morning placed on the mandrel, and the reproducer dropped on to the record, then the clock set to whatever time it is required to go off in the morning, which does not take very much time to do."

### OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., July 10, 1906.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

JUNE 11.

Berlin, 137 pkgs., \$1,374; Brussels, 100 pkgs., \$1,025; Buenos Ayres, 17 pkgs., \$1,195; China, 25 pkgs., \$985; Colon, 4 pkgs., \$100; Corinto, 8 pkgs., \$826; Glasgow, 25 pkgs., \$130; Quadaloupe, 10 pkgs., \$305; Havana, 12 pkgs., \$402; 10 pkgs., \$327; Havre, 11 pkgs., \$1,024; Liverpool, 41 pkgs., \$214; 2 pkgs., \$292; Livingston, 5 pkgs., \$180; London, 10 pkgs., \$420; 195 pkgs., \$3,063; Manchester, 40 pkgs., \$208; Mazatlan, 7 pkgs., \$251; Melbourne, 6 pkgs., \$135; Milan, 8 pkgs., \$153; Montevideo, 8 pkgs., \$163; Progreso, 6 pkgs., \$117; Singapore, 17 pkgs., \$711; Southampton, 6 pkgs., \$392; Sheffield, 25 pkgs., \$130; Valparaiso, 5 pkgs., \$126; 95 pkgs., \$7,254.

JUNE 18.

Brussels, 50 pkgs., \$425; Buenos Ayres, 21 pkgs., \$1,974; Colon, 6 pkgs., \$206; Hamburg, 121 pkgs., \$909; Havana, 11 pkgs., \$446; 32 pkgs., \$501; Havre, 9 pkgs., \$532; Limon, 7 pkgs., \$129; Liverpool, 30 pkgs., \$156; London, 3 pkgs., \$735; 13 pkgs., \$605; 497 pkgs., \$4,370; Milan, 5 pkgs., \$200; Montevideo, 17 pkgs., \$465; Neuvas, 5 pkgs., \$136; Para, 4 pkgs., \$120; Tampico, 9 pkgs., \$201; Vienna, 19 pkgs., \$832.

JUNE 25.

Antofagasti, 15 pkgs., \$375; Berlin, 92 pkgs., \$2,477; Bombay, 23 pkgs., \$759; 22 pkgs., \$683; Bristane, 551 pkgs., \$7,120; Brussels, 100 pkgs., \$530; Buenos Ayres, 33 pkgs., \$3,933; 11 pkgs., \$437; 18 pkgs., \$680; Callao, 3 pkgs., \$351; Hamburg, 4 pkgs., \$243; Havana, 46 pkgs., \$2,073; 18 pkgs., \$441; Havre, 8 pkgs., \$135; Lisbon, 25 pkgs., \$375; Liverpool, 31 pkgs., \$882; London, 2 pkgs., \$110; 405 pkgs., \$3,918; Matanzas, 5 pkgs., \$206; Melbourne, 14 pkgs., \$511; Milan, 8 pkgs., \$163; Rio de Janeiro, 7 pkgs., \$259; Rome, 13

Instantly attached, very rigid, and will hold any size Horn up to 36 inches. Will not injure the Cabinet.

## LETTER FROM VICTOR CO.

**Bearing on Distributors' Contracts—No Changes at Present—Later, if Defects Are Shown, the Contract Will be Remedied.**

When Louis F. Geissler, general manager of the Victor Talking Machine Co., Camden, N. J., attended the meeting of the Central States Talking Machine Jobbers' Association, at Cleveland, O., May 23, he promised to send a supplementary letter to the jobbers apropos of the Victor contract. Under date of June 5 the appended document was issued:

"We have been requested to make certain changes in our distributor's contract by a committee composed of a few of our distributors, most of whom have, however, after explanation, signed the contract. In reply to this request, we wish to make the following statements:

"The contract was put out by us at the almost unanimous request of our distributors. The contract was put out for the sole purpose of maintaining prices on Victor goods; it was not intended to secure any more rights to ourselves, or to give any more rights to our distributors than we each had without it; therefore, why fuss about the details of accomplishing a result that we all desire? Horace Pettit, our general counsel, with a large experience in many courts on this question, drew the contract and founded it on a knowledge of the points necessary to be covered to accomplish the purpose for which the contract is intended, and as he is the person who is obliged to fight the cases that may come up, it is necessary for him to do so in his own way.

"In view of the fact that we have received over 10,000 dealers' contracts, through our distributors, and more than nine-tenths of our distributors have signed and sent in their contracts, you can readily see how impossible it would be to make any changes in the distributor's contract at this time, for, if we made any change in the distributor's contract it would only be fair to make the same changes for the dealers also, as our policy is to treat all alike. This would delay the contract three months, causing us both no end of expense and trouble, and to no purpose. We have no doubt but that in the course of the year after we have all had experience with this contract, it will be desirable to get out a new one, and at that time, if our distributors as a whole desire any changes that are fair to us, we will only be too happy to make them. We feel confident, after this frank explanation on our part, that all will be satisfied, and that the few distributors who have not already signed will send in their contract by return mail."

## WINNERS OF BACIGALUPI SOUVENIRS.

The list of the lucky winners of the gold pieces sent the National Phonograph Co. by P. Bacigalupi, San Francisco—all that was recovered in his vaults after the earthquake and fire, his papers, books and securities being destroyed—is made out in rotation as tickets were drawn, and gives the number of ticket as well as the denomination of pieces won, as follows:

Ticket No. 287, \$20, Edward Buehn, of the Wells Phonograph Co., Philadelphia, Pa.; No.

113, \$20, Walter Miller, manager record-making department, National Phonograph Co., New York; No. 9, \$10, Mr. Storms, of Edison Phonograph Works, Orange, N. J.; No. 313, \$10, Mr. Prairie, of commercial department, National Phonograph Co., Orange, N. J.; No. 329, \$10, Percy L. Waters, the Kinetograph Co., New York City; No. 89, \$10, H. Pellington, Edison Phonograph Works, Orange, N. J.; No. 472, \$5, P. Weber, general superintendent, Edison Phonograph Works, Orange, N. J.; No. 407, \$5, John Kaiser, with Douglas Phonograph Co., New York City; No. 314, \$5, W. Williams, Edison Phonograph Works, Orange, N.

J.; No. 16, \$5, Percy L. Waters, the Kinetograph Co., New York City; No. 18, \$5, Mr. Taylor, with Edison Phonograph Works, Orange, N. J.; No. 56, \$5, Percy L. Waters, the Kinetograph Co., New York City; No. 219, \$5, Lipman Kaiser, of S. B. Davega, New York City; No. 78, \$5, R. McGuffie, Edison Phonograph Works, Orange, N. J.; No. 273, \$5, T. Harrison, of Edison Phonograph Works, Orange, N. J.; No. 215, \$5, J. N. Blackman, Blackman Talking Machine Co., New York City; No. 454, \$5, B. R. Barklow, manager the Bettini Co., New York City. The total amount realized for the \$140 sent the company was \$426.

## YOU HAVE WAITED FOR THIS!

AN ATTACHMENT FOR HOLDING SOFTERTONE AND MEDIUM TONE NEEDLES IN THE NEW SPRING CLAMP NEEDLE ARM OF THE VICTOR EXHIBITION SOUND BOX

Here it is attached to the sound box. The sound box is turned up and the attachment inserted with its flat side opposite the lever, as shown in illustration.

Here is the Needle Clamp Attachment separate.

Without this attachment it is impossible to use softer and medium tone needles on the spring clamp needle arm. It is perfectly simple, easily attached, holds like a vise and is made in two sizes—for softertone and for Medium tone needle. Order as NEEDLE CLAMP ATTACHMENT and specify which needle is to be used.

Price, 25 cents each

Special prices to jobbers and dealers

**The Softertone Needle** is growing in popularity every day. The loud tone needle, of course, is a necessity to the dealer for selling machines, but it is often too loud for home use. When a customer takes a machine home he finds the softertone needle a great relief. Instead of tiring it perpetuates the use of the machine. This means record sales.

**It Costs Less** One Softertone needle will play six records. Less time is used in changing needles, and there is less wear on the records. A record will last three times as long when the softertone needle is used. We did not accept this fact until satisfied by numerous tests. You owe it to yourself to make a test if in doubt.

## TRADE IN THE TWIN CITIES.

Hough Reports a Decided Increase Over Last Year—Opened New Stores Recently—Minnesota Phonograph Co. Make Excellent Report—The Views of Other Leading Dealers Vary, But All Seem Satisfied.

(Special to The Talking Machine World.)

Minneapolis and St. Paul, July 7, 1906.

T. C. Hough, the pioneer talking machine dealer of the Twin Cities, with two stores in Minneapolis and one in St. Paul, reports trade as having been very satisfactory the past month; in fact, that his business has been greatly increased over last year by the opening of his new store two months ago. Mr. Hough handles the Edison and Zonophone.

The Minnesota Phonograph Co. report that their wholesale business has been very good for the past 30 days. Mr. Lowey, in charge of the Minneapolis branch, said: "Trade so far this month has been much better than in May. It was rather quiet for a while. We have had a very good demand for Edison machines for the home of an excellent quality, although the Victor has also been selling very satisfactorily."

About a month ago Mr. Lowey started the practice of putting all disc records in envelopes. The plan has proved so successful that other dealers are following his example.

A. M. Magoon, in charge of the Victor department of New England Furniture Co., said: "Trade is somewhat quieter this month. It comes in fits and starts, you might say. One day there is nothing doing, and the next day we more than make up for the day before. However, results compare very favorably with a year ago. The machines we have sold the last month have all been of the higher grade."

W. J. Dyer & Bro., who handle the Victor, report: "Trade is hardly as brisk now as it was, but still it has been very satisfactory. The demand for records is unusually good."

J. H. Wheeler, manager of the Columbia Phonograph Co., in Minneapolis, reported trade as somewhat quiet now that the summer has commenced, but that so far this year the results are considerably ahead of last year.

C. W. Long, formerly of Salt Lake City, has taken hold of the St. Paul branch of the Columbia Co., and in the past month has secured very satisfactory results.

The talking machine department in the Glass

Block reports trade as quiet. In this department can be found the Victor, Edison, Columbia, Zonophone and Reginalphone.

## THAT TALK-O-PHONE CO. SALE

Story in Toledo "Blade" Denied by Mr. Reed of the Talk-o-Phone Co. and Mr. Lyle of the Columbia Co.

(Special to The Talking Machine World.)

Toledo, O., July 6, 1906.

The "Blade" of this city on Wednesday contained the following story: "The long-pending sale of the plant of the Talk-o-Phone Co. has at last taken place, A. L. Irish, who controlled the concern, having disposed of his interests. Mr. Irish refuses to give the name of the purchaser, but says that the agreement calls for the transfer of the purchase money on July 6. It is believed that the property will pass into the hands of the Columbia Phonograph Co. Mr. Irish denies the report that V. R. Manley, former cashier of the Homer Savings Bank, purchased his holdings. Mr. Manley, however, will be associated with the new owners, who will be Eastern men. The former banker, it is understood, will be the manager of the plant."

\* \* \*

When The World submitted the foregoing dispatch to O. Clayton Reed, manager of the Talk-o-Phone Co.'s New York branch house, he said: "Such rot makes me tired. There is not a word of truth in it. Our business is on a good foundation, is flourishing, and why should we want to sell out. Our trade West is immense, and is growing in the East rapidly."

On George W. Lyle, general manager of the Columbia Phonograph Co., general, being requested for a statement he remarked: "Absolutely nothing in it, so far as the Columbia Co. is concerned. I could say something else, but I will not."

## PHONOGRAPH IS FURNITURE

When the Librarian of Congress Wants It to Go With a Typewriter.

(Special to The Talking Machine World.)

Washington, July 7, 1906.

The Comptroller of the Treasury has decided that a phonograph is furniture within the meaning of the law. The Librarian of Congress re-

cently asked for an opinion as to whether he was authorized to purchase a phonograph for use in his office out of the appropriation for furniture. The Librarian explained that he wished to use the phonograph "in connection with a typewriter."

The Comptroller has decided that in view of the use to which the talking machine is to be applied it can legally be paid for out of the furniture appropriation.

## HONORING NATION'S BIRTH.

Appropriate Display by the Columbia Phonograph Co. for July 4th—Handsome Window Setting at Local Store.

Living up to their reputation for window dressing, the retail branch of the Columbia Phonograph Co., at 872 Broadway, New York, did some very elaborate work for the anniversary of the Nation's birthday. The south window was adorned with imitation firecrackers of all sizes, acting as guards for the fine display of disc graphophones, the whole being backed with a drapery of American flags. In the north windows, festooned with the national colors, amid a setting of Columbia graphophones of all sizes, were pictures of Washington, Lincoln and others who contributed to the freedom of our country. The whole proved very attractive, and did great credit to the ingenuity of Hayward Cleveland, the manager.

## GRAPHOPHONE FOR BARON ROSEN.

During the visit of Baron Rosen, the Russian Ambassador to Bridgeport, Conn., the closing days of last week, he was entertained by the Bridgeport Board of Trade at a banquet which was largely attended. At the conclusion of his address he was presented with a number of presents—evidences of the industrial development of that city—including a magnificent graphophone, a typewriter, with Russian characters, a sewing machine, silverware and many other specially made articles.

The Burke Talking Machine Co., of Brooklyn, was incorporated recently with a capital of \$10,000. Incorporators: Thomas Burke, Elizabeth Burke and J. A. Fagan.

## With the Makers, Sellers and Users of Automatic Specialties

### THE MONTH'S HAPPENINGS.

Slot Machine Men Experiencing Busiest Season  
—Working Night and Day to Fill Orders—  
Nickel Theatres a Good Investment—Talk-  
ing Machine Can be Used in Connection—  
Automatic Pianos Growing in Favor.

From reports which reach us from all over the country, the slot machine men are now in the midst of their busiest season. New arcades are being continually opened, and yet the demand for more does not diminish to any appreciable degree. The manufacturers are making shipments with somewhat greater promptness, and though many are still behind hand in their orders owing to the unprecedentedly large demand for their product, there prevails a more settled condition of affairs. Wires are not being kept at so white a heat by frenzied arcade men who saw money slipping through their fingers because of the lack of machines.

Blame for congested conditions in the past must not, however, be placed on the shoulders of the manufacturers, for these men have been working night and day to fill up the gap between orders and shipments, only to find themselves unable to get their raw material from the foundries.

Just what attractions in the automatic line hold the greatest interest for the public is a mighty hard problem to solve. To the saunterer who strolls into an arcade at the present day his impressions can only lead in two directions in the line of comparison—an anniversary sale in ladies' shirt waists at one of our department stores or the wild Brooklyn Bridge stampede about 6 p. m.

This new wrinkle, or rather an old one in a different cloak, of opening nickel theatres where performances are held, say, every half hour, is

a mighty good investment for the man with a small amount of capital and, in fact, for any person, as the returns are all but beyond belief. Moving pictures always did and always will hold a strong attraction for both young and old. These are the whole substance of the show, while if you have a good singer, illustrated songs give a desirable contrast and add interest. By the new rental system in vogue with the large film manufacturers one can obtain a constantly changing programme, which is necessary for any great returns, especially in small towns, at a very low cost. This idea is a splendid one for the talking machine dealer. If your store is not suited for such a place, look for one, say, that will seat anywhere from 100 to 300—but get one. During intermissions have your talking machine there and give selections from the latest records. The illustrated songs also will be big boomers for your record business; an automatic piano or a talking machine will make a first-class crowd drawer for the front of your place.

The automatic piano has certainly won for itself an enviable position all over the country, wherever amusement features abound. All the arcades of any importance have these instruments as headliners and crowd drawers, where they occupy the central position at the front.

The electric gun galleries are kept busy night and day, while those establishments that boast a "real live target range" are flooded by the followers of this diverting sport. There really is something like exhilaration when one hears the sharp report of a gun in answer to the persuasive pressure of the trigger finger—something that makes one's blood rush through his veins a little faster, as he feels this thing of life he holds tremble after the discharge. Yes, it's a paying proposition any way you look at it, and an attraction worthy of addition to any parlor no matter how large or how small.

### MONEY IN AMUSEMENT PARKS.

Places Where Automatic Devices of All Kinds Should Find a Ready Market—A Big Field.

The estimated investment in summer amusement parks in this country will reach a total of \$100,000,000 this year. The total number of parks is estimated at 200, and three-fourths of that number are controlled by and operated for electric railway lines.

This figure for the investment seems high, and the more so when it is known that the many small resorts, "gardens" "groves," etc., found in every locality are not included. It is probable, however, that the figure may be accepted as representative, though it will correspond more clearly to the advertised cost of each specific resort rather than the actual cost, the two sums frequently being quite different. At any rate, the investment will reach an astonishing total, and it calls attention to an interesting development in transportation affairs.

### TRADE NOTICES.

The new Automatic Vaudeville Arcade opened at Nos. 31 and 32 Park Row by Max Goldstein is rather unique owing to its elaborate decoration. The predominating colorings are white and gold, to which has been added a cream tint and green. The basis of the treatment is the classic. The location of this arcade is without a doubt the best in this city, for more people pass this spot every day than anywhere else in the world.

The Vitak moving picture machine is one of the mechanical wonders of the age and the direct result of twelve years' experimenting by experts and the expenditure of many thousands of dollars. This machine can be operated after a moment's study by any person of ordinary intelligence. It is so constructed that not the

slightest possible element of danger enters into its operation, and it can be sold at a price that places this pleasure maker within the means of every family. Here is a good chance for Mr. Talking Machine Dealer to carry a first-class side line. The price of these machines will make them appeal to all, and a large profit will accrue to you from their sale, not to speak of a steady trade in films, which you can build up as easily as your record business. Then, too, one of these machines might come in handy for use in your own store. By issuing invitations to customers and giving a performance, one afternoon a week, playing the latest records on a talking machine in between each set of pictures.

American prospectors in the automatic field are stretching out their arms to gather in some of the money of our cousins across the pond. A large and extremely attractive arcade has just been opened on Edgewater street, London, England, and, as was expected, the lavish way in which it has been fitted up has taken London by storm. And by the way this place is kept packed you would think the managers were doing the crowd a great favor in letting them spend their pennies. The Rosenfeld Mfg. Co., of this city, furnished the greater part of the machines.

### USE PHONOGRAPH AS ALARM.

**Clock Touches Off Machine and Sleeper Wakens to Music.**

People whose nerves are jarred by the strident tones of alarm clocks, but who still require artificial assistance in being brought back to consciousness every morning, may now be awakened, if they choose, by the music of a talking machine. There has just been invented a device for connecting an alarm clock with a talking machine in such a manner that the lever of the talking machine will be started at a certain hour, and, instead of the jangling bell of the clock, the sleeper is awakened by sweet music, oratory, or any form of entertainment which a

talking machine can ordinarily provide. The mechanism consists of a spring which trips a lever attached at one end to an ordinary alarm clock, at the other end to a cord which passes over a pulley and is connected to the starting lever of a talking machine. The case contains three ordinary dry-cell batteries, and when the spring is released by the clock the talking machine will deliver its message, and at the same time a miniature 4½-volt lamp is turned on. The light, however, may be turned on and off at will, and three ordinary dry cells will give a good light for a considerable time before they are exhausted.

### TALKING AND PICTURE MACHINE.

The talking machine has now been popularized to such an extent that it can be heard all over the world—if not in private homes, in the innumerable “penny-in-the-slot” machines placed everywhere. The moving picture machines being a more complicated apparatus, are fewer in number, but everybody is familiar with them. To combine the two into one machine is the invention of a Rhode Island man. A certain tune is placed on the talking machine, and pictures illustrating this particular song placed on the new apparatus. One presents the pictures, and the other reproduces the music. To gear each machine so that each picture will strike a predetermined point in the story of the song has not been a hard problem, and before long we may see these machines in operation in many amusement places.

### THE IMPERIAL ELECTRIC PIANO.

(Special to The Talking Machine World.)

World Office, 195-197 Wabash Avenue,  
Chicago, Ill., July 7, 1906.

The Cable Co. are having excellent success on their Imperial Electric piano, which is taking a prominent place in the ranks of coin operated machines. A notable feature of the Imperial is the expression device, which automatically gives forte or pianissimo effects, as required in the interpretation of the selection played. Manager Harrison, of the talking machine department, is also in charge of the company's coin operated instrument business. “They play when paid and pay when played,” is the apt phrase used in exploiting coin operated machines.

### “IT IS A DANDY.”

Reports from Neola Piano & Player Co. during the last few weeks indicate that the “Nicklin” (nickel-in-the-slot) piano, manufactured by them at their factory, 201 East Forty-ninth street, New York City, is making great strides and has firmly established itself as one of the consistent moneymakers for the live dealer. We quote from a letter received by the Neola Co. a few days ago from a prominent western music house; written after receipt and thorough trial of a “Nicklin”:

“Gentlemen—We like the instrument very much; it is so simple and easy to regulate, and so little to get out of repair that we think it is a ‘dandy.’ Yours truly, Featherston Music Co., Bozeman, Montana.”

### THE “SUBLIMA” PIANO.

One of the most interesting propositions which has come before the trade in many a day is the Sublima piano, illustrated and described in the advertisement of the Regina Co., on the back cover page of this issue of The World. It is a marvelous instrument with tremendous possibilities for the talking machine or arcade man. From the musical standpoint, it is most satisfying, while structurally it is built to last and give enduring satisfaction. No talking machine man should fail to look up this instrument and other specialties made by the Regina Co., as they should prove most effective as side lines.

The Colonial Automatic Merchandizing Co. was incorporated in Maine on June 30, with a

capital of \$200,000, to make and sell vending machines. The incorporators were I. S. Kearney and E. M. Thompson, both of Augusta.

## THE “PHONO TRADER AND RECORDER”

Editorial, Advertisement and Publishing Offices:—

1 & 2 WHITFIELD STREET, FINSBURY,  
LONDON, E. C., ENGLAND.

The “Phono Trader and Recorder” is published exclusively in the interest of the Talking Machine and Allied Trades. It contains usually from 70 to 80 pages of valuable and interesting matter, comprising list of all records issued monthly by the leading companies, minute descriptions (with drawings) of new patents, together with various special articles, interviews, etc., and items of news from all quarters relating to the Phono industry. Printed on art paper, and splendidly and profusely illustrated.

Annual subscription, post free, three shillings, which includes also the “Pick of the Basket” supplement of Record Reviews, a copy of which is inserted in the “Phono Trader.”

We shall be glad to supply a specimen copy.

## To Talking Machine Dealers

The MUSIC TRADE REVIEW is the oldest publication in the music trade industry. It contains more than fifty pages devoted to the piano trade, musical merchandise news, music publishers' department and talking machine trade. A special technical department is a regular weekly feature of the publication. A vast amount of valuable information is contained in each issue. The REVIEW has won higher honors at the great expositions than have ever been won by any other publication in the world.

GEORGE ROTHGIESSER

BERLIN W. 30

John Bull's Message to Uncle Sam

GOOD LUCK TO YOU, BOYS!

I want to call your attention to “THE TALKING MACHINE NEWS,” which circulates throughout the whole of the British Islands, and goes all over the world besides. Contains all about everything relating to talking machines, and is invaluable to manufacturer, jobber and dealer alike. “The Talking Machine News” is published on the 1st and 15th of each month during January, February, March, October, November and December, and on the first of each month during April, May, June, July and September. Annual subscription, one dollar and ten cents. Specimen copy free on request.

The Publisher,

1 Mitre Court, Fleet Street, LONDON, ENGLAND, E. C.

# If Someone Told You

that there was a *new* musical instrument which operated automatically by means of a paper roll, *without pneumatics, bellows or tubes*, which *automatically* controlled its own expression from loud to soft and *vice versa* by means of perforations in the roll, and which had the effect and the tone-quality of an expensive orchestrion, although offered at a moderate price, you would want to know more about it, wouldn't you?

Well, we have such an instrument in our new

## Regina Sublima Piano

Although recently placed on the market, its success is already assured, and it bids fair to become the most popular instrument that we have ever produced.

Our space here is too limited for a complete description, but here are a few facts concerning it:—

1. It is coin operated.
2. It plays upon piano-strings, yet sounds different and *better* than any automatic piano.
3. Its tone quality is wonderfully rich and sweet, and the musical effect is not in the least degree "mechanical."
4. It is operated by *electric* motor or by *spring* motor as desired. (This feature is valuable in places where electric current cannot at all times be obtained).
5. It stands eight feet high.
6. It contains an advertising device with spaces for 10 cards, which

change at intervals while tunes are playing. This space can easily be rented and the rental will help pay for the instrument.

7. Each music-roll contains five selections, one of which is played for each coin inserted, and when the last one is finished, the roll is automatically re-wound, and is ready to start again at the beginning.

8. It has a range of 73 notes, which is almost double that of the ordinary coin-operated piano, and eight notes more than in the largest one heretofore produced.

9. It bears the well-known *Regina* guarantee.

Further information will be furnished on application. Dealers who wish to handle the Sublima Piano should write us promptly, as territory is being rapidly assigned for its sale.

FOR VACATION FUN AND MUSIC.  
(July Ad.)

# Successful Edison Advertising

The vacation time is at hand and Edison Dealers are prospering. The reason is apparent. Edison summer advertising, a sample cut of which is shown on this page, tells the public how to advantageously use the Edison Phonograph during the warm summer months, and the suggestions are favorably received by the public.

The Edison Dealer never fears a "Summer Slump," because we prevent it by advertising as above mentioned.

There's money to be made in handling Edison goods, and it would pay you to write us or any of the Jobbers named below for full particulars. Do so now.

## AMERICAN COPYRIGHT BILL

Discussed from the English Point of View—Proposed Clauses Effecting Talking Machines and the Radical Changes Which Would Be Effected, in Case of Passage, Discussed.

Our friends in England are giving much attention to the revision of copyright now proposed in this country, and the Music Trades Review of London, in its last issue says:

"The new American copyright bill, and especially its clause dealing with reproductions by mechanical machines, has been severely criticised in America, and has provoked a great amount of opposition among the roll and record manufacturers. That feelings should have run very high and accusations of every sort should have been made, seems natural. Into these bickerings we cannot enter, and therefore will confine ourselves to the main points involved.

"It is obvious that the talking machine trade will be revolutionized if the proposed clauses should become law. The importance of the measure lies in the fact that not only would the American trade be affected, but that it would bring radical changes about in the talking machine and music publishing trades of the whole world.

"In order to realize this fact, we have only to remember that America is the home, and—to a great extent—the place of manufacture of the chief mechanical instruments, i. e., the piano-players and talking machines. Any changes of method and increased cost of production of these instruments in that country must necessarily react upon the trade in the other parts of the world. On the other hand, the United States of America is, and always has been, a remunerative market for European publications. There is not one music publishing house of any importance in Europe which has not either a branch establishment or an agency in the States. Similarly the demand for American music in Europe has constantly increased, with the result that the number of American publishers who have direct representation here is growing year by year. It must also not be forgotten that hardly any composition is issued in Europe that is not copyrighted in the United States; in fact, several countries (Germany, for instance) maintain a convention with the States whereby the copyrights of one country are automatically protected in America and vice versa, subject, of course, to certain formalities.

"If the clauses which seek to prohibit mechanical reproduction without permission were to pass, the talking machine trade would have to accept one of two courses: either the manufacture of players and talking machines would have to practically cease, or the manufacturers must acquire the rights of mechanical reproduction of compositions, which, under the proposed American bill, will be separated from the copyright and the right of performance.

"We may take it for granted that the respective camps will fight desperately for their interests, and it is not unlikely that amendments to those contentious clauses will be made. We suspend our judgment on the matter until we are in possession of the final text of the bill, which will be held over until the December session.

"However, the fact remains that now has commenced in real earnest the fight of composers and publishers for their full rights in every direction. That efforts to secure these would be made has been for a long time apparent to every observer of the trade; in fact, it was suggested both in Germany and at the Milan Congress of Publishers only a short time ago that the terms of the Berne convention should undergo modification in respect of the rights of mechanical reproduction. At present the United States is the only country involved, but unless we are very

much mistaken the battle cries of the two parties will resound throughout every civilized country before long."

## VALUE OF "PUSH."

A Small Word, But It Is the Key to Success on the Talking Machine Field.

Push is a little word, but it is the key to success in the talking machine business, notwithstanding.

A moderate capital, a good location and push harnessed abreast will prove a money making team capable of hauling a large business load at a good pace without turning a hair or missing a feed.

Push means hustle. Go after your customers—don't wait for them to come to you. Let them know all about you and your goods. Send them bulletins, invite them to call, and when they come, entertain them as your friends. Demonstrate to them the many uses of the talking machine; make them believe that their lives will be rank failures hence forward and forever without one of your outfits in their homes.

Make your store attractive with the many really artistic posters in endless variety furnished you by the manufacturers. Make a specialty of cleanliness, and you will find that when the ladies call, they will not only purchase the records they came for, but stay to listen to others, which will lead to sales in the future.

The only recipe for prosperity in the talking machine world that is worth shucks is push.

HOWARD TAYLOR MIDDLETON.

## FRENCH RULING ON RECORDS.

A recent French Government circular instructs customs officials that charged phonograph cylinders and gramophone discs (records) for the reproduction of words only or of songs with words are to be subjected on importation to the same copyright regulations as printed matter. Records for the reproduction of music only, without words, are not subject to these regulations.

## FOUR THOUSAND HORNS FOR EUROPE.

The Hawthorne & Sheble Manufacturing Co., of Philadelphia and Bridgeport, have just received a European cable order for four thousand assorted horns. For some time past it has been difficult for American concerns to compete with the cheap labor of Europe, but the Hawthorne & Sheble Manufacturing Co., by the addition of labor-saving machinery and devices, together with increased facilities, are now in a position to secure foreign business.

## GOOD TRADE REPORT FROM HOLYOKE.

(Special to The Talking Machine World.)

Holyoke, Mass., Aug. 10, 1906.

The talking machine business in this city has been of a very satisfactory nature right along, despite the expected summer dullness. Many machines have been sold and the demand for records has been extremely heavy. The trade predict an excellent fall business and are stocking up in anticipation. The leading dealers are M. Steinert & Sons Co., the Columbia Phonograph Co. and C. E. Walker & Co., who handle the Victor, Columbia and Edison lines, respectively.

At Washington there are kept photographs, samples of handwriting, biographies and other data of leading statesmen, including the presidents of the United States, and these, if agitators for the move are successful, will be increased by phonographic records of the voices, in public speech and ordinary conversation, of the men of whom these records are kept.

## THE "REFORMED PHONOGRAPH."

The Salvation Army Has One on Its Hands, and the Wonder Is What Fearful Crime Did It Commit in Its Life-time.

So many crimes have been laid at the door of the poor, abused talking machine that its betterment has been undertaken by the Salvation Army, and if their accounts are true, they have succeeded in saving its musical soul. In front of one of their headquarters the following announcement has been boldly placarded:

COME IN AND HEAR

THE REFORMED PHONOGRAPH.

IT SINGS,

IT PRAYS.

IT WILL LEAD YOU TO JESUS.

IT WORKS ALL THE TIME.

Many have been the suggestions as to what fearful crime this instrument could have committed to be compelled to publish its sins to all the world and do penance by working all of the time. Inquiries among the various dealers in the city elicited opinions like the following: "It was corrupted taking testimony in a society divorce suit." "It was a Brooklynite and had to travel over the bridge every night." "It had been brought up on ragtime music, but after hearing 'Waiting at the Church,' got religion." "A small goods importer tried to dictate a letter to it. It got mad." "It was once the property of a talking machine jobber who never advertised, and its morals were corrupted by hearing his cursory remarks about the dull times."

The fact remains, however, that it has been reformed, and is playing its part in aiding in the reformation of others. There can be no doubt that it will receive far closer attention than many preachers and exhorters, and will sing in a sweeter strain than the average mixed choir. If it succeeds in its mission, its life will be well spent, and the ingenuity of its inventor will have been put to a good use. The Salvation Army have certainly paid the talking machine a compliment by using one in their services, and the time may not be far distant when it will be used in the same field by others.

## LANGUAGE STUDY IN CHICAGO.

Lyon & Healy Doing a Big Business With the Course Directed by the International Correspondence Schools.

(Special to The Talking Machine World.)

Chicago, Ill., August 9, 1906.

L. L. Lewis, representing the International Correspondence Schools of Scranton, Pa., is in charge of a special branch in the retail department of Lyon & Healy's devoted to the exploitation of language teaching through the medium of the talking machine. It is said that so far Lyon & Healy have disposed of over 300 outfits, mostly to the better class of customers, the facilities offered by the talking machine plan for studying at odd hours appealing directly to the busy man of affairs. All told, the International Correspondence Schools have disposed of 20,000 outfits, valued at \$1,000,000.

## "TALKER" INSTEAD OF ORGAN.

Progressive Pastor of Catholic Church Uses Talking Machine in Services.

A small Catholic Church in one of the Southern States has experienced considerable difficulty in raising an organ fund, and for a long time was without music. The pastor—evidently a priest built on the twentieth-century plan—installed a talking machine in the choir which renders hymns and other music suitable for use during the masses.

# A CONVINCING ARGUMENT WHY THE PEERLESS COIN-OPERATED PIANOS ARE LEADERS.

Do you know that the PEERLESS COIN-OPERATED PIANOS are used in Cuba, South America, Australia and Africa, on the Gold Coast in the furthest confines of Alaska and the Klondike, and many more of the uttermost corners of the Earth.

**There's a Reason:** The PEERLESS is the easiest to sell and it stays sold. The live and up-to-date Dealer should consider the PEERLESS, as it will mean quick profits to him in the end.

Gentlemen:-

It gives us pleasure to state, that we have sold a great many of "STYLE" #44 Nickel-in-the-slot Automatic Peerless Pianos, and they have given the very best of satisfaction to our customers.

Our customers state that they have never made an investment that has brought the same returns and most of them have had experience with other nickel-in-the-slot Pianos, as well as other nickel-in-the-slot Music-boxes.

Yours truly,

NATIONAL NOVELTY CO.,

Peerless Piano Player Co.,

2 East 47th St.,

N. Y.

Gentlemen:-

In reference to our PEERLESS ELECTRIC PNEUMATIC PIANO, which was the first in Memphis, we are glad to advise that we are more than pleased with it. We do not see how there could be a better COIN OPERATED PIANO than this one has proved to be.

The PEERLESS was installed in our place on Sept. 16th, '03, and up to this date, a period of four months and fifteen days, it has earned \$490.15, or an average of \$108.92 per month. In addition, it has materially increased our sales by making our place more attractive to our patrons.

Among its many points of merit are-- beautiful quality of tone and durability. Our PIANO has not required any tuning, and it has not cost us a cent for repairs.

Very truly,

Friedman & Rosenbaum

Peerless Piano Player Co.,

Roth & Engelhardt, Prop.,

#2 E. 47th St.

New York.

Gentlemen:-

About one year ago we purchased one of your Peerless Nickel in the slot pianos for use in our Penny Arcade. This instrument has been running steadily every day except Sunday from nine o'clock in the morning until ten o'clock at night, a steady run of thirteen hours each day, and it is as good now as when we purchased it. It requires only a few minutes attention each day and we freely give you this endorsement because we consider it positively the best Automatic Piano both Structurally and musically that has ever been produced. Wishing you success, we are,

Yours truly,  
Treon & Miller.

J. B. Miller.

## TRADE IN THE SAINTLY CITY.

**Business Reports Favorable—Dealers Optimistic Over Outlook for the Fall—Val A. Reis Co.'s Handsome New Quarters—The News of the Trade Carefully Sifted and Presented for Readers' Consideration.**

(Special to The Talking Machine World.)

St. Louis, Mo., August 8, 1906.

Talking machine reports for this month are all fairly favorable, and trade for the latter part of the month shows an improvement with indications for a nice fall trade. All the dealers are decidedly optimistic, and are preparing for a big business from now on.

Those who attended the Edison gathering in New York are very enthusiastic over the pleasure they enjoyed, and are predicting that this reunion will have a splendid effect on all those who had the good fortune to participate.

W. C. Fuhri, Central Western manager of the Columbia Phonograph Co., returned recently from a trip through his territory, and found business in a very healthy condition with splendid prospects for the fall.

Manager Kelly, of this concern, states that they have just received some of their new type B. M., which are making a big hit, both with the public and the dealers. This concern has just recently fixed up a fine grand opera room, where these records are played exclusively for their prospective patrons. W. M. Byrd, traveler for this house, is home from a month's trip through Illinois and Missouri, and reports trade very good.

S. E. Lind, assistant manager of the Columbia Phonograph Co., at Detroit, Mich., was a recent visitor here on his vacation.

D. S. Ramsdell, vice-president and general manager of the St. Louis Talking Machine Co., reports trade as being better than expected for this season of the year. He finds great difficulty in getting enough of their new style second and third Victor machines to supply the demand. C. P. Ramsdell, of this concern, is expected home about August 10 from an extensive Eastern trip.

Marks Silverstone, president of the Silverstone Talking Machine Co., reports their business as being good. He states that their monthly concerts, which they give at their store one night a month, are good trade producers.

The Val A. Reis Music Co. are fitting up handsome talking machine rooms at their new store, and when completed they will be decidedly attractive. This firm will push their talking machine interests very strong from now on.

The Thiebes-Stierlin Music Co. are making preparations to establish elaborate talking ma-

chine rooms on the first floor of their store at an early date, when they will go into the retail business extensively. They report their wholesale trade as being good.

T. P. Clancy, manager of the talking machine department of the Conroy Piano Co., states that their July business made a nice showing, and that he looks for a big fall trade.

A. G. Quade is now manager of the Talking Machine Co., vice M. Neuman, who is no longer connected with the company.

E. B. Walthall, manager of the talking machine department of the O. K. Houck Piano Co., accompanied by his wife, is home from his vacation, which was spent in the East.

## EUROPEAN SINGERS MAKE MONEY

**Through Singing for the Talking Machine—Even Musical Papers Now Admit the Artistic Influence of the "Talker"—Some Singers Who Secure Big Salaries.**

"That the talking machine has come to stay, and, moreover, has to be treated quite seriously, there is no longer any doubt," is the admission of the London Musical News. For this, much thanks. Even the British Museum, the most conservative of all institutions, has, in entering on its list of exhibits records of Tamagno and others, set the seal on the utility of the talking machine, and an interview with a record maker, which recently appeared in Tit-Bits, demonstrates the fact that it offers a new source of income to singers. It appears that many singers, not necessarily of the very highest class, but those whose voices are peculiarly adapted to record making, are being engaged in England at salaries of £100 (\$500) to £700 (\$3,500) by the talking machine merchants. The manager of this establishment tells us that the best voices do not always make the best records, and that basses and contraltos are generally more effectively reproduced than tenors and sopranos, with the single exception of Caruso, whose voice, it is said, can be heard on the phonograph with wonderfully realistic naturalness. Throaty tones are fatal, and "the man or woman who sings from the back of the throat is no good for the phonograph. What is wanted is a clear, unaffected tone, which will cut clearly into the wax." It seems evident, therefore, that voices which have been subjected to "open" training are the ones that are most effectively reproduced, and though this can be readily understood, it is somewhat unsatisfactory. Voice trainers who advocate more "closed" methods for body of tone and carrying power will find their pupils less in demand for phonographic purposes than

the more shrill and hard toned students of the "open" system. But it must be remembered that the most effective voices at a few feet away are the ones which will make the best records, and those who can carry their voices to the farthest end of a large concert hall are not necessarily the most suitable for reproduction. We are told that Madame Schumann-Heink and M. Plancon make better effects than Madame Melba and Herr Burgstaller. Further details as to instrumentalists are interesting. Violin soloists are at a discount, as violin tones are too sharp to reproduce well. They seldom earn more than 10 shillings a record; but the record manager has a side drum player who has been engaged for five years at £300 a year! This is a decided setback for stringed instrument artists, but our Kubeliks and others can comfort themselves with the thought that in ordinary performance they have little fear of being ousted from the platform by players on instruments of percussion! Still the song artists have the best of it, and engagements by makers of talking machine records, though unattended with the "enthusiastic receptions" so beloved by public performers, offer a nice little addition to the income of competent exponents without the trouble of getting into concert attire or the possibility of suffering from stage fright.

## CHAS. FROHMAN'S LATEST IDEA.

**Brings Trunk Full of Talking Machine Records of Songs in London Play to be Produced in New York.**

Charles Frohman successfully tested an interesting experiment last week at the dress rehearsal of "The Little Cherub" at the Criterion Theater. He not only came back from Europe with a chest of plays and contracts, but also brought with him a trunk full of tunes.

It was Mr. Frohman's idea that there was a new way of importing popular song hits, and he has found that it worked finely. Songs he heard in Paris and London he had sung into a talking machine by the artists who were singing the hits. The records he brought with him, and at the rehearsal several songs now used in "The Little Cherub" were reeled off the records with excellent effect.

In some regards the song on the record compared well with the song as rendered here by the singer, and in instances it suggested improvements. The song written by Marie Doro, "The Doggie in the Yard," which is being sung in "The Beauty of Bath" at the Aldwych Theater by Seymour Hicks and Ellaline Terriss, was reproduced for "The Little Cherub" company from the record. It is sung here by Hattie Williams.

Mr. Frohman was so pleased with the success of the experiment that he cabled Seymour Hicks to send him records of any new song hits as they come out in London.

## A QUICK SELLING NOVELTY

**Is the New Patented Compartment Needle Box Being Placed on the Market by Hawthorne & Sheble Mfg. Co.**

An important addition to the list of quick selling novelties in the talking machine trade has been made recently in a new patented compartment needle box illustrated in this issue of The World. The box is admirably adapted for the purposes intended, providing a means for separating needles of different reproducing qualities. Almost any desired tone effect can now be secured from a disc talking machine by the aid of needles of various thicknesses, length and taper. Another feature of the compartment needle box is the space arranged for the used or rejected needles, and the method of disposing of the needles is a novel one.

We understand from the patentees of the box that they have booked orders six months ahead for same. There is no reason why it should not have a large and extensive sale, as it not only fills a long-felt want, but is the first device of its kind so admirably arranged with convenient features.

## Sell Them The Best Oil— It Pays

The best oil that's made (that's "3-in-One") is none too good for your talking machines. No other oil is good enough. Any less-than-best oil is liable to make trouble between you and your customers. Why take chances? Why not take the good easy profit (50 and 100 per cent.) you would make selling "3-in-One?"

"3-in-One" is the one right and safe lubricant for phonographs, graphophones, gram-o-phones and all other disc machines. It makes the action points work perfectly. Prevents rust and tarnish on the metal surfaces. Polishes the wood cases. Keeps the records clean—just wipe them with soft cloth moistened with "3-in-One."

Suppose you just get a trial supply of "3-in-One" from your jobber and see what happens. Or prove its value to yourself by writing to-day for a FREE sample bottle and the "3-in-One" Book. Address:

**G. W. COLE COMPANY,** Sole Makers of "3-in-One"

Broadway and Liberty Streets,

New York City.

## THE QUAKER CITY NEWS BUDGET.

Business for Month Uneven—Progressive Institutions Make All Seasons Active—Victor Co.'s Excursion—Musical Echo Co.'s New Quarters—Heppe's Selling Plan—Keen Co. Organized Phonographs as Furniture and Toys—Combines Are Dangerous—Talking Machine Development—Circulating Record Bureau—"Talker" Men to Play Ball—Views of Talking Machine Music—Abuse of the Machine by Well-Meaning But Thoughtless People.

(Special to The Talking Machine World.)

Philadelphia, Pa., August 10, 1906.

So far as trade in local talking machine circles is concerned, it is as one wholesaler put it, "in a betwixt and between season condition." He meant that while business was pretty good it was by comparison with other months rather quiet. The fact is, reports differ as to state of trade; some of the dealers are busy, some fairly so, while others are merely doing a seasonable business. Unquestionably dealers themselves have much to do in making trade good or dull. The aggressive dealer, with good ideas and a determination to push sales, is not complaining. The less said about the other sort of fellow the better. Good fall trade is predicted. The usual complaint, viz., "We would be doing more business if we could get the records we want," is heard. Sales at Jersey seaside resorts are reported good, records and supplies especially being in good demand.

The Chancery Court of New Jersey the past month made perpetual the injunction sued out by Tabacconist Seligman against the Victor Talking Machine Co. This injunction restrains the company from operating this power plant after 10 o'clock p. m. and before 6 a. m. The court's order really imposes no hardship on the Victor Co., because they can easily construct additional buildings and enlarge output capacity to meet all requirements, and it is quite likely they will do so. The fifth-story addition to the North Front street factory has been completed, and work on the Cooper street addition is being vigorously prosecuted.

The employees of the Victor Co. gave an excursion to Atlantic City the past month. It was enjoyable and successful in every way. A small fire occurred at the works the past month, but was "put out" by the Victor fire company long before the Camden firemen reached the works.

A baseball nine, composed of Victor Co. employees, crossed bats recently with a nine from a nearby industrial plant. The Victor boys went down—failed to make a record, and now they want another game and satisfaction.

The entire Victor plant is running steadily, and there seems some chance now of catching up with back orders. Vice-President Douglass is enjoying better health.

Comfortably ensconced in new and larger quarters at 1217 Chestnut street, the Musical Echo Co. are in excellent shape to successfully handle the increasing business which is coming into both retail and wholesale departments. Manager H. D. Marschalk and his assistant, L. J. Gerson, are a strong selling team, having had ample experience and being possessors of "snap" and hustling ability. The new quarters are tastefully furnished and attractive, and "pull in" buyers from the most fashionable promenade in the Quaker City.

C. J. Heppe & Son, who originated the "Junior Club" plan of selling talking machines, report that it has proven very successful. Phonographs are sold on a basis of \$1 down and \$1 a week. Boys are led to be careful in the way of saving their money with which to make payments, and even bankers have instructed their boys to join the club to the end that they would learn "real lessons in business." The fact that they earn money to pay for a machine also leads the Juniors to take pride in their work, and also teaches them to take good care of their machine, too. A large number of sales have been made by Heppe & Son.

The application of the Keen Co. for a State charter empowering them to manufacture and deal in talking machines, etc., was duly granted by Governor Pennypacker. It is capitalized at \$5,000, and the incorporators are B. Silver and David and M. N. Keen. Since opening parlors

and warerooms the Keen Co. have met with good business success, and established a solid trade. David Keen is giving close personal attention to sales, and is pushing business in several original ways.

Said a Market street jobber: "At Washington the Comptroller of the Treasury decided that a phonograph is furniture. At New York the board of United States General Appraisers decided phonographs are not toys and must pay an entry duty of 45 per cent. as manufactures of metal, and not 35 per cent. as toys. This latter decision will help keep out foreign-made goods, which will benefit domestic manufacturers, jobbers, etc. The Washington decision, which classifies phonographs as 'furniture' favors us also, because it stamps the machines as being necessary office adjuncts. All these things are sure to make trade better."

Members of the trade here who attended the meeting of Edison jobbers at New York last month are warm in their praise of the treatment received, and all report having had a splendid time, and, in addition, picked up good trade tips and pointers.

Any attempt by a "combine" or "association" of jobbers to "fix" or "set" prices on machines, records, etc., will be fraught with danger here, as Pennsylvania laws against "trusts," arbitrary prices, etc., are very rigorous.

"I have been connected with the talking machine trade about ten years," said a Ninth street jobber in a chat with The World, "and the fact that important developments and advancement have been made in the past few years impresses itself daily on my mind. I presume I could mention a dozen men here who, like me, went into the business thinking it was a transient fad, and that in due time we would turn to something else. Ten years ago the talking machine was looked upon as a toy—and, to an extent, some of the primitive talking machines turned out in those days were toys—and even worse. Ten years ago talking machines were handled as a 'side line.' Exclusive houses, such as we have all over the country to-day, did not exist; in fact, men with money were afraid to go into the thing on an exclusive basis! But as improvements were made, inventions perfected and new companies organized, a steady change for the better came, and the business has now reached its present remarkable proportions. To predict its future is quite impossible, but with the talking machine fast becoming a necessary and a useful adjunct in office and commercial work, a decidedly solid, substantial business is being founded, which, in my opinion, will last as long as men carry on commerce and trade."

A talking machine circulating record bureau is among the probabilities of the near future, according to rumors circulating here. It is said Philadelphians have discussed the plan of placing large cabinets, containing disc and cylinder records, in prominent drug stores in principal cities of the United States. People owning phonographs, upon paying a membership fee of \$2, would be allowed to take out from one to ten records for two weeks, paying 5 cents apiece for them. The plan closely follows the Tabard Inn Library scheme, originated by the now defunct Book Lovers' Co. Members of the Phonograph Record Bureau would be in a position to hear the latest records as well as old ones, at a mere nominal cost. It is said it would take \$500,000 to get the plan started. The World's correspondent has only secured meager news of the talked-of scheme, and cannot say whether it is really going to be consummated or not. Later he will give more particulars. It is rumored, however, that several substantial men of means are willing to finance the scheme. Assuming that record manufacturers will not sell the proposed new bureau

corporation its records, it will, if started, prove a good thing for jobbers and, indirectly, for retailers, because it is figured members of the bureau, hearing so many new records, would turn in and buy their own.

Dame Rumor has it that the wholesalers and jobbers are seriously thinking of challenging the retail talking machine dealers to a red-hot game of baseball. The game, it is understood, will be "pulled off" on a lot convenient to an uptown hospital and handy to a brewery. H. T. Lewis, of the Lewis Talking Machine Co., is mentioned as pitcher on the jobbers' "battery," but he won't pitch, he will simply fire the baseball from a small cannon. If "Ed" Buehn, of the Wells Phonograph Co., as catcher, manages to stop the "sphere," well and good, otherwise it seems likely the balls will go through him. The retailers will probably put W. Beckhardt, of the Eastern Phonograph Co., and "Charley" Robertson, a genial Lancaster avenue hustler, in the "box," and a hearse will be around the corner until after the game's over and the battlefield is searched. A detail of marines from League Island, it is asserted, will maintain order, while the Superintendent of Police, clad in armor, will do any umpiring that is allowed. Talking machines, mounted in all parts of the "diamond," will encourage the victims to "make second!" "slide for home!" "back to the woods with you!" "slug him, Bob! he's doing you out of a run!" etc.

Signs that talking machine "music" is not wholly popular with some people are not wanting. The Rev. J. R. Jordan, Burgess of Prospect Park, a nearby village, recently issued an edict that only "sacred music" could be played on talking machines on Sunday, and a police officer has been enforcing the order. In Chancery Court at Camden, N. J., the past month, on complaint of J. Albert Harris, a rule to show cause why an injunction should not be issued against O. J. Leigh, of Wildwood, N. J., from operating a phonograph, was granted. Reuben Goldberger, an Eighth street merchant, Philadelphia, complained to Judge Martin, of Common Pleas Court, that a talking machine operated by J. W. Himebaugh, an amusement palace man, opposite his place of business, so annoyed and distressed clerks, etc., that it had become unendurable. Finally the matter was compromised by Mr. Himebaugh agreeing to have the music operated on a p. p. basis, with the phonograph moved away from his front door back to the rear. A number of laborers, near Bridgeton, N. J., annoyed because a phonograph kept them awake when they wanted to sleep, took the law into their own hands, and descending upon the offending machine, kicked it to pieces and threatened to do the owner bodily harm.

The foregoing facts are mentioned to emphasize the points made by a local dealer in talking machines, etc., who, in an interview, chatted on the subject of "Use and Abuse of Talking Machines." He said, in part: "To the right use of talking machines by considerate people no sane person will object, but certainly when foolish people operate them in such a way as to cause annoyance and distress, it is time such people were called to order. The talking machine itself is not a nuisance; but it can be made one, of course, by thoughtless, foolish people who set it going at unreasonably late hours, or who set them going in wrong places, such as near a church during service hour, or who keep a machine going so continuously that what was enjoyable or amusing at first is, by monotonous repetition, turned into annoyance and distress. Common sense must be exercised by owners of talking machines if they wish to avoid being called 'nuisances.' Talking machines are no worse than dozens of musical instruments so far as abuse is concerned. A clarinet or violin played at 2 a. m. by an amateur is enough to make a well man frantic. And a talking machine operated under wrong conditions by a person with more enthusiasm than discretion is apt to stir up bitter feelings. There should be moderation in all things, and in phonographs people should consider other people's feelings."

Harris Master, who recently opened talking machine and piano salesrooms at 239 Market street, is meeting with deserved business success. He

carries a good-sized stock of popular makes of machines and records.

Having once been a resident of San Francisco, L. F. Geissler, general manager of the Victor Talking Machine Co., has taken a deep interest in the affairs of that city, both at the time of the earthquake and fire and since.

At Camden, N. J., it has been understood that the famous Victor, "His Master's Voice," "picture" was originated by Mr. Eldredge Johnson. He had a dog at one time which closely resembled the one in the "picture" which is peering into the talking machine, and if, as related in the July World, a Massachusetts gentleman originated or, rather, "discovered" the "picture," a belief long cherished by Camdenians, falls. Some Camden people are so sure the dog in the picture was Mr. Johusou's pet canine that they can almost tell the name of the photographer where Mr. Johnson had the "picture" taken. "Sure," said one old resident, "that's Mr. Johnson's dog. He was a sort of bulldog-poodle dog, and his name was 'Jack.' Gee whillikens! I knew the dog well!" "Was it Mr. Johnson's dog?" is a question which bids fair to become quite as interesting as "The lady or the tiger?" problem, made famous by Frank R. Stockton.

### MUSIC IN PITT STREET!

Rival Venders Start Talking Machines With Love Tunes to Attract Trade.

Pitt street, between Grand and Broome, is now known as a musical center. All the airs that are dear to the ears of the east side there mingle in a mighty roar until late in the night. As yet there has been no complaint to the Health Department because, though the street is narrow and the average family has not less than five children, neither the heat nor the crowded quarters have disturbed the nerves of the community and there is not a case of illness on the block. The people are happy with the music that has recently been added to their pleasures through a war among the candy stores.

It all began a week ago, when Sam Berger placed in his store a talking machine which ground out all the tunes that are favorites with the boys and girls, and naturally the young men bought candy for their sweethearts from Berger. His store became the lovemaking center of the neighborhood.

Isaac Davis across the way could not stand for this competition, and bought a larger talking machine with a large horn. This brought the crowd flocking to his place of business, the favorite being "Chasan und Kalla Mozzel Toi." The children can dance to this to their hearts' delight. The older couples can hold hands without being discovered because of the crowd, and it is not difficult to slip an arm around a waist without being too conspicuous.

The new machine helped Samuel Cohen, whose store is just in the neighborhood. He profited by the overflow, and did not have to pay for anything.

Learning that Berger is to get a still larger singing machine, Cohen, who believes in fair play, means to buy the largest talking machine made, warranted to play with emotion "Kim, Kim Smelke a Heim." The news has filled the healthy, happy community with untold delight.

### THEY HAVE "CANNED" THE SQUEAL.

One of the scenes in the dramatized version of Upton Sinclair's novel, the "Jungle," which, as everybody knows, treats of conditions in the stockyards of Chicago, depicts a number of hogs being led to the slaughter. The agonized squeals of the hogs will be reproduced by a series of talking machines placed behind the stage. The records have already been made in Chicago. What next?

### LIVELY CAMPAIGN IN RICHMOND.

Since obtaining the agency for the Victor talking machines, the Cable Company have been carrying on a vigorous advertising campaign, especially in the South. The Richmond branch is

turning out some very clever advertising, the work of Edward H. Mayfield, and it is the kind of publicity that will undoubtedly spell success.

### POWERS & HENRY CO. ACTIVITY.

Doing a Big Business in Their New Store—Grand Opera Concerts to Be Inaugurated.

(Special to The Talking Machine World.)  
Pittsburg, Pa., August 7, 1906.

The new talking machine store opened not long ago by the Powers & Henry Co., at the corner of Sixth street and Duquesne Way, is now fully established and running smoothly. An extensive line of machines and over 150,000 records are carried in stock, and as an inducement for the opening to attract a crowd to their store they gave to all persons presenting a certain ad. clipping, and who owned a cylinder machine, one Columbia record from a late catalogue. To those presenting the ad. who owned disc machines they sold 10-inch records for 15 cents, although the regular price is 60 cents.

The quarters take up 8,000 feet of floor space, and in their line will be found Edison, Victor, Columbia and Zonophone records and machines.

In addition to all their other inducements, the Powers & Henry Co. will in September commence a series of grand opera concerts during the afternoons, when such stars as Caruso, Melba, Schumann-Heink and Sembrich and others may be heard.

Some remarkably fine specimens of twelve-inch records, made by the American Record Co., Hawthorne, Sheble & Prescott, sole selling agents, have been recently shown to the trade. High-grade recording is in evidence, and quietness of surface is particularly noticeable, all of which reflects great credit on their laboratory methods under the able management of J. O. Prescott.

Perry B. Whitsit, of the Perry B. Whitsit Co., Columbus, O., has been enjoying a vacation in Danbury, New Hampshire.

# We Sell Victor Machines and Records

## THE BEST IS GOOD ENOUGH FOR US—HOW ABOUT YOU?

Being Distributors of Victor Machines and Records only, it stands to reason that we can give you better service in this line than can those who job several lines, as we give our whole time and attention to satisfying the wants of those dealers who want Victor Goods and who want the best service possible.

## NEWS ITEMS FROM THE TWIN CITIES.

**Mid-Summer Trade Better Than Expected—  
Dyer Enlarging Talking Machine Department  
—Splendid Report from Minnesota Phonograph Co.—Kohler & Heinrichs, Edison and Victor Jobbers—Other Items.**

(Special to The Talking Machine World.)  
Minneapolis and St. Paul, Aug. 8, 1906.

The mid-summer trade in talking machines has been better than expected, and results for July show a decided improvement over a year ago.

W. J. Dyer & Bro. report this department of their music business as showing the largest increase this year of any of their other departments, and are quite enthusiastic over the prospects for this fall. They have brought the department down from the fourth to the first floor, and it will occupy the space formerly occupied by the offices.

The Minnesota Phonograph Co. report an extremely good month in jobbing both Edison and Victor goods. At their St. Paul store, an excellent retail trade for July in Edison goods was reported. The Victor end, however, was light, as it is only recently this company began pushing Victor machines. At the Minneapolis store, Mr. Lowey, the manager, reported larger sales in July than during the preceding two or three months. The demand was mostly for Victor records and machines.

L. H. Luckner, the president of the Minnesota Phonograph Co., who went East last month, accompanied by his brother, W. A. Luckner, is again at the helm.

Kohler & Heinrichs, large fancy store in St. Paul, took hold of the Victor and Edison machines last week as jobbers. This firm was originally the first jobber of Victor goods in St. Paul.

William Donaldson & Co., of Minneapolis, who run the largest department store in that city, report better results in July than any previous month this year. Nearly all makes of machines can be found in their talking machine department.

T. C. Hough, handling the Edison and Zonophone, reports a fine business at all three of his stores, with a big increase over last year.

A good, steady trade in records during July was reported at the Victor department in the New England Furniture Co.'s store. The sale of machines, however, was not so large, but consisted of a good grade.

Good average results were reported by both stores run by the Columbia people.

## GRAPHOPHONE PARK CONCERTS.

**Aldermen Divided Over Question of Replacing  
Band With Large Talking Machine.**

(Special to The Talking Machine World.)  
Bridgeport, Conn., July 31, 1906.

The Columbia Phonograph Co., of this city, have a giant machine which, they assert, will emit more real music than the loudest brass band ever organized. Band concerts are given frequently in Bridgeport's parks, and the company

have offered one of the machines in place of a military band and applied to the Board of Aldermen for permission to give concerts. News of this became public, and while part of the population of Bridgeport protested, many are in favor of its use. The vote at the Aldermanic meeting was half for and half against. Of course, the members of the Musicians' Union are "agin it." They are afraid there will be no summer jobs if a gigantic graphophone is placed in the parks.

## "TALKER" AS PEACEMAKER

**Brings Joy Into the Home and Knits Some  
Broken Hearts.**

The role of peacemaker is among the latest assumed by the ever useful talking machine, and the scene of action is given as a small town not far from Chicago. The characters were a love-lorn traveling man and the idol of his heart.

The young lady broke off the engagement just previous to the time for the wedding, to the consternation of the would-be Benedict. The day upon which the ceremony was to have been performed he called up the girl to announce the fact that Heaven was his home, and that he was going there by the pistol route. This information did not melt the young lady's heart, so he procured a talking machine, placed it in front of the telephone, and ground out, "I'm Trying So Hard to Forget You." Sweetheart still refused to become reconciled, but took occasion to notify the town marshal regarding the young man's threats. The officer reached the hotel just in time to prevent the suicide and friends, citing the touching verses of the ballad and the virtues of the distressed gentleman, prevailed upon the lady to consent to the wedding, to the inexpressible delight of the traveling man.

## SOME WINDOW DONT'S.

Don't slight the windows.

Don't let the glass become dirty.

Don't depend too much on fixtures.

Don't neglect the upper part of the window.

Don't stick to one style of trimming. Branch out.

Don't skimp on elbow grease in cleaning the glass.

Don't wait till a trim is fly-specked before changing it.

Don't overlook the utility of a certain number of fixtures.

Don't be afraid to try something new in the way of display.

Don't let the window stand too long. One week or two is about the limit.

Don't be afraid to spend a little money on the trim. It will come back.

Don't fail to call the local newspaper's attention to each nice trim that you make.

Don't prolong the trimming unnecessarily. A quick change will impress the public more.

Don't try to do too much. Better a simple trim changed often than an elaborate one that stands a month.

## NOT LOADED DOWN WITH DETAILS.

**Does It Pay Not to Know All Details of One's  
Business?—Leading Jobber Says It Does.**

One of the leading jobbers of the United States was conversing with a business caller the other day, who asked him about a certain transaction which had recently occurred between the concerns that the two represented.

"I do not know anything about it," said the jobber, "but I will take pleasure in looking it up, and letting you know." After the caller had left a business friend who was present, said to the jobber: "Could you afford to confess that there was anything connected with this establishment that you did not know all about?"

"I not only could afford to confess it," was the answer, "but I regard it as a mark of good business judgment, which has been fortified by all of my experience and observation, for the head of a concern not to know any more about the details than he has to. It is his business to lay out the general plans, and to select men to carry the same into execution, and he certainly can perform both of these duties to far greater advantage if his mind is not encumbered all the time with a mass of details, which he has selected other men to look after, and which they certainly are as competent to care for as he is himself. The mind that is overloaded with all the petty transactions of a business concern has no room for inception, originality, or that calm and constant reflection which produces new ideas, and enables the gray matter of one's brain to do the best work of which it is capable."

## SECTIONAL RECORD CABINET

**To be Placed on the Market by the Blackman  
Talking Machine Co.—Providence Firm As-  
signs Record Brush to Blackman Co.**

Rogers & Forsell, of Providence, R. I., who have been selling and manufacturing a record brush similar to the Place record brush sold by the Blackman Talking Machine Co., have assigned to them all of their claims on these articles and will cease selling and manufacturing them.

The Blackman Talking Machine Co. are about to put on the market a novelty in the way of a sectional record cabinet, similar to the sectional book cases now in such general use. As a matter of fact, these are being built in part for records with a sectional book case part, so that it may serve a manifold purpose. These will be built both for private house and dealers' use. In speaking of talking machine cabinets, Mr. Blackman says that they have just secured a carload of new styles in carved mahogany, which are designed to retail from \$40 to \$100, which they will have ready for delivery by the middle of this month.

Theodore F. Bentel and wife, of Pittsburg, Pa., are recuperating in the invigorating air of Springfield, Mass., the guests of E. A. Hawthorne.

## Buy from Headquarters

## FOREIGN RECORDS.

## An Explanation of Why It Will Pay a Dealer to Push Them.

I have made it a point to question a number of dealers regarding the attention they pay to the foreign record division of their business, and they all informed me that there was not a great deal doing along that line. "We are so busy with our American selections that we have no time to waste on dead material," was the usual answer they gave to my inquiry.

If foreign records are dead material, it is the dealer's own fault, for every large city in the world has its foreign element, a very large majority of whom are music lovers, and eager to take advantage of just such an opportunity as the talking machine affords of bringing melody into their homes at a small figure. In Philadelphia alone there are 310,000 foreigners, and if they were made to understand the musical excellence and great variety of the records set forth in the foreign catalogues of the different companies by a little judicious advertising on the part of the talking machine man, they would be quick to grasp the chance to enjoy the beloved airs of their native land, sung in their mother tongue.

The following little story illustrates what the

VISIONS OF THE PAST.

talking machine has done, and is still doing for one poor Italian:

A member of the White Wings squad of street cleaners is working in front of a phonograph store. A talking machine is playing "Mattinata," "Il Barbiere di Siviglia," and resting on his broom the man drinks in the flood of melody greedily. It carries him back to a summer night in Italy. The moon is shedding its silver splendor on the rippling waves of the lagoon. Inside the veranda a hammock swings in the breeze, and nestled within its gaudy meshes a dark-eyed girl gazes out at him. Near them a phonograph is playing a song of love. An original record it is, of the girl's sweet soprauo, and on the morrow her lover is to take it with him in the great ship to America.

\* \* \* \* \*

Ah, what bitter disappointments have come since then! In his dear Italy he had enjoyed the distinction of being addressed as Signor—in America, the land of the free, he cleans the streets. However, he is making money; he still has the voice of his sweetheart to cheer him, though thousands of miles away, and soon he will have saved enough to go back to the villa by the lagoon and lay a bag of gold at the proud Padrone's feet and demand the hand of his daughter in honorable marriage. No more can the old man cry out in a rage, "You have no money! Would you have my daughter married to a beggar? Begone!" Now he will be welcomed as worthy of the girl he loves, and all will be well.

The only thing that has kept this poor Italian from giving up in despair, time and time again, has been the voice of his loved Signorina, who is awaiting his return in the land across the seas. Every night, in his humble lodgings, through the tin horn of a cheap talking machine, he hears her sing to him, and when he lies down to rest, it is with the sweetness of her song in his ears, and a smile of supreme content upon his lips. When slumber comes, it finds him smiling still.

This foreigner is one of the very few who know the talking machine, and who have taken advantage of its power. It is for the dealer to ac-

quaint others of the greatness of this instrument that talks, laughs and sings, and in doing so he will bring into his business a new line of trade that will pay him well. In other words, he will enjoy a state of remunerative philanthropy by bringing joy to many a lonely heart and making money by it.

HOWARD TAYLOR MIDDLETON.

## OUR FOREIGN CUSTOMERS.

## Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., August 10, 1906.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

## MANY VISITORS TO COLUMBIA CO.

The Columbia Phonograph Co., General, have just brought out two sets of records, one for the disc and one for the B. C. type of machines, which comprise an entire dance programme. The first, No. 12, comprises twelve assorted dances, including waltzes, polkas, quadrille and lancers. The B. C. assortment has seventeen numbers, covering the same field. These will fill a want long felt, and they feel assured of their immediate popularity.

The jobbers who visited their offices at 90 West Broadway this week were loud in their praise of their new Home Twentieth Century Graphophone, which has attracted so much attention since its introduction.

## EDISON BUYS HIS OHIO BIRTHPLACE.

Thomas A. Edison has come into possession of the place near Milan, Erie County, Ohio where he was born. A deed transferring the property to him has just been filed in Norwalk. The transfer is made by the granddaughter of Edison's sister, and the consideration is announced as \$1.

J. Samuels & Bro., of Providence, R. I., are among the largest talking machine jobbers of Victor, Columbia, Edison and Zonophone machine records and supplies in the State. H. Wonderlich, who has charge of this end of the business, is a hustler in the fullest sense of the word, and it is largely due to his efforts that his company occupy so firm a foundation in the talking machine trade. They are fast building up for themselves a reputation for their progressive and up-to-date manner of doing business.

J. R. Diener, the talking machine dealer, of Bellefontaine, O., has increased his trade considerably through a number of public concerts. Mr. Diener chooses a varied programme for his concerts, and always attracts a large crowd.

## Hawthorne & Sheble Mfg. Co.

Howard and Jefferson Sts., Philadelphia, Pa.

## GOOD REPORTS FROM CLEVELAND.

Business Satisfactory—Columbia Window Publicity—Buescher & Sons New Store—Columbia Amusement Co. Have Nine Stores—Probeck to Yellowstone Park.

(Special to The Talking Machine World.)

Cleveland, O., August 10, 1906.

Considering that this is the vacation season of the year, conditions generally are very satisfactory in this city. Quite a number of machines and a large number of records have been purchased by parties to take with them on their vacation, and the sales aggregate a goodly volume of business. No complaints are heard, and the dealers are all optimistic of the future.

One of the most attractive window displays in the city is that of the Columbia Phonograph Co. It is a camp scene. The floor of the large window is strewn with broken limbs and bark. In one corner a large mirror blossoms into a lake. A tent is labeled "Camp Columbia," and inside and out are camp stools, fishing rods, guns, etc. Hanging from a tripod of limbs of trees by a chain is a kettle with a red-hot fire apparently blazing up all about it. Beneath a wire screen, about 18 inches square, resting on stones raised about 15 inches, the screen covered with small limbs and bark, is a small electric fan, and just above the fan and below the screen two electric bulbs, one covered with orange and the other with lemon-colored tissue paper. Fastened to the limbs and bark lying on the screen are narrow strips of varying lengths of red, white and yellow tissue paper, with the bulbs glowing and the fan blowing, keeping the narrow strips of tissue in motion. The scene is a most realistic one, and attracts thousands of sightseers.

G. J. Probeck, manager of the Columbia Co., stated that business had vastly improved during July, and was picking up wonderfully, sales having been especially good of Twentieth Century graphophones.

Mr. Probeck will leave for Yellowstone Park, August 15, where he will rusticate for two or three weeks.

There is some talk that Smith & Nixon, piano dealers, located in the Arcade, will carry a line of talking machines this fall.

Mr. Denslow, who was formerly with the W. C. De Forrest Co., of New Castle, Pa., is now with the Ohio Phonograph Co., of Youngstown, O., who handle the Lyric phonograph. He was in the city a few days ago.

Flesheim & Smith, who handle the Zonophone, report business a little dull, but about the same as usual at this season of the year. They have placarded in their window a machine with 20 Excelsior records for \$25.

Your correspondent called on W. J. Roberts, Jr., the other day, and during his visit several of his former customers made substantial purchases, and expressed themselves pleased to see him back in the business. Mr. Roberts said that day by day his old trade was returning, and he feels highly elated over the prospects.

E. A. Neff, of the Ball Fintz Co., of Newark, O., was interviewing the talking machine people of Cleveland last week.

"The Victor" is the name of W. H. Buescher & Son's new retail store at 254 Prospect street. Mr. Gulley, manager, stated that trade was fairly good, and that there had been within the past two weeks decided increase in sales of Victor and Edison machines. He said they were doing an excellent business in Red Seal records and having a good sale of August records. Visitors express themselves much pleased with the arrangement and decorations of the rooms of "The Victor."

Trade is reported very good at Collister & Sayles'. Victor and other records are in good demand, though it was stated this was their usual dull season.

Business at W. J. Buescher & Son's was reported good. "It is keeping up remarkably well," said Mr. Buescher, "with prospects of its continuing right along. We are having a good demand for the new records, and there is a steady call for the old. The 'Marlo,' our new picture show and arcade, is doing a nice business."

The Columbia Amusement Co., the most extensive amusement slot machine operators in Ohio, are at present operating eight places of amusement in the city and report that all are doing good business. Their headquarters are at 635 Superior avenue. Harry S. Lavine is president and F. R. Mosley, of the Union National Bank, treasurer of the company.

The Eclipse Musical Co. are having a good demand for records, and are selling a good many machines. The manager stated they were very busy, especially in the jobbing department, and that prospects were flattering.

The Central States Jobbers' Association, which meets in Detroit, August 14, will be largely attended by the jobbers of Cleveland.

T. H. Tarvell, president of the Eclipse Musical Co., has just returned from the Edison jobbers' meeting at the factory, and reports a very enjoyable and profitable time. The Eclipse Musical Co. will have something new in the way of a horn crane, which they will put on the market shortly. It is claimed it will be superior to anything now in use.

## NOW THE BURGLAR-ALARM

Field Has Been Invaded by the Talking Machine—Something of John C. Hood's Invention.

John C. Hood, of Wilkinsburg, Pa., is the inventor of an electro-phonographic device which calls up the police station when a burglar tries to get into the house. It tells the man at the police end of the 'phone to hurry along with the wagon and take the robber away.

When the burglar forces a door, window or other opening where the device is placed the machine, which is worked by electricity, is set in motion, and a phonograph, located in the garret, where connection between the telephone wire and the wire connected with the burglar alarm has been made, calls "central" and asks in plain English for the police station. When connection with the police station has been secured the phonograph informs the police as to the street and number of the house that is being robbed, and repeats the information as long as the receiver is off the hook.

## TO MAKE MUSICAL SPECIALTIES.

M. Redgrave, 9-11 Willow street, Jersey City, N. J., has incorporated to manufacture musical specialties and parlor games. Capital, \$10,000. Incorporators: Montague Redgrave, Dana F. Putnam, John J. Melick and Chas. E. Putnam, M.D., all of Jersey City.

If your  
jobber  
isn't prompt

That's a big stumbling block that loses customers for many dealers. It pulls down your business instead of building it up.

It's bad for the customer, bad for the dealer, bad for the jobber. The customer loses his patience, the dealer his customer, the jobber his order.

If your jobber isn't prompt, he is not only standing in his own light, but, worse yet, is retarding your progress. There's no reason why you should put up with this sort of thing, and the jobber has no one but himself to blame if you take your trade where more attention is given to it.

We take a load of worries from your shoulders by shipping your orders the same day they reach us, and you can always count on this. No delay, no excuses at any time. Victor Talking Machines and Records, Trumpet Horns, English Needles, Fibre Cases and accessories and specialties of every sort are always here in sufficient quantities to meet all demands.

Let us send you our newest catalogue. That will give you a complete idea of the extensive line of Talking-Machine goods we handle and put you in a position to get your goods without the least delay.

## THE TRADE IN ENGLAND.

**Summer Conditions Satisfactory on the Whole, But Business Could be Improved if more Energy Were Placed Upon the Publicity End—Lyon & Co.'s New Establishment—At Neophone Headquarters—The Edison-Bell Persistency—The National Program—Columbia Activity—A New Needle by David Bruce & Co.—Dashes Here by the World Man in the British Metropolis.**

(Special to The Talking Machine World.)

London, Ang. 6, 1906.

As the result of a general review, trade conditions over here are very satisfactory, taking into consideration the time of year. All reports go to prove that last month's business is far in excess of the same time in any previous year, and there is every indication of an early phenomenal revival of trade. Certain firms have ceased to run their machinery for merely the manufacturing of stock, but are now working at high pressure to turn out as speedily as possible the orders received and in preparing for the rush of business which, it is confidently anticipated, will be of exceptional magnitude this season. To approach such a gratifying condition all the year round would perhaps be too much to expect. But I firmly believe a larger volume of business could be promoted during the summer months were the dealers to stimulate matters in a more vigorous manner than they do. Some of our London friends are particularly apathetic in this respect, and instead of striving to make headway they seem content to rest on their oars and drift with the current. However, competition, combined with the educating efforts of the factors, will no doubt do much toward remedying this evil, and in time, I foresee, the English dealer will realize that his best interests are served by sustaining the demand all the year round.

If your Dr. Thaddeus Cahill would only bring his wonderful electrical device—for diffusing music to over 500 houses simultaneously—to London and install it at Covent Garden, it would pretty sure catch on, as there is great rejoicing over the recent production of "Tschaikowsky's" opera, "Eugene Oneghin." It is to be hoped that one of the disc companies will have secured a musical selection.

\* \* \* \*

While passing along the City Road the other day I was struck with admiration at the handsome appearance of Messrs. A. Lyon & Co.'s new premises. These warehouses are in addition to their Whitechapel store, and have been taken in order to cope with their ever-increasing business. The place is elaborately fitted up and will hold complete stocks of all machines and records. I hope next month to give further particulars.

\* \* \* \*

The Phonograph Exchange Co., of London, Norwich and Ipswich, makers of the Star record, report a severance of the partnership heretofore existing between their Frederick William Hawkins and Rupert Vaughan Farish. Debts due and owing by the late firm will be settled by F. W. Hawkins at Norwich. In the matter of the British Phonograph Industries failure a summary of the statement of affairs shows that the unsecured creditors will suffer a 60 per cent. loss.

\* \* \* \*

At the "Neophone" headquarters at Worship street I found Dr. Michaelis and Mr. Cameron's enthusiasm for their new "Neolite" records well justified. With the reproduction so realistic and sweet, it is no wonder this new record is attracting great attention. The "Neolite" is a black composition, 12 double-sided record selling at 3s., at which price the company expects an enormous demand. At a carnival recently held in Kingston, a No. 7 Neophone was placed in a

position overlooking the Thames and discoursed many fine selections during the band intervals. The popular music provided was encored again and again by the large crowd of excursionists gathered around, and all Kingston resounded with cheers as the Neophone wound up its entertainment with "God Save the King."

\* \* \* \*

The Edison Bell Co., of 39 Charing Cross Road, London, are to be complimented upon the good example they set in the persistency of always keeping before the dealer the fact that he is a dealer, and consequently, to be up to date, must stock Edison Bell records. Mr. Jas. E. Hough, manager of the company, is the leading spirit in this movement, and I must say the unique line he strikes has proved highly successful; it's "proved" by the fact that their sales are this year more than double that of any previous years at the same time.

\* \* \* \*

The National Phonograph Co. have a good programme in hand for this season, and report a steady demand for their machines and records. Their C reproducer will in future be fitted with a copper diaphragm in place of built-up mica. The change is well justified by the tone improvement.

\* \* \* \*

Flower horns will be well to the fore this year. To meet the ever-increasing demand the Columbia Phonograph Co. are concentrating steam-engine energy to place a sufficient supply upon the market. Their beautiful floral horns diffuse a sweet tone in great volume and are an undoubted credit to the firm. The new style Lyric reproducer adopted has also found much favor. The change substitutes a coil spring for the floating weight, and it is claimed this style of construction provides better tonal qualities, besides ensuring perfection in tracking. The Columbia company report complete success with their new branch recently opened in Manchester. Situated in the principal thoroughfare, their new handsome premises have aroused keen interest, the first month's business proving highly satisfactory.

\* \* \* \*

Messrs. Murdocks, of Farringdon Road, who are factors for the Genuine Edison, Sterling, Columbia and Edison Bell goods have their hands full at present and report business as more than double this time last year. They carry a stock of over 300,000 cylinder records, and discs in thousands. Eight new types of machines will appear this season, and they announce a new sound-box as ready for sale. It is called the Chantora, and is offered at an extremely low figure.

\* \* \* \*

Messrs. J. J. Stockall & Sons, Ltd., occupy extensive premises in the Clerkenwell Road. Messrs. Barnett Samuel & Sons, Ltd., of Worship street, have arranged to take over some eight different models of disc machines, all of the two-arm type. This new series of instruments will certainly be welcomed by all phonograph dealers, as the construction contains several new features of a distinctive character.

\* \* \* \*

Owing to the price-cutting which is inclined to by certain dealers over here, a suggestion is in force to form a retailers' protective association. By this means it is hoped to stifle the illegal cutting and thereby induce a feeling of greater security among those dealers who have signed the manufacturers' agreements. Undoubtedly such an association would be more than welcomed by all legitimate traders. The idea first emanated from one of our smartest dealers—Mr. J. Tobins, of 382 Mile End Road, London, E., and while I am in entire agreement with Mr. Tobin's suggestion I feel that it is a more difficult object

to attain than at first appears. Weeding out the delinquents would probably entail much time and money. The association should receive loyal and continuous support from each member, and by such observance would the necessary protection be largely gained. It is not to be expected that under-selling can be entirely prevented, but a continuous war must be waged in the interests of future trade, as in the case of records, competition is getting so keen that obviously if the dealer is to maintain a fair living his fixed margin of profit must be protected. I shall further report upon the progress of this matter, as I am of the opinion that the increasing interests of the Talking Machine World in England justifies any support I may be able to provide by the use of our columns for such a practical cause.

\* \* \* \*

The constant cry is more room. It's the American Talking Machine Co. this time. They have in fact been crying for such a long time that the accompanying tears have at last flooded them out of Putney, or will do very shortly. Extensive warehouses have been secured in Tabernacle street, right in the heart of Phonoland. These new premises contain five stories—sufficient to accommodate thousands of records and machines. By the way, it is a noteworthy boast of this firm that they can execute at any time a 95 per cent. completion of most orders placed with them, so large is their stock. Mr. John Nottingham, the able head of the firm, is perhaps the oldest in the trade. At any rate he has been trading for a very large number of years, and is popularly styled "the father of the trade." Sufficient evidence of his keen business methods is found in the retrospect, from commencing with one small room, he has built the trade gradually and surely up to the necessity of acquiring no less than three large warerooms, in addition to his present occupation of two handy buildings. Later I shall give more detailed information.

\* \* \* \*

Messrs. David Bruce & Co., of High Holborn, have recently entered the market with a specialty that is attracting considerable interest. They have revolutionized the trade with what is claimed as absolutely an unwearable needle. From my own observations this statement seems perfectly justified. It is evident a huge demand is forthcoming. The same firm have also marketed the "Vox Humana" sound-box—a master patent of Mr. Gardner's, who they claim was the first inventor of the screw attachment to the diaphragm with adjustments.

\* \* \* \*

I learn that the Nicole Record Co. has been reconstructed and taken over by the newly registered Disc Record Co. I caught the manager, G. H. Burt, busily engaged in superintending the removal of machinery from the old premises in Great Saffron Hill, to Wellington Mills, Stockport, at which place the company intend to manufacture an improved disc record. Such is the information furnished by Mr. Burt, who will be remembered in connection with the Burt Co., at one time of Milburn, N. J.

\* \* \* \*

I learn that Mr. Melerio is resigning his position with the National Phonograph Co., Ltd. Mr. Schermerhorn, chairman of this company, by the way, is back from his American trip.

\* \* \* \*

Eldridge R. Johnson, of the Victor Talking Machine Co., is, as you probably know, over here just now. His return is a little uncertain, as it depends on his wife's health, but Mrs. Johnson is making good progress, and I understand they may arrive in America about the end of September, or the beginning of October. In order to deal with the business and keep in quick touch with his firm, Mr. Johnson has opened up temporary private offices in the west of London.

## THE LAKE PATENT UPHELD.

Appeal from Decision Favorable to the Gramophone & Typewriters, Ltd., Against C. & J. Ullman Dismissed by Higher Court—Important Suit Will Interest Americans.

(Special to The Talking Machine World.)

London, England, August 5, 1906.

Before Lord Justice Vaughan Williams, Lord Justice Romer and Lord Justice Cozens-Hardy, the suit of the Gramophone & Typewriter, Ltd., v. C. and J. Ullman, has just been up for hearing.

This was an appeal from a decision by Lord Justice Farwell, sitting as a judge of first instance, and which was heard last March. The plaintiffs were the registered legal owners of letters patent No. 8401 of 1903, granted to Henry Harris Lake for "improvements in sound magnifying horns for phonographs and the like." The patentee in his complete specification stated as follows: "My invention relates generally to the art of sound recording and reproducing, and particularly to that class of device known as talking machines. The object of my invention is to provide an amplifying horn for talking machines of such a character that the same will have all the material advantages of a single horn connected directly to the sound box without having the disadvantages thereof due to the large size and weight of the bell portion of the horn"; then, after describing in detail his invention, he claimed "tapering amplifying horn for talking machines having joints in the tapering portions thereof to allow a horizontal and vertical movement of the sound box." The gramophones or talking machines manufactured and sold by the plaintiffs under these letters patent were a very large success, and had quite revolutionized the trade in talking machines. The defendants were factors and vendors of talking machines imported into this country from Germany and manufactured by the International Talking Machine Co., of Berlin. The plaintiffs alleged that the defendants were infringing their said letters patent by selling talking machines with tapering amplifying horns constructed in accordance with their said letters patent, and they claimed (1) an injunction to restrain the defendants from infringing their said letters patent; (2) damages, and delivery up or destruction of all infringing articles. The defendants alleged that the plaintiffs' patent was invalid because it was anticipated by the following specifications: Loret's, No. 6073, of 1897; Grindlas' No. 24,833, of 1899; Jensen's, 17,934, of 1900, and Johnson's, 21,799, of 1902; and they further contended that Lake's improvement was not the proper subject matter for a patent. Mr. Justice Farwell, in a considered judgment, said that the earliest form of gramophone in point of time had the amplifying horn mounted so as to be near the center of gravity, but with a certain amount of its weight resting on the sound box, and the horn had to be moved by the needle. This was, for various reasons, a disadvantage. The next step was to move the horn from the reproducer and connect it therewith by a tube. This tube, however, being made with parallel sides, was not so well adapted for the conduct of sound as the tapering horn. Lake then hit on the idea of putting two joints in the tapering portions of the horn, so that it is independent of support from the record and is yet flexible so that it can follow the record. It turns on both a vertical and a horizontal axis, the vertical enabling it to follow the side to side movement of the record, and the horizontal to follow the up and down movements. His lordship came to the conclusion that, though the case was near the line, there was sufficient invention to support the patent. He, therefore, granted the injunction as asked and an inquiry as to damages, and ordered destruction of the infringing machines. The defendants appealed.

The court dismissed the appeal. Their lordships said that for there to be good subject matter for a patent there must be both utility and invention. In the present case the utility of the

patent was not disputed. As for invention, this patent removed a difficulty which had always occurred previously in the manufacture of gramophones, and on the evidence it must be held that there was invention. On looking at the earlier patents on which the appellants relied, it was plain that none of them anticipated Lake's improvement. As infringement could hardly be seriously disputed on the evidence, the appeal must be dismissed.

## PATHE FRERES PURCHASE.

Business Bearing Their Name in London—New Disc Contemplated—New System of Recording.

(Special to The Talking Machine World.)

London, England, August 6, 1906.

Pathé Frères, Paris, announce having acquired the well-known phonograph and cinematograph business of Pathé Frères (London), Ltd., carried on at 14, 16, 18 Lamb's Conduit street (London, W. C.), and that in future the business will be carried on under the style of Pathé Frères, London, at the same address.

H. Courant, who has for many years been intimately associated with this business, will reside in England, and with the help of an efficient and experienced staff will conduct the business.

With a thirst for more information I called upon L. H. Courant, who very courteously supplied other details. As mentioned the firm in future will be known as Pathé Frères, London. It is not intended to take over all the old stock of machines and records, but to put absolutely new goods upon the market as soon as possible. The company are going to manufacture a disc. This is only a preliminary statement to more definite information next month, and although it requires the patience of Job to rest on such a meager remark we must abide in such satisfaction as each one of us can muster according to temperament. About the first of October next a revolution in recording may be expected. If all anticipations are reached dealers will be interested to know that the new Pathé records embody a new scientific principle of recording. Mr. Courant claims that it will revolutionize the trade. This next season special efforts are to be devoted to the sale of discs and intermediate cylinder records and every help will be provided for the dealer. Owing to the reduction in price of the ordinary record the sales have increased in a marked degree. It was naturally expected that such would be the case, and the success of the venture is amply evidenced by the continued stream of orders that are received.

## COLUMBIA CO. BRANCH IN WARSAW.

(Special to The Talking Machine World.)

London, England, August 7, 1906.

Undeterred by the unsettled social and political conditions in Russia, the Columbia Phonograph Co. are opening up a new branch in Warsaw, where for a long time they have had important connections. The new branch will be well stocked with Polish records as well as Russian, German and Hebrew, and will be the distributing point for Poland and Southern Russia, where a large and increasing volume of trade is being done in talking machines.

C. H. Miller, manager of the Oxford street branch of the Columbia Phonograph Co., has returned from his holiday on the East Coast, bronzed and happy in the accumulation of additional avoirdupois.

Horatio Connell and Bert Morphy recently made some splendid disc records for the Columbia Co., which they are publishing in the August supplement. They are of a very high order of excellence.

## "GLORIA" TONE ARM CYLINDER MACHINE.

(Special to The Talking Machine World.)

London, England, August 7, 1906.

I have had the advantage of inspecting an advance sample of this instrument, which Messrs.

Barnett Samuel & Sons, Ltd., specialize. At the suggestion of a tone arm in combination with a cylinder machine one's thoughts are naturally directed toward various cheap Puck machines, which have been fitted solely for purposes of show, with a small tin elbow, thus justifying a use of the term "Tone Arm Machine." The "Gloria" is, however, an instrument of an entirely different type, and I am not saying too much in prophesying that it will soon become one of the most popular machines on our market.

Its tone arm attachment has been ingeniously constructed on scientific lines, and actually assists materially in increasing and purifying the tone of the instrument. The cabinet is a substantial one of green stained oak, several attractive mouldings helping to improve its appearance. Messrs. Barnett Samuel & Sons will shortly issue illustrations and full printed particulars of the "Gloria" machine, and all dealers should write to Worship street, London, for same.

## THE GENERAL PHONOGRAPH CO.

J. H. White at the Head of Affairs—Manufacturing Both Cylinder and Disc Records—Huge Developments in Prospect.

(Special to The Talking Machine World.)

London, England, August 7, 1906.

Interest centers just now upon anticipation in relation to the future products of the above firm. Outside immediate trade circles little is known, excepting bare facts, but much is speculated upon. With a desire to clear the horizon and determine exactly what quality of record dealers may expect, I engineered my way to Easton Building, the company's new warehouse. The term "engineered," by the way, is expressly used, as near unto the premises it required an eagle eye to avoid the obstructive evidences of a future big business. I found Mr. White busily engaged in personally superintending the recording, but nevertheless courteously inclined to satisfy my huge capacity for news. The company consists of Mr. White and Mr. Greenberg, as first directors, certain of the departmental managers having an interest in the concern, which has a capital of nearly £40,000 behind it, with more to call upon if required. The firm intend to manufacture a cylinder and disc record, also a superior class of machine.

Among certain newly recorded selections I had the pleasure of listening to "Asthere" and "The Moon Has Raised Her Lamps Above," both excellent duets, by Peter Dawson and Tom Child, and was particularly impressed by the magnificent blending and natural tone qualities obtained. There was absolutely no blasting or metallic ring, and I venture to predict that Mr. White's record will find great favor with the public and soon obtain a prominent position in the field. The record is priced at one shilling, and will be known as the "White" record. Information regarding the disc record and machine will be forwarded later. Outside Mr. White, who is too well known to dwell further upon, the General Phonograph Co., have gathered around them other experts, including Mr. Von Dermee (late of the National), who has been appointed factory manager. With such experts, who are perhaps the most adept and inventive men obtainable in the talking machine industry, devoting their exclusive care and attention to turning out a really first-class record, dealers will not be disappointed in expecting to handle a line that can record its own merits. The labels of this company are striking and are gotten out in gold, red and black, the words "White Record" appearing in white on black background, producing a most novel and artistic appearance.

## LATEST NOVELTIES

The "Cordock" Concert Reproducer for Puck and similar type machines. Acknowledged by experts to be the finest reproducer on the market for small phonographs, 50 per cent. louder than any other reproducer of its kind. For volume, clearness and distinctness of tone, it stands alone unequalled. Factors should write for sample and wholesale prices, to

G. W. CORDOCK & CO.

High Street, Scunthorpe, Lincs., England.

## FROM OUR LONDON HEADQUARTERS—(Continued).

## NATIONAL PHONOGRAPH CO.

And Their Progressive Dealers—Their Combined Efforts Insure Good Steady Business.

(Special to The Talking Machine World.)

London, England, August 5, 1906.

The pleasantest feature of the summer season just ending, so far as phonographs are concerned, has been the realization by dealers in Great Britain that the talking machine business is one which merits attention from the dealer for twelve months in the year, and is not merely a winter side line. This satisfactory state of affairs is traceable to the efforts of the National Phonograph Co., Ltd., who were the first to introduce into this country the price maintenance system. This is a system which enables a manufacturer or distributor to keep in close touch with every dealer who is handling the manufacturer's goods. The National Phonograph Co., Ltd., have spared no efforts in their endeavor to secure for their agents shopkeepers and dealers of the best type. It is the custom of this company to have their representatives from time to time call upon every dealer who has at any time, and through any factor, signed a dealers' agreement. The information thus acquired is valuable, not only to the company in that it keeps them posted as to who are really the live agents, but also to the better class of dealer, because by means of these personal visits an undesirable agent is eliminated from their list. It has been felt that it was unjust to the dealer who invested his capital and used his premises to stock and exhibit talking machines through the entire year, and not a few months at the extreme end and beginning of the year, that he be called upon to meet the competition of his neighbor, who possibly only took up talking machines as a side line in the winter.

That the efforts of the National Phonograph Co. in this respect have been appreciated by dealers is amply proved by the increased business which has resulted this summer, the volume of which has been far in excess, both as regards machines and records, of any preceding summer season.

## NEOPHONE, LTD., EFFECTIVE PUBLICITY.

(Special to The Talking Machine World.)

London, England, August 5, 1906.

The Neophone, Ltd., had a very fine display at their stand (No. 10) at the Music Trades Exhibition held at the Crystal Palace. There were about fifty models on show, and the public generally were greatly attracted to the stand on account of the numerous show cards intimating that "Neophones Need No Needles." I overheard several people talking about the display, and a sample of their conversation is that if they don't know what the "Neophone" is, they know it needs no needles. Mr. Bragg, who was in charge, was kept busy all day answering inquiries respecting the new product of the Neophone, Ltd. The records were of such splendid volume that I understand the bandmaster in the grounds asked Mr. Bragg to desist from using the Neophone while the band was playing in the North Tower Gardens.

Another great attraction at the stand was the Neophone home recorder. This the public were intensely enthusiastic about, and the crowd at times numbered quite a hundred. The visitors were all anxious to make records, and many fine results were obtained. In some cases three and four visitors were waiting to get their "turn," and the reproductions were really astonishing. One gentleman came with his cornet and played very well, and several of the Handel Festival Choir contributed during the interval.

The Neophone, Ltd., are to be complimented upon the design of their stand, and the blending of the colors, white, gold and green, and also the perfect representative stock they exhibited.

## DR. MICHAELIS TO VISIT NEW YORK.

Dr. Michaelis, inventor of the Neophone, may

be expected in New York about, if not before, this is in print. His visit will be purely of a business nature, as I understand the firm's intention is to open up in the States. Neophone, Ltd., have been showing keen enterprise over here just lately, and if the same methods are adopted in America, the flies may be expected to buzz an indicating knell of advertising sorrow. For who? Don't trouble. You will soon know.

## HUNTING CO. TAKE ODEON BUSINESS.

Sole Rights for Great Britain and Australia Secured.

(Special to The Talking Machine World.)

London, England, August 6, 1906.

As will be seen, this has been a month of surprises in London. Many new developments, some of which have been maturing for a considerable period, have at last reached the stage of open confession. The Russell Hunting Record Co. have, since their inception, shown a resourceful enterprise only equaled by the very exceptional position they hold in this field of industry. They have sent letters to the branch conveying the information that they have concluded arrangements with the International Talking Machine Co., of Berlin, and the Fonotipia Co., Ltd., of London and Milan, by which they have acquired the sole rights of Great Britain in "Odeon" and "Fonotipia" talking machines and records. What effect this development will have on the trade cannot be speculated upon here, but the future will tell. Certain it is, however, that the influence and up-to-date methods of the Russell Hunting Co. will undoubtedly secure a larger demand than hitherto for the Odeon and Fonotipia records.

As an indication of this, the firm have already secured another large warehouse in City Road, in addition to their present premises. For the present they will remain there, but there is no intention of continuing to occupy the Hamsell street premises, which evidently are far too small to cope with the anticipated increased demands for these disc records. E. Rink, former manager of the Odeon Co., has been elected to the directorate of the International Talking Machine Co., of Berlin, but will reside in Milan. In relation to the disc business only the firm will be known under the name of Sterling & Hunting, Ltd.

## DISCOVERY OF OLD TIME RECORDS.

(Special to The Talking Machine World.)

London, England, August 4, 1906.

"Voices, that tho' silent are not forgotten."

The following is a list of some old-time records taken by one of the employes of the Edison-Bell Co., of London, in the year 1890. These records have until very recently been lost sight of, and in consequence of having been stored in unsuitable surroundings have suffered damage in various places by the attack of a minute fungus, which impairs the records here and there by the introduction of grating sounds. These records must not be compared as records with the advanced state of the art of recording of this day, but they are without doubt the productions of the genuine voices of the eminent personages represented.

The record made by the late W. E. Gladstone is most unfortunately the least intelligible, probably in consequence of repeated repetitions, and it bears the evidence of having been in unskilled hands and so has suffered damage from other causes than the mere wearing of the stylus. This is very unfortunate, as some of the words by close attention may be distinguished, most certainly his own utterance of his name.

The records, which are 14 in number, consist of the following:

Four by the late Poet Laureate Lord Tennyson, taken in his sick room during what proved to be his last illness. The titles are: "Let the Tale Be Told," "Bury the Great Duke," "Charge of the Light Brigade" (2).

One by Thomas Bailey Aldridge (the American author), on "Identity," July 4, 1890.

Two by Florence Nightingale, July 30, 1890.

One by P. T. Barnum, February 17, 1890.

One by Dr. William Bonny, of the Stanley Expedition.

One by Henry Arthur Ethrington (Vanity Fair), June, 1890.

One by Dr. Horatio Nelson Powers, of New York.

One by Mrs. Robert Browning.

One by H. M. Stanley.

One by the late W. E. Gladstone, March 15, 1890, message to a meeting in New York.

At the invitation of Mr. Hough I was accorded the pleasure of listening to certain of these records. Nobody can imagine the thrill of awe and delight that passes through one at the sound of voices long stilled. The reproduction is at intervals imperfect, but on the whole remarkably

FROM OUR LONDON HEADQUARTERS—(Continued).

clear for that time, when scientific recording was practically in its infancy. Among enthusiasts these records should be in great demand. Mr. Hough invites inquiries at 39 Charing Cross Road, London, and if there is sufficient call to warrant reissue he will no doubt make arrangements accordingly.

### NEW DEPARTURE IN RECORDS.

Larger Records Admit Longer Verses of Song.

(Special to The Talking Machine World.)

London, England, August 6, 1906.

When calling at the Edison-Bell office the other day, Mr. Hough, the manager, showed me what is practically a new departure in phonograph records. It has often been complained that a record made a trifle longer would frequently admit of extra verses of a song, or a few extra bars of a musical selections which have had to be cut out of the ordinary length of phonograph record, in consequence largely of the extra speed at which the present-day records are run and the shortness of the cylinders. By adding from one-quarter of an inch to five-eighths in length this defect may be remedied. A piece, for instance, like "The Lost Chord," cannot be put complete upon a phonograph cylinder, a most interesting passage always has to be left out. By utilizing the spare space which is demonstrated on all mandrels of standard lengths and size, this defect can be made good, and such as "The Lost Chord" be put on the slightly longer phonograph records without mutilation. It will be observed, of course, that this extra length is all "meat," the end washers being just the same, consequently the addition can be used to its fullest capacity. I think it highly probable when once this fashion is set it will be largely followed, and possibly universally adopted, as there has long been agitation among a certain section here for a longer record.

### JAMES H. WHITE HONORED.

Provincial Factors of the National Company  
Fete Popular Member of the Trade.

(Special to The Talking Machine World.)

London, England, August 5, 1906.

"We live in deeds, not years; in thoughts, not breaths;  
In feelings, not in figures on a dial.  
We should count time by heart-throbs. He most lives  
Who thinks most, feels the noblest, acts the best."

—Baileys.

Had these words been dedicated to Mr. White they could not have been more pertinent to the man, and such must be the thoughts of all who come in contact with him. At any rate, the

JAMES H. WHITE.

provincial factors of the National Phonograph Co. all thought so, as they took care to see that the verse in question was emblazoned on the menu card of the dinner they provided for Mr. White on the 27th at the Midland Hotel, Manchester. You all know that Mr. White has resigned his position with the National Phonograph Co., and is now at the head of the General Phonograph Co.

engaged in manufacturing what will be called the "White" record. In order to mark their feelings of appreciation and esteem for Mr. White, and at the same time avail themselves of the opportunity to record their hearty wishes for the success of his new venture, the provincial factors decided that a dinner and presentation would be the most suitable manner in which to do so.

A goodly company mustered at the Midland Hotel and a most successful evening was spent. The duty of the chairman was admirably discharged by Mr. William Newton, the popular factor of Newcastle.

After an excellent dinner the chairman addressed the gathering. In the course of his remarks he said: "I am delighted and honored to give you the toast, 'Our Guest.' We have assembled here to-night in a hostelry more or less consecrated to the talking machine trade, to do honor to one of its most distinguished members. Our guest is no stranger to any of us, so that there is no necessity for me to make a speech of introduction. But I think I will only be voicing your feelings if I say that the acquaintance and friendship of Mr. White has been something which each of us has prized, and of which we are not a little proud. I am sure that nothing I could say could possibly increase the respect and esteem in which he is held by all sections of the trade. We must remember and recognize that in a very large measure the healthy condition of the talking machine trade is due to the efforts of Mr. White in his endeavors to place practically a new industry in such a secure position as to prevent its early decay by a fearless application of the great principle of price maintenance. Personally, I consider that every straightforward factor and dealer in the United Kingdom is under a deep debt of gratitude to Mr. White for the state of the phonograph trade to-day. Had Mr. White not with great firmness stood fast on this, the question of price, to use a familiar phrase, the trade would have been in 'rags and tatters.'

# TO TALKING MACHINE MEN =====EVERYWHERE=====

During the past few months I have visited all of the principal trade centers in Europe with a view of getting in closer personal touch with the talking machine interests everywhere.

As a direct result of my investigations, I have opened an office in London, with a trained trade journalist in charge, who will pay the closest attention to the news and trade situation in Europe.

The space given to European news in this issue will show how I propose to extend the influence of this journal in other lands. I shall have, as well, a special Continental service, and this journal, as its name indicates, will wield an ever-increasing world-wide influence among talking machine men.

It is most gratifying to find the steady advance which the Talking Machine World has made in European countries, and the high compliments paid it there, where leading men unhesitatingly pronounce it the best paper of its kind published.

The steady and to some surprising growth of this paper is not without excellent reason, for it is the result of carefully matured plans. I may state that for years I have been collecting lists of talking machine men in every part of the earth, including the islands of the sea, so that when I first set our journalistic machinery in motion I had a complete command of the trade situation, which it is impossible to obtain without years of preliminary work and large financial outlay. Back of this I have a splendidly organized journalistic machinery, covering every part of America, as well as Europe, composed of trained journalists, who thoroughly understand the talking machine situation.

It requires years to build up such an organization, and I feel today that I can confidently say to Europeans that I am in a better position to serve their world-wide interests than any other organization. Foreign advertisers should know that the paper circulates extensively not only in their respective countries, but in all parts of the earth, of course not to the same extent as in America, but sufficient to give excellent results to advertisers. Some of my European advertisers have already reaped most satisfactory returns through their investment in the World's columns, and I propose to conserve their interests carefully and render a splendid equivalent for any investment which they may make with me.

This paper stands for the best interests of the talking machine trade. It has demonstrated its independence and its usefulness. The subscription price is extremely moderate, and there is sufficient value in each issue to equal the annual subscription cost. The World is today the strongest influence in the entire talking machine industry, and it is most gratifying to all who are connected with it to know that its growth is being steadily accentuated with the passing of each month.

**EDWARD LYMAN BILL**

New York, August 15, 1906.

## FROM OUR LONDON CORRESPONDENT—(Continued).

I may say that it gives me very great pleasure in now asking Mr. and Mrs. White's acceptance of a small token of our esteem and regard. Wishing him every success in his new undertaking, and may he and his good lady have long years of happiness and prosperity before them. Gentlemen, I now ask you to rise and drink to the health of our guest, Mr. White."

Needless to say, the toast was received with acclamation. Mr. White, much moved by the kind remarks of the chairman, in his reply, said that he did not know what he had done to deserve such a handsome gift, which he appreciated and thanked them for from the depth of his heart. In the time to come he would never be able to take a meal without thinking of "the boys of the Old Brigade" in the North. Although silverware could be destroyed, words

SILVER CHEST PRESENTED TO JAMES H. WHITE.

could not, and such kind words and thoughts as inspired this gift would ever live in his memory. He wished to propose two toasts in one—the "Provincial Factors and Thomas A. Edison," which, needless to say, was most enthusiastically honored.

This was then followed by several vocal and musical selections by well-known artists. Mr. James Stewart was most amusing and realistic in a voice-imitation of the phonograph. It was a novelty, requiring much vocal dexterity and was rendered in a most phonograph-like manner. Some more pithy speeches followed, in which reference was made to the guest, and it was evident therefrom that the regard in which Mr. White was held was most general.

Mrs. White and her sister, together with Mrs. Duwe, graced the company by their presence later in the evening. Mr. Duwe, as secretary of the Dinner Committee, showed his "Christian" character by doing his utmost to insure the absence of any hitch in the programme.

During the course of the evening telegrams were received from some who were unable to be present. Mr. Tilley (of "Titles" fame) wired from Cardiff his bitter regrets at his unavoidable absence, but the contrasting sweetness were the very hearty wishes sent. Mr. Lyle Taylor, the master-musician of the "White" record; Mr. Charley Howell, and Messrs. Brown Brothers, among others, wired their congratulations.

Mr. H. Clegg (Manchester Evening News) and Mr. B. W. Taylor (Manchester Dispatch) represented the local press, and L. W. Lillingston, Messrs. Dunlops and W. Lionel Sturdy the talking machine press.

The present consisted of a solid oak case of unique and handsome design, containing a set of silverware for all occasions. The case was inscribed as follows:

Presented to  
Mr. and Mrs. James H. White  
as a token of esteem  
by the Provincial Factors of  
the National Phonograph Co.,  
July 27, 1906.

One of the artists, Mr. Hamilton Hill, leaves here October 17 in the "Majestic" for America.

He will tour with the B. F. Keith service through Paterson, Hoboken, N. J.; New York, Boston and on to Toronto among other places. Mr. Hill makes records for the Russell Hunting Co. and the Gramophone and Typewriter Co., and if he can gain permission hopes to do some recording in the United States.

The following were present at the Northern Factors' complimentary dinner: Mr. and Mrs. Jas. H. Waite, Mr. W. Newton, Newcastle; Mr. and Mrs. Christian Dusoe, Manchester; Mr. J. Walsh, Blackburn; Mr. R. J. Appleton, Bradford; Mr. Swaine Stoddart, Mr. Fred Stoddart, Bradford; Mr. J. Harris, Dublin; Mr. E. A. Wood, Birmingham; Mr. E. Gardner, Padiham; Mr. Morris Greenberg, London; Mr. S. C. and Joseph Richardson, Mr. G. M. Geddes, Mr. Karl Wagenhaus, Manchester; Mr. J. Ellis, Sheffield; Mr. Burrows, Mr. S. Popert, Mr. A. M. Abbott, Mr. A. Cuthbert, Manchester; Mr. Arthur S. and Percy A. Dunlop, Mr. L. W. Lillingston, Mr. W. L. Sturdy, Mr. H. Clegg, Mr. B. W. Taylor, London.

### PRESIDENT EASTON AN ENGLISH VISITOR.

(Special to The Talking Machine World.)  
London, Eng., Aug. 4, 1906.

E. D. Easton, president of the Columbia Phonograph Co., visited London in July in the course of his annual European trip. He spent a fortnight on the Continent, and also went down to Manchester to have a look at the new Midlands branch recently opened there. He was accompanied as usual by Frank Dorian, European general manager. Mr. Easton was much interested in the progress made at the Wandsworth factory, and expressed himself as pleased at European conditions generally. In answer to inquiries he said the last year had been the best in the Columbia's history, and the prospects were for an even better report for the coming twelve months.

### INCREASE PRICE EDISON-BELL RECORDS.

(Special to The Talking Machine World.)  
London, Eng., Aug. 5, 1906.

The following is the text of a communication issued by the Edison-Bell Co.: "We regret to announce that in consequence of the serious advances during the present year in the market prices of all materials of which Edison-Bell records are composed, we are compelled to give notice of an impending increase in our prices to dealers, rather than use inferior materials. Our present stocks and contracts for supplies will carry us well into August, and we have decided to give dealers the benefit of the lowest prices as long as possible. After August 31 next the prices will be 7 shillings and six shillings 9 pence per dozen instead of 6 shillings 6 pence and 6 shillings three pence, respectively. Terms and other conditions, as heretofore."

### PROPOSED RETAIL PROTECTIVE SOCIETY.

(Special to The Talking Machine World.)  
London, Eng., Aug. 6, 1906.

To add to my previous report upon the above matter, I learn from Mr. Tobin, the organizer, that the suggestion is being warmly supported by the dealers, but it is a fact that the manufacturers show a somewhat surprising indifference to the movement. Mr. Tobin invites correspondence, and as soon as a satisfactory number of promises to subscribe for membership are received a meeting will be called to discuss the matter further and appoint the necessary executive.

### SOUSA'S LATEST MARCH HEARD.

(Special to The Talking Machine World.)  
London, Eng., Aug. 7, 1906.

Sousa's latest march, "On to Victory," is announced by the Columbia Co. in ten-inch disc record No. 3404. The march is introduced into "The Free Lance," a new comic opera written by Sousa, which is having a successful run in the States.

### SEEN AND HEARD IN LONDON TOWN.

New Zonophone Catalogue, American Talking Machine Co. in New Quarters—Bruce's Specialties in Records—Other News.

I have before me one of the Zonophone Co.'s latest catalogues of records. Apart from being well printed and neatly arranged, the list contains a comprehensive tabulation of various band and instrumental selections. The vocal section contains many popular airs (old and new), and being allocated in each case under the name of the artist, is most adaptable for easy reference. Generally, business is very good with this company.

\* \* \* \*

The American Talking Machine Co. will be ready to do business from their new premises in Tabernacle street by the time this is in print.

\* \* \* \*

David Bruce & Co. (151 High Holborn) are offering for sale some magnificent all-British made disc talking machines. The firm also manufacture in their own works from master patent, what they claim to be one of the finest sound boxes on the market. Also a needle warranted to play 50 records without signs of wear.

\* \* \* \*

Recently meeting Mr. Spiers, the well-known Birmingham factor, he informs me that the provincial trade is, generally speaking, pretty good. Of course, the present activity with the manufacturers will soon spread to the factors, and as the summer wanes, to our very much respected dealer.

\* \* \* \*

Among the new August records announced by the Columbia Co. are several very attractive numbers on seven-inch discs. They are brisk marches and lively dances, and ought to have a wide popularity.

\* \* \* \*

Ten more long six-inch gold moulded records for cylinder machines with long mandrels have just been published by the Columbia Co. Six are instrumental selections, the rest vocal.

\* \* \* \*

A novelty for talking machine users is offered in the August supplement of Columbia records in three ocarina solos on 7-inch records. This seldom-heard instrument makes a good record. The tone is clear-cut, without being shrill. The quality is distinctive and the reproduction effective. On the Continent such records are in high favor, and no doubt these now under notice, which are played with remarkable skill, will find many British admirers.

### COLUMBIA TAKES FIRST PRIZE.

(Special to The Talking Machine World.)

London Eng. Aug. 5, 1906.

The Columbia sound-magnifying graphophone has just taken first honors at an exhibition held in Wurtemberg, Germany. The loud-sounding instrument is having a splendid sale on the Continent, the demand being considerably in excess of the supply. Interest in the machine is everywhere considerably on the increase, and dealers particularly are ordering them because of the splendid help they find them in showing records to customers.

### NOVEL RECORD ADVERTISING.

(Special to The Talking Machine World.)

London, England, August 6, 1906.

The Russell Hunting Record Co. recently resorted to an advertising scheme that for originality surpassed anything so far adopted by the trade in "Yankeeland." The company sent up a balloon from which was dropped 5,000 coupons each entitling the finder to their choice of any record on the Company's list. Within three days 3,500 of the coupons had been returned and the records claimed. Each recipient of a record gave his name and address, and thus many valuable names were added to the list of prospects.

# TWENTIETH CENTURY "HOME"

A WONDERFUL NEW GRAPHOPHONE  
NOW ON THE MARKET A MARVELOUS INSTRUMENT

THE demand for a Graphophone embodying the principles of the "Twentieth Century" but smaller in size than the "Premier" and particularly adapted to the home and small halls, has resulted in the bringing forth, by the Columbia Phonograph Company, of a new machine known as the **Twentieth Century "HOME."** We present a picture of it below.

This new type of machine sells, without horn, for

## \$75

and is, in every respect, a thoroughly first-class instrument.

It has the same essential features that have made the Twentieth Century "Premier" famous.

TWENTIETH CENTURY "HOME" GRAPHOPHONE  
(TYPE BM)

Mounted in a

### Mahogany Cabinet

of great beauty and high finish and equipped with a strong motor, the

### Twentieth Century "HOME"

LEAVES NOTHING TO BE DESIRED

Uses the regular Cylinder Records—all makes—as well as the new Columbia Twentieth Century Cylinders, half a foot long: 50 cents each.

While the **VOLUME** of tone from records played on the new machine is somewhat less than when they are reproduced on the Twentieth Century "Premier," the **QUALITY** is full.

Measured by ordinary cylinder machines, the **Twentieth Century "HOME" GRAPHOPHONE** is so far in advance of them as to leave no room for comparisons.

## NEWS FROM THE EMERALD ISLE.

Talking Machines at Country Fairs—Recent Visitors to Belfast—J. H. Whites' Resignation Regretted—Neophone Novelty Demonstrated—Sousa's Attack on Talking Machines—Exploiting House Property With the "Talker"—Equipment for the Seaside.

(Special to The Talking Machine World.)

Belfast, Ireland, August 3, 1906.

In an agricultural country such as the North of Ireland, special exhibition of cattle, farming implements, etc., naturally appeal to a very large and important section of our population. This was evidenced by an enormous "gate" at Newtownards, County Down, when the annual "show" of the North Down Agricultural Society attracted the fairest of Ulster's daughters, the elite of the province, horse and cattle breeders from far and near, and last, but not least, thousands of farmers from the counties of Antrim and Down—fine, typical specimens of that healthy and robust race which has been correctly described as "the backbone of Ireland," and from which has sprung the most successful merchants of Belfast. Judging from newspaper reports the two leading features of the exhibition were the horse jumping competitions, and the "musical treat." The latter was a splendid programme of choice selections rendered on the Monarch senior gramophone and Edison phonograph. The entire arrangements in connection with these concerts were entrusted to T. Edens Osborne, of Belfast, who displayed laudable judgment in choosing the gramophone, zono-phone and Odeon disc records and the popular Edison and "Sterling" cylinders, the rendition of which was much appreciated.

The genial manager of the British Zonophone Co., London, G. P. Long, paid a flying visit to Belfast recently. He had the pleasure of congratulating his factor (Mr. Osborne) on account of his output of Zonophone goods, being treble what it was in April, May and June of 1905, thus indicating that the demand for "talkers" and records in summer is growing phenomenally.

R. G. Smyth, the energetic and popular representative (for Ireland and Scotland), of the Gramophone & Typewriter, Ltd., was another visitor, and in conversation with his largest local customer reported that the summer sales of this company's products were highly gratifying.

The resignation of J. H. White, who until quite recently was managing director of the National

Phonograph Co., has caused widespread regret, especially among all factors who enjoyed the privilege of being "hand in glove" with him. His geniality, good nature and urbanity, coupled with organizing abilities of a high order, endeared him to the clientele of his late company. No one can contemplate the charming personality of Mr. White without being strongly impressed with his splendid physique, his good-natured, honest physiognomy, and a temperament indicative of that "Suaviter in modo, fortiter in re," so essential to success in life.

By an artistic "carte postale" mailed at Suez on June 16, S. W. Dixon, the esteemed manager of the Gramophone & Typewriter, Ltd., London, apprised T. Edens Osborne that he was thus far on his return journey from his successful South African business trip; having such an efficient staff in London it is anticipated that Mr. Dixon could not have experienced much anxiety concerning the affairs of his company while abroad.

P. Mellerio, formerly manager of the British Zonophone Co., now occupies a prominent position in London, namely, "manager of the sales department" of the National Phonograph Co. His many friends in the trade heartily congratulate him on his appointment.

The latest novelty shown at Scottish Provident Buildings, Belfast, is the new device of the Neophone, Ltd., for attachment to the sound box of a disc "talker," consisting of an elbow for adjusting it to the proper angle, and a pin with reproducing sapphire substituted for the ordinary needle; a taper arm instrument thus becomes suitable for operating the Neophone records. The reproduction, though wonderfully good, is not considered by local experts at all equal to an up-to-date gramophone. Doubtless the Neophone will ere long be much improved by its clever inventor, Dr. Michaelis.

Sterling phonograph records have become "prime favorites" in North of Ireland, and seem to be ousting several brands sold at same price, one shilling, from the market.

The attack made by Sousa on talking machines was much commented upon in this country. Fortunately, the public of Belfast are gifted with a fair share of commercial perspicacity, and accordingly were well qualified to "read between the lines" when perusing the published extract from Sousa's speech before the Congressional committees. Surely a change has suddenly come over the spirit of his dream, for only a few years ago when "talkers" were but crude and primitive in comparison with present-day instruments, he wrote to Mr. Barry Owen, "Your gramophones are all right."

Toujours la politesse! A pretty compliment—unconsciously administered—was paid to the Gramophone a short time ago in the talking machine depot of T. Edens Osborne. One of his lady customers, before leaving the establishment, had to pass close to a gramophone in operation. Just at that moment Russell Hunting was announcing the title of one of his well-known "Michael Casey" records, and the lady thus taken by surprise immediately turned toward the instrument and said, "I beg your pardon," before she discovered she was apologizing to a gramophone (for so rudely passing in front of the speaker).

One of the latest uses to which the "talker" has been locally applied is to attract investors to desirable building sites, and to exploit and develop house property. With commendable enterprise Sir Robert J. McConnell, Bart., has purchased an up-to-date Gramophone which he has installed in the picturesque pleasure gardens of the Garden Estates Co., Cliftonville Circus, Belfast. It has been placed in a sweet little tea house (in charge of Miss Hamilton) which is now therefore a new type of Café Chantant.

It is significant that many families now include a talking machine and records as an item of their equipment when going to the seaside. Furthermore, the "talker" is now an essential factor in camping parties—indeed, this was evidenced at the charming seaside resort of Helen's Bay, County Down, during the months of June and July, where the Edison Home Phonograph was used by the Bohemian Camping Club for the enjoyment of its members, and the general public.

## TRADE HAPPENINGS IN THE WEST

Appreciative of National Phonograph Co. Courtesies—Babson Bros. Branch Out—G. M. Nisbett Joins Forces—C. M. Noyes Chats Interestingly of San Francisco Matters—New Coin-operated Machine—Eckland's Plan of Campaign—Cable Company Expansion—Lyon & Healy's Great Record—Henry B. Babson May Retire from Universal Talking Machine Co.—To Locate in Chicago—All the News of the Month Carefully Presented.

(Special to The Talking Machine World.)

World Office, 195 Wabash avenue,  
Chicago, Ill., August 11, 1906.

Ordinary adjectives are entirely inadequate to express the opinions of the Chicagoans who attended the Edison reception in the East. They returned full of enthusiasm regarding the magnificent hospitality tendered them, the remarkably able management of the whole affair, and the priceless privilege of meeting and conversing with Mr. Edison himself. Following are some of the expressions:

F. L. Babson, of Babson Bros.—“The whole affair was conducted on a great, broad-minded way, and far exceeded anybody's expectations. Mr. Dolbeer, who had charge of the programme, and all the officers of the company, are to be congratulated. Everything was carried out without a hitch, the hospitality was lavish and the visitors were not allowed to spend a cent. Business was tabooed. Possibly many thought the Edison people were getting us down there to talk business to us, but such was not the case. Shop talk was tabooed, and it was simply a great, big, glorious family gathering.”

J. W. Harrison, of the Cable Company.—“The Edison people certainly treated us royally. The way the big crowd was handled was a marvel. There were no mistakes, no failures to carry out the programme as arranged, and the whole 250 of us were looked after with as great care and given as much personal attention, and entertained as liberally, as if there had been only three or four of us.”

C. E. Goodwin, Lyon & Healy.—“I can't say too much in praise of the National Phonograph Co.'s reception to their jobbers. Everything was conducted on a princely style. Just say that the whole affair was up to, if not a few points above, the usual Edison standard, and you have it in a nutshell.”

James F. Bowers, treasurer of Lyon & Healy, had the privilege of spending almost the entire time during the trip to West Point in Mr. Edison's company. “He's the greatest man that ever lived,” said Mr. Bowers. “His knowledge is universal and encyclopædic, and his manners are as simple and unaffected as a child. He loves a joke, and can tell a good story, but he's a serious minded man, nevertheless. Just for instance, at one time when there was a little pause in the conversation, he turned to me, and waving his hand toward the magnificent landscape, said: ‘I can't understand how any one who knows anything about chemistry or delves into the secrets of nature, can doubt for a moment that this glorious world of ours evidences a Creator, an overruling Intelligence—a Ruler of all.’”

Touching on Edison's relations to the industrial world, Mr. Bowers said: “Just think of the enormous number of men given employment as the result of this man's genius. Three thousand seven hundred men are employed at the talking machine factories at Orange alone. Twenty thousand at the great works of the General Electric Co., besides those at the Edison lighting plants throughout the country. Talk about your captains of industry! This man's a general. And yet as simple and unaffected as a child,” he repeated, musingly.

Edward H. Uhl, Rudolph Wurlitzer Co.—“Everybody had the time of their lives. Both in general scope and in the manner in which the details were executed it was a remarkable affair. While it was primarily and absolutely a social affair, yet the gathering of so many jobbers from all parts of the country must be of invaluable commercial benefit to them all. The exchanges of experiences in hotel corridors and en route to the various points of interest visited proved invaluable, I am sure.”

P. E. Conroy, of St. Louis, passed through Chicago on his belated return from the East.—“The Edison affair was simply magnificent,” said he. “The best thing about it was that there were no playing of favorites. The mere fact that a man was an Edison jobber no matter how small placed him on a par with the biggest handler of Edison goods on the list. I don't think there has ever been anything like it in any line of trade whatever.”

The most important news item of the month from the Chicago standpoint is found in the fact that Babson Bros., who started in business a little less than a year ago in the mail order talking machine business, have decided to branch out extensively in the jobbing business, with a view to gradually concentrating their entire energies to the wholesale end. G. M. Nisbett, one of the best-known talking machine men in the country, will have charge of the wholesale department, and will have a working interest in that end of the business. The wholesale department will be conducted separate from the other branch of the business now at 149 Michigan avenue, and Mr. Nisbett will probably have secured spacious quarters for his department by the time this issue of The World reaches its readers. The firm will be Edison jobbers on a large scale, and heavy orders for goods have already been placed. They will also carry a disc line, but arrangements have not yet been completed. F. L. and Gus Babson are recognized as two of the brightest, keenest, most aggressive young men in the business. They have literally grown up in it, and got their early training with such men as their brother, Henry Babson, and Mr. Douglass, now of the Victor Co.

G. M. Nisbett came to Chicago in October, 1905, as city salesman for the Edison Co. Has been with them ever since, and the last two years until the discontinuance of the Chicago office has been in charge of it as the company's Western manager. He is a thoroughly posted man, and has wide acquaintance with the Western dealers. Babson Bros. are prepared right now to fill orders for Edison goods, but will go after the business on an aggressive scale by September 1.

C. W. Noyes, secretary of the Hawthorne-Sheble Manufacturing Co., and Western representative of the American Record Co., returned on August 6, from a trip to the Coast, which has proven a record breaker, both in territory covered, considering that he only left Chicago on June 26, and in the volume of business. He says that the past year has witnessed a wonderful development in the talking machine business in the far West. Any number of new jobbers have been created, and they in turn have been at work aggressively, and have got dealers started in little hamlets where no talkers were sold before. All of the older distributors have placed much larger orders for fall than last year.

‘Frisco was a revelation to him. “One dealer told me that I would be surprised to find the number of talking machines among tent dwellers in Golden Gate Park,” said Mr. Noyes. “I admit that I was incredulous at first, but not after I took a trip out there one evening. The air was full of melody. It was a great record exhibition. I only went through a small portion of the tent city and counted twenty-five talkers, and, of course, there were plenty more concealed. A large number of the talkers at Golden Gate Park have been purchased since the quake and fire. Of course, there are many people out there rendered destitute by the great disaster, and who are supported by the city. But perhaps the larger portion of the tenters are employed at good wages. The transforming of some of the residence streets into marts of trade have driven the former residents out, as they cannot pay the high prices obtainable from business firms. These concerns who are back in the talking machine business in ‘Frisco are doing a really big business, and a big trade is being done from Oakland. Everybody is placing large orders. Kohler & Chase are in temporary quarters on Sutter street and are making arrangements to put up a building on their old site. Just now all their talking machine business is being done from Oakland. Sherman, Clay & Co., who have been in Oakland, are establishing temporary quarters on Van Ness avenue, and will have a magnificent stone and steel fire and earthquake structure on their old site.

“Peter Bacigalupi didn't stay wiped out. The next day after the fire he was down on Golden Gate avenue leasing ‘foundations’ and letting contracts for temporary stores. Bacigalupi's market is a wonder. He put up a roof and rented space to sixty merchants in all lines, who have put up their own booths and are paying Peter a rental and a percentage of the profits. You can buy anything, from a pencil to a threshing machine there. Next door is Bacigalupi's

## Chicago Horn Support

### FOR EDISON PHONOGRAPHS

FRONT VIEW—SUPPORT INVISIBLE

The simplest, neatest and most practical Horn Support on the market. Has many advantages over other devices of this kind. Is adjustable to different size horns, holding the largest size bell horn perfectly without tipping the machine.

This support is so constructed that it comes directly under the machine and practically out of sight, leaving the top of machine perfectly clear. This support is quickly attached and detached, and folds up into a package 1¾ inches by 2¼ inches by 15 inches in length, allowing same to be packed inside of machine case. Handsomely finished in heavy nickel plate.

Ask your jobber to send you a sample. Must retail for \$1.50 each. Wholesale, 75 cents each.

**CHICAGO STAND CO.**  
266 Wabash Avenue, CHICAGO

SIDE VIEW

main talking machine store. Nearby is a restaurant run by one of 'Frisco's most famous chefs, and in which the talking machine man has an interest. He was preparing to start a drug store when I left. He has another talking machine store on Fillmore street. I spent a Saturday afternoon there, and the store was literally crowded. One \$300 outfit was sold. Everywhere I went a remarkably good dull season's business was being done. At Los Angeles the Southern California Music Co. have just taken hold of the Edison line in a large way as jobbers. They are also Victor dealers and handle Hawthorne-Sheble supplies, and are American record jobbers. They have fitted up the second floor for the talking machine department, and have five plate glass record rooms. They are doing a big business, both wholesale and retail. Up on the north coast I found things booming. Graves & Co., at Portland; D. S. Johnston & Co., Seattle; Eilers Music Co., and the Spokane Phonograph Co., Spokane, are all doing an excellent business right now, and are preparing for a phenomenal fall business, judging from the size of their orders.

At Butte, Mont., Oiton Bros., are preparing to move their talking machine department from the basement to the second floor, where the business will be pushed more energetically than ever, and where they will have handsomely fitted up record rooms. At the Montana Phonograph Co., at Helena, Frank Buscher told me that when they first went into the jobbing business a short time ago there were only 13 talking machine jobbers in the State. They have created many others since. Mr. Buscher cited the fact that the length of Montana from east to west is approximately 800 miles—almost the distance from Chicago to New York—and is 500 miles wide. This gives an idea of the chance of business development in the future.

Among the other cities covered by Mr. Noyes in his trip were Kansas City, Omaha, Lincoln, Denver, Colorado Springs, Salt Lake City and Ogden, in all of which he found the talking machine dealers in a flourishing condition.

E. C. Plume, who represents the Columbia Phonograph Co. to the jobbers in the Western field, left on July 28 with his family for a two or three weeks' vacation at Berrieu Springs, Mich. He has recently created a number of new jobbers for the Columbia product in Chicago.

H. A. Steadman, manager of the talking machine and gun departments at Hibbard Spencer, Bartlett & Co.'s, who has been ill with typhoid fever for the past six weeks, and at one time was very near death's door, is slowly convalescing, and hopes to be able to assume his desk again before the month is out.

A. S. Thompson, manager of the talking machine and musical instrument, sporting goods and toy departments at Rothschild & Co.'s, left the latter part of the month for the East, where he will spend several weeks buying goods in his various lines.

The Automatic Machine & Tool Co. have now on the market a coin-operated talking machine of decidedly unique nature. It is equipped with twenty-four disc (Victor) records, twelve on each side of the center revolving table, which holds the record being played. The programme is in sight, and any special number desired can be selected by the turning of a knob. Above the revolving table is a magazine holding 150 needles, one of which is fed automatically for each record. After the record is played the needle just used is dropped into a cup, which, as the record disappears, is carried into a receptacle on the side. To operate the machine a nickel is dropped in the slot, and the crank handle turned once, winding the motor for one record. A unique feature is that steel or iron slugs will not work, as they are at once deflected from the coin channel by a magnet. It is a crowd entertainer, the large horn emerging from the top of the machine.

The Victor Novelty Works, who manufacture a large line of slot machines, are about to bring

out a coin-operated cabinet machine, using the Twentieth Century Graphophone, and thus producing a remarkable volume of tone. The Columbia cylinder records will, of course, be used. It will be on the market about September 1. A number of records are on a spindle, and the one to be played is automatically shifted unto the mandrel. One turn of crank winds for record.

\* \* \* \*

O. Eckland, manager of the instalment department of the Chicago Phonograph Co., has now no less than 284 solicitors out in Chicago, and within a radius of 300 miles of the city. In addition to these he has a number of women engaged in the city stirring up prospects and keeping the solicitors, who work on commission, from getting discouraged, because of the otherwise totally unproductive calls they would have to make. The young women make a systematic canvass of the district to which they are allotted, visiting every house and flat. They get easy admission by a peculiar method of approach invented by the ingenious Eckland. Then they proceed to find out whether the householder has a machine; if not, whether he is favorably disposed toward the proposition; if he has a machine, whether he would exchange for a better one. Their reports of course furnish valuable pointers for the regular canvassers.

\* \* \* \*

W. W. Parsons, manager of the commercial department of the Chicago office of the Columbia Phonograph Co., spent his vacation last month in the East. He visited the Columbia factory, and was impressed with the immense increase in equipment and output since his last visit five years ago. He reports that the new type of the dictation graphophone, especially adapted for use in the smaller cities and towns where they have no direct current, will soon be ready for the market.

\* \* \* \*

Since Arthur D. Geissler came to Chicago in February last to take charge of the Talking Machine Co., he has made some very aggressive moves, which have had the effect of immensely increasing the wholesale business of the company. For one thing, he has eliminated the retail business of the company entirely, including the mail order business, which amounted to something like \$15,000 per month alone. The Talking Machine Co. are exclusive Victor distributors, and continually carry a stock of 100,000 Victor records. Moreover, a number of extra men have been added to the shipping department so as to enable them to fill all orders the same day received. Mr. Geissler exhibits with pride a recent order for 500 records, which was filled with only five "outs," and he says their orders will average 95 per cent. of the records scheduled filled from stock. As soon as a record is received from the factory, it is placed in a special envelope and sealed, so it is never used before shipping and the dealer is assured of a perfectly fresh record. The envelopes are, of course, cut out so as to expose the label of the record. James Milne, who, while a young man, is one of the oldest talking machine salesmen on the road, but who for the past six months has been out of the line settling his father's estate, and has been placed in charge of the Talking Machine Co.'s road men, and will personally call on the trade in Southern Michigan, Southern Wisconsin, Northern Illinois and Northern Indiana.

\* \* \* \*

C. L. Hibbard, manager of the Chicago branch of the commercial department of the National Phonograph Co., reports that sales of the Edison business phonograph are far beyond his expectations. A number of the largest concerns in the city have adopted the Edison dictation machine, and are enthusiastic over the results they are securing. Handsome quarters are occupied by Mr. Hubbard, and a large corps of assistants on the sixth floor of 304 Wabash avenue. Separate from the offices is a room devoted to the school of instruction, in charge of Miss Davis. Here a number of young women are being trained in the use of the business phonograph, and experienced operators can be furnished at a moment's notice. When the Edison machines are installed in a

# ALL IN AN ENVELOPE

This is the way your Records look when you receive them

**"If You Get Them from Us."**

As soon as received from the factory they are placed in an envelope and sealed. This seal is not broken until, in selling a customer, you break it.

**We Are the Only Victor Distributors in United States Who Do Not Retail.**

You might just as well be dealing with the Factory direct—the Goods reach you in the same condition.

NEWARK, N. J., U. S. A.

house the stenographers in its employ are welcomed at the company's office, and, by spending their spare time there for a few days, become proficient in the use of the business phonograph. The school of instruction is equipped with all makes of talking machines.

Considering the fact that the Cable Co.'s talking machine department did not get under way until what is usually the dull season of the year was upon us, Mr. Harrison has every reason to be pleased with the showing he is making. Last week was the largest they have had, and besides a brisk record sale several high-priced outfits were sold. The new wholesale stock-rooms referred to last month are now all completed and stocked, and the department is decidedly busy. Talking machine departments are being rapidly established in the Cable Co.'s branch stores throughout the country, ten of them having already gone into the talker business.

The splendid new store of the Rudolph Wurlitzer Co. is getting an excellent summer's business, both in talking machines and automatic instruments. Wholesale business is reported as more than satisfactory.

Mr. Israel, who was buyer and manager of the talking machine and other departments at Hillman's department store up to three years ago, has returned to Chicago and assumed his old position.

A. J. Morrissey, city wholesale salesman for the Columbia Co., returned recently from his vacation spent in New York.

Mr. Faber, of the Healy Music Co., has returned from a three weeks' visit among relatives in Iowa, North Dakota and Minnesota. Incidentally he took a talker along and made a number of sales. He contemplates putting out a number of canvassers in Chicago and vicinity.

James H. Stuart, formerly in the mercantile agency business in Chicago, has gone to Toledo, Ohio, and has organized a company for the manufacture of an indestructible record. It is understood that he expects to commence its manufacture in about six weeks.

C. E. Goodwin, manager of the talking machine department at Lyon & Healy's, says that the record of their department this year has been a continual surprise to him. July, he declares, scored an increase of something like 80 per cent. over the corresponding period last year in total sales. Of course, the addition of the Edison line has had something to do with this, but the Victor business has been way ahead, both in wholesale and retail. For the summer months an astonishing number of the highest grade Victor outfits have been sold. The increase in the Edison wholesale business has compelled increased facilities, and a large space in the rear of the talking machine department on the fourth floor has been converted into an Edison stock room. All disc records are now enclosed in rice paper envelopes. Mr. Goodwin makes the point that any retail orders from towns where they are selling dealers are promptly referred to the latter. L. K. Cameron, who is in charge of the retail department on the fourth floor, has returned from his vacation spent in Colorado.

Albert Janpolski, whose oratorio records are very popular, was a visitor at Lyon & Healy's a week ago. The only trouble that Mr. Goodwin will own up to is a fear lest his force be seriously decreased by the wiles of Cupid. Several of his young lady assistants have returned from their vacations wearing engagement rings.

The Chicago Stand Co., 266 Wabash avenue, are having an excellent demand for their new horn support for Edison phonographs. The unique feature of this support is that it is invisible to one standing in front of the machine. It is adjustable to the different size horns, holding the largest size bell horn perfectly without tipping the machine. It is nickel-plated and folds into small compass, enabling it to be packed inside a Home machine case. It has been on the market for several months, and dealers who are handling it describe it as being one of the most practical and convenient devices of the kind on the market.

Henry B. Babson arrived in Chicago a few days ago and expects to make this city his home in

the future, to the delight of his many friends in the trade. Mr. Babson says he is not prepared to make any statement as to his plans at this time. He will spend a week of each month in the East looking after his interests there, but has not yet decided on what he will do here. It is reported in the trade that he will join his brothers in the firm of Babson Bros., who, as reported in this issue, are branching out largely in the jobbing business. When asked about it, he reiterated that he had made no plans as yet.

Frank Dillbahrner and C. H. Wyatt will engage in the manufacturers' agency business under the name of the Western Talking Machine & Supply Co., with offices at Suite 305, No. 185 Dearborn street. They are now completing arrangements for their lines, which will be announced later.

Charles E. Hunt, representative of C. W. Cole & Co., makers of the famous "3 in 1" oil, has placed the agency for this celebrated oil with Lyon & Healy, Jas. Lyons and the Cable Company.

THE DENHAM "CABINET."

## 2 MYSTERIES:

1. Why did a large number of well known dealers and jobbers sell more phonographs and records during the "dull" months of June and July than they sold during any preceding two months this year?

2. Why were more Denham phonographs sold by us in June and July than during any preceding two months this year?

Because our "selling schemes" have caught on, and every dealer and jobber who has tried one of them has made a success of it; and, by handling Denham phonographs (along the novel lines suggested by us), has enormously increased his sales of his regular lines of phonographs and records.

Our "selling schemes" violate none of the clauses of any of the price maintenance contracts, and are being worked with invariable success by many of the best known Edison, Columbia and Victor dealers and jobbers.

Write for particulars to-day if you wish to secure exclusive rights in your town.

# Quality Records

¶ QUALITY has been the keynote of our success. When this business was founded, it was with quality as a foundation stone, and we were determined that our product should be of such standard quality that it would win the approval of the trade strictly upon its merits.

¶ It has not been our policy to make vainglorious statements concerning ourselves, but we have rather preferred to let our records tell their own story of excellence.

¶ The growth of our business, which to-day occupies one of the largest plants in the world devoted to record making, is perhaps one of the strongest arguments which can put forth in favor of our records.

Write to-day

Best Artists.

¶ Jobbers who have placed sample orders with us have invariably repeated them, and it is conceded that the

## International 10-Inch Records

**Retailed at 40 cents are the Best in the World**

¶ We make liberal discounts to jobbers, so that our proposition is at once the best from a business standpoint.

¶ It offers better profits to the jobber, and it is a fact that people who have bought International Records clamor for them. They know of their excellence and will take no others.

¶ Another point to consider is our ability to fill orders promptly. We carry an enormous stock, and can always make prompt shipments.

## INTERNATIONAL RECORD COMPANY

40-46 Washington Street, Auburn, N. Y.

## BOSTONIANS JOURNEY TO NEW YORK BY AUTOMOBILE.

Four well-known, not to say very much alive, talking machine men of Boston, Mass., made the trip from that city to New York, to attend the Edison jobbers' entertainment, in an automobile, the group being shown in the accompanying picture. C. G. Andrews, of the Boston Cycle & Sundry Co., the owner of the car, is at the wheel, and Frank Boyd, of the Iver Johnson Sporting Goods Co., alongside in front. The rear seat is occupied by Dwight Andrews, of the Linscott Sporting Goods Co., and William Veal, of Read & Read. The party took it easy, having a most enjoyable time, using up three days going over, with stops by the way, and 14 hours to return, which is good time for a 14-horse-power car.

In view of the above facts, manufacturers of arcade fittings, slot machines with musical attachments, etc., would do well to investigate the possibility of covering that field.

## SELECTING FESTIVAL ARTISTS

For Musical Festival at Louisville—Artists Heard Through Medium of "Talkers."

(Special to The Talking Machine World.)

Louisville, Ky., Aug. 11, 1906.

When names of artists are suggested as possible attractions for the Louisville May Festival at the meeting of the incorporators, their work will be reproduced for inspection and consideration.

"Schumann-Heink would be a great feature," one incorporator may suggest.

A record will be slipped into place upon a phonograph of the most expensive type and the voice of the famous German matron will swell forth into almost actual reproduction. The promoters of the event, which is to mark the beginning of a new era in the musical circles of Louisville, will have a realistic forecast of its possibilities.

If some one mentions Damrosch another record will be put into service and the great symphony orchestra will be heard in one of its most famous successes. So it will be when others of the world-renowned musicians are suggested.

This unique feature has been planned by Andrew Broadus, who possesses the high-class talking machine which is said to be nearly perfect in its reproduction of the human voice and instrumental music. Many of the music-lovers of Louisville have heard it at Mr. Broadus' home and have been thrilled. He also had the instrument at the Board of Trade offices the other day. The concert, however, was not given for the benefit of the general public, and only the incorporators of the festival society were present.

In a church in Monroe, Me., a talking machine is used to lead the music.

## SLOT MACHINES UNKNOWN IN GREECE.

(Special to The Talking Machine World.)

Consul George Horton, writing from Athens, says: "Coin-operated or 'slot' machines are practically unknown in Greece, about the only examples of the kind being a few introduced by the Princess Sophia in the interests of the Society for Forest Preservation, of which she is honorary president. These machines are manufactured here and are clumsy things. They give out in return for a 20-centimes nickel a small paste-board card. The possessor of 100 cards receives a copper medal entitling him to honorary membership in the society. These machines are not very well patronized, as the inducement is remote and intangible. A slot machine that has

something attractive to offer should be a great success in this country. The Greeks do not chew gum, but they are, for example, inordinately fond of perfume. An agent who would come here with a good machine would be repaid for his trouble. It do not know whether anything could be done through correspondence or not, but names of parties who might possibly be interested are sent herewith. [The names can be obtained from the Bureau of Manufactures.] Coin-operated machines are not mentioned in the tariff lists, and it is therefore safe to assume that they would pay a duty of 20 per cent. ad valorem, besides octroi and port dues. The bill of lading, certified by the Greek consul of the place of origin, together with a letter from the seller or manufacturer, must be presented to the custom-house authorities."

**NEW YORK, AUGUST 15, 1906.**

THE talking machine business has maintained a fair activity in this country during the summer months, and we may add that the summer trade in America is surprisingly good when compared with the European trade in the talking machine line. We have, during the past few months, visited the principal cities in the British Isles and on the Continent, and while the prospects for an early fall business are excellent, there is apparent an unmistakable stagnancy during the heated term. Whether this is due to the fact that Europeans live largely out of doors during the summer, and care little for inside attractions, is a matter which might be open to argument. But the main fact remains, that the talking machine trade in Europe is extremely quiescent during the summer.

ANOTHER point which is apparent to those who have studied the trade situation in Europe is that price cutting is indulged in there to a greater extent than here in our own country. Price cutting has a tendency to disturb settled conditions, and in the end it has the effect of demoralizing trade conditions and reducing profits to a point where they are hardly discoverable. A great many have complained to us bitterly about the cutting of prices which prevails in most of the large cities in Europe. It certainly injures business, and there is need of a good organization to solidify the talking machine interests in Europe. It must be admitted, too, that retail business is not conducted along as pleasing lines in Europe as in this country.

THERE are great talking machine interests abroad which are controlled by American corporations, and are fairly represented in all of the principal cities over the sea, and the managers of these branches will indorse the statement that they are confronted by many perplexing conditions which render the conducting of

business not at all times pleasing. As a matter of fact, the price cutters are in evidence in almost all of the large cities, and their attitude has a tendency to make the position of the merchant and manufacturer who believes in fixed prices at times harassing. The talking machine interests abroad, however, are important. One realizes this when visiting the beautiful business emporiums in London, Edinburgh, Brussels, Antwerp, Berlin, Dresden, Milan, Paris and other cities throughout Europe. Not only are there a large number of business houses in the great trade centers, but these places are superbly fitted up, and occupy splendid points of vantage on the principal streets of the various cities. It cannot be denied that the talking machine is largely in evidence in Europe.

LONDON is not only the center of important manufacturing interests in the talking machine line, but it is a point from which enormous wholesale and retail sales are made. Recognizing the importance of this great commercial metropolis, we have opened an office in that city, and have placed in charge of our interests there Mr. W. Lionel Sturdy, who has been connected for a long time with the talking machine trade in a journalistic capacity, and therefore brings to bear an intimate knowledge of trade conditions. He will devote his entire time to our interests. The extent and completeness of our foreign reports in this number will furnish an index as to the manner in which we propose to deal with the talking machine interests abroad.

IT has been surprising and gratifying to us to learn the position which The Talking Machine World has won in European trade circles, where The World is conceded to be the leading paper of its kind. The leading members of the trade have been most profuse in their compliments, and have shown their faith in our enterprise by aiding us in various ways in making the paper stronger in European trade circles. The editor of The World takes this opportunity to express thanks to the talking machine trade for the many courtesies extended him by members of the craft in the various cities which he visited in his recent European tour. The encouragement which we have received justifies us in placing added energy upon this newspaper enterprise, and by larger outlay strive to make it in every way a stronger aid in extending the legitimate interests of the talking machine industry, not only in America, but in all parts of the world. It may be truthfully said that there is no country on earth where this publication is not read with interest.

A WELL-KNOWN European manager, who directs vast talking machine interests, remarked to The World that he felt confident that should the European dealers place the same energy as Americans did upon their business during the summer, that they would receive equally as good returns as the American talking machine dealers. He stated that he studied the policy of some of the more progressive European dealers, and he had noticed that in almost every instance where they had exhibited push and energy in conducting their affairs that they invariably secured excellent results. He said that the value of advertising was hardly appreciated in many of the smaller points throughout Europe, and as a result business was permitted to drift along through the summer in an indifferent manner. All

this could be remedied by the exhibition of determination on the part of the dealers to use printers' ink liberally during the summer months.

THE gathering of the Edison jobbers in this city last month was in many respects the most notable trade event which has ever occurred in this industry, there never having been before a gathering at which such a number of prominent members of the talking machine trade were present. The affair was admirably managed by the Edison people, and the visiting talking machine men were thoroughly enthused over their reception. The Edison people spared neither pains nor expense to make the tarry of their friends as pleasant and as agreeable as possible in every way. The story of this famous trade gathering is fully covered in another part of The World.

REPORTS from various trade centers throughout America indicate an unusually enthusiastic feeling on the part of jobbers and retailers. Everything points now to the biggest fall trade in the history of the industry, and it is the wise business man who prepares for business well in advance. It takes a good while to get stock in shape, and it does not pay to wait until the rush is on before ordering stock and getting ready for the fall trade. It is good business to be prepared before the rush comes, and it does not require such an exhaustion of nervous energy to keep things up to the high-water mark. There is no reason why orders should be delayed until the last moment, and the man who has his stock in in good season is prepared to meet the incoming business wave.

## RECORD MAKERS TO PAY FOR RIGHTS.

**Italian Courts Decide in Favor of Publishers and Singers—No Work Can be Reproduced Without Consent—Past Infringers to Pay Damages—An Important Decision.**

(Special to The Talking Machine World.)  
Milan, Italy, August 1, 1906.

Yesterday, in the High Courts here, an opinion was handed down in the case brought by the Society of Italian Authors and Composers, with which local and French publishers joined, involving the status of talking machine records toward the copyright statute. The decision is extremely interesting, in which the court holds that during the life of the first period of copyright, namely, forty years, no musical composition, in whole or part, or any selection from the work, can be reproduced on a record without the written consent or permission of the copyright owner. After the forty years have expired the record makers using any copyright music must pay royalty, the amount to be fixed by the court. What is still of more importance, the decision finds past infringers of the act guilty, and assesses upon them punitive damages and the cost of the action. The victors get the spoils in this case, and payments of no small amounts are awarded Sonzogno, Leoncavallo, Tosti, Ricordi, Mascagni, Gilea, Giordano and over two score other musicians, writers and publishers who are copyright owners.

## HENRY B. BABSON'S PLANS.

**To Resign as President of the Universal Talking Machine Mfg. Co. on January 1, 1907.**

The World's Chicago correspondent reports that Henry B. Babson will again enter the talking machine field in that city, and therefore his Eastern connections will be severed.

When this information was brought to the attention of John MacNabb, president and general manager of the company, he confirmed the news, but said Mr. Babson would continue as the nominal chief executive until January 1, 1907.

## TRADE CONDITIONS IN BOSTON.

How a Store May Lose Good Customers, and How Others May Gain Them—Changes in Winchell Store—Osgood's Good Report—Victor Machine for China—Many Visitors to and from City.

(Special to The Talking Machine World.)

Boston, Mass., August 10, 1906.

An incident occurred in a certain talking machine store here recently which may be worth recording here, as an instance of how one store may throw away good customers and good money and another store obtain them by decent methods and gentlemanly treatment. A gentleman entered the first store and told the clerk that he had bought a dozen records there the day previously, and one of them was cracked when he opened the bundle. He showed the clerk the sales slip and asked him to exchange the imperfect record for a perfect one. The clerk refused, was surly to the man, talked brusquely and said: "Oh, now, you broke it after you got it home; it wasn't broken here" etc. His manner was so ungentlemanly that the customer threw the broken record upon the floor, tore up the sales slip and left the store with blood in his eye.

The World man happened to know him. He walked down to another store, not in the same section of the city, and asked to see some records. Before he left he had bought \$52 worth of talking machine goods, including one large machine, and said that he did so because he had been "treated right" by the clerk in the second store.

In another store, where they have little rooms for the display of the records, it is the custom of the clerks to put the customer in a chair, start a record on the machine, and then rush out of the room to talk with some friend or lean against the counter, watching the pretty girls pass by. When the record is run off, he rushes back into the room, snaps out, "How'd you like it?" puts on another record and rushes out again.

Customers don't like this sort of business. They want to have some attention paid to them, and The World man knows of one man who declares that he will never go into this particular store again, because they don't pay any attention to him.

Every store has its faults; but it is a good plan to know what a few of them are, sometimes, so that they can be corrected.

Changes are being made in the interior of the Winchell Co.'s store on Sumner street. The talking machine counter is being enlarged, the sheet music being placed upon the other side of the room, and a lot of fine cabinets will soon be put in position. The Winchell Co. is making a specialty of the Zonophones just now, and is doing a rushing business. Four different orders have been sent in inside of a month, and even now the stock is low. The window display is particularly attractive.

Mr. Mattison, of the National Phonograph Co., was here this week, also Silas E. Pearsall, of the Stanley & Pearsall Co., New York City. He called at the Eastern Talking Machine Co. on his way to Maine for a vacation.

Manager E. F. Taft, of the Eastern Talking Machine Co., has gone to Touisit, R. I., for a month's vacation with his wife and family. W. J. Fitzgerald, of the Eastern Talking Machine Co., is also away on his vacation, touring New England.

H. A. Winkelman, manager of Oliver Ditson Co.'s department, has returned, brown as a berry. He says the fish didn't bite well. The new Victor second machine is being featured by the Ditson Co. with great results. Enlargement of this department will have to be made soon.

C. G. Andrews, manager of the Boston Cycle Exchange, left this week on his automobile for a vacation in New York State. Business at this house is booming, especially on Searchlight horns.

An interesting order for Victor records and a fine Victor outfit was shipped by the Eastern

Talking Machine Co. this week to American Consul John C. Phillips, at Pekin, China.

At C. E. Osgood's the talking machine department has more than made good. "It was started eighteen months ago," said Manager H. L. Royer to The World, "and was given three months to live. We turned our stock in four months, and now, after enlarging twice, we haven't room enough." Mr. Royer handles the Edison and the Victor machines and records.

## NEW BRITISH LAW EXEMPTS RECORDS.

As may be noted in the new British Musical Copyright act, passed by Parliament August 3, talking machine records are exempt from its provision. Section 3 says: "The expression 'Pirated Copies' and 'Plates' shall not, for the purpose of this act, be deemed to include \* \* \* records used for the reproduction of sound waves, or the matrices and other appliances by which such rolls or records are made." The law is now in effect.

## PHILLIPS &amp; CREW CO. OPEN SCHOOL.

The Phillips & Crew Co., of Atlanta, have fitted up a handsome schoolroom in their establishment, where Spanish, German and French will be taught by means of talking machines. A competent director has been engaged to take charge of the school, and the success of the venture will be watched with interest by all those interested in the development of the "talker" industry.

Saturday last Chas. V. Henkel, president and general manager of the Douglas Phonograph Co., accompanied by Mrs. Henkel, left New York for Detroit, Mich., where he attended the meeting of the Central States Talking Machine Jobbers' Association on Tuesday, the 14th. The sessions were held at the Hotel Cadillac. Mr. Henkel went as the delegate from the Eastern Talking Machine Jobbers' Association.

## LYNN CARRYING CASES AND PEG BOXES

The "Lynn" Record Holder  
FITS THE RECORD

No. 66.

No. 6.

Made of heavy paper board and covered in imitation of black leather. They are strong and compact, with each standard bearing a boldly printed number, which corresponds with index on front of box. The constantly increasing demand for which testifies to their popularity with the trade.

1 dozen size, No. 6; 2 dozen size, No. 66. With felt cushion and each wrapped in manila paper. 1 dozen size, No. B; 2 dozen size, No. BB. Similar to No. 6 and No. 66, but without felt or wrapper.

OUR PATENTED  
STANDARD

permits placing a greater number of records in a given space, with less liability of breakage than any other method.

### FROM HERE AND THERE.

Max Landy, of the Land-o-phone Co., New York, who has been abroad for five or six weeks, is expected to arrive home to-day (15th) on the "Barbarossa," of the North German Lloyd line, sailing from Plymouth, England.

The Palace Phonograph Co., 309 Springfield avenue, Newark, N. J., J. M. Chepot, manager, handles the Edison, Victor, Zonophone, Columbia and the American Record Co.'s lines.

C. H. Hopper, of the D. S. Johnston Co., Seattle and Tacoma, Wash., who has been East for a

couple of weeks with Mrs. Hopper, left New York for the far West Saturday, the 11th. The company are said to do the largest jobbing business in the State. Mr. Hopper stopped at Chicago, St. Louis, Denver and several other cities en route home.

Victor H. Rapke's business in horn cranes and his record labeling system is taking on large proportions. During the past few weeks he has added a number of the largest jobbing houses to his list. Mr. Rapke, an inventor of no mean attainments, has a few new things up his sleeve which will be forthcoming before long.

## Sell Them I. C. S. Records and Textbooks

You have many former customers who stopped purchasing records, either because they became tired of their phonograph, or because they found it too expensive an amusement. It would be worth a great deal to you to have these customers become purchasers again, wouldn't it? You may readily accomplish this by selling them I. C. S. records and textbooks. Those who have become tired of their phonographs as a fad, will be only too glad to turn their machines to some profitable account, and those who find it too expensive to buy amusement records, may be easily convinced that it is for their benefit to purchase this outfit, learn a language, and secure one of the fine paying positions as a translator or correspondent for some importing or exporting house.

### I.C.S. LANGUAGE SYSTEM

WITH  
Thomas A. Edison  
PHONOGRAPH

The I. C. S. Language System has been approved by the highest educational authorities in the land, and by the French, German, and Spanish embassies. The pronunciation is guaranteed to be absolutely correct.

You are thus selling an article of real merit that will be of real benefit to the purchasers and of real profit to you, as has been proved by the experience of dealers who have tried it. Will YOU write to-day for full particulars?

### International Correspondence Schools

Box 918 SCRANTON, PA.

## THE MELLO-TONE

Makes a Musical Instrument  
out of a Talking Machine.

The addition of the Mello-Tone perfects the Disc Talking Machine and makes it an enjoyable Musical Instrument for the home and parlor.

With the use of regular Victor Needles and the Mello-Tone everything that is on a record is brought out clear and distinct, though in soft mellow tones that are simply perfect. The Mello-Tone is easily attached or removed. Nothing to get out of order and will last as long as the machine does.

For the Victor and Zon-o-phone Machines only.

## TIMELY TALKS ON TIMELY TOPICS.

A new Victor machine, to be ready in October, is an addition to that popular line which is becoming stronger and better right along. Perhaps this comment is unnecessary, considering the aims and purposes of this great company, whose policy is not to stand still, but to forge ahead, improving their product in keeping with the rapid march of events, succeeding each other with almost bewildering rapidity, in the advancement toward perfection of the talking machine.

The fall season is now practically on in the primary market, manufacturers being urged with hurry-up calls for goods. On this point, C. H. Wilson, general sales manager of the National Phonograph Co., expressed himself in the following emphatic manner: "The fall trade has opened, and we believe the greatest season we have ever had is before us. And in this I also include every manufacturer. As to the probability of a congestion this fall, yes. By October I am free to say the call for goods will again create that condition known as being 'all balled up.' Notwithstanding the increase of our working force in every department, and the expansion of our plant, by that time we will be again allotting goods to the best advantage of all concerned. In other words, we will be congested, and the trade, therefore, should not wait until goods must actually enter into consumption before placing orders. If they do, possibly they may remember what happened this spring."

A decision rendered by a high court at Milan, Italy, and the enactment of a new copyright law by the British Parliament, will interest record manufacturers and the trade at large. Under the first named judicial decree the use of musical works is prohibited for a period of forty years without the permission of the writer or owner,

and thenceforward a royalty is to be paid, to be fixed by the court. The amount of damages assessed for past violations was heavy. The British act, for which composers, authors and publishers have been striving for seven years, exempts talking machine records in its operation. It is possible, however, that an effort will be made before long to amend the law so as to make the record makers liable for using copyright music without paying for the privilege. At least this is the line of talk now being indulged in by the jubilant English publishers.

Yesterday, the 14th, the Central States Talking Machine Jobbers' Association, were in session at Detroit, Mich. As The World had practically gone to press before the tenor of the meeting could be reported and published, it must necessarily be reserved for a subsequent issue. It is safe to assume, however, that this wide-awake body of men discussed trade matters of live interest, and handled them in the business-like manner for which they have acquired a high reputation. The Central States members are inclined to criticize the methods followed by the Eastern Talking Machine Jobbers' Association, and none too gently at that. Not a few prominent jobbers west of the Alleghanies did not hesitate to say that the opposition to the organization of a national association was based on the apparent ineffectiveness of the Eastern body, hence the advocacy and adoption of the resolution to encourage the formation and strengthening of the local associations with closer affiliations, leaving the future to develop the advisability of nationalizing the movement.

Considerable space has been surrendered in this issue of The World to adequately describe and depict the entertainment of the Edison jobbers of the National Phonograph Co., July 17-20.

The occasion was unique, its management wonderful, and the company's guests delighted. The story gives the details.

Now and again correspondents of the daily press indulge their spleen against the "rasping, harsh and objectionably noisy" talking machine. One writer follows another for several days, when the clamor ceases. To be sure, the complainants may be compelled to listen to some cheap, poorly constructed contrivance and "dub" records, and in that event their condemnation may be justified. Were these "kickers" to hear the strains of the high grade records as reproduced on the accurately adjusted machines of the leading manufacturers they would certainly alter their harsh opinions to peans of praise.

Several changes in the official staff of a prominent talking machine manufactory are making the "wise bunch" sit up and take notice. Chicago is to be the field of active operations of possibly a new plant, with some of the best men in the business at the head.

L. Kohn, of Seattle, Wash., writes The World as follows: "It affords me great pleasure to compliment you upon the good work you are doing with your publication among those interested in talking machines, placing them in touch with all that is new and improved in that line. Among my friends I am called the talking machine crank and among some of the dealers, too, for I expect the very best results from these machines. From the old Berliner gramophone, purchased ten or twelve years ago, as the best machine made then, I had good opportunity to watch the evolution of these machines. I have 30 or 40 six-inch discs yet, with the title scratched thereon, such as they were issued then. It seems to me that the enterprising manufacturers would confer a great favor upon the talking machine enthusiasts if they would favor the public with good quartettes, quintettes or sextettes, of choruses from standard operas like the ensembles of "Martha," "Rigoletto," "Faust," "Laura," etc. The public

**WE** have been in the talking machine business for many years and we have studied the business from the standpoint of the dealer.

We know his needs and know how to cater to them.

We are

and

**VICTOR

UNDER MANAGEMENT

HENRY E. MARSCHALK

LOUIS JAY GERSON

and the patrons will certainly gladly meet the advanced prices. Outside of the anvil chorus and the soldiers' chorus (of "Trovatore" and "Faust"), I know of no others at the present writing. The only sextette that I know of at present is the one of "Florodora." Of course, these remarks refer to vocal selections only, while we have a profusion of instrumental publications.

The field of the talking machine usefulness has extended to the sick room through the ingenuity of a Canadian physician, and it is said to aid materially in the recovery of the patient. An alarm clock is set to awaken the invalid at a given time, which instead of ringing a bell lights a small electric lamp and starts the motor of a phonograph, operated by a three-cell dry battery. The record delivers a message arranged by the physician the night before, and is of a cheerful nature. The idea of the scheme is that the first impression received upon awaking remains clearly before the mind all day, and where it is of pleasant nature tends to reduce the excitement often evinced by a patient, as a sick person is especially susceptible to such impressions. This is certainly a happy idea.

Within the last three years the talking machine trade in Milan, Italy, has assumed very satisfying proportions. About 250 machines are imported monthly, valued at approximately 150,000 lire, or, say, \$30,000. In addition to the above goods some 10,000 to 15,000 records are imported each month, valued at from 40,000 to 5,000 lire. The cylinder machine is much more popular than the disc variety.

In a decision by I. F. Fischer, the Board of United States General Appraisers overruled July 31 a claim filed by Marshall Field & Co., of Chicago, it being held that phonographs are not toys, and therefore cannot be given the benefit of the 35 per cent. duty accruing under the toy schedule of the Dingley tariff law. The Collector's action in returning the phonographs as manufactures of metal at the rate of 45 per cent. is affirmed.

The Brooklyn Chapter of the American Institute of Architects took their annual outing up the Hudson on July 7, and as the ocean-going tug which conveyed the party was not large enough to accommodate a band in addition, the services of Hayward Cleveland, manager of the retail department of the Columbia Phonograph Co., at 872 Broadway, New York, were in demand. With the assistance of a B. I. Graphophone, he entertained the party with all varieties of music on their sail, and at the landing at West Point gathered a large crowd of the soldiers and residents to listen to his concert. Members of the party said the carrying power of the machine was simply wonderful, as they could hear it clearly when they were up on the parade ground.

Hitherto the coming of summer has been looked on with something akin to fear by the talking machine dealer. The year of 1906, however, has brought with it a change for the better. The cause is self-evident. The big companies are learning the importance of publicity, not the commonplace announcement, but by advertisements which force themselves upon the attention of the public. It seems strange that the men who have charge of the publicity departments of large corporations and who are without a doubt are clever and experts in their line, should have taken so long to comprehend the requirements of the summer season; in fact, it has been laid before them in trade paper editorials for many seasons that there is no time in the year when advertising is perused more carefully than in the summer. The talking machine dealer has more time to peruse his trade journals and make notes regarding the lines he desires to handle or changes to be made. The same is true of the average reader, who devotes closer attention to the advertising columns of

various publications, reading their contents from cover to cover.

We do not wish to make light of the enterprise of the advertising managers, and understand the obstacles they meet with when broaching the subject of an increase in expenditure for publicity. Some of the large companies have adopted the methods suggested, and the results have been increased prosperity in every case. Retail dealers have awakened to the possibilities of big business among vacationists, and in turn have pursued like methods by using well-written publicity in the daily papers and attractive window displays.

#### MOTHER GOOSE RECORDS FOR CHILDREN.

The Victor Talking Machine Co. have issued to the trade this month a special series of Mother Goose records for children, with excellent imitations of the various animal characters occurring in the rhymes. A Punch and Judy record has also been issued to amuse the children.

#### A PROGRESSIVE INSTITUTION.

The Musical Echo Co., of Philadelphia, have recently been appointed Edison jobbers, and have placed an order for several hundred machines and several thousand records. In the meantime, as Victor distributors, they are carrying a tremendous stock of goods. They are in a position to fill orders promptly. This business is under the personal supervision of Henry E. Marschalk and Louis Jay Gerson, talking machine men of marked ability and an experience covering many years.

T. J. Murray, who has already made his name famous as a salesman of the product of the Columbia Graphophone Co., of 90 West Broadway, left the early part of the week for an extended tour through the Southwest and Mexico. It is his intention to make the name "Columbia" a household word in that country.

A number of new things are coming through the factory of the Columbia Phonograph Co., general, and are set down for early announcement.

## An Extension

### FOR RECORD RACK NO. 123

The cut herewith illustrates a section of a new extension, which is to be used in connection with our No. 123 Cylinder Record Rack. The object of the extension is to provide a means for naming the records as well as numbering them.

Rapke Name Labels may be attached to this extension, fastened by O. K. Fasteners so that customers may select records from the racks by the name instead of looking through the catalogue in the effort to find individual records.

You will find that this method stimulates buying and saves the time of clerks and customers.

The No. 123 Rack ('Heise System') with this extension, capacity 500 records, will be sold for \$15.00. This price does not include labels or fasteners.

Usual Discount to Jobbers.

**FROWNS ON NATIONAL BODY.**

**Talking Machine Jobbers After Organizing Temporarily in New York Decide Against Forming a National Jobbers' Association—Mr. Dolbeer's Remarks.**

Friday, July 20, at 10 a. m., about 150 of the Edison jobbers, guests of the National Phonograph Co. at the week's entertainment, assembled in the Myrtle Room of the Waldorf-Astoria Hotel, New York, to discuss the advisability of forming a national talking machine jobbers' association. Geo. Ilsen, of Ilsen & Co., Cincinnati, Ohio, was elected temporary chairman, and A. C. Jones, Savannah and Waycross, Ga., secretary. Earnest talks on the subject, pro and con, were made by James Fintze, of Ball-Fintze Co., Newark, Ohio, who created something of a sensation by making a savage attack on the Eastern Jobbers' Talking Machine Association, which was replied to in defense by Sol. Bloom and J. Newcomb Blackman, of New York; Perry B. Whitsit, of P. B. Whitsit & Co., Columbus, Ohio; A. S. Petit, of the Edison Co., Newark, N. J.; J. F. Bowers, of Lyon & Healy, Chicago, and the chairman also spoke in elucidation of various trade topics. F. K. Dolbeer, chief of the credit department of the National Phonograph Co., being requested to address the meeting, said in part:

"Gentlemen, it is a pleasure to be asked to address you, but I must not be looked upon as an expert, as I have only been with the National Phonograph Co. seven years. In that time I have endeavored to formulate a system of credits that is actually protective. You know the keynote of a successful business is carefully guarded credits, tempered with wisdom. In other words, we are in the position of having a product obtainable nowhere else, and therefore we can, in a measure, not exactly dictate, but suggest our own terms. Now, then, to make your associations successful you must have a full exchange of ledger information. Free and above-board. Frankness in this respect is the govern-

ing principle, and unless this rule is adopted and carried out in sincerity the purpose of a jobbers' organization falls to the ground. Possibly some of you may have thought me harsh in my correspondence on the subject of credits, but these expressions will sometimes become necessary. The evil of the trade is dead-beatism, and when this is eliminated by an exchange of ledger information then you will succeed. Otherwise not. I thank you for your kind attention."

Mr. Bowers, who assumed the chair after the retirement of Mr. Ilsen, asked for further discussion, and then put the question of forming a national association to a vote, it being decided in the negative. The opinion was that new territorial or local associations should be formed which should affiliate with each other, and in this manner the object of associated effort would be accomplished. Previous to adjournment a set of resolutions thanking the National Phonograph Co. for their munificent entertainment was adopted by acclamation. They appear in the account of the banquet elsewhere in this issue.

**TALKING MACHINE IN CHURCH.**

**Being Used to Do the Singing at the Prayer Meetings.**

In telling a new use that the talking machine is being put to in his community, the Wallkill correspondent of the Walden Citizen says: "What a wonderful aptitude Americans have for labor-saving expedients! New developments in this direction are continually unfolding. Soon we shall live and move and have our being and maybe save our souls by machinery. It is stated that already the talking machine is being used to do the singing at the Thursday evening prayer meeting. A fine idea. Why not let it do the praying, too? Such an arrangement would save a great deal of trouble. Set up the machine in the chapel, let the sexton, who is paid for it, be there to change the registers and put in hymns and prayers and the whole business of worship

would be done. The church members need not bother at all; they could stay at home or spend these hot summer evenings in the ice cream parlor while over in the sanctuary the machine would be lifting up its voice in praise and prayer."

**EFFECTIVE WINDOW DISPLAY.**

**Manager Long of the Columbia Branch in St. Paul Understands the Drawing Power of a Cleverly Arranged Window.**

Manager Long, of the Columbia Phonograph Co.'s St. Paul branch, is a genius in window decoration, and he recently made a bid for trade from prospective campers through the aid of a window display as follows: In one end of the window he had an ordinary camping tent tacked to the wall, so as to show the entrance. The bottom of the window was covered with about three inches of white sand. In front of the tent, running parallel with the window, was a bench, consisting of two ordinary boxes, with a board laid across them, on which a B1 graphophone and a supply of disc records were carelessly disposed. In the front corner of the window there was a camp fire, built with three forked sticks, from which hung a large iron kettle with burnt wood and ashes beneath it. Under these was a 16-candle incandescent globe, which served to impart the appearance of a live smouldering fire. The front of the tent was ornamented with a picture of Columbia, and on the window was the legend, "Camp Columbia." On the bench a half sheet sign informed the observer that "half the pleasure of camping out is lost if you are without a graphophone."

The entire arrangement was in harmony and told the story in a way that had the desired effect. Mr. Long is to be congratulated upon his originality. The talking machine as a medium for entertainment in camp, on the water and in the country home is unsurpassed, and the fact is being generally realized.

## DEALERS ARE PUSHING **PETMECKY MULTI-TONE NEEDLES**

because they are more profitable than the ordinary kinds and because they have a *Character*.

**LOUD AND SOFT TONES WITH THE SAME NEEDLE.**

They improve the tone quality and increase the sale of disc machines and records. They make old scratchy records smooth and musical.

A prominent dealer writes: "We have tested the Petmecky needle in the presence of a number of our customers. They all pronounce them the real thing. We believe you have solved the needle question."

Another dealer writes: "The Petmecky needles ought to retail at 25c. per hundred instead of 15c. My customers like them so well they will take no other and would pay 25c. just as willingly as they are paying 15c."

Samples and interesting particulars free if you write for them.

A few good lively jobbers can get interesting proposition by writing us.

## **THE PETMECKY CO., AUSTIN, TEXAS.**

**A SEARCHLIGHT HORN STATEMENT.**

Will Have Facilities by the Early Fall for Forty Thousand Horns Per Month.

The Searchlight Horn Co., 753 Lexington avenue, Brooklyn, make an announcement in another section of this publication, which furnishes an undisputable evidence of the marvelous progress made by this concern. They state that on October 1 their manufacturing facilities will be enlarged, so that they will be able to produce 40,000 horns per month—surely an astonishing number when we consider the short time since the Searchlight product was launched upon the market. Some of the largest jobbers in the country have arranged to handle the horns made by this concern, and from present indications it would seem as if the Searchlight horn business would be decidedly brisk during the early fall and winter.

**INJUNCTION DENIED**

Against National Phonograph Co.—The Attitude of the Company Defined.

On June 30 Judge Keogh, of the Supreme Court of New York, second department, denied the application of the New York Phonograph Co. for a preliminary injunction to restrain jobbers and dealers in New York State from handling Edison goods, pending the trial of the case on its merits. The National Phonograph Co. defended the suit. This is the last move in this long drawn-out litigation, various decisions being made by the United States courts, with which the trade are familiar. Subsequently the company issued an official and detailed account of this litigation, published in the Edison Phonograph Monthly, of which the subjoined extract sums up their resolute attitude in this matter:

"At the present time the National Phonograph Co. does not make use of a single patent for which the New York Phonograph Co. holds a license, and manifestly, therefore, cannot infringe

any rights of the New York Phonograph Co. We are advised by our counsel that so far as jobbers and dealers within the State of New York are concerned the New York Phonograph Co. has no possible claim against them; in fact, it has been decided by the United States Supreme Court that where patented goods are purchased outside of a restricted territory, as is the case of the sale of our goods at Orange, N. J., they can be taken and sold anywhere in the United States, free of restriction, even within the exclusive territory of a licensee."

**GARDNER WANTS TIME TO PAY DEBTS.**

(Special to The Talking Machine World.)

New Orleans, La., August 7, 1906.

L. S. Gardner, dealer in talking machines, 149 Baronne street, has applied to the Civil Court for a respite or extension of one, two or three years in which to pay his debts, alleging inability to provide for obligations due to losses met on stock of merchandise, "owing to a cut in prices made by manufacturers after he had purchased a large stock of talking machines." His schedule shows assets of \$12,901.50, with liabilities of \$11,323.58.

**RECITATIONS BY PHONOGRAPH.**

Since the beginning of the year a phonograph has been used in the theological faculty of the University of Vienna. Professor Swoboda, the head of the faculty, had noticed that while reciting the students always made the same mistakes. It then struck him that by means of a phonograph their mistakes might be demonstrated to them in a striking manner. The results exceeded all expectations.

The new building of the Columbia Phonograph Co., on Oxford street, London, England, has just been completed, and the company comfortably installed. The new quarters are extremely handsome in every particular and does credit to the talking machine trade of the country.

**REGINA CO. NOW VICTOR JOBBERS.**

Formally Appointed Last Week—Will Also Handle Edison Goods—Will Make Magnificent Display—Quarters Being Handsomely Fitted Up for This Purpose.

The important announcement was made by the Regina Music Box Co. last week that they had been placed on the list of Victor jobbers, and would in the future carry a complete line of the celebrated Victor talking machines and records in addition to their regular stock. They will also deal in all lines of the Edison goods, carrying a full stock of machines and records.

The magnitude of the equipment of the new warerooms at 41 Union Square, becomes apparent when a visitor is taken by Manager Wilbur to that part of their establishment under ground. There they will find a series of rooms, magnificently furnished in the most artistic style, the rugs and furniture harmonizing with the beautiful cabinets and pianos and player-pianos therein exhibited. Each of these rooms will contain some one particular line of the Regina product, ranging from the smallest music box to the most elaborate cabinet, and from a chime clock to their beautiful Sublima piano, which is making such a great hit with the dealers in coin-operated machines. In addition, two large parlors will be set apart exclusively for the talking machine business, one to contain the Victor line and the other that of the Edison. These rooms are very large, and their acoustic properties are such that the machines can be heard to the best possible advantage.

In the rear they have constructed large stock-rooms, and have equipped a complete repair department, which will be under the charge of their most experienced workmen.

They are bringing out a new line of hall clocks with chime attachments, which they will soon have on display in their main showroom. These clocks have won a well deserved popularity, and dealers are finding in them a work of art that meets with a ready sale.

# Edison Jobbers Entertained by National Phonograph Co.

At a Series of Entertainments Winding up With Grand Banquet at The Waldorf-Astoria Hotel. An Event That Will Ever be Remembered By Those Who Had the Privilege of Participating.

For two years the National Phonograph Co., Orange, N. J., have contemplated meeting their Edison jobbers personally, the event to take the form of an entertainment and an exchange of social pleasantries in New York. The scope and plan for such an occasion would necessarily involve an enormous amount of time to work out the details, the expense being a secondary consideration. As in everything they undertake and stand for, the company are strangers to half-way measures, and this was no exception. Their chiefs of departments—executive, scientific, mechanical, artistic, etc.—co-operating with the various officials, bent every effort to make it a success, and that they are each and every one

less trying, but granting the request with great good humor.

A remarkable fact of the whole time was that not a man failed to put in an appearance as each function was spun off the reel. A full count was never lacking from the morning of Tuesday, July 18, to the evening of the succeeding Friday, of which the incidents of chief import are subjoined in chronological order.

July 17-20 was a notable week in the talking machine business, an epoch which will be recalled with pleasure by the many participants in the generous hospitality, hearty and sincere good feeling evinced by the National Phonograph Co. in their entertainment of the Edison jobbers. From

the first the company worked hard to make their jobbers thoroughly at home, and in saying that they succeeded admirably is but feebly expressing the universal sentiment of their delighted guests. E. A. Link, of the Kipp-Link Phonograph Co., Indianapolis, Ind., was the first to register at the Edison headquarters in the Waldorf-Astoria Hotel, where Room 151 was used for the registration bureau, with the Myrtle and East rooms, facing Fifth avenue and 34th street, for reception purposes, and where every facility for attending to correspondence and business, telephones, commercial phonographs, typewriters, etc., were furnished gratis.

By the following morning 200 jobbers had registered and were assigned quarters, free of cost, in the hotel. Each

was equipped with tickets for entertainments, dinners and the final banquet, and a handsome badge, solid gold, and enamel work, a miniature reproduction of a cylinder record, bearing date of 1877 (that of the first phonograph invented) and the words "Edison, 1906," gold lettering on blue enamel center—a pretty and striking design that was warmly praised.

During the afternoon an informal meeting of a number of leading members of the Central States Talking Machine Jobbers' Association and the Eastern Talking Machine Jobbers' Association was held to arrange for the presentation of the souvenirs to Thomas A. Edison and to Wm. E. Gilmore, president and general manager of the National Phonograph Co. It was decided that W. D. Andrews, Syracuse, N. Y., president of the Eastern body, would present the gift to Mr. Edison, and George Ilse, of George Ilse & Co., Cincinnati, of the Central States organization, would

WM. E. GILMORE, PRESIDENT AND GENERAL MANAGER, NATIONAL PHONOGRAPH CO.

render like service toward Mr. Gilmore.

In connection with these two beautiful and entirely appropriate expressions of the good-will of the jobbers of the United States and Canada toward these gentlemen, it may be said that the idea originated with C. V. Henkel, president and general manager of the Douglas Phonograph Co., New York. The committee acting with him were W. D. Andrews, P. A. Powers, Buffalo, N. Y.; E. F. Taft, president Eastern Talking Machine Co., Boston, Mass., and L. C. McGreal, of McGreal Bros., Milwaukee, Wis. Each jobber was requested to contribute \$10 toward a fund for the purpose, and no difficulty was encountered in obtaining the desired amount, excepting the occasional slow responses that made the aggressive chairman a trifle tired. The souvenir intended for Mr. Edison was a solid gold record, 22-carat fine, standard size, on which was engraved a congratulatory address, a conception of

JOHN R. SCHERMERHORN, ASSISTANT GENERAL MANAGER, NATIONAL PHONOGRAPH CO.

THOMAS ALVA EDISON.

entitled to a wreath of bay leaves and laurel not one of their guests will gainsay. The brunt of preparing and adhering to the extraordinary programme enjoyed for four days last month fell upon the broad shoulders of F. K. Dolbeer, and he carried the burden without an outward sign of weariness from beginning to end, when he was literally showered with congratulations by the guests and his company colleagues. President Gilmore established himself in the personal affections and esteem of every last man—he met them all. Of course, Thomas A. Edison never ceased to be the center of attraction whenever he was present, which was at nearly everything of note transpiring, constantly surrounded by an ever-changing group of eager questioners and respectful listeners. His was conceded to be a wonderful personality, and the anxiety to be photographed in his company was general, Mr. Edison never evading what must have been more or

Victor H. Rapke, New York. A mammoth sterling silver loving-cup, standing over two feet high, exclusive of base, and holding at least three gallons, was designed for Mr. Gilmore, the idea having originated with Mr. Henkel. Both of the recipients were kept "in the dark" regarding their gifts, consequently the surprise and pleasure manifested was doubled when the formal presentation took place.

#### The Visit to the Factory at Orange.

The morning of the 18th was put down on the programme of F. K. Dolbeer, chairman of Entertainment, for the official "opening of the hall." Promptly at 9.30 Chairman Pelzer, of the com-

machines and records of which they were in total ignorance.

#### Visitors Enjoy Elaborate Luncheon.

At noon luncheon was served in the new office building, a massive five-story and basement concrete structure, that was hurried to completion for this express purpose. It was an elaborate collation, smoothly and admirably handled. Flags decorated the room, and the bountiful table was adorned with huge clusters of roses. Previous to "pitching in," if such a term may be allowed, President Gilmore had conducted Thomas A. Edison into the improvised dining hall, where he held a reception. Every one was introduced to the

L. C. M'CHESNEY, MANAGER ADVERTISING DEPARTMENT,  
NATIONAL PHONOGRAPH CO.

mittee on transportation, with his able assistants, got everybody—200 by count—aboard nine large motor cars, and they bowled merrily down Fifth avenue toward the 23d street ferry depot of the Erie Railroad. A kinetoscope picture was taken of the party in passing, besides snap-shots ga-

SYSTEM,  
NATIONAL PHONOGRAPH CO.

lore. A special train awaited the visitors on the Jersey side, and Orange, N. J., the seat of the Edison Phonograph Works, and plant of the National Phonograph Co. was reached by 11. Then, in the care of Peter Weber, general superintendent and chairman of the factory committee, and his able heads of departments, the guests

F. K. DOLBEER, MANAGER CREDIT DEPARTMENT,  
NATIONAL PHONOGRAPH CO.

were divided into manageable squads and every part of this vast and interesting hive of the phonograph industry was visited. To the great majority such a plant was a veritable revelation, and their knowledge of the extent and paramount

WALTER STEVENS, MANAGER FOREIGN DEPARTMENT,  
NATIONAL PHONOGRAPH CO.

importance of the Edison business was for the first time received at first hand, surprise being succeeded by delightful satisfaction as each department presented some phase of manufacturing

distinguished gentleman and world-wide celebrity, whose unaffected and simple, yet cordial manner of greeting was commented on by all. Considering his individual services to the scientific and industrial world, not to mention his wonderful discoveries and ingenious solution of vexing problems in applied chemistry and mechanics—at-

WILLIAM PELZER, LEGAL DEPARTMENT,  
NATIONAL PHONOGRAPH CO.

tainments that usually have a tendency to surround the majority of men with an atmosphere far from geniality—Mr. Edison's personality, by contrast, was found to be most charming. Generally he is so absorbed with original investigations that little time can be spared for the exercise of social amenities when at the works. On the occasion of the jobbers' visit, however, he was

in a most genial and unaffected mood, and no one laughed heartier or entered more thoroughly into the spirit of the occasion than this wonderful man, with whom a personal meeting was considered an unusual honor.

#### Presentation to Thos. A. Edison.

After satisfying the inner man—Mr. Edison standing with the party and enjoying the repast with the same relish as the others—Mr. Gilmore again took the "Wizard" by the arm and conducted him into a corner of the room, where a small platform had been improvised for the speakers—a moment that had been looked forward to with absorbing interest for weeks. W. D. Andrews, of Syracuse, N. Y., after securing silence and addressing Mr. Edison and Mr. Gilmore in particular, said:

#### W. D. Andrews' Remarks.

"We are gathered here together at the invitation of the National Phonograph Co., not as exclusive representatives of their interests, but we represent the trade in all its branches—all companies. But I want to assure you that we consider your company *the* company. (Applause.) We are familiar with your methods and have approved your policy and the execution of the same, which is designed to benefit the trade. I have attended several meetings of the Jobbers' associations, and the conclusion arrived at is that your company is our company; your interests are our interests. (Great applause.) It is in this spirit that we have conceived the idea of a gift to you, Mr. Edison—a slight token of our high personal regard and appreciation of your eminent labors in the development and perfection of the phonograph. I was a member of the committee who had the matter in charge, but C. V. Henkel, president of the Douglas Phonograph Co., was the first to consider the propriety of presenting you with this souvenir. If you do not approve of the gift you must look to Mr. Henkel, but I feel sure you will accept it in the same spirit in which it is given. Therefore, Mr. Edison, on behalf of the jobbers of the United States and Canada, I present you with this solid gold record. May it always be a reminder of this momentous occasion for the spirit which fittingly expresses our feelings toward you is on the record."

Vociferous applause followed Mr. Andrews' neat and happy remarks, and three roof-lifting cheers and a tiger followed. Then Walter A. Miller, manager of the company's recording laboratory, adjusted the gold record to a Triumph machine, and Mr. Edison, with his face in the bell of the horn—he is slightly deaf—heard the following formal congratulatory address, which was recorded by Len Spencer:

#### What the Gold Record Said.

"Mr. Edison: This record of pure gold, which addresses these words to you, is a gift from the jobbers engaged in the distribution of the Edison phonographs and records. They have come from the East, the West, the North and the South of this fair land of ours. They are your loyal and admiring friends—your ambassadors of commerce, whose mission it is to distribute your products to the four quarters of the globe. By the touch of your colossal inventive genius you have created industries, giving employment to countless thousands the world over. The wheels of commerce occupied in the production of your invention sing a never-ending song of praise to your magnificent achievements.

"To the seven existing wonders of the world you added the phonograph, which is the eighth wonder of the world. It speaks every language uttered by human tongue, and in the field of language-study it is the greatest educator the world has ever known. With song and story it will continue till the end of time to entertain the multitudes of the earth, who place the name of Thomas A. Edison at the head of the column of the world's greatest captains of industry."

The phonograph record wound up with an orchestral rendition of "Auld Lang Syne," in which the assemblage joined with a will. To be sure, everybody was gratified and no one expressed it more unreservedly than the eminent recipient. As

Snap-shot of Edison Jobbers taken in front of the Factory of the National Phonograph Co., at Orange, N. J.

Mr. Edison never indulges in speeches he looked his appreciation. A replica of the record in the standard material was later given every one in attendance as a memento.

#### Description of Edison Gift.

The stand supporting the gold record presented to Thomas A. Edison is made in solid sterling silver, ornamented with solid gold inlay and

GOLD RECORD, MOUNTED, PRESENTED TO MR. EDISON.

surmounted with three beautifully modeled figures, representing music, art and progress. On the sides of three panels are imbedded a medallion portrait of Mr. Edison and appropriate inscriptions of the event. The style followed throughout was that of the celebrated Louis XV. period, the rococo design, with its graceful flowers and scrolls artistically intermingled, shows intricate chasing. Above the decorative work was the holder for the record, the entire affair being mounted on an ebony base and being in all about twelve inches high.

#### Presentation to President W. E. Gilmore.

When the applause had subsided Geo. Ilsen, of Cincinnati, then said: "The committee is also responsible for my selection; at least you would think so if you were 'over the Rhine,' where its purpose would have practical application in short order, though I doubt very much whether one man could handle it easily and make a neat job of the performance. However, we will let that pass and come to my pleasant task. We all know that Mr. Edison gave the world the phonograph, but the man who made the phonograph a commercial product—a man who has surrounded himself with assistants as able as himself—is W. E. Gilmore. (Tremendous cheering.) He is the right-hand man of Mr. Edison, and we honor Mr. Gilmore in presenting him with this magnificent silver loving-cup—not a small one, by any manner of means—for perhaps it might take three men to handle it in action. (Here the flag shrouding the cup was removed with more cheering and blushes on the part of Mr. Gilmore.) As you will notice, Mr. Gilmore, each leaf on the cup bears the name of some jobber, a contributor, and therefore a lasting testimony of his high esteem for you and who honors the distinguished president of the National Phonograph Co. Not many men know Mr. Gilmore as well as I. He has the biggest heart of any man I know, and he has the love and esteem of the jobbers, and it is in this spirit we take the greatest pleasure in presenting you with this elegant cup,"

#### President Gilmore's Appreciative Remarks.

The cheering was long and vehement, with calls for "speech." At last Mr. Gilmore feelingly said: "All I can say is you take me off my feet. On behalf of Mr. Edison, who never makes a speech, I thank you for the beautiful testimonial of your regard; and for myself I thank you for this elegant present. I knew something of what was going on in regard to Mr. Edison, but never dreamed for a moment you had 'something up your sleeve' for me. However, I promise you our company will continue to be fair and square with you, and that our business policy of the past will remain unchanged unless it is not mutually beneficial. Again I thank you all most sincerely."

#### Description of Cup Presented to Mr. Gilmore.

The solid sterling silver loving cup presented to Mr. Gilmore is of the massive Grecian style, being about twenty inches wide and placed on an ebony base about two feet high. The general style and ornamentation was worked out from the ideas and suggestions of Chas. V. Henkel, president of Douglas Phonograph Co., being bowl shape, set in foliage of repousse laurel leaves and berries, with the name of a different firm on each leaf (about 160 in all), representing donors. In center of the leaf work, on one side, is a bas-relief of Mr. Gilmore; second side, a well-known lithograph of an old lady and gentleman listening to a phonograph, and the third side, an etching of the presentation inscription. The cup is surmounted by three beautifully carved handles. Between the different handles are three panels, each a bas-relief of cherubs representing music progress and art. The cup is a handsome example of the modern silversmith's art, and was made by Dieges & Clust, of New York. The inscription on the cup is as follows: "Presented to William E. Gilmore, July 18th, 1906, by the Edison Phonograph Jobbers of the United States and Canada as an expression of their personal esteem."

HANDSOME CUP PRESENTED TO PRESIDENT WM. E. GILMORE.

With these ceremonies over a photograph was taken of the entire assemblage in front of the library building, with Mr. Edison occupying a prominent position. Subsequently the remainder of the plant, including the laboratories, private experimental rooms and kinetoscope department, heretofore unvisited, were inspected.

#### Dinner and "Show" Wednesday Night.

In the evening, on returning from Orange, an informal dinner was given at the Waldorf-Astoria and later on the performance of "The Governor's Son," on the roof of the New Amsterdam Theatre, was witnessed.

#### The Trip to West Point.

The excursion Thursday, the 18th, to West

WALTER H. MILLER, MANAGER RECORDING LABORATORY. Point was full of incidents by "flood and field." Few knew of the presence of Thomas A. Edison aboard until he was discovered in the midst of a

group of eager listeners, and this was the order all day. Generally, he is accompanied by some one of the company when away from the works, and while he was strongly urged to join the water trip he was uncertain, and gave no inkling what his judgment would be. When the first automobile load of guests arrived at the

boat Thursday morning, to the surprise of President Gilmore and his fellow officials, Mr. Edison was comfortably awaiting their arrival. He had left Orange alone early in the morning, had crossed New York in the surface cars—he

boat Co.'s fleet, first steaming down the bay off Coney Island before going up the Hudson. The weather was ideal, and the trip was doubly enjoyed on that account.

At West Point the commanding officers were all

filed out into the banquet hall, played appropriate music, which was accompanied by cheers. It was an elaborate affair, the menu being a credit to this great hostelry.

While the banquet was being served, which

VICTOR H. RAPKE IN GOOD COMPANY ON TRIP UP THE HUDSON.

A BUNCH OF PLEASED EXECUTIVES—J. NEWCOMB BLACKMAN, PERRY B. WHITSIT, W. E. GILMORE AND C. N. ANDREWS.

knows the city like a book—to the pier. During the day he was kept busy signing menu cards,

attention to their distinguished visitors, and if the request had been made in time they would have cheerfully accorded Mr. Edison the honor of reviewing the cadet corps at dress parade. As it was, Colonel Smith and Captain Hubert took great pleasure in conducting him through the summer camp, and in bidding him good-bye the colonel expressed his delight in behalf of the "Point" in meeting Mr. Edison, to which complimentary remarks Mr. Gilmore made a suitable reply, that was emphasized by cheers for everybody. The return home in the moonlight was devoid of special interest, "dancing being kept up until a late hour."

#### The Banquet at the Waldorf-Astoria.

In the evening of the following day, succeeding the sight-seeing trip in automobiles about New York, a banquet was given in the Astor Gallery at the Waldorf-Astoria Hotel. The magnificent room was simply yet beautifully decorated, the guests being seated at small tables containing eight each. At the head, or honor table, facing the entire assemblage from the north, as will be observed in the flashlight picture in this issue of The World, Thos. Alva Edison, who has participated in all the festivities—a rare honor, by the way—is to be found at the right of William E. Gilmore, while Mr. Foster is at Mr. Gilmore's left. Other well-known gentlemen at this table were: William Werner, William M. Hollins, George Ilsen, S. J. Francis, E. Perry Ashton, J. F. Bowers, F. L. Dyer, C. H. Wilson, P. E. Conroy, J. R. Schermerhorn, W. D. Andrews, R. S. Williams, Jr., William Pelzer, Geo. Meikle, Thomas Graf, F. K. Dolbeer.

The Edison Symphony Orchestra, as the guests

was admirably done, the prevailing sentiment was "strict attention to business"—from eight to ten

FRANK L. MADISON, MANAGER CONTRACT DEPARTMENT, NATIONAL PHONOGRAPH CO.

W. H. A. CRONKHITE, ASSISTANT MANAGER RECORDING DEPT., NATIONAL PHONOGRAPH CO.

which he did cheerfully and with pleasure. Late breakfast, luncheon and dinner was served while on the water, the "Cepheus," of the Iron Steam-

o'clock. Several of the dishes were appropriate to the occasion, the ice cream coming on in the form of phonograph, horn and all.

MR. EDISON, IN COMPANY OF P. E. CONROY, GEORGE ILSSEN AND JAMES K. O'DEA ON WAY TO WEST POINT.

A GROUP OF PROMINENT MEN IN THE TRADE. SNAPPED WHILE APPROACHING WEST POINT.

Banquet at the Waldorf-Astoria Given Evening of July 20 by the National Phonograph Co. to Their Jobbers.

A flashlight picture was taken at the conclusion of the "spread," a copy of which, 19 by 13½ inches, suitably mounted, was subsequently presented each one attending, with the compliments of the company. Then the Edison artists, namely, Arthur Collins, Harry MacDonough, Byron G. Harlan, Ada Jones, Len Spencer, displayed their talents, rendering the popular airs generally made familiar via the records. The kinetograph also contributed material enjoyment, the reproduction of the jobbers on the motor cars turning into Fifth avenue on their way to Orange being hailed with acclaim. Mr. Edison, who seemed to be enjoying every minute of the time, was repeatedly cheered and candidly indorsed as being "all right" at various times, and Mr. Gilmore was not neglected. When Mr. Gilmore spoke of Mr. Dolbeer as being entitled to every scrap of credit for the perfect manner in which each day's programme had been carried out, the banqueters indorsed the sentiment with whoops and cheers, calling on the gentleman for a speech. Mr. Dolbeer replied briefly, thanking every one for their kind and generous opinion of him, but disclaimed the whole credit of having given so much evident pleasure to the Edison jobbers, as

are to be suitably engrossed and presented to the gentlemen mentioned. The resolutions follow:

#### Resolutions of Appreciation.

"Whereas, The National Phonograph Co. has taken occasion to entertain as its guests in New York City the jobbers of the United States and Canada in its line of manufacture, and,

"Whereas, Such invitations have been accepted

EDISON ON PARADE GROUNDS, WEST POINT.

by the leading jobbers in the trade in this country and Canada, to the number of two hundred and fifty or more; and,

"Whereas, While it might reasonably be anti-

W. D. ANDREWS,  
SOL. BLOOM,

"Committee on Resolutions."

"New York City, July 20, 1906."

These resolutions were adopted at the meeting of the jobbers in the hotel Thursday morning last, when the proposition of organizing a national talking machine jobbers' association was "turned down," an account of which together with Mr. Dolbeer's emphatic address, appears elsewhere.

#### Souvenirs of the Event.

The souvenirs were elegant and worthy of preservation as mementos of an historical event—its duplicate may never occur again. The most important is that of the personally signed superb portrait of Thomas A. Edison, together with the menu, musical programme and list of jobbers, which was arranged in book form, 13½ by 7 inches, printed on choice deckled edge paper and bound in cardboard with white satin ribbon, the initial E appearing on the cover inclosed in a heavy wreath stamped in gold, the whole being enclosed in a special box, with the initial device embossed on the outside. A small bronze bust of the distinguished inventor of the phonograph was also presented. It is whispered that the company are preparing a medal commemorative of the occasion, which is not to be distributed before September.

#### Some Edison Aftermath.

On Sunday and Monday many of the jobbers left for home, but a great number stayed over to visit the trade. All of the jobbers with whom The World had the pleasure of talking before leaving were most effusive in their appreciation

SNAPSHOTS OF NATIONAL PHONOGRAPH CO.'S GUESTS ON AUTOMOBILE TRIPS.

he had been loyally assisted by his colleagues in every department of the company, including Mr. Gilmore himself.

Before the "talent" appeared, J. F. Bowers, of Lyon & Healy, presented a set of resolutions, thanking Messrs. Edison, Gilmore and the National Phonograph Co. in general, and conveying their good wishes and reciprocal feelings, which

pated that the entertainment offered by the National Phonograph Co. to its guests would be of the high character warranted by the standing and reputation of the company; and,

"Whereas, The entertainment has far surpassed the warmest anticipation held in regard to it; therefore, be it

"Resolved, That the jobbers of the product of the National Phonograph Co., in meeting assembled at the Waldorf-Astoria Hotel in New York City, do hereby tender to

Thomas A. Edison,  
William E. Gilmore,  
Carl H. Wilson,  
Frank K. Dolbeer,

and their great corps of assistants, their sincere and heartfelt thanks for the magnificent entertainment and splendid courtesy extended to them by the National Phonograph Co.; and be it further

"Resolved, That a copy of these resolutions, suitably engrossed, be sent to the National Phonograph Co., for preservation in its archives as a memento of one of the most agreeable and highly enjoyable occasions in the lives of all of its participants,

"J. F. BOWERS,  
ROBERT L. LOUD,  
R. WURLITZER,

A WELL-CONTENTED PARTY.

EN ROUTE TO THE FACTORY.

In the days following the completion of the "official" programme many courtesies were shown the visiting trade by the New York jobbers. Several special parties to places and points of interest were participated in by the ladies—wives of the out-of-town people—Coney Island attractions being the most popular diversion. Dinners and luncheons *al fresco* were numerous and greatly enjoyed.

\* \* \* \*

During the days the jobbers were in the generous hands of the National Phonograph Co., the comparatively few ladies—about 25—who accompanied their husbands to New York were not neglected. Under the Chesterfieldian and tactful management of N. C. Durand, chief of the business phonograph department, they were entertained with automobile trips about the city, dinners at Claremont and Manhattan Beach, theater parties, flowers, etc. For this delicate service, so perfectly executed, Mr. Durand has been showered with congratulations, and he may be presented with an unique testimonial one of these days. As one of the ladies afterward remarked: "I've had the time of my life, and Mr. Durand is too sweet for anything."

\* \* \* \*

While each and every one of the company's committees in charge of specific functions performed their respective duties admirably, an extra meed of praise is due the transportation committee—namely, William Pelzer, chairman; Walter Stevens, C. C. Squire, Joseph F. McCoy, J. W. Scott and J. R. Wilson, Jr. They were "on to the job" at every stage of the game, and not a man was left behind in the various connecting trips from the hotel to and from trains and boats. Ample provision was made for everybody, and comfort and expenditure resulted from the committee's splendid work.

\* \* \* \*

Another notable feature was the absence of the customary press committee on occasions of this kind. No "booming" or "puffing" by the daily newspapers was desired, let alone sought—a temptation and an opportunity difficult for the great majority of business men to resist. Representatives were present, but they were left to their own devices regarding the "write-ups," and this fact the jobbers subsequently commended in no uncertain terms. Neither was business discussed in any form, shape or manner, excepting where it originated with the jobber. Orders were not in order, and this plan was sedulously eschewed on the part of the company, who wished to be regarded simply as hosts at an entertainment which has already become historical in trade annals, the like of which has never been recorded in commercial events, and may never be repeated on a similar scale of liberality and generous hospitality, coupled with an entire freedom from any suggestion of ostentation.

\* \* \* \*

It would have been a graceful act if the work—by no means easy or altogether free from un-

pleasant incidents—of C. V. Henkel, president of the Douglas Phonograph Co., New York, in raising the funds that made the presentation of the souvenir gifts to Messrs. Edison and Gilmore possible, had been recognized specifically. Mr. Henkel originated the idea, created the co-operating committee, the soliciting falling wholly on his shoulders and he assuming the entire financial responsibility. (Doubtless a few are still shy, and in that event prompt and immediate payment would certainly be the only course out of their delinquency.) A resolution to this effect could have been appropriately adopted at the meeting of the jobbers in the Waldorf, July 20, when the question of commending the National

L. E. McGreal. C. N. Andrews. E. F. Taft. P. A. Powers.  
W. E. Gilmore. Thomas A. Edison. C. V. Henkel.

SOUVENIR COMMITTEE AND DISTINGUISHED RECIPIENTS.

Phonograph Co. was adopted by a rising vote. Perhaps a few jobbers will send Mr. Henkel a souvenir postal card expressive of their sentiments, for it is never too late to mend.

\* \* \* \*

The camera brigade were in evidence at all times, in and out of season. Mr. Edison was snapped possibly in a hundred different poses, one chap on the "firing line" declaring he had secured enough views to last him two years—making a business of their sale.

\* \* \* \*

The ladies present during the festivities were: Mrs. E. F. Ball, Newark, O.; Mrs. George Ilsen, Cincinnati, O.; Mrs. Theo. F. Bentel, Mrs. W. J. Tipper, Mrs. E. H. Fall and Mrs. F. Olmhausen, Pittsburg, Pa.; Mrs. J. N. Willis, Elmira, N. Y.; Mrs. J. M. Hayes, Toledo, O.; Mrs. T. J. Heffelman, Canton, O.; Mrs. J. P. Riley, Atlanta, Ga.; Mrs. and Miss Buckowitz New Orleans; Mrs. E. Perry Ashton, Detroit, Mich.; Mrs. C. W. Patrick, Mrs. C. L. Hibbard and Mrs. F. K. Babson, Chicago; Miss A. Smith, Buffalo, N. Y.; Mrs. Harry W. Weyman and Mrs. Darion, Philadelphia; Mrs. W. C. De Forest, Sharon, Pa.; Mrs. N. C. Durand, Mrs. Walter Stevens, Mrs. C. H. Wilson, Mrs. F. E. Madison, Mrs. Peter Weber, Mrs. L. C. McChesney, Orange, N. J.

#### THE GENTLEMEN PRESENT.

Germany—Thomas Graf, of Edison Gesellschaft, Berlin.

Alabama—A. R. Boone, T. Williams, Birmingham; W. H. Reynolds, Mobile, Ala.; R. L. Penick, Montgomery.

Arkansas—S. M. Field, O. K. Houck Piano Co., Little Rock.

Colorado—H. Shields and W. S. Ferguson, of Denver Dry Goods Co., and Thomas Hext, of Hext Music Co., Denver.

Connecticut—W. O. Pardee and H. L. Ellenberger, of Pardee-Ellenberger Co., New Haven.

Wisconsin—Hugh J. McGreal and L. E. McGreal, of McGreal Bros., Milwaukee.

Canada—R. S. Williams, Jr., of R. S. Williams & Sons Co., and H. G. Stanton, Toronto.

### THE "MEN BEHIND THE GUNS."

No small share of the success of the festivities attendant on the gathering of the Edison jobbers was due to the following committees, who performed their respective duties in a manner to evoke the highest praise:

Reception and Hotel Committee.—C. H. Wilson, chairman; William Pelzer, Walter Stevens, N. C. Durand, Frank L. Dyer, A. C. Ireton.

Dinner Committee.—W. E. Gilmore, chairman; C. H. Wilson, Walter Stevens, F. K. Dolbeer.

Music Committee.—Walter H. Miller, chairman; W. H. A. Cronkhite, A. T. Moore.

Transportation Committee.—William Pelzer, Walter Stevens, C. C. Squire, Joseph F. McCoy, J. W. Scott, J. R. Wilson, Jr.

Factory Committee.—Peter Webber, chairman; A. Wester, E. L. Aiken, C. C. Squire, L. C. McChesney, A. M. Hird, G. E. Youmans, J. H. Moran, F. S. Brown, I. A. Harrison, H. T. Leem-

ing, H. F. Miller, J. W. Aylesworth, W. G. Bee, J. V. Miller, F. L. Dyer.

Headquarters Committee.—F. K. Dolbeer, chairman; F. E. Madison, N. C. Durand, C. L. Hibbard, M. E. Elliott.

General Committee.—F. K. Dolbeer, chairman; C. H. Wilson, A. C. Ireton, W. H. Miller, W. H. A. Cronkhite, N. C. Durand, C. L. Hibbard, G. A. Hedden, M. E. Elliott, F. E. Madison, A. T. Moore, C. E. Osborne, C. B. Haynes, J. W. Scott, J. B. Wilson, Jr., H. M. Root, John C. Loy, Peter Weber, L. C. McChesney, C. C. Squire, E. L. Aiken, A. M. Hird, G. E. Youmans, H. F. Miller, Louis Reichert, J. H. Moran, F. S. Brown, J. W. Aylesworth, I. A. Harrison, W. G. Bee, J. V. Miller, John Hardin, George Renner, Walter Stevens, William Pelzer, F. L. Dyer, W. J. Buehler, John E. Helm, J. F. McCoy, W. H. Hug, E. E. Davidson, H. A. Turner, F. L. Fritchey, A. V. Chandler, W. P. Hope, A. H. Kloehr, M. G. Kreusch, W. C. Patrick, H. T. Leeming.

### NOW THE COLLAPSIBLE HORN.

The New Jersey Sheet Metal Co. Have Evidently Got a Winner—Has Many Features of Excellence.

It would seem as if the New Jersey Sheet Metal Co., of Newark, N. J., had solved the collapsible horn problem. We had the pleasure of examining their latest product in this line the other day—a collapsible sheet metal flower horn—and must admit surprise and pleasure at the results demonstrated. It was placed together and taken apart in an incredibly short space of time—a couple of minutes, we believe. Now, while this is an accomplishment to be proud of, yet this is not "the whole thing." The great feature of this horn is its wonderful system of interlocking, whereby it is as firm as if cast in a mold, with an interior that is as smooth as glass, with no interruption to sound and designed to give the best results acoustically. To such a multitude of excellencies might be added that of reliability—in fact, it is apparently made to last. Dealers are destined to find this collapsible horn a wonderful seller. It is made for both cylinder and disc taper-arm machines, and for the thousands who take their talking ma-

chines "visiting" it will prove a godsend. It will not interfere with the sales of the regular horn, for no enthusiastic user of talking machines will fail to be without the two.

### THE "NEOPHONE" IN CANADA.

Mr. A. W. Bennet has just arrived from England and has opened up at 38 and 40 Adelaide street, West Toronto, with the sole agency for Canada for Neophone, Limited, London, England, owing to the numerous inquiries which have reached them from this country for Neophone specialties. The Neophone is the invention of Dr. Michaelis, and is protected by patents in every country throughout the world.

Mr. Bennet, the "Neophone man," as he calls himself, is a keen, progressive business man, and has already made many friends, says the Canadian Music Trades Journal. He is quite enthusiastic over his Canadian business, and tells us that the amount of orders already received more than fulfil his expectations, and he is quite confident that the great success achieved by the Neophone, Limited, in foreign countries will be repeated in Canada as soon as the merits of the Neophone become more widely known.

### A GOOD DOLLAR'S WORTH.

On and after July 15 the annual subscription price of The Talking Machine World, published by Edward Lyman Bill, at 1 Madison avenue, New York, will be \$1 instead of 50 cents. Any dealer interested in talking machines was never offered better value for his money than the same publication gives. It is a well-edited, cleanly gotten-up publication and worth money to the man who sells talking machines.—Canadian Music Trades Journal.

George H. Sharp & Son, of Westfield, Mass., have been advertising the Edison goods very extensively during the summer through the medium of various public picnics, fetes, etc. The machines were taken to the affairs by a member of the store staff, and the latest records were played. The publicity created by the above plan resulted in a largely increased trade, especially in records.

## BLACKMAN KEEPS DEALERS COOL

AN  
**EDISON**  
Jobber

Don't get warm because you can't get EDISON or VICTOR goods wanted. Buy from BLACKMAN and notice how cooling BLACKMAN's treatment is.

 overture by Prince's Orchestra and the entire  
 Minstrel Company, singing the chorus "Songs  
 of Aristocracy," followed by humorous dialogue  
 between Interlocutor and End-man, with amus-  
 ing interruptions from the other End-comedian,  
 whose witty sallies are greeted with laughter  
 and applause. Mr. Murray responds in the  
 ditty "I Kind of Like to Have You Fussin'  
 'Round" with full quartette refrain.  
 3449 Record "B" introductory overture "The Yankee  
 Doodle Negro," by full company with Prince's  
 Orchestra. Interchange of repartee between  
 Interlocutor, and the End-comedians. Mr.  
 Collins renders "Good-Bye, Mr. Greenback"  
 with Minstrel chorus and enthusiastic plaudits  
 from the audience.

### CALLERS ON TEA TRAY CO.

Many Jobbers Who Stayed Over from Edison  
Entertainment Placed Good Orders.

A large number of the talking machine jobbers  
who stayed over in New York for a part of the  
week following the entertainment given by the  
National Phonograph Co. called to see the sam-  
ples of the new goods exhibited by the Tea Tray  
Co. at the Hotel Imperial.

Orders comprising specific deliveries for horns  
and horn supports for the coming fall and winter  
if placed early by the jobbers of talking machines  
will insure better service than could possibly be  
obtained by holding back orders until late in

the season. The new models of No. 200 and No.  
228 cranes are very highly spoken of. They con-  
tain all the good features of the No. 20 crane  
and several improvements. In a chat with a  
member of the company last week he said:

"Many valuable patents have been obtained,  
and others are pending, which are intended to  
protect our patrons. The policy of our com-  
pany, the pioneers in the business, by the way,  
is so well known that we have found it neces-  
sary to begin to protect our interests against in-  
fringers, and these will be prosecuted with  
vigor."

### FAVORABLE JUDICIAL VIEWS.

Courts Notice the Animous of "Kickers"  
Against Talking Machine—Never Look at  
the Other Side of Things.

It is very pleasing to the trade in general to  
note the favorable judicial view entertained  
throughout the country in regard to "talkers."  
Every week or so we read of a person who has  
no soul for music complaining about a talking  
machine in his vicinity and almost invariably  
the court refuses to sustain him. Of course,  
there are cases where the talking machine is  
operated in a way to annoy people in the neigh-  
borhood, but in such cases the owner of the ma-  
chine usually heeds a protest and avoids bringing  
the matter to court. The talking machine has  
reached a point where it furnishes the musical  
entertainment of a great mass of the people,  
and in most instances the music is much above  
the trashy order.

Wholesome entertainment—whether found in  
books, talking machines, other musical instru-  
ments, or what not—is the greatest foe of intem-  
perance that exists, and those who would curtail  
those sources of pleasure that are on the moral  
side of life incidentally encourage those that are  
on the immoral side, a fact that is so well under-  
stood that the courts can be relied upon to decide  
cases in accordance with the spirit of fairness and  
with a proper regard for the good of the ma-  
jority. Few laws, however rigid they may ap-  
pear, are so inelastic as to deprive a large num-  
ber of people of innocent pleasure to the end  
that the whims of cranks and neurotics may be  
humored

The wholesale and retail stock of Edison phono-  
graphs and records carried by Kipp Bros., 217  
North Illinois street, Indianapolis, Ind., has been  
purchased by the Kipp-Link Phonograph Co. The  
latter firm have added 2,000 feet more floor space  
to their store, and will enlarge the business in a  
way that will enable them to render the dealers  
in their territory much better service through  
their jobbing department.

In a small class which graduated from a local  
educational institution, there are said to have  
been records made of the class singing the class  
song and giving the class yell. Each member of  
the class was given one of each of these records,  
which they are keeping as highly valued mement-  
oes of their school days.

## STANDARD METAL MFG. CO.

MANUFACTURERS OF

## PHONOGRAPH HORNS AND SUPPLIES

Our Horns, as our name implies, are "Standard" in every  
respect. We make all the different styles and sizes in any metals or colors, including the  
new Morning Glory Horn, which is cut on a new plan to distribute sound more evenly.

10 WARREN ST.

## LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS.

(Specially prepared for The Talking Machine World.)

Washington, D. C., August 10, 1906.

**GRAMOPHONE.** Gustav Hensch, of Leipsic, Germany, assignor to the firm of Ernst Holzweissig Nachf., of Leipsic, Germany. Patent No. 825,725.

This invention relates to phonographs and similar instruments, and its object is to locate the trumpet of these instruments so that it shall be out of the way and less subject to damage and to injury of the other parts of the instrument by being run against or unintentionally struck, as often happens when the trumpet is

arranged in the exposed position common to most apparatuses of the class hitherto known.

The invention also comprises the connection of the diaphragm arm to the end of the trumpet, so as to allow of the free movement of the latter when the trumpet is stationary.

Figure 1 is a side elevation, partly in

section, and Fig. 2 a plan of the device.

**SOUND-BOX OF PHONOGRAPHS.** Alex. Fischer, of Kensington, London, England. Patent No. 825,119.

This invention relates to improvements in the sound boxes of phonographs; that is, instruments by which the mechanical effect of vibrations of sound can be recorded on a suitable moving surface, such as a cylinder or disc, and reproduced from such surface.

The invention has for its object the reduction of the over-and-false vibration of the diaphragm of the reproducing and recording sound boxes. To this end the diameter of the diaphragm is divided into about thirds by placing on each of the two points of division a dome or bearing piece. The two domes or bearing pieces carry and are directly connected to a common stylus bar carrying (preferably at its middle) the stylus. The domes or bearing pieces and the common stylus bar carried by them lie in a direct line with the longitudinal axis of the sound box connection or sound exit tube. In the case of disc machines the bridge to the diaphragm of the sound box is connected at two points (the points of division dividing the diameter or axis into about thirds) over one another in a line with the stylus bar. The connecting pieces may go through the diaphragm in the usual way, the stylus being at the lower end of the stylus bar. By preference two sound collecting holes are employed, situated under the division points of the diaphragm and leading into the sound exit tube for other cylinder or disc machines. This arrangement has also been applied with success to two independent sound boxes which are placed in front of one another across the record for

cylinder machines and on the top of one another for disc machines. These independent sound boxes are directly connected together through a common stylus bar and a common exit tube, and have one common reproducing stylus.

Figure 1 shows perspective view of sound box. Fig. 2 shows elevation of same. Fig. 3

shows perspective view of sound box for that description of phonograph known as the "gramophone." Figs. 4 and 6 show a method of applying the invention to two independent sound boxes. Fig. 5 shows a detail hereinafter referred to.

**SOUND-REPRODUCING DISC FOR GRAMOPHONES.** Achille Maitre, of Delemont, Switzerland. Patent No. 825,065.

The distinguishing feature of this invention consists in that the sound-reproducing disc has each of its two faces constructed as a spirally-grooved working surface in the form of a truncated cone. A first object which is attained by this special formation of the disc faces is to enable the disc to be used on each of its two faces, with the effect of enabling the receiving stylus to follow more easily the spiral grooves, owing to the inclination of the grooved parts, and at

the same time to diminish the friction thereof, because the declivity or inclination of the grooved working faces of the disc aids somewhat in the motion of the receiving stylus.

Another great advantage of this double cone disc consists in that the latter has in its middle portion relatively great

thickness, so that it is very solid and resists well breaking and bending strains, during its manipulation or under other influences.

In the accompanying drawings, Figure 1 represents by way of example the preferred form of the improved disc in plan view, and Fig. 2 is an elevation of the same viewed edgewise.

In the construction shown the disc is provided upon both faces with spiral grooves for

the purpose of reproducing two airs, these faces being inclined to form each a working surface in the form of a truncated cone. This inclination of both the disc faces is arranged in such a manner that the thickness of the disc in its grooved part diminishes gradually from the point a to the periphery b, whereby the disc possesses in its middle portion a relatively great thickness. For both working faces of the disc the reproducing stylus will travel from the inner end of the spiral to its outer end. The disc of this invention is intended to be mounted upon a stationary shaft which can only perform rotary motion around its geometric axis.

**MANDREL FOR PHONOGRAPHIC RECORDS.** William H. Gates, of Norwich, Conn. Patent No. 825,045.

This invention relates to record supporting mandrels for use with talking machines, the immediate object being to provide a removable mandrel in which provision is made for adjusting the record longitudinally relatively to the said mandrel.

Heretofore it has been the universal practice to provide in talking machines using cylindrical records a slightly tapering mandrel that is fixedly secured to or formed as an integral part of the screw shaft that operates the traveler upon which the reproducer is mounted. The cylindrical record is slipped upon said mandrel until it fits the same snugly,

no provision being made for adjusting the record lengthwise. As stated above, the present invention provides for such adjustment, and thus makes it possible to

so position the record with respect to the reproducer that the latter will be started into action sooner or later, as may be desired—that is to say, the record may be readily and accurately

positioned so that the reproducer will engage it at any point throughout the length of said record, and will begin speaking at that particular point. In addition to this desirable result the present invention also anticipates the provision of automatic means for transferring records one at a time from a relay or magazine of records to the mandrel of talking machines of this class, and for removing said records after they have been used, the present improved form of mandrel being specially adapted for use with such automatic mechanism.

The invention is illustrated in the accompanying drawings. Figure 1 is a side elevation of a phonograph case having mounted thereon the shaft which ordinarily receives the cylindrical record. In this figure one of the newly invented record supporting cylinders is also shown in position to be slipped upon the said shaft. Fig. 2 is a relatively enlarged side view of a mandrel embodying the essential features of the present invention, and Fig. 3 is a longitudinal central

Instantly attached, very rigid, and will hold any size Horn up to 36 inches. Will not injure the Cabinet.

sectional view of said mandrel, showing also a "record" mounted thereon, as well as a portion of the shaft above referred to. Fig. 4 is a transverse sectional view of said shaft at the point where it is intersected by a certain friction plug g. Fig. 5 is a transverse sectional view of the mandrel taken on the line 5 5 of Fig. 2.

MULTIPLE DUPLICATING APPARATUS FOR SOUND-PRODUCING RECORDS. Emile Desgrandchamps, of Paris, France. Patent No. 824,710.

This invention relates to the manufacture of plate or disc records for talking machines, and its object is the impression of such plate records for sound producing instruments, which records are made of hard but elastic material when in a cold state, and which softens when heated, the impression of these plates being performed by means of a press provided with a movable device or a turntable carrying the disc and which allows simultaneously or not the heating of the discs or of the material previously to the compression or to the cooling of the discs or the corresponding plates, disc, and the like during or after the compression.

The annexed drawing given by way of example shows a vertical section of a special form of this press.

A table 8, which may be rotated round a vertical shaft, carries, by means of springs 13, plate forms 10, which may be lowered by the action of the pressure and rest upon the lower plate form 1 of the press, which is cooled by circulating water or in any other preferred manner, as well as the plate 2 of the press, which is movable. The plate form 10, carrying a die or electro block 3, has previously been heated over burners 11 or otherwise. Afterward the rotation of the movable table 8 carries under the plate form of the press the previously heated die, as well as the plate 4 to be impressed, upon which is arranged a second also previously heated die 3 and an auxiliary plate 7, which is compressible and made of felt, asbestos, tin, zinc and the like if the impression is to be obtained on both sides at a time or simply the compressible plate if the impression is only to be done on the under side of the disc record. This compressible plate 7 may also be previously heated if the nature of the disc to be impressed requires that. It may also be wedged up under the movable plate 2. Then different superposed plates may be kept in place by a centering pin 5 or by the walls of a kind of mold. The turntable may be composed of a plurality of discs 10, so that while one die is under pressure another one is heated and a third one cooled. A press of this kind permits any loss of time to be avoided, as simultaneously one disc record may be under pressure while

another die intended to receive the pressure is heated and while a third disc record which has just been compressed may be separated from its cooled die.

The compressible plates 7 are intended to render the pressure uniform on the whole area of the pressed surface and to control the cooling, which is very useful, as the materials which are

hard and elastic at ordinary temperature generally soften but difficultly when hot, and as the cooling under pressure rapidly leads to the limit temperature at which the plasticity ceases and the elasticity begins.

It has been noticed that with plate records made of hard and elastic material a sapphire or glass point would be very convenient for producing purposes even if the record has been made by sinuosities (record of a gramophone). The points need not be changed after each reproduction, and the record wears very little, as the spiral of the record is even polished by the successive passages of the point. Besides this, the obtained disc records are practically unbreakable. They may be homogeneous if the thickness of the elastic material is sufficient to allow the impressed layer to remain plane without the aid of a layer of any material (cardboard and the like) upon which it is usually mounted.

SOUND BOX FOR PHONOGRAPHS AND THE LIKE. Piotr Lebedzinski, of Warsaw, Russia. Patent No. 825,738.

The capacity of a diaphragm for recording or reproducing sounds of a varying pitch in the proper strength and tone color chiefly depends upon its pitch or tone, and each pitch or tone of the diaphragm comprises only a certain progression of notes which may be recorded or reproduced approximately correctly. A lowly keyed diaphragm will always reproduce the low notes in a louder and more natural manner than the high notes, which in a so-keyed diaphragm are feeble and have an unnatural color, while on the contrary, a highly tuned diaphragm will reproduce the high notes in a louder fashion and in a more correct tonality than the low notes, which in a so-keyed diaphragm are weaker and unnatural. In short, each diaphragm in accordance with its pitch will vary that proportion between the overtones and the fundamental which determines the color of the notes, so that also the true reproduction and strength of the tones will be more or less influenced.

In order to satisfy as much as possible all the requirements, the diaphragms used in phonographs, gramophones, telephones, etc., are usually tuned to a mean succession of sounds, although the above-mentioned defects will remain unaltered at both ends of the scale. Thus, for example, the notes of the violin when reproduced will always resemble those of the flute or the whistles and the notes of a trumpet or the piano bass notes will resemble cries, they being without depth and strength, while only the intermediate notes between certain limits, the pitch of which is in accordance with that of the diaphragm, will be reproduced comparatively truly and in the correct strength. The same is true of the recording diaphragms which are not uniformly sensitive for all notes, and therefore will record the several sounds only in correspondence with its pitch and not always in a manner true to nature. Now that the musical scale comprises at least seven octaves (certain overtones of the several notes remaining still without these limits), but the capacity of the diaphragm comprises only about two octaves, it follows that the diaphragm will have to satisfy other conditions in order to be able to correctly reproduce or record every sound or note possible. First of all, the diaphragm requires to have a pitch that may vary within very wide limits, and, secondly, the diaphragm requires to be combined with devices by means of which its pitch may be varied, not only when at rest, but also when working—that is, during the recording or reproducing operation. In other words, the diaphragm requires to be capable of accommodating in a similar manner as the eye or the ear.

The object of this invention is to provide a diaphragm which will record or reproduce accurately and distinctly tones of widely varying pitch and be adaptable during operation to a tuning adjustment. To this end the diaphragm comprises a central portion composed of a hard material and an outer portion of an extremely flexible fibrous material adapted to stretch radially to change the tension of the diaphragm.

Figure 1 is a longitudinal central section through a sound box. Fig. 2 is a cross-section through the line y z in Figs. 1 and 3. Fig. 3 is a section similar to Fig. 1, in which the diaphragm is modified. Fig. 4 shows diagrammatically the arrangement of two different diaphragms with a common stylus lever, and Fig. 5 shows diagrammatically the arrangement of two different diaphragms with a common stylus carrier.

COLLAPSIBLE PHONOGRAPH HORN. C. A. Senne, New York. Patent No. 811,877.

This invention relates to an improved horn especially designed for use in connection with talking machines and the like, the object being to provide a horn that may be "knocked down," so that it may be readily packed in a small space, and also that its transportation may be facilitated.

With these briefly stated objects in view, the invention consists in providing a series of blades or sections, each having their edges formed with flanges over which is secured a locking rib, by which the sections are securely held together, and sleeves having tubular portions engaging alternate ribs, the device as a whole being in the shape of a horn.

The invention also comprises means for holding the horn to the tube nozzle, which is also employed for locking the sections and holding the horns in a perfectly secure condition.

Figure 1 is a perspective view of a horn constructed in accordance with the invention. Fig. 2 is a plan view of the same. Fig. 3 is a detail section on the line 33 of Fig. 2. Figs. 4 and 5 are enlarged detail sections drawn through the uniting ribs and flanges. Fig. 6 is a detail per-

### NEW LINE OF HORNS

Being Placed on the Market by Hawthorne & Sheble Mfg. Co.—Business Very Active.

The new line of decorated flower horns shown to the trade by the Hawthorne & Sheble Manufacturing Co., of Philadelphia, have found immediate favor and large orders are waiting. The line is such as will enable any jobber or dealer to round out his stock with artistic horns of decided feature of decoration and finish. A number of the decorated horns made by the above concern are distinctly new in their design, and are a departure from established lines.

It has been reported that the Hawthorne & Sheble Manufacturing Co. are pushed to their extreme capacity, even during the so-called dull season, to supply goods. Their increased facilities, however, will enable them during the coming season to make prompt shipments on all orders they have booked for future shipment.

The jobbing trade and dealers this season are taking time by the forelock, due to their experience last season, and are placing orders for from six to eight months in advance. Their wise precaution is due to large demand for talking machine supplies.

### A PROGRESSIVE INSTITUTION.

One of the most complete and up-to-date piano, graphophone and musical instrument stores to be found in Ohio is the combined store of S. H. Lightner and the Columbia Phonograph Co. in the Y. M. C. A. Building, at 104 East Federal street, Youngstown. Manager Harry B. Bibb is in charge of the Columbia interests and reports

a good business up to the present. Mr. Lightner handles a line of high-grade pianos, organs and musical instruments, while Mr. Bibb carries Columbia graphophones of all sizes and descriptions. The largest stock of records ever carried by any musical house in Youngstown is being handled by this concern.

### WHY IT'S BEST TO BE A HEN.

A Duck was one day bewailing his fate to a Rooster.

"Here I work all year round," said the Duck;

"lay larger eggs than the hen and more of them than the hen, and still there is no flattering poetry written of my efforts toward feeding mankind."

"Well," said the Rooster, "you lay the egg and walk away quietly. Why don't you do like the hen—advertise?"

Moral.—Call attention to yourself and your business. Your competitor won't do it for you. The world won't know you're doing business if you don't cackle about it.

Be a hen, not a duck.

## YOU HAVE WAITED FOR THIS!

AN ATTACHMENT FOR HOLDING SOFTERTONE AND MEDIUM TONE NEEDLES IN THE NEW SPRING CLAMP NEEDLE ARM OF THE VICTOR EXHIBITION SOUND BOX

Here it is attached to the sound box. The sound box is turned up and the attachment inserted with its flat side opposite the lever, as shown in illustration.

Here is the Needle Clamp Attachment separate.

Without this attachment it is impossible to use softer and medium tone needles on the spring clamp needle arm. It is perfectly simple, easily attached, holds like a vise and is made in two sizes—for softertone and for medium tone needles. Order as NEEDLE CLAMP ATTACHMENT and specify which needle is to be used.

Price, 25 cents each

Special prices to jobbers and dealers

**The Softertone Needle** is growing in popularity every day. The loud tone needle, of course, is a necessity to the dealer for selling machines, but it is often too loud for home use. When a customer takes a machine home he finds the softertone needle a great relief. Instead of tiring it perpetuates the use of the machine. This means record sales.

**It Costs Less** One Softertone needle will play six records. Less time is used in changing needles, and there is less wear on the records. A record will last three times as long when the softertone needle is used. We did not accept this fact until satisfied by numerous tests. You owe it to yourself to make a test if in doubt.

## DEATH OF ROBT. L. THOMAE.

Drowned at Atlantic City on July 21st, While  
Trying to Save His Daughter, Who Also  
Lost Her Life.

It is with exceeding regret that we announce the death of Robert L. Thomae, which occurred on Saturday, July 21, at Atlantic City, N. J., under extraordinarily sad circumstances. Mr. and Mrs. Thomae and their daughter Helen, aged thirteen, had been visiting Atlantic City, and about five o'clock on Saturday Mr. Thomae and his daughter decided to take a sea bath. Mrs. Thomae did not don a bathing suit, but sat on the land watching the father giving the little girl her first lesson in swimming. Finally, tired with the exercise, Mr. Thomae went upon shore and joined his wife. Helen remained behind, wading in the water which did not reach her waist. The first inkling Mr. Thomae had of her danger was when he heard a plaintive cry of "Papa! papa! help me!" Before he could reach his daughter a swirling current had carried her beyond his depth. Striking out he managed to reach her side, and, seizing her bathing suit, attempted to drag her ashore. For fully ten minutes he struggled in the waters, but, becoming exhausted, the father sank to his death, still clutching the bathing suit of the lifeless girl.

The battle waged by Mr. Thomae, first to save the life of his daughter and later that of himself, was watched by a crowd of hundreds who gathered on the beach, helpless to extend aid. The breakers ran with terrific force, sufficient to balk the efforts of the life guards, who rushed to help. At last they manned a lifeboat and forced it through the surf within reach of Mr. Thomae's body, which was floating, face downward. His grasp of his child had loosened, and the body had disappeared. The men quickly pulled the father's body into the boat and carried him ashore, while every effort of the physicians was futile to bring back a spark of life. The body of Miss Thomae was washed ashore late Saturday night.

The late Mr. Thomae, who resided in Fanwood, N. J., was in the very prime of life, being 49 years of age. He had long been connected with the talking machine business, and was considered one of its leading experts. He had been long associated with the Victor Talking Machine Co., of Camden, N. J., in various confidential capacities. He was a gentleman of culture and unusual attainments, and keenly interested in the talking machine industry. It was only recently in The

World sanctum that Mr. Thomae spoke in the most optimistic vein regarding the future of the talking machine and its great possibilities in varied lines of effort. He took a very active part in the deliberations of the committee which framed the copyright bill, recently presented for the consideration of Congress. His sad death is a

THE LATE ROBT. L. THOMAE.

disinct loss to the industry, and The World extends to his widow the sympathy, not only of this paper, but of a host of friends in the trade, in the dual loss which she has sustained.

The funeral of Mr. Thomae and his daughter, which took place from the residence of Mrs. Jas. B. Carter, at Fanwood, N. J., on July 24 last, was largely attended.

## THE "TALKER" IN THE HARVEST FIELD.

More light has been thrown upon the continual growing sphere of the talking machine by an item from Salt Creek, O. In order to add spirit to the efforts of his neighbors at raising of Val Hunter's barn, John Taylor entertained the workers with a number of fine selections on the graphophone. Lo, a new field for possibilities. At the present rate the talking machine may be expected to supersede the jug of hard cider at harvest times as an exhilarator, and in other

ways lighten the labors of the farm hands through the influence of sweet music.

## THE VICTOR AND THE STEINWAY.

Manager Grannis, of the Knight-Campbell Music Co., Denver, Col., recently conceived an extremely bright method of emphasizing the value of the Victor talking machines. In arranging a window display he placed a Steinway piano in the center and surrounded it with Victor machines. The accompanying sign read: "The Victor is the Steinway of Talking Machines—the Standard," and who doesn't know the standing of the Steinway? "Nuff sed."

## HERE'S A RECORD WORTH NOTING.

The business resulting from a talking machine department may be judged from the report of a Syracuse, N. Y., dealer after stock taking. His year's net business in all amounted to \$250,000, of which \$50,000 represented the sales of sporting goods and musical merchandise, his original lines, and the \$200,000 was from talking machines. Of course, he got out and hustled, but then the results were pretty fair, eh?

## AN OLD EDISON PHONOGRAPH.

(Special to The Talking Machine World.)

Pontiac, Mich., Aug. 6, 1906.

The Davis Phonograph & Music Co. have on display one of Edison's first phonographs, which was made 26 years ago. It is of cast brass, and weighs 175 pounds. The machine was worked by hand, and has a flywheel weighing over 60 pounds. The cylinder is over a foot in circumference, and instead of wax, tea lead or tin foil was used as a record. It is the property of the American Phonograph Co., and was purchased by them for \$2 of a junk dealer. It is valued at \$500.

The Columbia Phonograph Co., through their branch located at 104 East Federal street, Youngstown, O., recently donated a Twentieth Century machine for use at an outing of the M. E. churches on Conneaut Lake. The music and source from whence it came was greatly appreciated by the excursionists.

The Pittsburg Phonograph Co., of Pittsburg, have been incorporated with a capital of \$25,000. Directors: J. L. Wagoner, D. M. Wagoner, E. E. Irwin and others.

### REVIEW OF TRADE CONDITIONS.

**Business for Month Little Behind May and June—New Slot-Controlled Devices to Be Placed on Market the Coming Season.—A Business That Calls for Long Study and Thought—Always Room for New Ideas.**

Business in this trade during the past month has, if anything, been a little behind that of May and June. The outlook for the coming month, however, is exceedingly bright, and the present slight respite comes as a God-send to all desiring a short summer vacation. One feature of the coming fall trade, which will be sure to stir things up a little, is the large number of new slot-controlled devices about to be placed on the market. While these, it is true, consist mostly of improvements on models now in use, yet some of them are not only radically new, but many original and catchy features are involved, which stamp them among the class known as "money getters."

The manufacturing of slot-controlled machines is an undertaking which necessitates long study and thought, and even then it is, more or less, a gamble. The impossibility of estimating the real earning power of a new machine until it is tested by the public is undoubtedly the cause both of the many failures in this field and the large number of machines now on the market that are really worthless, and will soon find their way to the junk pile. Yet, with this and other equally trying things to contend with, there is absolutely money to be made, and lots of it, too, in the automatic business. And still we hear men who, because they lacked the brains or stick-to-itiveness that would have wrested success from failure, "knock" this business and declare it "worked out," or that there is no field for new devices of this kind.

Let anything of true merit show itself, and see how quickly it is snatched up by our sharp-eyed parlor managers who are constantly on the lookout for new attractions. No one knows better than do these men the incessant call of the public for the new and novel.

This trade worked out? Rather say we need more new men in it who have ideas and push about them. Push has made American men what they are to-day. It is the great American spirit condensed into a monosyllable. Hand in hand with push goes publicity as a motive power toward success. The two are so close that it is difficult to know them apart. The man of push is a champion of publicity. If he has a good thing he wishes the public to know about it. If he has goods to sell there must be push and publicity if he would convert those goods into income. What is the use of having the goods to sell if no one knows of them? How are the buyers to be found? Push and publicity will provide the articles to be sold and the persons to buy them. Push and publicity are the antidotes of stagnation and starvation.

It has been the policy of The World from the start to help advance the interests of the automatic business and to bring the manufacturers into closer contact with the consumer. This will be our policy in the future, and this department will welcome any suggestions to this end. It is our aim to be helpful to all engaged in this line of business.

### TO TRAVEL FOR THE REGINA CO.

L. T. Haile, formerly with the Auto-Electric Co. and the Rudolph Wurlitzer Co., has been engaged to travel for the Regina Co. W. C. Pross,

of the Regina Co., has been advanced to assume the territory formerly looked after by L. C. Wilbur, who is now in charge of the New York store of the Regina Co.

### TO TEST SPRINGFIELD ORDINANCE.

**Case of Burns Will be Taken to Highest Courts of the State.**

(Special to The Talking Machine World.)

Springfield, O., August 6, 1906

William Burns, manager of the moving picture parlor at No. 49 East High street, will test the validity of the city's graphophone ordinance in common pleas court.

He was placed on trial in police court for violating the ordinance, found guilty and given the minimum fine of \$10 and costs. A motion was made for a new trial and overruled without argument that the case might be appealed at once.

Professor Robert Brain, testifying for the State, said that the continuous playing of the machine made his work in his conservatory in the Book-walter Building very difficult.

Dr. Converse testified that it was almost impossible to carry on a conversation with his patients, and that he could hardly hear over the telephone when the machine was playing. His office is in the Mitchell building.

The doctor admitted under cross-examination that he had on several occasions requested the manager to play certain pieces on the machine.

Alpha Gross, testifying for the defense, said that he had sold the graphophone in question to Mr. Burns, and that he had used it previous to the sale to advertise his own business.

The receipt for \$50 for a license from the Mayor to conduct a talking machine and picture show parlor at No. 49 East High street for one year at \$75 a month, were introduced in evidence and will be taken to the common pleas court.

### PHONOGRAPH-BIOGRAPH.

**New Form of Producing the Illustrated Song and Story.**

Phonographic parlors have passed the experimental stage, and have universal approval. The combination of the phonograph and the kinematograph has also proven popular.

At the present time an enterprising promotor is establishing permanent biograph exhibitions in the larger cities, the admission being small, with a change of pictures twice a week.

A New York City inventor still further improves the biograph by the assistance of the phonograph. In other words, he has greatly simplified the production of the illustrated song. Simultaneously with the projection of pictures upon a screen, a phonograph is utilized to render a musical composition in conjunction with the illustration.

### BURNT LEATHER POST CARDS.

A novelty to have any permanent selling value must be one, though a fad, that can be put to some good use. The burnt leather post card is one of these. The feminine eye has been caught and now you can find these cards made into couch covers, pillows, handkerchief holders, table-covers and a hundred and one other articles of value.

The idea of the collector is, of course, to get as many from different parts of the country mailed by friends as possible. Talking machine dealers can make a large profit by handling these cards as a side line. Their display in the window will induce many to enter the store to buy

who never would have stopped. This might mean a number of extra "talkers" disposed of in a year, and, at any rate, will do no harm.

The Risley Bird Manufacturing Co., 94 Fifth avenue, this city, are making a special offer to the trade in their advertisement in this issue, and it will pay any one to read it over carefully.

### A NOVEL MACHINE

**Is the Eidophone Designed by Mrs. Watt-Hughes—Has Unlimited Possibilities.**

The eidophone is a novel picture-making apparatus designed by Mrs. Watts-Hughes. It consists of a receiver, resembling an inverted conical ink bottle mounted upon a cylinder, and a long tube fitting into the bottom of the latter. Over the top of the receiver is stretched a membrane, which may be made of paper, parchment, silk, goldbeater's skin, thin tin or rubber.

Sand, powder of some kind, or even small seeds, may be placed on the membrane. When a person sings in the tube surprising results are noticed. The most delicately wrought pictures are formed by the loose material.

Even water or milk spread on the membrane will respond in pictures and figures to the vibrations caused by the voice, various patterns being formed, according to the power or intensity of the notes.

"I noticed," said the experimenter, "that the seeds which I had placed on the rubber membrane, instead of scattering promiscuously in all directions or falling over the edge, resolved themselves into a perfectly geometrical figure."

"Wondering if this were the result of mere accident, I cleared the diaphragm and scattered fresh seeds on its surface. Upon singing the same note as before, the seeds formed themselves into the same figure."

The possibilities of this invention are limitless. A fellow need only know that his girl's picture appeared at the sounding of E natural to make the photographer a useless factor. A rogue's gallery, instead of containing a number of portraits, would simply show records of measurements and enough musical notes to form a Sousa march.

### HERE'S A SENSIBLE JUDGE.

**Appoints a Committee to Select Music for Talking Machine Used to Advertise Arcade—Residents Complained of One Tune All the Time.**

(Special to The Talking Machine World.)

Philadelphia, Pa., July 31, 1906.

After hearing testimony in the suit brought to refrain John W. Jones, the proprietor of an amusement resort on North Eighth street, from keeping a talking machine on the go all the time in front of his place, Judge Martin decided the objectors had a case and suggested a plan for the abatement of the alleged nuisance. The complainants were Reuben Goldberg, a milliner, and E. B. Woods, manager for Woolworth's store. Several employees of the two establishments testified that the constant repetition of one tune on the singing machine had worn their nerves to frazzles. John said he pointed the megaphone of the instrument at an alley midway between the store of the complainants, but the Court decided that the volley of popular airs was too scattered with such a blunderbuss of a discharge, and that the machine be drawn back into the hall of the amusement company so that the music could only reach to the front pavement and not across the street.

Judge Martin also suggested that the parties to the action map out a line of tunes for the repertoire of the machine. Goldberg said he was

accustomed to "When the Harvest Days Are Over, Nellie, Dear," that he could see Nellie in his sleep, and that the "Grand Old Flag" aroused anything but patriotic emotions. The manager of the place and two policemen testified that the music was of the best kind, and attracted many patrons, besides adding to the gayety of the Eighth street life. This was admitted by the plaintiffs, but they said the occasional stroller on the busy mart was not called upon to endure the same tunes every day. They agreed to try a wider range of tunes, and Judge Martin said that if the plan did not work he would take further action.

#### MOVING PICTURE MACHINE WANTED.

In the list of Foreign Trade Opportunities furnished by the Government, No. 243 states that a party in a South African city desires catalogues and prices of moving picture machines. He intends buying a complete outfit of biascopes and a few cinematographs, and wants the very "best money can buy." He will require the latest films and will pay spot cash. Further information regarding the above inquiry may be obtained from the Bureau of Manufactures, Washington, D. C.

#### RECENT INCORPORATIONS.

American Amusement Co., Boston, has been incorporated with the authorities of Massachusetts, with a capital of \$10,000. President and treasurer, J. E. Comerford, No. 48 Vineland street, Brighton, Mass.; clerk, James W. Murdock, No. 336 Old South Building, Boston, Mass.

\* \* \*

The Fibre Case & Novelty Co. was incorporated recently with the Secretary of State of New York, to manufacture fiber cases and specialties. Capital, \$10,000. Incorporators: David Wolin and Eva Wolin, No. 223 West 123d street; Samuel Meyerson, No. 1907 Seventh avenue, all of New York.

#### ATTRACTS THE LADIES.

Most of the penny in the slot machines are made with mirrors nowadays, for these draw attention more surely than any sign. A girl will come past, stop, unable to resist taking one look in the glass. Then, as she hates to be noticed

looking at herself, she slips in a cent for chocolate. Men are lured in the same way through an overpowering desire to see how their neckties are doing. What they really pay a cent for is a good look at themselves.

#### THE PICTURE-PHONE

Is a Most Ingenious Slot-Controlled Device, Which Has Many Individual Features That Command.

The latest production in the line of slot-controlled devices is the "picture-phone," which is the invention of that well-known talking machine expert, Louis P. Valiquet. The "picture-phone" is a revelation in the type known as illustrated song machines, which for a year or two have been on the market, operating in arcades, cafes and other places of amusement, where they have successfully enticed the pennies from the public's pockets.

One serious difficulty, however, confronted the operators of most of these great money making devices, namely, the combination of the pictures and talking machines made a device whose complex nature puzzled all but the most experienced mechanics in this particular line of work—it was a conglomeration of dynamos, coils, repeating and tuning devices, etc., the repairing of which was a difficult undertaking.

Every one realized this faulty condition of affairs, but it remained for L. P. Valiquet to illuminate the trouble, which he has most effectually done with the introduction of his "picture-phone." This machine is simplicity itself in construction and automatically perfect in every detail. Unlike other similar contrivances, a disc instead of a cylinder record is made use of, in connection with which a permanent needle is used. This not only insures a better quality of music, but gives to operators a wider range of productions to choose from. A great saving is also made in the cost of records, as the disc with the permanent needle will reproduce perfectly at least 800 times. No timing is necessary between the record and the picture, as they time themselves perfectly.

The extensive plant of the Valiquet Novelty Co. in Newark, N. J., is running full blast in order to get these machines ready for the general market, but shipments will not be able to

be made before September on account of large standing orders, which were placed months in advance. First come first served, is the way they work it at this place. So it behooves interested parties to hurry along their orders.

#### THE PEERLESS AS A MONEY-MAKER.

A Letter from A. B. Bridges, of Gainesville, Tex., Which Gives Some Facts in This Connection—A Strong Tribute to the Peerless.

A. B. Bridges, dealer in musical instruments at Gainesville, Tex., writes Roth & Engelhardt, makers of the Peerless coin-operated pianos, 2 East 47th street, New York, under date of July 30:

"Gentlemen:—Your letter announcing shipment of the second piano came duly to hand, and announce that the first piano was placed in position on the 23d day of June. This is just twenty-seven days ago, and the piano has taken in \$350. It seems almost beyond belief, but this one certainly has delivered the goods. Yours truly,

"A. B. BRIDGES."

This is only one of hundreds of letters received by this enterprising institution, showing the tremendous possibilities of the Peerless as a money-maker. It is proving one of the biggest successes of the day. Its splendid tone, careful construction and all-round excellence has won for it a high degree of favor. An announcement from Roth & Engelhardt appears on page 4 of this issue. It is worth reading.

#### A MOVING PICTURE MACHINE.

The "Vitak" Is a Wonderful Creation Which Is Destined to Win a Large Measure of Popularity Among Talking Machine People.

In this issue will be found the announcement of a new moving picture machine called "The Vitak," made by the Church Supply Co., of New York. In all respects this machine is most decidedly a marvelous innovation, for it is the realization of a dream long cherished by the public of some day possessing one of these pleasure-makers, which means to the dealer an insured sale of "Vitaks" in large numbers. In the advertisement there is but one thing that really appears a catch. The almost ludicrously small

# The Picture-Phone

The Greatest Money Maker Ever Produced

This machine is a new revelation in the illustrated song type of slot controlled devices.

For Simplicity in Construction—Automatic Precision in Operation—Perfection in Result

The  
Picture-Phone  
Has No  
Equal

It is adapted for all kinds of electric current and voltage.

**A Disc Record and a Permanent Needle is made use of in this machine.**

*One record and one needle will reproduce perfectly at least 800 times.* This means a clarity and evenness of tone *impossible with other machines* of like character. The needle is removed in the same manner as in any other Disc Talking Machine.

**The Pictures and Records can be readily changed without set screws or springs. No timing is required between them.**

Drop your penny in the slot, the machine does the rest.

The Picture-Phone machines will be placed in the various leading Parlors, Arcades, Cafes, etc., throughout New York, early this month.

Our extensive factories are now in full blast, but on account of the large number of standing orders, it will be impossible to make shipments for the general market until some time in September.

—FOR FURTHER PARTICULARS ADDRESS—

## Valiquet Novelty Company

50-58 Columbia Street

NEWARK, N. J.

amount of \$4 is very likely to arouse the suspicion of its either being a "fake," as they say, or else a mere toy. This is absolutely wrong, for it is neither. It is an example of simplicity in construction, which brings the result without the expense. The "Vitak," it is true, is not constructed for exhibition purposes, but for home use, for which purpose it is ideal. This company are expecting also to place a larger machine on the market very soon which will retail for about \$25. This will compare in every respect to the best machines now in use.

The American Mutoscope & Biograph Co., 11 East 14th street, this city, are experiencing an extremely heavy demand for their new Mutoscope Type E. The trade has waited impatiently for it on account of the many new improvements incorporated in this machine. Max Goldstein was the happy recipient of seventy of them for his new arcade recently opened at 31-32 Park Row, while a number of other early birds were equally fortunate. Temperly & Nethery have just opened a new parlor in Los Angeles, to which place the Mutoscope Co. recently shipped three carloads of machines.

A police officer standing in a railroad station in Ft. Worth, Texas, recently had his attention called to a young stranger in the station who was vigorously shaking the radiators of that building in evident vexation, saying:

"Make music; why don't you play—get busy, smoke up, come across we want to hear some tunes, and if we can't get it, we can do fighting."

Approaching the young countryman, the officer asked: "What in the world is the matter with you, friend?" to which the man replied, "These phonographs around here stopped playing music 'bout midnight, and I've been shaking them up to make the suckers begin again."

The stranger was escorted to police headquarters and detained until he had regained his wonted strength of mind and soberness of purpose, when the officer released him, for all of which the young fellow expressed gratitude and went his way in peace.

## To Talking Machine Dealers

The MUSIC TRADE REVIEW is the oldest publication in the music trade industry. It contains more than fifty pages devoted to the piano trade, musical merchandise news, music publishers' department and talking machine trade. A special technical department is a regular weekly feature of the publication. A vast amount of valuable information is contained in each issue. The REVIEW has won higher honors at the great expositions than have ever been won by any other publication in the world.

Grand Prix at the Paris Exposition,	1900
Diploma at Pan-American Exposition,	1901
Silver Medal Charleston Exposition,	1902
Gold Medal St. Louis Exposition,	1904
Gold Medal Lewis-Clark Exposition,	1905

Subscription in United States, Canada and Mexico, \$2.00 for 52 weeks. All other countries, \$4.00.

We publish the Tuner's Guide also—a cloth-bound, illustrated work of over one hundred pages. Sent postpaid to any part of the world upon receipt of one dollar.

## TRADE IN THE SOUTH.

Splendid Prospects in Georgia, Carolinas, Florida, Alabama, Mississippi and Tennessee.

(Special to The Talking Machine World.)

Atlanta, Ga., Aug. 3, 1906.

The talking machine trade here is increasing at a great rate and has already reached a point where this city has become one of the leading distributing points in the South supplying the Carolinas, Georgia, Florida, Alabama, Mississippi and Tennessee. There is an immense field for talking machines in those States that has not been covered thoroughly, and therefore the future of the business looks most promising.

The largest talking machine department is that of the Phillips & Crew Co., who devote the fourth floor of their establishment to the wholesale end and the larger part of the second floor to the retail. They carry immense stocks of both Edison and Victor machines and records. Frequent concerts are used as one means of advertising and have proven very successful. The department is in charge of Mr. Crew.

Both the National Phonograph Co. and the Columbia Co. have branches here in charge of J. P. Riley and Westervelt Terhune, respectively, and reports from these stores are of the rosiest, high-class records being especially in demand.

## SAN FRANCISCO—LATER.

After Bret Harte.

Undaunted by the blows of Fate,  
Thou sittest at the Western Gate.

The Shadow of the horror spent,  
Thou guardest still our continent.

Gather thy dead—a Nation's dead—  
For we who bend above thy head

And bring of aid for thy behest.  
Know not of East, nor South, nor West,

Of our abundance take, that thou  
May'st rise and front with dauntless mrow

Once more the future big with Fate,  
O Warder of our Western Gate.

She rises with the hope that thrills,  
And builds new watch fires on her hills;

And 'mid her desolation stands,  
Her ruined palaces and lands.

Her scattered people—all the gray  
Buried blocks of homes that stretch away.

And temples lying crushed and prone,  
Of twisted iron, shapeless stone,

As if some mighty Thor had hurled  
His hammer 'gainst the Western World!

But rising now from her dismay,  
She bares her forehead to the day,

Her form no longer crushed and bowed,  
Our risen sister, fair and proud.

Now in a vision see arise  
A city in a fairer guise,

Purged by the fire and chastened, she  
Guards, as of old, our Western Sea,

But built anew of what is best  
In ardent manhood, quickened zest,

For what appeals to Mind and Heart,  
A nobler Culture, finer Art,

Whom higher aims and dreams inspire,  
Out of the earthquake and the fire.

Out of the Terror and the Flame;  
Purged of the taint of ancient shame,

With all her ancient glory lit  
By newer glories wed with it,

And charms of finer graces lent,  
New Warder of a Continent.

JOSEPH DANA MILLER.

## SCHLOSS & CO. WELL REPRESENTED.

E. Schloss & Co., New York, who manufacture an extensive line of disc and cylinder record and music roll cabinets, have distributed an attractive card calling attention to the four points where the line may be conveniently inspected. The various warerooms are at the factory, foot of East Grand street, Sol Bloom Building, 3 East 42d street, the New York Furniture Exchange, 43d street and Lexington avenue, and the Grands Rapids Furniture Exposition. The

line of cabinets is excellent, and visiting dealers would do well to stop at one of the showrooms and look over the samples.

## PRICE REDUCED

## Burnt Leather POST CARDS

Our Burnt Leather Post Cards are the quickest selling and most profitable side line ever offered the Talking Machine trade.

TRIAL ORDER.—We will send you prepaid 100 cards (100 beautiful designs), with the name of your town stamped on each if desired, for \$3.10 cash. Retail everywhere at 10c. You make a clean profit of \$6.90.

# If Someone Told You

that there was a *new* musical instrument which operated automatically by means of a paper roll, *without pneumatics, bellows or tubes*, which *automatically* controlled its own expression from loud to soft and *vice versa* by means of perforations in the roll, and which had the effect and the tone-quality of an expensive orchestrion, although offered at a moderate price, you would want to know more about it, wouldn't you?

Well, we have such an instrument in our new

## Regina Sublima Piano

Although recently placed on the market, its success is already assured, and it bids fair to become the most popular instrument that we have ever produced.

Our space here is too limited for a complete description, but here are a few facts concerning it:—

1. It is coin operated.
2. It plays upon piano-strings, yet sounds different and *better* than any automatic piano.
3. Its tone quality is wonderfully rich and sweet, and the musical effect is not in the least degree "mechanical."
4. It is operated by *electric* motor or by *spring* motor as desired. (This feature is valuable in places where electric current cannot at all times be obtained).
5. It stands eight feet high.
6. It contains an advertising device with spaces for 10 cards, which

change at intervals while tunes are playing. This space can easily be rented and the rental will help pay for the instrument.

7. Each music-roll contains five selections, one of which is played for each coin inserted, and when the last one is finished, the roll is automatically re-wound, and is ready to start again at the beginning.

8. It has a range of 73 notes, which is almost double that of the ordinary coin-operated piano, and eight notes more than in the largest one heretofore produced.

9. It bears the well-known *Regina* guarantee.

Further information will be furnished on application. Dealers who wish to handle the Sublima Piano should write us promptly, as territory is being rapidly assigned for its sale.

## TALKING MACHINE PARTIES.

### How Dealers May Keep in Close Touch with Their Customers.

Every dealer will admit that it is absolutely essential in order that he may enjoy prosperity for him to keep in close touch with his customers, and continually throw their way any ideas which tend to further the sale of records by creating new interest in the talking machine.

Why not suggest to them, therefore, the idea of giving talking machine parties? Invitations may be sent out as follows:

Mrs. Jones Requests the Presence  
of Mr. Brown at a Talking Machine  
Party, Friday evening, August 31, at 8.  
Please bring your Violoncello.

The instrument should vary, of course, according to the talents of the invited guest. When the party is assembled, a talking machine is adjusted for recording, and as their names are called, the ladies and gentlemen present come forward in turn and play solos upon their respective instruments into the horn. When the instrumental part of the programme has been recorded, vocal solos and recitations may be indulged in, and then comes the real fun of the evening. A reproducer is inserted in the machine, and seated before it the amateur "talent" listen spellbound to their own phonographic efforts.

A prize suitable to the occasion should be awarded to the most successful record maker, and while refreshments are being served, a short professional programme rendered by the talking machine.

Get your customers in the talking machine party habit. It will grow on them and help you.  
HOWARD TAYLOR MIDDLETON.

## TALKER CAUSES MURDER.

### Italian Who Broke Record in Absence of Owner Shot Dead—World Correspondent Enacts Role of Sherlock Holmes.

(Special to The Talking Machine World.)

Scranton, Pa., August 25, 1905.

I have often marveled that the talking machine sailing serenely upon the ocean of comedy, had never touched at the rocky shores of tragedy, but I need marvel no more.

The town of Scranton is aquiver with excitement to-night because of a dastardly crime committed in its very midst. Vincenzo Errinoni, an Italian foreman of section hands of the Delaware, Lackawanna & Western Railroad Co., lies cold in death, and Luigi Salwiner is a murderer and a fugitive from justice because of a phonograph and a broken record. This much is fact. The following version is simply a dream, if you will, of the writer, and it remains for the future to verify or nullify that dream.

This morning (Sunday) broke cloudy, with a fine rain falling—the kind of day that suggests indoor pleasures. Twenty Italian friends of Salwiner assembled at his shanty to hear his phonograph. He had many selections in his collection, and an enjoyable concert was in prospect. No sooner, however, was the machine started than he was called away on business, and in order that his comrades might continue their good time in his absence, he left Errinoni, who understood the running of a talking machine, to take his place as operator.

There was one record in that collection of which Salwiner was very fond, and he requested that it be laid aside. "Play all the others," he said, "but not that one." His friend smiled and nodded in assent. But after all the other rec-

ords had been played over and over again, his curiosity triumphed over his good judgment, and he placed the fatal cylinder on the mandrel. The first notes of the selection were ringing out on the still air when Salwiner returned. "You dog!" he cried in Italian, at the same time reaching for his revolver. Errinoni caught in the act, tried valiantly to withdraw the record, but it withstood his first efforts. Again he tried, and this time a dull crunch—the wax cylinder broke in half. That was as fire to the torch. Accompanied by a scream of rage, the revolver leaped from its holster, a lurid streak of flame shot from the polished muzzle, and Errinoni was dead, while Salwiner was fleeing across the fields—an escaped murderer.

Here fact creeps in again, for it is known that the mighty police appeared and arrested, with dauntless courage, seventeen innocent men, and that the slayer of Errinoni is still at large; but what caused him to spring with tiger-like ferocity upon his friend and shoot him down is not known.

I am not a Sherlock Holmes, but I firmly believe that if the Police Department of Scranton will search carefully for the remains of that record at the scene of the crime, and cement together its shattered fragments, they will learn why Luigi Salwiner killed Vincenzo Errinoni. It may have engraved upon its glossy surface the voice of a sweetheart across the seas—who knows? May she not have been a dainty signorina whom Errinoni had won by foul means from his friend Salwiner, and whose voice upon the record was all that remained to him of her sweet presence?

## OUR FOREIGN CUSTOMERS.

### Amount and Value of Talking Machines Shipped Abroad from the Port of New York for the Past Month.

(Special to The Talking Machine World.)

Washington, D. C., September 7, 1906.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past five weeks from the Port of New York:

AUGUST 8.

Berlin, 39 pkgs., \$1,854; Bristol, 115 pkgs., \$390; Buenaventura, 8 pkgs., \$189; Buenos Ayres, 131 pkgs., \$4,307; Calcutta, 7 pkgs., \$337; Callao, 2 pkgs., \$248; Cartagena, 10 pkgs., \$316; Cardiff, 55 pkgs., \$429; Coquimbo, 2 pkgs., \$201; Glasgow, 9 pkgs., \$376; Hamburg, 231 pkgs., \$3,460; Havana, 1 pkg., \$100; 12 pkgs., \$621; La Guayra, 14 pkgs., \$529; Limon, 10 pkgs., \$266; London, 1,014 pkgs., \$13,447; 17 pkgs., \$1,235; 62 pkgs., \$362; Melbourne, 11 pkgs., \$334; Milan, 7 pkgs., \$202; Para, 17 pkgs., \$792; Sheffield, 62 pkgs., \$362; St. Petersburg, 10 pkgs., \$355; Trinidad, 12 pkgs., \$208; Valparaiso, 4 pkgs., \$139; 14 pkgs., \$996; Vera Cruz, 20 pkgs., \$624; Vienna, 4 pkgs., \$100.

AUGUST 14.

Berlin, 245 pkgs., \$2,290; Brussels, 14 pkgs., \$132; Buenos Ayres, 30 pkgs., \$735; Callao, 3 pkgs., \$250; Colon, 3 pkgs., \$215; 7 pkgs., \$203; 4 pkgs., \$295; Glasgow, 3 pkgs., \$259; Havana, 21 pkgs., \$1,732; 17 pkgs., \$500; Havre, 9 pkgs., \$376; Limon, 1 pkg., \$124; Liverpool, 2 pkgs., \$175; 11 pkgs., \$898; London, 979 pkgs., \$8,737; 22 pkgs., \$1,562; Santiago, 8 pkgs., \$352; Santos, 8 pkgs., \$118; St. Petersburg, 5 pkgs., \$196; Sydney, 540 pkgs., \$4,300; Vienna, 27 pkgs., \$137; Vera Cruz, 19 pkgs., \$470; Warsaw, 13 pkgs., \$333.

AUGUST 20.

Bombay, 31 pkgs., \$305; Ceara, 12 pkgs., \$383; Corinth, 8 pkgs., \$510; Demerara, 3 pkgs., \$116; Guayaquil, 3 pkgs., \$235; Havana, 27 pkgs., \$934; 14 pkgs., \$900; Havre, 3 pkgs., \$183; La Guayra, \$287; Limon, 5 pkgs., \$250; London, 3

pkgs., \$173; Manila 24 pkgs., \$1,515; Melbourne, 24 pkgs., \$680; Progreso, 15 pkgs., \$633; Savanilla, 6 pkgs., \$139; Sydney, 1,629 pkgs., \$16,373; Valparaiso, 40 pkgs., \$1,419; Valencia, 2 pkgs., \$117; Vera Cruz, 9 pkgs., \$146.

AUGUST 27.

Acajutla, 2 pkgs., \$205; Berlin, 229 pkgs., \$1,767; Bombay, 4 pkgs., \$196; 3 pkgs., \$119; Brussels, 8 pkgs., \$970; Buenos Ayres, 30 pkgs., \$2,728; Callao, 4 pkgs., \$105; Colon, 4 pkgs., \$195; Dublin, 9 pkgs., \$240; Glasgow, 6 pkgs., \$179; Hamburg, 6 pkgs., \$137; Havana, 12 pkgs., \$499; Liverpool, 5 pkgs., \$219; London, 8 pkgs., \$446; 1,000 pkgs., \$9,841; 1,184 pkgs., \$14,136; 14 pkgs., \$1,582; Manaos, 17 pkgs., \$500; Milan, 22 pkgs., \$833; Montevideo, 32 pkgs., \$2,831; Santos, 12 pkgs., \$1,491; St. Petersburg, 15 pkgs., \$517; Tampico, 7 pkgs., \$356; Vera Cruz, 14 pkgs., \$296; Warsaw, 5 pkgs., \$117.

SEPTEMBER 3.

Alexandria, 4 pkgs., \$124; Berlin, 259 pkgs., \$2,911; 231 pkgs., \$5,003; Bristol, 85 pkgs., \$2,375; Bombay, 19 pkgs., \$521; 4 pkgs., \$196; Buenos Ayres, 198 pkgs., \$4,706; 12 pkgs., \$908; Cienfuegos, 14 pkgs., \$197; Colon, 2 pkgs., \$370; 5 pkgs., \$161; Havana, 13 pkgs., \$1,045; Havre, 7 pkgs., \$242; Iquitos, 7 pkgs., \$823; La Guayra, 7 pkgs., \$144; Limon, 3 pkgs., \$149; London, 33 pkgs., \$2,027; 1,064 pkgs., \$15,031; Matanzas, 2 pkgs., \$189; Milan, 7 pkgs., \$291; Para, 2 pkgs., \$107; Rio de Janeiro, 12 pkgs., \$1,615; Samarang, 94 pkgs., \$392; Singapore, 6 pkgs., \$215; St. Petersburg, 22 pkgs., \$879; Sydney, 8 pkgs., \$330; Vera Cruz, 5 pkgs., \$100; Vienna, 12 pkgs., \$198; 20 pkgs., \$126; Warsaw, 7 pkgs., \$162; 7 pkgs., \$325.

## PRESERVING INDIAN MYTHS.

### Prof. Kroeber Successfully Preserving Prayers and Legends of Fast Dying Humboldt Tribe of American Indians.

(Special to The Talking Machine World.)

Berkeley, Cal., Sept. 8, 1906.

Professor A. L. Kroeber, secretary of the Anthropological Department of the University, has returned from a month's exploration among the Indians in northern Humboldt county, bringing with him more than a hundred graphophone records of songs, myths, traditions and medicine prayers. The songs belong mainly to the sacred dances of the Yurok tribe of this region, and the spoken records all refer to the religion and beliefs of these people. All of the graphophone records, besides being intended for permanent preservation, will be carefully gone over with interpreters, and written out in full in a system of special characters used for this purpose. The texts in native language thus obtained will be published in a bulletin of the University, with exact interlinear translations, thus giving an accurate picture and record of this tribe's legends, prayers and medicine in both the Indian's and white man's language.

When the Second Regiment Connecticut National Guard was returning from camp recently, the band playing the well-known "Second Regiment March," turned down a side street, leaving the greater part of the regiment out of hearing distance of the music. At the time the troops were passing the store of the Columbia Phonograph Co., on Church street, New Haven, and Manager Ogden, noting the lack of music, got a Twentieth Century Machine in working order, pointed the fifty-six inch horn toward the street, and a record of the regimental march was soon furnishing marching music. The time was perfect and it is said that not a man lost step. We believe that this is the first instance where the greater part of a regiment marched to the music of a talking machine.

# TWENTIETH CENTURY "HOME"

A WONDERFUL NEW GRAPHOPHONE  
NOW ON THE MARKET A MARVELOUS INSTRUMENT

THE demand for a Graphophone embodying the principles of the "Twentieth Century" but smaller in size than the "Premier" and particularly adapted to the home and small halls, has resulted in the bringing forth, by the Columbia Phonograph Company, of a new machine known as the **Twentieth Century "HOME."** We present a picture of it below.

This new type of machine sells, without horn, for

**\$75**

and is, in every respect, a thoroughly first class instrument.

It has the same essential features that have made the Twentieth Century "Premier" famous.

TWENTIETH CENTURY "HOME" GRAPHOPHONE  
(TYPE BM)

Mounted in a

**Mahogany Cabinet**

of great beauty and high finish and equipped with a strong motor, the

**Twentieth Century "HOME"**

LEAVES NOTHING TO BE DESIRED

Uses the regular Cylinder Records—all makes—as well as the new Columbia Twentieth Century Cylinders, half a foot long: 50 cents each.

While the **VOLUME** of tone from records played on the new machine is somewhat less than when they are reproduced on the Twentieth Century "Premier," the **QUALITY** is full.

Measured by ordinary cylinder machines, the **Twentieth Century "HOME" GRAPHOPHONE** is so far in advance of them as to leave no room for comparisons.

## TRADE GOOD IN SAINTLY CITY.

Some Dealers Behind on Supply of Stock—Victor-Victrola and Auxetophone Admired—T. P. Clancy's Good Report—Thiebes-Stierlin New Department—Phipps Co. Adds "Talkers"—Twentieth Century Graphophone a Big Seller—Some Recent Visitors—Other Items.

(Special to The Talking Machine World.)

St. Louis, Mo., Sept. 8, 1906.

The talking machine trade for the past four weeks has been quite fair considering the season of the year, and the indications point to a decided improvement from now on.

The St. Louis Talking Machine Co. report a very fair trade, and that they are still behind on orders for Victor seconds and thirds. This concern has just received an Auxetophone, which sells at \$500, and a Victrola, which sells at \$200. They are on exhibition at their salesrooms, and are commanding a great deal of admiration.

W. C. Fuhri, western representative of the Columbia Phonograph Co., reports that trade is seasonable, and that everything points to a big Fall and Winter trade. Mr. Fuhri has just returned from a business trip to New York.

T. P. Clancy, manager of the talking machine department of the Conroy Piano Co., reports a much better trade for August than for the same month a year ago. He also reports the sale of a number of high priced instruments.

O. K. Houck, president of the O. K. Houck Piano Co., who was a recent visitor here, stated that he looked for an exceedingly big trade in talking machines this Fall and Winter, and that he expected that all the companies would find great difficulty in filling orders, both for machines and records.

The Val A. Reis Music Co. have just finished up a handsome room for talking machine purposes on their first floor. It is partitioned off from the main department, and it is nicely equipped in every way.

The Thiebes-Stierlin Music Co. will have their new talking machine retail department ready for the trade about October 1. It will be located on the first floor, and it will be thoroughly up-to-date.

L. A. Cummins, salesman in the talking machine department of the O. K. Houck Piano Co., has returned from a two weeks' vacation, which was spent in Chicago and other points.

Paul Ware, formerly salesman in the talking machine department of the Conroy Piano Co., has accepted a position with the talking machine department of the O. K. Houck Piano Co.

The H. A. Phipps Piano Co. have established

a talking machine department, and are now ready for business.

S. V. Bradley, of the International Record Co., was a recent visitor here and did a nice business with the local dealers.

Manager Kelly, of the Columbia Phonograph Co., states that the demand for the Twentieth Century instrument is better than ever before, while the \$45 aluminum tone arm is selling faster than they can get them.

Manager Charles A. Regan, of the Columbia Phonograph Co., New Orleans, spent a few days of his vacation here recently renewing old acquaintances.

"Dick" Guttenberger, formerly with the Columbia Phonograph Co. here, and now with the same concern at Kansas City, spent a few days here recently visiting his folks.

## BUSY TIMES IN ST. PAUL, MINN.

(Special to The Talking Machine World.)

St. Paul, Minn., September 6, 1906.

The talking machine dealers of this city are of the kind that are "up and doing," as is evidenced by the recent move of the Minneapolis Phonograph Co. in engaging a traveler to cover territory as far west as the Coast. The company handle the Victor, Edison and Zon-o-Phone lines, and in their section have built up a very prosperous business.

Another hustling concern is W. J. Dyer & Bro., whose talking machine department is continually growing and who place reorders almost as soon as original shipments are received. The Edison line is the basis upon which the concern is increasing this department of their growing business.

## NEW USE FOR TALKING MACHINE.

A Johnson County (Missouri) woman found a new use for the talking machine the other day. Her husband was cavorting around trying to settle a swarm of bees by ringing a bell, beating on a dishpan, and hammering the daylight out of a lard can, when she thought of the new phonograph in the parlor. She brought it out, started it going, and in a few minutes the swarm of bees was settled and hived.

## INTERVIEWING DENIZENS OF JUNGLE.

Miss Ida Vera Simonton, who, with Prof. R. L. Garner, will spend several months in steel cages in the heart of the African jungle for the purpose of studying the language and life of our

Simian brethren, will take a talking machine as part of her equipment.

Whenever curious gorillas or chimpanzees visit the locality of the cage the phonograph will be made ready to receive and record their chatterings. Then, again, the machine will be started and the animal's language repeated back to him and a friendly conference held.

Doubtless upon her return to civilization, Miss Simonton will be able to throw much light upon the truth or falsity of the Darwinian theory through facts gleaned from the conversation of the denizens of the jungle themselves.

## SPEAKING BOX 3,000 YEARS OLD.

Discovered, of Course, in China, Where So Many of Our Modern Inventions Have Been Anticipated—Interesting Contribution.

A correspondent of the New York Sun sends the following bit of information concerning the alleged origin or discovery of the talking machine: "I found the following in an article entitled 'China, Reform and the Powers,' in the Fortnightly Review for May, 1901, page 759. The article is by Sir Robert Hart: 'In 1858 the governor of Kwang-tung, Pih-Kwei, told to incredulous me how some old books of 2,000 years ago related how, a thousand years before, the prince of one of the Chinese States of those days used to send messages to a brother prince in a curiously shaped box made of special wood—how he spoke his messages into it, closed and sealed it, and sent it by a trusty messenger—and how the recipient on opening it heard with his own ears the actual words and voice of the sender. In 1898, the first phonograph that came to Peking brought me a message from Lo Feng Luh, now Chinese Minister in London, England, and as the cone revolved and I heard his words and recognized his voice, I heard also Pih-Kwei telling me once more—but no longer incredulous—about the prince's wonderful message box.'"

## NAVAL MEN BIG USERS

Of Talking Machines—Big Purchases Made by Sailors of Fleet Recently in These Waters for Inspection by President Roosevelt.

The songs to the tune of the bosun's pipe on board of the men-of-war of this nation at least is a thing of the past, the talking machine taking its place. There are few if any of our naval vessels that have not several of these machines on board, and whenever at a port where English records are sold Jackie always is ready to make an investment. During the recent naval inspection at Oyster Bay an enterprising Brooklyn dealer secured the attention of the Jackies to his wares, with the result that over a quarter of a hundred talking machines are now furnishing enjoyment to the various crews. It is not an uncommon thing for a "mess" to club together and purchase a talking machine and a large assortment of records, and in addition form a pool monthly for adding to their stock of records, each one selecting what most appeals to his taste, and all having the benefit of the others. As a rule, the disc machine gives better results at sea, as the rolling of the ship does not affect its playing to the extent that it does to a cylinder machine. It is also claimed that the salt water tends to disintegrate the wax records. As there is a growing demand for sea chantys, it has been suggested by a sailor that the talking machine people put a lot on their records, and it is thought that they will prove as acceptable to the landsman as to the tar.

Manufacturers of a certain breakfast food have devised an excellent scheme for attracting attention to the various wagons they send out and which are covered with advertising matter. A large talking machine is placed within the wagon with the horn protruding out over the driver's seat. A catchy tune being played assures the attention of everyone in hearing distance and they cannot avoid seeing the signs.

## YOU HAVE WAITED FOR THIS!

AN ATTACHMENT FOR HOLDING SOFTERTONE AND MEDIUM TONE NEEDLES IN THE NEW SPRING CLAMP NEEDLE ARM OF THE VICTOR EXHIBITION SOUND BOX

Here it is attached to the sound box. The sound box is turned up and the attachment inserted with its flat side opposite the lever, as shown in illustration.

Here is the Needle Clamp Attachment separate.

Without this attachment it is impossible to use softer and medium tone needles on the spring clamp needle arm. It is perfectly simple, easily attached, holds like a vise and is made in two sizes—for softertone and for medium tone needles. Order as NEEDLE CLAMP ATTACHMENT and specify which needle is to be used.

Price, 25 cents each

Special prices to jobbers and dealers

**The Softertone Needle** is growing in popularity every day. The loud tone needle, of course, is a necessity to the dealer for selling machines, but it is often too loud for home use. When a customer takes a machine home he finds the softertone needle a great relief. Instead of tiring it perpetuates the use of the machine. This means record sales.

**It Costs Less** One Softertone needle will play six records. Less time is used in changing needles, and there is less wear on the records. A record will last three times as long when the softertone needle is used. We did not accept this fact until satisfied by numerous tests. You owe it to yourself to make a test if in doubt.

FOR SALE BY **LYON & HEALY, CHICAGO**

## HOW THE TRADE IN CLEVELAND IS MOVING.

**Optimistic Feeling Prevails Over Trade Conditions—Notable Columbia Sales—Attractive Window Display—Smith & Nixon Add Talking Machines—W. J. Roberts Admires the Victor Victrola—Arcades Are Doing Well—Looking for Novelties—Traveler Neff's Good Report—Dockstader and the Columbia—Odd Experiences Over Needles—Talkers May Kill Trust.**

(Special to The Talking Machine World.)

Cleveland, O., September 9, 1906.

The optimistic feeling generally indicates a good, healthy condition in the talking machine trade in Cleveland. With the cooler weather the volume of business is increasing to an extent that shows the interest taken by the mass of people in talking machines is growing. The demand for the best also indicates they are educating themselves to a higher appreciation of the better record productions, and sales of these are increasing.

Cleo. S. Bourgeois, assistant manager of the Columbia Co., reports that business has greatly increased over the month of July, and is improving daily. He said there had been a big demand for the new Twentieth Century half-foot dance music records, and also for twelve-inch. "Within the last week," said Mr. Bourgeois, "we closed the sale of a four-machine commercial outfit to the Lawrence Publishing Co., publishers of the Ohio Farmer, and one to the Ward-Stilson Co., of New London.

In addition to sales mentioned we now have active trials in the Chamber of Commerce, Cleveland Worsted Mills Co., Cleveland Grain Co., National Electric Lamp Co., Upson Nut Co., and many promising prospects in sight."

Mr. Bourgeois, who, by the way, is the originator and designer of the many attractive show window displays which the Columbia Co. have had recently, made up a very neat window card, advertising the half-foot cylinder records. It consists of a long, narrow card, attached to which is an ordinary yardstick. Just below the yardstick are fastened six half-foot cylinder records, and beneath them the legend: "Columbia Cylinder Records, \$3 per yard, 2 yards for \$5."

The Smith & Nixon Piano Co., in connection with their piano business, have installed a full line of Victor and Edison talking machines and records, and the patronage from the start has been very encouraging. They have fitted up an elegant display and salesroom, with all the modern furniture and fixtures pertaining to the trade. H. T. Rayner is manager of the company and personally supervises the business.

Several calls at the store of W. J. Roberts, Jr., found him and his clerks so busy with customers coming and going that it was impossible to secure an interview. Mr. Roberts is a young, fine-looking fellow, and judging from the number of sweet-looking ladies constantly calling at his store he is unusually popular with the gentle sex. Any way, he has so engaging a way that it is rarely a lady departs without having made a purchase. He, however, is so in love with his machines and records that he does not ascribe the numerous sales to other than their merits, but there's a good deal in a good-looking salesman. Mr. Roberts has got in a Victor Victrola, which he asserts is a "big thing," pleasing everybody who hears it, and which will attract the better class of trade.

Collister & Sayle report business opening up in fine shape as the vacation season is closing. They are having a steady call for machines and selling a good many September records. From present indications they anticipate a lively fall trade.

Arthur Caille, of the Caille Bros. Co., Detroit, Mich., was in the city this week calling on his old customers and numerous friends. He placed quite a few orders for his company. The Caille Bros. Co. are the largest slot machine manufacturers in the world and do a very extensive business.

Mr. Gulley, manager of The Victor, No. 254 Prospect street, stated that business was fairly good during August, and since the 1st had perceptibly been improving.

The Baily Co.'s department of the Columbia Phonograph Co. had an excellent trade during August, and the lady manager said business was considerably improved since the 1st. She stated the September lists of records were exceptionally fine and selling rapidly.

The various arcades, and slot machine amusement places are all well patronized. H. S. Lavine, president of the Columbia Amusement Co., said: "Business in general has been rather quiet in the recent extremely hot weather, but has noticeably improved in the last week. This has been the case with the penny arcades and moving picture shows. The outlook for a busy fall is good, as all the shops are working to their capacity. Our company are about to open a new place on Superior street, near the Square, and will present a lot of new automatic features."

Several new parlors are opening in the city. One on Ontario and one on Pearl street, near Clark avenue.

The parks are doing unusually good business this season, and expect to keep open later than usual this fall.

The slot machine parlors are anxiously waiting for the new fall novelties to appear. The managers say there are not sufficient new ones produced at present to supply the demand.

E. A. Neff, traveling representative of the Ball-Fintze Co., of Newark, O., was in the city a few days last week. He was just in from a trip through Pennsylvania and is now extending it through Ohio. Of trade conditions he said: "All the dealers with whom I came in contact anticipate a big business. I had an exceptionally nice business in my trip through Pennsylvania. Dealers are all stocking up heavily for the fall trade. The Ball-Fintze Co. are the largest jobbers of Victor and Edison goods in the Central States. We have sold a number of the new Victor Victrolas at \$200 each."

The Ward-Stilson Co., of New London, O., have added another graphophone to their commercial equipment, which now numbers nine machines, all purchased from the Columbia Co., of this city.

The Columbia Phonograph Co., taking advantage of Lew Dockstader's minstrel show at the Opera House this week, have decorated their windows with large Dockstader posters and cards inviting everybody to come into the store and hear Lew Dockstader sing "Everybody Works But Father" and "Uncle's Quit Work, Too." It is a well-known fact that the sale of records in the talking machine business is greatly influenced by the theaters, and the Columbia folks are certainly alive to the situation.

A rural gentleman walked into a talking machine store recently and said he wanted some "graphophone tacks."

A lady called at the store of the Columbia Co. a few days ago and asked for some needles. In reply to the query she said she would take a ten-cent package. The next day she returned with the package, saying there were "no holes in them," and she couldn't use them. She wanted sewing machine needles. As there was no explanation the saleslady supposed, of course, she wanted machine needles. The purchaser simply got into the wrong store.

Few of the old-time organ-grinders are seen about the thickly populated sections of the city nowadays. The spirit of the trust has not only impregnated the big enterprises, but has spread to channels of enterprise so small, or seemingly so, that the hand-organ with its frisky monkey, has fallen under its gigantic shadow. The aged cripple or decrepit old foreigner who stands by the curb and sleepily grinds out what were originally intended to be bewitching waltzes or martial airs, is being driven to the wall by a combination of "barrel organ" promoters. The mon-

key and the harsh grating notes of the old organ-grinder lend amusement to the unattuned ears of children, but woefully rack the nerve of elders. Now, wherever he goes he is most certain to be followed by the big organ, oftentimes pulled by a horse. And its great swell of somewhat better music and its mandolin attachment, so metallically jarring to the sensitive ear, are sure to win more pennies from the children than the old machine can ever again hope to get.

Of the scores of big organs tolerated by suffering elders for the sake of the children, all are under the control of two or three men. What few remaining small organs there are in the city are usually trailed about by the big machines. The trust follows them relentlessly. When the little piping box has finished its repertory of halting, jerky, squeaks and discordant rasping it is soon followed by a broadside of "Waiting at the Church," "Wait Till the Sun Shines, Nellie," "It's a Grand Old Rag," etc. And the poor old organ-grinder, with his antique, crumbling machine—how can he compete? Even the children recognize the old fellow as quite passe. It is possible the talking machine may reach out after this barrel organ trust in time and drive it from the field, and there is the possibility of our preaching our own funeral sermon, an example of which is afforded by an old preacher who has requested that the concluding ceremony of his funeral shall be the rendering on a talking machine of a benediction composed by himself.

### WILL STIMULATE TRADE.

**Cater to Your Independent Customers by Allowing Them to Hear Your Latest List of Records in Their Own Homes.**

A retail dealer always has a certain number of independent customers. By independent I mean the people who do not care to come to a dealer's store and wait their turn in a crowded hearing room to have records played for them. As these are generally the class of customers who are of the most value to a dealer, because of their ability to purchase anything they like regardless of price, it will pay him to look after their interests.

Why not send a boy with a record case filled with your latest stock around to such a customer's house on a rainy evening, when all thoughts of park or lawn have been dissipated by the weather? You will find that he will welcome the opportunity of partaking of a concert with delight, and it will be all the more enjoyable to him because unexpected. The boy will return to you with a very materially lightened burden, and a countenance aglow with satisfaction, for he will "get his," you know. You can always trust Young America for that.

Aside from the additional profit accruing from this branch of your business, and the instinct for money making instilled into the heart of the small boy, it will pay you by bringing to your door the good will of the moneyed class—a fine thing to have in the talking machine business.

HOWARD TAYLOR MIDDLETON.

### NEWARK AS A CENTER.

**The Location of Many Eminent Concerns.**

It is very likely that if a center of the talking machine industry were to be located it would be found to be in Newark, N. J., and vicinity for the factories making both machines and sundries in that section are almost innumerable. Besides the enormous plant of the National Phonograph Co. at Orange, there is the Universal Talking Machine Co. in Newark proper, as well as the Tea Tray Co. and New Jersey Sheet Metal Co., makers of horns and other manufacturers too numerous to mention, all devoted to making some part of the talking machine's equipment.

The Valiquet Novelty Co., who make a number of coin-operated machines for arcades, including the picture-phone, are also located in Newark, and more are coming.

## A big help to dealers

Did you ever consider the value to you of the advertising we are constantly doing? Did you ever think how this publicity could be used to your greatest advantage? Our magazine advertising goes to 49,000,000 readers every month and opens up a field for the sale of

## Victor Talking Machines and Records

that is as broad and long as the United States itself.

There isn't a dealer anywhere who isn't helped by this widespread publicity; but some dealers don't realize how helpful it can be made if they do their part.

Whatever portion of these 49,000,000 people live in your vicinity is yours to work on, and this is the way to do it:

Follow up the impression made by our advertising by doing some of your own in the local papers, by circular work and window display. Invite people to your store to hear the *Victor*. Try to let everybody know *you* have the *Victor*.

Easy enough and extremely profitable. Why don't you try it?

### Victor Talking Machine Company Camden, N. J.

P. S.—You'll find it profitable to carry out this idea: Place standing monthly orders for the new records with your distributor, and push this feature. (Keeps your customers calling at least monthly—they look for them.) Artistic Monthly Supplements furnished free for this purpose.

## THE QUAKER CITY NEWS BUDGET.

August Makes Good Business Showing—Continued Enlargement of Victor Plant—Hawthorne & Sheble's Great Establishment—Heppe Incorporation—What Some of the Leading Jobbers Have to Say Regarding Trade Conditions—Manager Marschalk Enthusiastic Over New Victor Specialties—Penny Palaces and Talkers—New Dealers in Evidence—Australian Jobbers in the City—New Columbia Branch—Compiling Statistics About Noises.

(Special to The Talking Machine World.)

Philadelphia, Pa., Sept. 10, 1906.

August business in local talking machine circles was generally satisfactory—in a number of cases being very good and surpassing the same period a year ago. Jobbers predict good fall business and are preparing for it. September business is reported excellent, due in great part to the home coming of people who have been away for the summer and the opening of Fall trade.

A number of additional improvements are to be made by the Victor Talking Machine Co., at its Camden, N. J., plant. A two-story brick warehouse addition, 148 x 123 feet, is to be erected at Front, Linden and Point streets. Camden City Council, by ordinance, has granted the company permission to erect buildings on the southwest corner of Front and Cooper streets, opposite the main building. It is probable an office building will be erected on the site. It is the "same old story," so far as business at the large plant is concerned: everyone is very busy and steady efforts to keep up with orders on hand are constantly being made. Large shipments of records and machines are made daily.

The new quarters of the Hawthorne & Sheble Mfg. Co., at Jefferson and Howard streets, are admirably adapted for the increasing trade of the firm—an entire first floor is occupied, being divided into office, storeroom and manufacturing departments, with additional rooms for shipping, packing, etc. Employees engaged in manufacturing the company's "Artistic Flower Horns" and other talking machine equipment are usu-

ally skilled, as is shown in the perfect products which leave the factory. When the World's representative called, Mr. Sheble, of the company, was deeply engaged with out-of-town customers and could not be seen, but from other sources it was learned that the plant is very busy and the outlook for Fall business is very bright.

An incorporation of note the past month was that of the piano and musical instrument house of C. J. Heppe & Son. The incorporators of record are C. J. Heppe and F. J. Heppe, of Philadelphia, and John G. Stratton, of Camden, N. J., where the incorporation papers were filed. The firm is capitalized at \$1,100,000. At their large warerooms on Chestnut street, Heppe & Son handle pianos, piano players, Victor talking machines and various musical instruments, and are accounted one of the reliable houses of the city.

"Business with us has taken a big jump," said Manager H. T. Lewis, of the Lewis Talking Machine Co., 15 South 9th street. "Trade has improved very much. No, I can't say very many new parties have gone into the retail trade; Summer seems to take their nerve, but this Fall, no doubt, a number of new retail stores will open. We have made a 'hit' with the Twentieth Century Home machine—the \$75 Columbia talker. Have put out a large number of them and could put out more if we had them on hand."

"We are getting in a good many orders for future delivery," said John B. Miller, of the Penn Phonograph Co., 17 South 9th street. "We have just leased the premises next door, that is,

the ground floor, and will utilize it as storage quarters. Here at No. 17 we will continue our salesrooms, offices, etc., but, having outgrown our present quarters we had to take on additional room. What is the outlook for Fall trade? Fine! We are placing heavy orders with confidence, and I have no reason to believe but that trade will be very good."

Manager John A. Gouldrup, of the Columbia Phonograph Co.'s main Philadelphia office, 1109 Chestnut street, said of trade conditions: "We have had a good August and look for better things in September."

Haddonfield, N. J., people are after one "John Doe," who, at his place on Centre street keeps a talking machine working overtime on "rag time" music. "Doe" belongs to the class who operates his machine not "wisely, but too continuously," and may have to answer to a nuisance charge.

A. L. Heil, of the main office of the Columbia Phonograph Co., visited Mt. Holly, N. J., the past month, where he looked up the doings of an alleged crooked salesman. He straightened matters out all right, it is said.

The Automatic Music Publishing Co., of Reading, Pa., which incorporated under Pennsylvania law the past month, is capitalized at \$10,000.

Gimbels, department storists, in their musical department the past month, have been pushing sales of Reginalphones and Victor goods with excellent success. The goods were first strongly advertised, an important part of a sales battle—and then, "having the goods," experienced and courteous salesmen did their share to exploit the machines and satisfy patrons. The musical department is now on the fourth floor.

Said a Ninth street jobber: "I don't take much stock in the invention of attaching a clock to set off a phonograph so that it will arouse a sleepy person. Gee! if I had a clerk who couldn't get up when an ordinary alarm clock goes off I'd fire him. Talking machines have too many other useful purposes than to be used as alarm clocks. And look at it! Who could sleep if a phonograph got to yelling in every house?"

# We Sell Victor Machines and Records

THE BEST IS GOOD ENOUGH FOR US—HOW ABOUT YOU?

Being Distributors of Victor Machines and Records only, it stands to reason that we can give you better service in this line than can those who job several lines, as we give our whole time and attention to satisfying the wants of those dealers who want Victor Goods and who want the best service possible.

WE INVITE A TRIAL OF OUR ABILITY IN "DELIVERING THE GOODS."

## OUR NEEDLES

ARE THE PERFECT-MEDIUM-QUIET

These are our own brands, put up by us. You can depend upon them every time.

We have Hundreds of Satisfied Users  
ARE YOU ONE?

Write us for full information. Samples sent free to dealers.

## THE TRUE TONE SOUND BOX

PRICE 5.00 EACH

Not an Experiment, but a Perfected Musical Instrument  
Has a Two-Inch Diaphragm. For VICTOR TAPER ARM only

WE WILL SEND A SAMPLE UPON RECEIPT OF THE PRICE. If it is not satisfactory, return it, and we will refund your money. Regular Victor Discounts to Distributors and Dealers.

AMERICAN TALKING MACHINE COMPANY  
586 FULTON STREET, BROOKLYN—N. Y. CITY

Largest Talking Machine  
House in the City

A Philadelphia matron went her New York sister one better the past month. The New York mother called up her children, away in the country on vacation, by telephone, and gave them maternal advice. But Mrs. Quaker City reeled off her admonitions on a record, sent it to the youngsters at the seashore and saved both time and money. And again the talking machine had the advantage: Every time the children were "bad" and Nurse desired a change, she put "Ma's" disc on the machine and little Willie and Margaret soon heard their boss's voice bidding them "stop it" under penalty of the slipper. "Bless the talking machine!" says Ma. "It does save my voice so." "And your slippers," adds the nurse. Willie and Margaret are so down on the talker, however, they await a chance to "smash it."

In a trade chat, Henry E. Marschalk, manager of the Musical Echo Co., 1217 Chestnut street, said: "We have the two new Victor machines: the Victor Victrola and the Victor Auxetophone, and I predict that both machines will have phenomenal sales. Of course, being high grade machines, they will appeal to the well-to-do class. Business in general is very good. We are going after wholesale business very energetically."

Exhibitions of both the Victrola and Auxetophone machines were given at the Musical Echo Co.'s fine concert rooms the past month, for the benefit of dealers, etc., and both machines created a decided sensation. The Victrola was exploited August 23 and the Auxetophone on August 24. Both machines were sold at once.

Assistant Manager L. G. Gerson, of the Musical Echo Co., at present writing, is visiting state dealers and is securing good orders for near future and immediate delivery.

E. A. Hawthorne, who spends most of his time at the American Record Co. plant, Springfield, Mass., visited "home" the early part of September. He was accompanied by Theodore Bentel, a large Pittsburg talking machine jobber. On the evening of September 4 they were entertained at supper by Manager H. E. Marschalk, of the Musical Echo Co., and talked "shop," real estate trust bank failure, "fishing," and other interesting matters.

In the local courts the past month, Isaac Singer, a North 8th street merchant, applied for an injunction restraining Ernest and Eben Percival from running a graphophone in front of their "Palace of Amusements." Mr. Singer complained that the talking machine was a nuisance, destroyed his peace of mind and interfered with his business. The court took the matter under advisement. Last month Reuben Goldberger, also an 8th street merchant, applied for a restraining writ directed against J. W. Himebaugh, who conducts an amusement palace, asking that Himebaugh be prohibited from running a gramophone. This case was compromised by Himebaugh agreeing to place the talker hack in his store and moderate its volume of sound.

Among suits instituted in the local courts the past month was that of the Penn Phonograph Co. against L. Futernick, in which the complainant alleges breach of contract.

The phonograph is said to be the underlying cause of a murder which occurred at Scranton the past month. In operating Luigi Salwiner's talking machine, Vincenzo Errinoni broke a record. This enraged Salwiner, who procured a revolver and shot Errinoni dead.

H. M. Ko Eune has opened a retail talking machine store at 3016 Ridge avenue and carries a well selected stock of Victor and Edison machines, records and supplies. He is in a good business neighborhood and will doubtless meet with deserved success. One of the first—if not the first—dealers on Ridge avenue, is C. B. Stahl, who at No. 2510 is handling "talkers" and records with good success.

John Blackman, the Edison jobber, of New York City, was a trade visitor the past month.

Ruane & Bayley, retail talking machine dealers at 5158 Haverford avenue, have dissolved partnership. John F. Ruane succeeds to the business and stand of the old firm. F. R. Bay-

ley has opened an entirely new retail store at 5004 Baltimore avenue—a rapidly growing section of the city—where it is most likely he will meet with good success.

Courtland Shaw, on or about October 1, will open a retail talking machine store at 52d and Cedar streets, West Philadelphia. Mr. Sham was formerly with the Victor Talking Machine Co., has a thorough knowledge of the "talker" industry and is really one of the pioneers of the industry. It is said he will carry a big stock of machines and supplies.

Robert L. Gibson, well known in local talking machine circles, is engaged in perfecting a number of "talker" improvements and inventions.

Another legal contention, in which the phonograph figures, arose in Camden, N. J., the past month. John Pulaski and Frank Nowack were enjoying talking machine music when David Hollander, a strolling musician, came along and, playing upon a combination of instruments, marred the pleasure of Pulaski and Nowack. They assaulted Hollander and broke his instruments, with the result that they have been held in heavy bail for atrocious assault.

While the talking machine may figure in court it has its good side, too, as was demonstrated recently near Norristown, Pa. A graphophone, the property of the Port Indian Outing Club, was stolen from the club's boathouse. It was found in possession of two men and led to their arrest for housebreaking.

A swindler at Haddonfield, N. J., used a talking machine as the "bait" to lure money from the pockets of people to whom he told a story that he was collecting funds with which to buy the "brave firemen" a phonograph so that their "hours of ennui would be relieved." Before the swindler could be headed off he had collected \$18, and the "brave firemen" are more than tired.

Said a representative of the Keen Talking Machine Co., 8th and Cherry streets: "Trade has been a little quiet, but is improving."

Said Louis Buehn, of the Wells Phonograph Co., 45 North 9th street: "August business was the biggest we ever had for that month. The outlook for business is good; orders are getting larger all the time."

Said S. Ford, of the Disk Talking Machine Co., 13 North 9th street: "Business is very good; we have placed Zon-o-phone goods with the trade in all parts of the city and over the State. We have increased trade tenfold. Zon-o-phone records at 50 cents have proved popular and sell quickly."

Said H. A. Weymann, of H. A. Weymann & Son, jobbers, 923 Market street: "Our business

in July and August this year ran 50 per cent. ahead of a year ago. Our trade in Edison goods, especially, has been extremely large and is growing right along. We have added a new floor to our wholesale phonograph department. The addition, which is 20 x 200 feet, gives us much needed room and it will be devoted to our talking machine department entirely."

Edward J. H. Smullen, salesman with the Lewis Talking Machine Co., 15 South 9th street, left early in September on a regular sales trip to Pennsylvania points. He has been sending in good orders ever since.

Charles R. Chapman, one of the largest phonograph jobbers in Australia, was a trade visitor the past month. Mr. Chapman is combining business and pleasure on his visit to this country. At Newcastle, New South Wales, he has a jobbing phonograph business reputed to be the largest in Australia. Mr. Chapman visited Philadelphia in order to see the famous Baldwin Locomotive Works, and was entertained by Manager John A. Gouldrup, of the Columbia Phonograph Co.

The Columbia Phonograph Co. has opened a South Philadelphia branch salesroom at 1402 Jackson street, in charge of Manager Harry Brack. A complete line of Columbia goods is carried and business, ever since the opening of the store, has been very satisfactory. Charles E. Gabriel, formerly assistant manager of the Columbia Co.'s Camden, N. J., branch store, has been appointed manager and is pushing sales successfully and vigorously.

Frank O. Miller, of F. O. Miller & Co., Jacksonville, Fla., was a trade visitor the past month. F. O. Miller & Co. are influential sewing machine merchants at the Florida town mentioned, and have put in a large department of phonographs, records and supplies.

Mrs. Imogene B. Oakley, a club woman, of Germantown, a suburb, is compiling statistics about unnecessary noises—with the object in view of doing away with them, it is stated. "Anybody who makes his or her living by emitting noises ought not to be disturbed," asserts Mrs. Oakley. A noise made by a crowing rooster is unnecessary, she holds, because he does not make his living by it. Phonograph men can feel safe, under Mrs. Oakley's theory: the noise they and their machines make are necessary, because they make their living by it. If the courts will only take this view of the matter, short work will be had of several "restraining" order cases instituted against phonograph operators by complaining merchants.

Jobbers and dealers in Columbia Phonograph Co.'s lines were well pleased upon learning that

## New England Dealers

will be interested to know that we have for six weeks past been preparing to supply their wants promptly when the Fall and Winter rush is on.

¶ We will have on hand by October 1st a surplus stock of over twenty-five hundred Edison and Victor machines and over two hundred thousand Edison and Victor records. This surplus with the deliveries the factories will make us during the rush season will enable us to give dealers' orders the same attention as we would ordinarily during the Summer.

¶ Prompt and Full Shipments on day order is received.

¶ Send for our new list of "Live Ones" of the Edison Record List.

¶ If you are not already handling the Mega Flower Horns (plain and decorated) send for descriptive circulars and prices.

NEW ENGLAND DISTRIBUTING HEADQUARTERS

**THE EASTERN TALKING MACHINE CO.**

**177 Tremont Street, Boston, Mass.**

Distributors of EDISON and VICTOR MACHINES, RECORDS and ALL SUPPLIES.  
Eastern agent for HERZOG DISK and CYLINDER RECORD CABINETS :: ::

the Columbia company had succeeded in attaching Marconi, the famous inventor, to their experimental staff.

It is stated negotiations are on between a local jobbing house and a large musical house, whereby the latter will add a "talker" department to its present large business. By next month particulars can probably be given.

### "TALKER" IN BOSTON CAMPAIGN.

Parrot Used as a "Blind" in a Novel Means of Securing Votes.

The residents of the Roxbury district in Boston, Mass., are being treated to a little novelty in the way of political advertising which has attracted no end of attention. In ward 18 there is a bitter House fight this year, and the "anti-regulars," Councilman Daniel J. Curley and former Councilman Thomas Fay hit upon a scheme for attracting attention to their candidacies which has the "regulars" looking on with open-eyed envy.

Passersby in the vicinity of the Curley-Fay headquarters, 1142 Tremont street, have their attention arrested by shrill cries which fairly root them to the spot upon which they are standing, and few pass by without investigating the source of the cries.

In the doorway of 1142 Tremont street, where the curtains are closely drawn, is a parrot of the color which would naturally attract the attention and admiration of every true Irishman. And as the people pass by they cannot bring themselves to believe that it is not the parrot which is constantly crying out: "Democrats! Democrats! vote for Curley and Fay!"

All day long this cry is kept up, and all day long inquisitive pedestrians scratch their heads while they listen to the shrill cry and attempt to fathom the mystery, for after the first or second glance it is apparent to most that the parrot is not working overtime.

The secret of the cries remains hidden behind the curtained windows, where Curley and Fay have placed a phonograph, and where it is forever grinding out: "Democrats! Democrats! vote for Curley and Fay!"

Rather proud of the attention which he thinks he is attracting, the parrot adds to the confusion with a few choice expressions which cannot be found in President Roosevelt's "nu spelling buk," and gradually he is learning to deliver himself of parts of the phonographic "spiel." There are three other candidates in the field from Ward 18, but as yet they have not been able to overcome the advantage of having a parrot making the preliminary campaign for their opponents.

### THE PIANOLA AND THE "TALKER."

This Well Known Instrument Used by Edison in Making Experiments at His Laboratory in Orange, N. J.

In the development of sound reproduction in connection with talking machine records the pianola played a by no means unimportant part. At least this is the inference from what W. E. Gilmore, president of the National Phonograph Co. recently told a party of visitors at the works in Orange, N. J. They were in one of the laboratories, and after carefully examining the curious apparatus and machines, the inventions of the famous originator of the phonograph, an old square piano, equipped with a pianola, attracted the attention of the music men present. Naturally Mr. Gilmore was asked the meaning of so seemingly an incongruous exhibit in the midst of chemical and mechanical appliances, when he replied, laughingly:

"Oh, yes; that's a pianola. You see, Mr. Edison, in making experiments in sound reproduction, soon found that no matter how skilful or artistic a pianist might be there was always a variation of time, expression and color every time a piece was played. At his suggestion I bought him a pianola, then the music was ren-

dered uniform, no matter how many times it was performed. This was precisely what Mr. Edison desired to record the data in figuring out certain results in sound reproduction for phonographic records. So satisfactory was the pianola that Mr. Edison wanted another in his private office and experimental room for the same purpose."

### MILWAUKEEANS ARE BUSY.

McGreal Bros. Carrying Enormous Stock of All Lines of Machines—Florsheim & Ging Buy Out Bennest—Mr. Thomas a Progressive Columbia Man—Geo. H. Eichholz Doing Well—Huseby Co.'s New Quarters.

(Special to The Talking Machine World.)

Milwaukee, Wis., September 10, 1906.

McGreal Bros., by far the largest factors in the talking machine business, have made a remarkable record, and the manner in which they have been expanding of late proves that in the few years they have been in business they have been building on strong and sure foundations. The main store remains at 173 Third street, where L. E. McGreal, the head of the concern, makes his headquarters. They also have another retail talking machine store in South Milwaukee. The other member of the firm, Hugh McGreal, devotes his attention mainly to their extensive credit clothing business in South Milwaukee. The firm recently moved their wholesale department to commodious headquarters at 317-319 Milwaukee street. Their inventory the first of August showed a stock of 110,000 Edison and Victor records. They have been Edison jobbers ever since they started, and a couple of months ago also lined up as jobbers of the product of the Victor Co. The firm does an extensive business in the jobbing line. They have something like 200 accounts in Wisconsin alone, and also have considerable business throughout Michigan, Minnesota, Iowa and Northern Illinois. They are preparing to put additional men on the road this fall, and will considerably extend their territory covered.

A. F. Bennest, who for the past two years has owned the talking machine department in the Boston store, Milwaukee, sold out on August 25 to Florsheim & Ging, who also have the small goods, pictures and toy departments, and who will continue it in charge of T. B. King, formerly of Syracuse, N. Y., and who has an interest in the talking machine department. The Victor line is handled exclusively. Mr. Bennest has long been in business in Milwaukee. His future plans have not been definitely made, but he will

surely remain in the talking machine field.

Mr. Thomas, manager of the Columbia Phonograph Co.'s store on Grand avenue, is a talking machine man of the most progressive type. He is giving the Columbia an able representation in Milwaukee, and goes out of his way to find new methods of pushing the company's goods. He works the "racial" idea thoroughly. When The World man called Mr. Thomas was demonstrating bagpipe and other records reminiscent of the land of Auld Lang Syne to a crafty Scotchman, whom he had been working on for weeks to get into the store. As he left he told Mr. Thomas that he would take the matter up with his lodge and have the talking machine man give them an all-Scotch concert in the near future. That's the way Thomas works. He watches the bulletins keenly for records appealing to some particular class of people, and then goes about the task of bringing the people and the records together.

The Huseby Co., who moved to their new store on Grand avenue a few months ago, are doing a nice retail business, and make attractive window displays of their line.

McGreal Bros. recently sold their store at Fond du Lac, Wis., to W. J. Augustin, who had managed the store for some time. The Victor and Edison are the lines carried.

George H. Eichholz is a prosperous talking machine dealer at 1340 Fond du Lac avenue. He only started in business for himself a couple of years ago, but has built up a fine business handling Edison goods exclusively.

### THEY USED THE TALKING MACHINE.

Upon the trip of Chairman Killam and Dr. Mills, of the Canadian Railway Commission to Dawson City, to investigate complaints regarding freight rates and other matters, N. R. Butcher, the official stenographer, will have the evidence at each hearing read into a talking machine from the stenographic notes, and the record sent to Toronto for transcribing. The finished records will have traveled 4,500 miles across the continent.

The Burlington (Vt.) branch of the American Phonograph Co., of Gloversville, N. Y., have separated their wholesale from their retail department, having leased a large three-story building on College street, with floors 45 by 90 feet. The new quarters are equipped with racks to hold 92,000 Edison records, and with an additional traveler engaged, the company anticipate a heavy season's business throughout the Eastern States.

## Keeps Talking Machines "Well"

The "insides" of talking machines are liable to get out of order—same as folks' insides. It "oil" depends on the oil. "3-in-One" Oil keeps all kinds of talking machines "well" and their owners happy. Maybe other oils will do the same—maybe they won't. There's no "maybe" about "3-in-One"—twelve years of success and growth proves its superiority.

"3-in-One" is "good medicine" for every talking machine part. Lubricates the action points; brightens and prevents rust on the metal surfaces; keeps disc and cylinder records free from dust particles, thus assuring perfect tone and harmony.

Where do you come in? Quick, easy sales and 50 and 100 per cent. profit—that's where. Your jobber can supply you with "3-in-One"—place a trial order to-day. FREE sample bottle and the "3-in-One" Book sent on request. Write to:

## GREAT ACTIVITY IN 'FRISCO.

Talking Machine Trade in San Francisco Has Assumed New Life—Leading Dealers Are Enlarging Their Space—The Outlook Good.

(Special to The Talking Machine World.)

San Francisco, Cal., Sept. 1, 1906.

So steadily has the demand for talking machines increased in this city since the resumption of business that nearly every dealer of importance has found it necessary to largely increase the space devoted to his goods.

Benjamin Curtaz & Son recently fitted up the California street portion of their store for handling "talkers" at retail, and so large has their business become that they have had to arrange for individual trying out parlors and extra record racks.

The Victor line is the winner with Peter Bacigalupi & Sons, 1113-1115 Fillmore street, and a strong demand for these goods has sprung up as a result of the company's liberal advertising. The window displays of this firm are always worthy of note, a unique example being shown this week. The two show windows, one on each side of the entrance, have been draped to imitate the horns of a talking machine. The plate glass window serves as the wide end of the horn and the draperies of cloth, red in one window and blue in the other, extend back in a funnel shape and in the center a picture is placed with the window cards and inscriptions desired for the day's advertising. The effect is that of two large phonograph horns facing the street and serves to draw marked attention to the store.

Clark, Wise & Co. are among those who have been compelled to enlarge their talking machine department to meet demands. The balcony in the front of the store, devoted to the "talkers," has been extended along one side, about doubling the space available for this department. As this firm handles all the leading makes of machines and records it is readily seen that the extra space was badly needed.

The Southern California Music Co. on South Broadway are making alterations on the third floor of their building with the ultimate object of increasing their stock of machines and records. It is their intention to carry a stock of 60,000 records.

In Sherman, Clay & Co.'s new store there is a large space allotted to the talking machines, and Manager A. J. McCarthy is figuring out how to use it to best advantage, as he says he needs every bit of it.

Several new talking machines have been opened recently, among them being that of M. Heydenfeldt, formerly connected with Kohler & Chase, on Golden Gate avenue, who will handle the Victor and Zonophone lines.

J. A. Leitz, under the title of the Eureka

Phonograph Co., will shortly open a store at 429 Fifth avenue, Eureka, Cal., where he will carry a large line of Edison machines and records.

## TALKING MACHINE AT OUTING PARTIES.

Outing funds conducted by newspapers in behalf of poor children have been a feature of the summer season in Philadelphia for several years, and one of the most successful methods of obtaining money for this righteous cause is giving porch parties.

A porch party is a very enjoyable affair, indeed, and is generally carried out by the children of the better class of society, backed by a newspaper, in aid of their less fortunate comrades. Some sort of entertainment is always indulged in and refreshments served. As the name implies, the porch is the place where these parties are held, and tastefully decorated with Japanese lanterns and flags, it makes a very striking picture against the sable background of the night. Only a small admission is charged, but so largely are these affairs patronized, that very substantial financial returns are often realized.

A talking machine man in discussing porch parties with the writer the other day incidentally remarked that they provided a rare opportunity for free advertising for any one in his business. He stated that the idea of donating a talking machine concert to the outing fund porch parties occurred to him early in the season, and he had made the most of it, sending a machine and operator to every celebration of the kind throughout the summer. In all cases advertising matter was distributed and questions courteously answered. The result was a large increase in sales for both machines and records, and in several instances outfits were disposed of on the spot.

It is, of course, too late now for a dealer to profit by this article this season, but it will pay him to cut it out and pin it in his hat-band to be taken up against next Summer, for by doing so he can increase his business without cost, which is an achievement.

HOWARD TAYLOR MIDDLETON.

## STRENUOUS SALESMANSHIP.

Len Spencer, whose voice issuing from the horn of a talking machine, is as familiar to the owners of these machines as that of some of their relatives, tells an interesting story of strenuous salesmanship that is worth repeating. Of course, somebody else, not Len, was "on the job." But to the story:

"Once upon a time I hired a horse and buggy and went through the country to sell talking machines. The results, the first day or two, were not altogether encouraging, and I was getting desperate. Toward nightfall the second day I pulled up at a farmhouse on the outskirts of a little Jersey coast town, determined to sell a machine at any cost, by any means. I was met by a vicious-looking bull dog, and a more savage-looking native, who demanded to know what I wanted.

"I said: 'Neighbor, I'm selling the best article on the market in the line of talking machines, to entertain and rest you and your family when you're tired, and tell you what's going on in the world where you can't go and see for yourself.'

"Talking machines! Huh! I'm willin' to bet this whole darn (he didn't say darn) farm agin a chaw of terbacker that my wife, Betsey Ann, kin talk faster, slicker 'n' more ter the point in good, plain English, than any darn machine yew ever heard gab!'

"I said: 'Can't I show it to you?'

"Don't trouble yourself.'

"I'm used to trouble.'

"Don't say! Yew don't look like it!'

"Yes, but I've had trouble. I've been in jail thirty days. Just got out.'

"What wuz yew sent to jail fer?'

"For nearly killing a man who wouldn't buy one of my talking machines!'

The old man came up and began to take notice. I sold him that machine.'

"It's the Easiest Thing in the World" to Sell

## TRADE HAPPENINGS IN THE WEST

Fall Trade Soon in Full Swing—Reorganization of Talkophone Co.—Wurlitzer Expansion—Lyon & Healy's Catalogue of Self-Playing Instruments—Marketing of the Crescent Tone Regulator—H. E. Marschalk a Visitor—Cable Company Becoming Strong Factors in Wholesale Trade—Victor-Victrola Creates a Furore—Talking Machine Co.'s Growth—Babson Bros. Going Extensively Into the Jobbing Business—News Budget of the Month.

(Special to The Talking Machine World.)

World Office, 195 Wabash avenue,  
Chicago, Ill., Sept. 10, 1906.

August made a comparatively poor showing as compared with June and July, a condition natural to the season, but the cooler weather ushered in with September is bringing many of the resorters back on the jump and business is picking up in excellent shape according to the reports all along the line. In another week or so the Fall trade will be in full swing and everyone looks for business of unusual volume. Jobbers report country dealers ordering briskly and placing somewhat larger requirements than usual at this time.

The fact that the Talk-o-Phone Co., of Toledo, is under process of reorganization has been known in the trade here for some weeks, but actual news is still very scarce. It is now stated positively on good authority that President Irish has sold his interests and has retired entirely from the company and that Mr. Metzger, the former secretary, has been made president in his stead. The company's plant, which has been shut down for several weeks pending the reorganization, will shortly start up, it is said, and various improvements in the product are being made. The name of the company will be changed it is reported. Considerable new capital has been put into the company and various rumors are afloat regarding the personnel of the new stockholders. It is understood that the new machine placed on the market last Fall, with the mechanical feed device by which the reproducer arm is propelled across the record independent of the action of the needle, will be manufactured

and pushed vigorously by the new organization.

Rudolph H. Wurlitzer, secretary of the Rudolph Wurlitzer Co., of Cincinnati, was in Chicago last week on a visit to Edward Uhl, manager of the Wurlitzer Co.'s big Chicago branch at 268 Wabash avenue. Mr. Wurlitzer told The World representative that he was agreeably surprised at the amount and volume of talking machine business this summer. Their retail business in Cincinnati is growing rapidly and this year so far has been about three times as large as for the corresponding period in 1905. The demand for the various automatic machines they manufacture has been phenomenally large and they have been having the greatest difficulty in keeping up with the demand.

Lyon & Healy have issued a new catalogue of music for the Majestic pneumatic self-playing piano. It contains all the latest hits and a good many selections which can hardly be classed as hits yet, but which have an undoubted future before them. Mr. Wade, who presides over this department, says that this Summer's business on the Majestic was over twice as large as last year. They are also preparing to push energetically the Pianette, a small coin-operated player which operates without electricity. Mr. Wade looks for a large sale.

John Otto, manager of the retail talking machine department at the Chicago house of the Rudolph Wurlitzer Co., is a fully developed Edison crank. His particular pride is that he has every Edison record now on the market in stock—everything from No. 2 to 9361.

Miss Peters, formerly with the Chicago office of the Columbia Co., has charge of the sales end

of the talking machine business at Siegel, Cooper & Co., and is giving evidence that woman is worthy of a prominent place in this trade. J. L. Kestner, of the firm, who buys the talking machines, together with other lines, is now on a buying trip to New York.

Charles F. Baer, the competent assistant manager of the Chicago office of the Columbia Phonograph Co., will take unto himself a wife the middle of this month in the person of Miss Lucas, the accomplished young lady formerly employed in the order department of the same house.

C. W. Noyes, secretary of the Hawthorne-Sheble Mfg. Co., has been circulating the following petition among the local jobbers:

"For the purpose of presenting to dealers a price list to cover various lines of supplies used in the talking machine trade, we deem it advisable and are agreed that from this date forward we will accept as a standard price list the price list adopted by the Central States Jobbers' Association and hereto subscribe our names."

Mr. O'Neill, of the O'Neill-James Co., was in the East early in the month and spent a few days at the factories of the Hawthorne-Sheble Mfg. Co. and the American Record Co.

C. E. Goodwin, manager of the talking machine department at Lyon & Healy's, is very proud of a recent acquisition, Tom Gray, otherwise known as Lightning Tom, who has the reputation as being one of the quickest order fillers that ever happened in the trade. "Just see that this gets into the hands of Lightning Tom and have him push it along," is the comment on many a rush order coming to Lyon & Healy these days.

Frederick Sheppy, proprietor of the Crescent Talking Machine Co., 3749 Wabash avenue, Cottage Grove avenue, and the inventor and manufacturer of the Crescent tone regulator one of the best devices of the kind on the market, has closed contracts whereby the Crescent will hereafter be marketed exclusively through the Cable Co. and the Talking Machine Co. The Talking Machine Co. will have the exclusive western dis-

# BABSON BROTHERS,

WHOLESALE

Edison Phonographs

AND RECORDS.

We desire to announce to the trade that we have secured the old quarters of the National Phonograph Co., at 304 Wabash Ave., Chicago, and G. M. NISBETT as Manager of our wholesale business.

*Complete Stock and Prompt Shipments.*

## Talking Machines for the Trade

We are jobbers of the Edison Machines and Records, Columbia Machines and Records, American Records and the H. & S. Supplies; also distributors of the Crescent Tone Regulators.

We have special facilities for placing attractive novelties in the hands of our dealers and keep our patrons constantly informed regarding the new articles in this line.

Our wholesale Talking Machine Department is entirely separate from our Retail business and is organized to give prompt and satisfactory service to our dealers. Shipments are made promptly and we guarantee bright, clean, new goods.

*Write for samples of the wonderful Petmecky needle and Phonographine, the best Talking Machine lubricant. Crescent tone regulators sent on approval.*

### Automatic Pianos

We are jobbers of the imperial Coin Operated Pianos, both 44 and 58 note. The 58 note instrument is the only Automatic piano giving tone shading.

Talking Machine Dealers will find this a profitable line to carry.

*Write to-day for catalogues, terms and full information.*

Department "E"

**The Cable Company**  
Wabash and Jackson Aves.,  
CHICAGO.

tribution and the Cable Co. the exclusive Eastern distribution. The dividing line between the territories of the two companies runs due North and South through Chicago.

L. Kean Cameron, who justifies his name by being one of the keenest and most capable young talker salesmen in the city, has gone with the Cable Company as chief retail assistant to Manager J. W. Harrison, of the talking machine department. Mr. Cameron received his training in the business with Lyon & Healy, with whom he has been connected for the past four years.

A. D. Geissler, manager of the Talking Machine Co., was called to Evansville, Ind., last month on account of the death of his maternal grandfather, John S. McCorkle. Mr. Geissler's father, L. F. Geissler, general manager of the Victor Co., came from the East to attend the funeral.

Henry E. Marschalk, at one time credit manager of the Columbia Phonograph Co., in Chicago, but now manager of the Musical Echo Co., Philadelphia, was in the city last month renewing his old acquaintances in the trade here. Mr. Marschalk exhibited with considerable pride photos of the interior of the Echo Co.'s new store, which is certainly one of the best fitted up talking machine establishments in the country. In addition to the Victor line, the Musical Echo Co. are now Edison jobbers. As he left Philadelphia Mr. Marschalk noticed in the Pennsylvania yards two cars with the Edison label on them. They represented the initial shipment to his company.

The Chicago office of the Columbia Phonograph Co. have established a mail order department in charge of Mr. Brind, formerly with the American Novelty Co., of this city.

C. W. Noyes, secretary of the Hawthorne-Sheble Manufacturing Co., and Western representative of the American Record Co., left August 25 for a visit to the factories at Philadelphia and Springfield. He afterward went with Mr. Hawthorne to Atlantic City for a week or so of rest and recreation.

The latest Chicago jobbers to receive the agency for the famous "3 in One" oil are The Chicago Music Co. and the Talking Machine Co. Being an ideal lubricant for the delicate mechanism of the talking machine, "3 in One" oil is in great demand throughout the trade, and additional distributors will do much to facilitate the rapid filling of dealers' orders.

The Cable Company are becoming very strong factors in the wholesale talking machine and supply trade. As readers of The World know, they are jobbers of the Edison and Columbia goods, the American records, the various products of the Hawthorne-Sheble Manufacturing Co., and distributors and jobbers of a number of new specialties. They are also having a fine trade in the Imperial coin-operated pianos, both 44 and 58 notes, the 58-note instrument being distinctive on account of the perfect tone shading secured. The company's wholesale department is entirely distinct from the retail, and is located in another building. This week Manager Harrison, of the talking machine department, will commence giving daily concerts from noon until 5 o'clock in Cable Hall. As the season progresses some unique features will be embodied in these concerts, details of which will be given later.

The Victor-Victrola, a description of which will be found elsewhere in this issue, made its appearance in Chicago last week. It has created a furor. Notwithstanding the price, \$200, the samples placed on exhibition at the several leading Victor jobbers and dealers have been sold and liberal orders have been placed. Everybody is talking, not simply about the beauty of the cabinet, the perfect concealment of the mechanism and the facilities for record "albums," but principally about the tonal effects produced by means of the lid over the turntable by which departing sounds are eliminated and the further tone control possible by manipulating the doors concealing the "invisible" mahogany horn.

Frank Dilbahrer, head of the Western Talking Machine & Supply Co., manufacturers' agents, Suite 405, No. 185 Dearborn street, has

**ALL IN AN

105-107-109 Madison Street,  
CHICAGO, ILL.

already made arrangements to represent the following well-known concerns: Universal Talking Machine Co., Zonophone machines and records; Udel Works, Indianapolis, record cabinets; Syracuse Wire Works, Syracuse, N. Y., record racks; Ideal Fastener Co., New York, Universal horn crane; Edwin A. Denham Co., New York, imported premium machines; Tone Regulator Co., Chicago, tone regulators. The Western T. M. & Supply Co. are also putting out a needle of their own, made in soft, loud and extra loud styles. They can fill orders for this needle promptly from stock in Chicago. C. H. Wyatt, of the company, is now on a trip among Western jobbers.

A. D. Geissler, manager of the Talking Machine Co., says that their business, now exclusively wholesale, showed an increase in August of 25 per cent. over the corresponding period of last year. Mr. Geissler, who has been working like a Trojan since he assumed charge early this year, broke away from business cares last Monday and spent the week accompanied by Mrs. Geissler, at Delavan Lake.

The Victor Co.'s new epoch-making machine, the Auxetophone, will again be on exhibition this week at the Talking Machine Co., Lyon & Healy and the Rudolph Wurlitzer Co.

R. C. Wiswall, assistant manager of the talking machine department at Lyon & Healy's, has returned from a three weeks' vacation spent at Matawa Park on Black Lake, Mich. Fishin' was good. Down on the ground floor of the big house active preparations for the season's Victor campaign are being made. The regular continuous afternoon concerts will recommence this week. Joseph N. Vasey has charge of the selling end and Mr. Blackman will demonstrate at the concerts as usual. An additional room—one of those now occupied by the pianola music department—will be given up to the sales end, and the phonographic language course department in charge of L. L. Lewis, now has a room to itself.

Kohler & Chase, of San Francisco, have been made Edison jobbers.

The Secretary of State at Springfield, on Saturday, licensed the incorporation of Charles C. Adams & Co., Peoria, "phonograph sundries." The capital stock is \$30,000.

L. R. Chandler, formerly traveling representative for the Edison Co. in Colorado and Utah, writes his friends from his ranch near Jordon, Mont., that the cattle business is all that it was cracked up to be, and that he is prospering mightily.

B. Edelson, 267 Milwaukee avenue, small goods, cutlery, etc., has added talking machines, handling the Victor and Edison.

Babson Bros., who, as announced in last month's World, are going extensively into the jobbing business, have just secured the third floor of 304 Wabash avenue for their wholesale business. This puts G. M. Nisbett, wholesale manager for Babson Bros., back in his old location, the quarters formerly occupied by the National Phonograph Co., for their Chicago headquarters of which he was manager. Babson Bros. have bought the office fixtures and the extensive record shelving formerly used by the National Co. Mr. Nisbett is rapidly putting the stock into the new location. Babson Bros. will handle the Edison exclusively, at least for the present. Manager Nisbett said that in addition to their present stock, which is very large, they placed last week one of the largest single orders ever received by the Edison Co. Besides a complete line of Edison machines and records they will also carry a full line of accessories, and are now getting out a complete supply catalogue.

L. L. Leeds, of Leeds & Catlin Co., was in the city this week on his way West.

#### TRANSMITS MUSIC BY WIRE.

Walter Wolfe, electrical engineer, and Austin Granville, chemist, of Muscatine, Ia., have launched a new instrument which is exciting considerable comment. This device is called the ampliphone, by which musical sounds, instrumental and vocal may be transmitted over elec-

trically charged telephone wires. Several prominent citizens have interested themselves in the invention and a syndicate is now being formed which will see to its speedy development and installation in this city, permission already having been obtained from the Bell Telephone Co. for the use of the poles upon which wires for the transmission of the music can be placed. If the invention proves a success the concerts may be heard many miles away.

#### BLACKMAN TALKING MACHINE CO.

Now that the Blackman Talking Machine Co. (J. Newcomb Blackman, widely known as the "white Blackman"), have acquired the exclusive control and manufacturing rights of the Place record cleaning brushes, the company will heretofore manufacture them under two new patents, which will be issued September 25 and October 2. A new style brush for cleaning disc records is now nearly ready for the market, and will be known as the Place No. 10 disc record brush. The Blackman Co. are having a large sale of "Melotone" needles, and are filling orders

promptly and regularly. Of record cabinets—cylinder and disc—they have 26 different styles in oak and mahogany, ranging in price from \$10 to \$75. They issue a handsomely illustrated catalogue on their cabinet line within a month. The company's sectional record cabinet is put down as a winner, the advance orders running into large figures.

#### RECENT INCORPORATIONS.

The Waco Talking Machine Co., of Waco, has been incorporated with the authorities of Texas, with a capital of \$2,000. It is their intention to conduct a talking machine business. Incorporators: C. Forkel, S. S. Clayton and A. Malone.

The Adams Talking Machine Co., of Peoria, was incorporated this week with the Secretary of the State of Illinois, with a capital of \$30,000, for the purpose of dealing in talking machines. Incorporators: Charles C. Adams, A. E. Adams and B. D. Bland.

Deliveries have been begun on the new alternating current commercial graphophone.

## Chicago Horn Support

### FOR EDISON PHONOGRAPHS

FRONT VIEW—SUPPORT INVISIBLE

The simplest, neatest and most practical Horn Support on the market. Has many advantages over other devices of this kind. Is adjustable to different size horns, holding the largest size bell horn perfectly without tipping the machine.

This support is so constructed that it comes directly under the machine and practically out of sight, leaving the top of machine perfectly clear. This support is quickly attached and detached, and folds up into a package 1¾ inches by 2¼ inches by 15 inches in length, allowing same to be packed inside of machine case. Handsomely finished in heavy nickel plate.

Ask your jobber to send you a sample. Must retail for \$1.50 each. Wholesale, 75 cents each.

# Artistic Flower Horns

Artistic Flower Horns are manufactured both with and without floral decoration on the inside. We have discovered a means of coating the interior of our Artistic Flower Horns, with special prepared enamels, whereby we secure rich, brilliant color-effects never before attempted. Artistic Flower Horns are totally different from any others, and their handsome appearance, symmetrical lines, and superior reproducing qualities place them as leaders wherever shown.

The decorations employed on Artistic Flower Horns are not cheap and gaudy-looking, but as one of our large jobbers remarked, they can safely be classed as works of art.

Artistic Flower Horns are made in the following styles :

Brass, Nickel-Plated and Polished outside, brilliant enamel background inside, with or without floral decoration.

Brass, Polished outside, brilliant enamel background inside, with or without floral decoration.

Silk Finish outside, brilliant enamel background inside, with or without floral decoration.

Artistic Flower Horns are made for Cylinder Machines and Victor Tapering Arm Machines.

Artistic Flower Horns are made in 84 styles and sizes so as to suit every fancy.

All our Flower Horns are made on machinery of our own design and construction, whereby we are able to secure the most symmetrical lines.

All our Flower Horns have tight joints, thereby eliminating any possible rattle.

All our Flower Horns are very strongly made, not readily damaged.

We manufacture many other style Flower Horns, but recommend the Artistic line as being the latest and most attractive.

We now have three factories in operation, and claim to be the largest manufacturers of Talking Machine Horns and all other Talking Machine supplies in the world.

Factory No. 1. Howard and Jefferson Streets, Philadelphia

Factory No. 2. Mascher and Oxford Streets, Philadelphia

Factory No. 3. Bridgeport, Connecticut

We publish on the next page, a list of our Jobbers in the United States, any of whom will be pleased to furnish you with list and prices of our Flower Horns together with all other goods of our manufacture.

## JOHN PHILIP SOUSA STILL ALARMED

Over the Great Dangers That Must Ensure from the Use of the Talking Machines and Mechanical Piano Players by the Musically Inclined People of This Country—He Draws Some Fantastic Pictures in Which He Presents a One-Sided View of the Situation—Demonstrates His Narrowness of Vision and His Lack of Knowledge of General Conditions.

Ever since John Philip Sousa, the eminent bandmaster, appeared in Washington in connection with the hearing on the copyright bill, he has been conspicuously in the limelight, always talking about the great danger and evils to ensue from use of the talking machine. He has been interviewed by newspaper men, and his remarks have been the subject of many editorial comments. The daily papers, however, could not afford him scope enough for his views, so this time he has taken the pains to contribute a lengthy article to Appleton's Magazine, for September, under the caption, "The Menace of Mechanical Music." Mr. Sousa goes on record as saying that he is willing to be reckoned as an alarmist, and proceeds in this wise:

"I foresee a marked deterioration in American music and musical taste, an interruption in the musical development of the country, and a host of other injuries to music in its artistic manifestations, by virtue, or, rather, by vice, of the multiplication of the various music reproducing machines. When I add to this that I myself

Mr. Sousa says that the present mechanical appliances reduce the expression of music to a mathematical system of megaphones, wheels, cogs, discs, cylinders and all manner of revolving things, which are as like real art as the marble statue of Eve is like her beautiful, living, breathing daughters.

Composer Sousa evidently believes that the sale of music producing inventions interferes with what was termed formerly the regular busi-

—Appleton's Magazine.

"LED IN THE STRIFE BY A MACHINE."

ness, and will ultimately drive the amateur musician out entirely. According to his views, "there are more pianos, violins, guitars, mandolins and banjos among the working classes of America than in all the rest of the world, and the presence of these instruments in the homes has given employment to enormous numbers of teachers who have patiently taught the children and inculcated a love for music throughout the various communities.

"Right here is the menace in machine-made music! The first rift in the lute has appeared. The cheaper of these instruments of the home

are no longer being purchased as formerly, and all because the automatic music devices are usurping their places.

"And what is the result? The child becomes indifferent to practice, for when music can be

"WILL THE INFANT BE PUT TO SLEEP BY MACHINERY."

heard in the homes without the labor of study and close application, and without the slow process of acquiring a technic, it will be simply a question of time when the amateur disappears entirely, and with him a host of vocal and instrumental teachers, who will be without field or calling."

He refers to an article recently appearing in the London Spectator, which shows how the talking machine is being used as a substitute for musicians at amateur performances, and quotes the exclamation of the little boy who rushed into his mother's room with the appeal: "O mamma, come into the drawing room, there is a man in there playing the piano with his hands!"

The March King is full of fear and trembling for the musical future of America, for he says:

"It is quite true that American girls have followed the athletic trend of the nation for a

"THERE'S A MAN IN THERE PLAYING A PIANO WITH HIS HANDS."

and every other popular composer are victims of a serious infringement on our clear moral rights in our own work, I but offer a second reason why the facts and conditions should be made clear to every one, alike in the interest of musical art and of fair play.

"It cannot be denied that the owners and inventors have shown wonderful aggressiveness and ingenuity in developing and exploiting these remarkable devices. Their mechanism has been steadily and marvelously improved, and they have come into very extensive use. And it must be admitted that where families lack time or inclination to acquire musical technic, and to hear public performances, the best of these machines supply a certain amount of satisfaction and pleasure."

Strothmann.

97 Chambers Street, New York

long while; at the same time they have made much headway in music, thanks to studious application. But let the mechanical music maker be generally introduced into the homes; hour for hour these same girls will listen to the machine's performance, and, sure as can be, lose finally all interest in technical study.

"Under such conditions the tide of amateurism cannot but recede, until there will be left only the mechanical device and the professional executant. Singing will no longer be a fine accomplishment; vocal exercises, so important a factor in the curriculum of physical culture, will be out of vogue!

"Then what of the national throat? Will it not weaken? What of the national chest? Will it not shrink?

"When a mother can turn on the phonograph with the same ease that she applies to the electric light, will she croon her baby to slumber with sweet lullabys, or will the infant be put to sleep by machinery?"

He does not evidently view the educational power of the piano players and talking machines in a favorable light, for he says that "the mechanical inventions, in their mad desire to apply music for all occasions, are offering to supplant the instructor in the classroom, the dance orchestra, the home and public singers and players, and so on. Evidently they believe no field too large for their incursions, no claim too extravagant. But the further they can justify these claims, the more noxious the whole system becomes.

"Just so far as a spirit of emulation once inspired proud parent or aspiring daughter to send for the music teacher when the neighbor child across the way began to take lessons, the emulation is turning to the purchase of a rival piano player in each house, and the hope of developing the local musical personality is eliminated.

"The country dance orchestra of violin, guitar and melodeon had to rest at times, and the resultant interruption afforded the opportunity for general sociability and rest among the entire company. Now a tireless mechanism can keep everlastingly at it, and much of what made the dance a wholesome recreation is eliminated."

He yields, however, on one point, that it may play a strong part in the love affairs of the nation, for he says:

"In the prospective scheme of mechanical music we shall see man and maiden in a light canoe under the summer moon upon an Adirondack lake with a gramophone caroling love songs from amidships. The Spanish cavalier must abandon his guitar and serenade his beloved with a phonograph under his arm."

Mr. Sousa believes, too, that in war as well as in love, the talking machine will win renown. He asks:

"Shall we not expect that when the nation once more sounds its call to arms and the gallant regiment marches forth, there will be no majestic drum major, no serried ranks of sonorous trombones, no glittering array of brass, no rolling of drums? In their stead will be a huge phonograph, mounted on a 100 horse-power automobile, grinding out 'The Girl I Left Behind

Me,' 'Dixie' and 'The Stars and Stripes Forever.'"

Through the opening of Mr. Sousa's article there is an ever-present sarcastic vein, and he obviously fails to give credit to the wonderful educational influence of the automatic devices which enable people in every part of the land to become acquainted, through their media with the musical compositions of this and past generations. The sarcastic element in Mr. Sousa's article is succeeded by a serious trend of thought toward the close in which Mr. Sousa gives his impression of the new copyright bill, which was introduced at Congress at the last session. He describes his experiences before the joint committee, where he made a strong plea for the composers.

"Of course, it must not be overlooked that in

—Appleton's Magazine.  
"DOES IT GO ABOUT TO SEEK WHOM IT MAY DEVOUR?"

the United States Circuit Court of Appeals a case has just been decided adversely to the composer's rights in the profits accruing from the use of his compositions on the talking and playing machines, but this case awaits final adjudication, on appeal, in the United States Supreme Court. Judges Lacombe, Coxe and Townsend rendered a decision as follows:

"We are of the opinion that a perforated paper roll, such as is manufactured by defendant, is not a copy of complainant's staff notation, for the following reasons: It is not a copy in fact; it is not designed to be read or actually used in reading music as the original staff notation is; and the claim that it may be read, which is practically disproved by the great preponderance of evidence, even if true, would establish merely a theory or possibility of use, as distinguished from an actual use. The argument that because the roll is a notation or record of the music, it is, therefore, a copy, would apply to the disc of the phonograph or the barrel of the organ, which, it must be admitted, are not copies of the sheet music. The perforations in the rolls are not a varied form of symbols substituted for the symbols used by the author. They are mere adjuncts of a valve mechanism in a machine; in fact, the machine, or musical play-

ing device, is the thing which appropriates the author's property and publishes it by producing the musical sounds, thus conveying the author's composition to the public."

May I ask, does this machine appropriate the author's composition without human assistance? Is the machine a free agent? Does it go about to seek whom it may devour? And if, as quoted above, the machine "publishes it," is not the owner of the machine responsible for its acts?

Mr. Sousa has evidently devoted considerable time to the consideration of this matter, and he says: "The section of the Constitution on which my whole legal contention is based provides: 'The Congress shall have power to secure for limited time to authors and inventors the exclusive right to their respective writings and discoveries.' And my claim is, that the words 'exclusive' and 'writings,' particularly the latter, are so broad in their meaning that they cover every point raised by existing copyright laws, even to the unauthorized use of musical compositions by mechanical reproducing apparatus, and all this because these two words deal, not alone with the letter, but with the spirit as well."

Mr. Sousa says later that "the day will come when the courts will give me the absolute power of controlling the compositions which I feel are now mine under the Constitution. Then I am not so sure that my name will appear as often as at present in the catalogues of the talking and playing machines."

He closes by saying that it is possible that if the composers do not receive a just reward for their efforts in the end it will have the effect to check incentive to creative work, and that compositions will cease. My, my, how sad!

### COLUMBIA WAREROOMS DAMAGED.

Fire Consumes \$40,000 in Machines and Records—Will Start Again at Same Place.

A fire at the Columbia Phonograph Co.'s downtown store, 352 Broadway, New York, August 21, caused a loss of \$40,000, fully covered by insurance. There was little if any salvage, and business will be resumed in the same place with as little delay as possible.

### JOBBER'S ASSOCIATION ELECT OFFICERS.

(Special to The Talking Machine World.)

Detroit, Mich., August 31, 1906.

The annual meeting of the Central States Talking Machine Jobbers' Association was held at the Hotel Cadillac August 15. There was a large attendance, and the morning and afternoon sessions were interesting, important trade matters being disposed of. The election of officers for the ensuing term follows: President, E. Percy Ashton, of the American Phonograph Co., Detroit; vice-president, E. J. Heffelman, of Klein-Heffelman Co., Canton, O.; secretary, Perry B. Whitsit, of Perry B. Whitsit Co., Columbus, O. (re-elected). The next meeting of the association will be on November 12 at Indianapolis, Ind.

## Rapke Horn Crane, No. 15

**S**IMPLEST and best ever produced. Will support any horn up to and including 36 inches. Is nicked throughout, and fits into small space. Weighs only 13¼ lbs. Can be attached in an instant to any Phonograph without injury to cabinet.

## GEO. W. LYLE WELCOMED

On His Return from Europe by a Strong Force of Columbia Men Who Went Down the Bay in a Special Boat.

After negotiations were under way to secure Marconi, the wireless wizard, for the experimental staff of the Columbia Phonograph Co., General, George W. Lyle, general manager of the company, made a hurried trip to London, England, to complete the deal, which was accomplished in his usual thorough and happy manner, and Mr. Marconi will be officially known as consulting physicist. Mr. Lyle, going over early in August, returned on the 24th, aboard the "Lucania," of the Cunard line, a host of his company and social friends meeting him at quarantine on

GEO. W. LYLE.

the ocean-going tug, "Charles T. Raymond." A Twentieth Century Imperial graphophone was a part of the joyous equipment, and the returning general manager was made to understand that between the strains of the graphophone and the songs and cheers of the enthusiastic group on the tug, he was the recipient of a home-coming that he will remember with pleasure for many a long day, as it was wholly unexpected.

Those on the "Raymond" to welcome Mr. Lyle follow: Edward D. Easton, president; Paul H. Cromelin, vice-president; E. O. Rockwood, secretary and assistant treasurer; T. D. Merwin, director; I. H. Dorian, assistant general manager; E. Keller Camp, of the legal department; Walter L. Eckhardt, manager wholesale department; J. W. Binder, manager business graphophones department; Walter P. Phillips, manager advertising department; Mortimer D. Easton, S. S. B. Campbell, Merwin E. Lyle, E. F. Sause, F. A. Vollane, John C. Button, S. Yano, Thomas Ware, Mrs. George W. Lyle and the Misses Jessie Brown and M. A. Elmendorf.

## HANDSOME LINE OF UDELL CABINETS.

The new line of cabinets for holding sheet music and piano player music rolls, made by the Udell Works, Indianapolis, Ind., is the most complete ever shown by them, owing to the importance attained by this department of their business. There are more designs shown, and the general beauty of style and finish are greatly enhanced, making the Udell line one that should find a place in the stock of every progressive dealer. It is not a "dead" line full of high priced goods that frighten customers, but the prices are attractively low, ensuring quick sales with good profit. It must be said, however, that while the prices are low the quality of the goods is of the high grade order, fully in keeping with the Udell reputation

for producing what is good in furniture. Talking machine and music dealers should obtain catalogue and wholesale prices of these cabinets with the object in view of increasing their business.

## THE "TALKER" ON THE SEA.

How the Lives of the Fisher Folk Down Cape Cod Way Have Been Made More Pleasant Through Use of the Talking Machine—The Views of an Old Sea Captain—Wants Records of Ditties of the Sea.

The popularity of the talking machine in all sections of this country cannot better be illustrated than by a visit among the fisher folk 'way down East in Cap Cod. Here, far removed from musical centers, with only the songs of the country church choir and the ruder chantys of the sailor, the development of the art was necessarily slow, but within the past few years it has taken a forward movement, and in conjunction with hymn tunes of a century ago, are heard the arias of the metropolitan concert hall. This great change is due to the introduction of the talking machine. From the Race to Buzzard's Bay they can be heard, both on land and sea. It has become a household necessity in those homes where the male members "go down to the sea" for a livelihood. In the long evenings, while the "wimmin" folks anxiously await the return of the breadwinners, it brings them both comfort and pleasure. The toilers of the sea also find it essential to their happiness, as it assists in whiling away many a tedious hour, and takes away the thoughts of the men from the discomforts of their life.

A former sea captain, who for forty years has been a whaler, said to The World recently: "Had the talking machine been invented a half a century ago, life on the ocean would have been much easier for the captains. If you could only realize the dearth of amusement and the love of music among the sailors, you would appreciate what a boon it would have been. To-day it is becoming as much a part of the equipment of a sailing vessel as its sails, and often I hear the crew joining in the chorus of some familiar song. I think it would pay the talking machine companies to give a little study to the needs and desires of this class of patrons. If the words of the newer songs could be attached to the records, it would do much to popularize them, as the sailors would soon commit them to memory. Then, too, the old-time ditties that we have always sung are always in requisition. Religious selections naturally appeal to those born and bred along the New England coast, and no collection of records is complete without a good sprinkling of the hymns we sang as children."

As to the class of machines in demand, the disc variety is far in the lead. Experience has proven that the cylinder type cannot be used on a vessel that is in motion, and that the salt air tends to disintegrate the wax records. With the disc even in quite rough weather the needle will not leave the groove and the record is not affected by atmospheric conditions. The taper arm machine has been found to be the best for general use, and practically no other kind is sold for marine use. There seems to be a field for a specially constructed nautical phonograph that will meet the demands on the dealers in the seaports, and as was suggested by the venerable captain, a collection of the sea ditties so popular on shipboard would appeal to the landsman as well.

## GRAPHOPHONE LEADS REVIVAL.

At the big tent revival meeting held in Collingwood, O., early this month, the Twentieth Century Columbia Graphophone played a very prominent part in the exercises, rendering a delightful program before the services, which was followed by the crowning surprise of the evening—the delivery of an eloquent address which was clearly heard by everybody assembled, and which made a profound impression. The singing of the hymns by the machine was so realistic that the congregation joined in the singing. In

addition, the pastors of the Collingwood churches spoke, but the star of the evening was the Columbia graphophone.

Frank A. Bowman, editor of the Collingwood Citizen, published a very interesting story of the proceedings, and paid a proper tribute to the tremendous value of the talking machine in its new sphere of activity. It is apparent that there is no end to the uses to which the talking machine can be adapted, and while narrow minded people abuse it once in a while, yet, it has done, and is doing, more to bring joy into the lives of the people at large than any device that has ever appeared in our time.

## LAMBERT PATENTS PURCHASED

By Geo. J. Snowden Who Is Interested in New Company Making an Indestructible Record Which Will Not Possess the Weakness of the Lambert Records.

(Special to the Talking Machine World.)

World Office, 195 Wabash avenue,

Chicago, Ill., September 10, 1906.

A deal which promises to lead to important developments in the talking machine trade of the country occurred last month when the assets and patents of the Lambert Co. were sold under court order to George J. Snowden, a wealthy oil man and capitalist of Oil City, Pa. The consideration is given as \$25,000. Mr. Snowden secured the Lambert indestructible cylinder record patents in the interests of a company recently incorporated under the laws of Maine, with a capital stock of \$1,000,000, as the Indestructible Phonographic Record Co. A change of name will have to be effected, however, on account of this name having been used by another concern.

Full information regarding the organization of the new concern is difficult to obtain at this end, but B. F. Philpot, trustee for the Lambert Co., and one of its former officers, outlined in a general way the intentions of the company as received by him from its promoters. "The new company secured the Lambert patents in order to protect a new indestructible record they are to place on the market," said Mr. Philpot. "It will have all the advantages of the Lambert celluloid record, but will be re-enforced, thus preventing warping, the only weakness of the old Lambert record. The company have unlimited capital behind it, and have already, I understand, secured a factory within a hundred and twenty-five miles of New York, and will have offices and headquarters in New York City. The factory will be equipped to produce 3,000,000 records a year, and will also manufacture their own cylinder machine which will have an entirely new reproducer. They expect to make 25,000 machines a year. Every department will be in charge of experienced men. It is expected that the company will be able to issue their catalogue and show sample lines next spring, and have their product generally on the market by next fall."

The new company control the Lambert patents absolutely except for England.

The Lambert Co. went into bankruptcy in January of the present year. The failure of the company is said to have been because of lack of capital, and the heavy expenditures in defending suits against their patents by the Edison and other companies. These suits Mr. Philpot declares resulted in the validity of the Lambert patents being fully established.

## HIS RECORDS OF THE FAMILY.

A prominent resident of Pittsburg is said to have records of the voices of every member of his family (his wife and six children), in which they express various sentiments. He intends to have these taken every few years, and to give each child a set of his own records. The collection will be interesting and highly-prized by each one. He has for illustration a yearly record of the voice of his fourth child, now 7 years old, one record having been taken on each birthday.

NEW YORK, SEPT. 15, 1906.

TALKING MACHINE men in various countries have been interested in the decision affecting the reproduction of music handed down by the Italian courts, which was reported briefly in the last issue of The World.

One of our correspondents in Italy says that many believe that the Court of Appeals in Italy will confirm the judgment of the First Court, and as the house of Ricordi control for the whole world the most important classical Italian compositions, including all the grand operas and works of the great masters, such as Verdi, Puccini and others, it will be seen that the decision rendered by the Tribunal of Milan is of the greatest interest to talking machine men wherever The World is read.

This Italian legal decision is a recognition without restrictions of the principle that the reproduction of music being reserved property, intended to be used for mechanical instruments in general, is not legal without the consent of the author or his representatives.

THE above decision holds that during the life of the first period of copyright, namely, forty years, no musical composition in whole or in part, or any selections from the work, can be reproduced on a record without the written consent or permission of the copyright owner. Even after forty years the record makers using any copyrighted music must pay a royalty, which shall be fixed by the court.

The Tribunal by this decision compels the Gramophone Co., the defendants in the case, to the repayment of damages incurred to the house of Ricordi for improper reproductions of their works. This alone means, in case the higher Italian court concurs, the payment of a considerable sum of money to the plaintiff.

IT should be understood that in Italy the law considers two periods for the right of publication, one of forty years, starting from the

date of the first publication in favor of the author, or his representatives. The second period of forty years, during which every one can publish a work by paying for the benefit of either the author or his representatives 5 per cent. of the price marked on each printed copy offered for sale. Not only does the Tribunal of Milan compel the Gramophone Co. to pay the firm of Ricordi the amount of 5 per cent. on the gross price marked for each disc, but it has even gone further. It has compelled a firm which sells the discs of the Gramophone Co. to repayment of the damages toward Ricordi, for the improper sale carried on up to the present time, and has warned the firm that it would incur penalties if the sales continued. The Gramophone Co. have also been asked to pay the costs and judgment of this most interesting case.

WE may say that it is not definitely assured that this decision will be confirmed by the Court of Appeal, but we can state in that connection that the Tribunal of Cremona has already taken the same view as the Milan Court regarding perforated rolls, which are used on piano players, and the use of music rolls on piano players will shortly be tried before the Tribunal of Bologna. All of these matters are of vital interest to talking machine men in all parts of the country, and the decision of the higher Italian courts will be awaited with increased interest, for it is possible that the attitude of the Italian legal authorities may in a degree affect the condition here in America, where there has been strenuous efforts put forth to change the existing copyright law.

ALONG these lines the "canned music" article of John Philip Sousa, which appeared in a recent issue of a popular magazine, has attracted considerable interest in this country. It may be possible that new conditions may, within the near future, demand a change in our copyright laws, but it must be conceded that the talking machines and self-playing instruments have done much toward popularizing the work of many well-known composers who have profited in a material sense by the increased demand created for their compositions by the self-playing instruments. People who have heard their works through the talking machines have gravitated to the nearest music stores, and have asked dealers to supply them with copies of such and such a piece, and probably had it not been for the mediumship of the talking machine many of these compositions would never have been heard, and their authors could have never received royalties from the music publishers.

THE statement has been made that years ago a well-known band master and composer actually urged talking machine men to reproduce his works on cylinder and disc records so that it would aid in their popularization. He then looked upon the talking machine as a splendid means of exploiting his musical creations, and there can be no question but that through the hundreds of thousands of records which have been sold of certain compositions that it has aided in popularizing them, and the talking machine will continue to be a popularizer of music in the broadest sense.

Neither does its use decrease love for piano playing, nor does it do away with the use of the smaller musical instruments in the slightest. It fills its own sphere as a musical educator and entertainer, and it is helpful in the broadest

way to the musical and educational interests of the country.

WE have noticed that the same men who claim to-day that the talking machine business has reached its highest stage of development are in many instances the same ones who, years ago, claimed that the present factories would be out of business by 1902.

There are pessimists in all trades, and it adds to the variety of the talking machine industry to have a few men who are making all kinds of dire predictions as to the future of the talking machine.

How can any one who has witnessed the steady evolution of this marvelous product of human brains and skill say that the highest stage of development has been reached. Look at the wonderful possibilities of the new instruments which have been placed out during the past six months, and then figure what the talented inventors of the future will create! This industry has not reached the high-water mark by a good step, and it will be many years before the wail of the pessimist can be heard distinctly above the whirr of busy machinery operating day and night in great plants to supply the world-wide demand for this great product.

REPORTS from the London office of The World are interesting this month. London is headquarters for an enormous talking machine trade, and this publication is in a position to supply its readers not only with the latest and most accurate information concerning trade matters in London, but our rapidly growing subscription list in all parts of the world demands that the fullest attention be given to the affairs which are closely interwoven with this industry in other lands as well as our own.

THE fall season is now well on, and reports received at this office during the past week indicate an unusual activity in trade circles. There will be the biggest kind of a business conducted in all lines of trade this fall. The jobbers in the Middle West are busy just now supplying the needs of the smaller dealers, and from all over America comes the cheering information that the talking machine dealers are getting extremely busy.

There are a number of specialties on the market, and the probability is that the present number will be constantly augmented. We have active brains and inventive skill in this industry, which are bound to tell in a number of ways, particularly in new inventions which are closely related to the talking machine.

TALKING machine dealers are imbued with a spirit of progressiveness which is apparent in the beautiful quarters which are constantly being fitted up all over the land. We have seen during the past month some superb establishments fitted up exclusively for the display and sale of talking machines. The space and elegance of these warerooms would do credit to any industry, and there is no reason to-day why the talking-machine men should not take a pride in their calling and in the evolution of the business to higher and better things.

Recollect, too, that The Talking Machine World predicted in its first issue that the talking-machine industry was only in its infancy, and, judging from the phenomenal development which has taken place since this paper first appeared, it would seem as if our predictions were pretty nearly correct.

## MARCONI VISITS COLUMBIA PLANT.

The Inventor of Wireless Telegraphy, Who Has Been Appointed Consulting Physicist by the Columbia Phonograph Co., Entertained at Banquet at Waldorf-Astoria—His Remarks to the World.

The presence of Mr. G. Marconi, the wizard of wireless telegraphy, in this city during the past week, is looked upon by those interested in the development of the talking machine as marking the beginning of a new epoch in its history. When it was first announced that he had been retained by the Columbia Phonograph Co. as its consulting physicist, the trade in general realized that the company had made a master stroke by taking into its employ one of the most brilliant inventors of the age. Mr. Marconi arrived from Europe late Friday evening, and during his three

MR. MARCONI.

days' stay on this side, spent practically the entire time in going over his new field of operations. On Monday he was taken in an automobile to visit the immense plant of the Columbia Co. at Bridgeport, Conn., examining every detail of the manufacture of their talking machine. On his return to New York that evening he was tendered a banquet in the Astor banquet hall of the Waldorf-Astoria Hotel by President Easton, of the Columbia Phonograph Co., General. Among the guests present were: Vice-Presidents William E. Bond, George W. Lyle, Paul H. Cromelin and Edward Burns, Messrs. F. J. Warburton, Timothy D. Merwin, Thomas H. McDonald, Victor H. Emerson, Elisha K. Camp, John H. Dorian, E. O. Rockwood, J. W. Binder and Walter L. Eckhardt. One of the features of the dinner was music from a Twentieth Century graphophone. Speeches of an informal nature were made, and all thoroughly enjoyed meeting Mr. Marconi.

Mr. Marconi sailed on the Caronia Tuesday morning, and just prior to his departure, in an interview with The Talking Machine World, he said:

"As yet I have not had an opportunity to make the thorough investigation of the graphophone in all its phases that the subject demands. One point that I have given careful attention to during my visit to the Columbia factory is the making of the master records and a saving in the cost of reproducing them. When I get back to England I will go into the subject of repro-

ducers, recorders and the composition for records more fully, and devote considerable time in making experiments along these lines. So far as the mechanical construction of the Columbia graphophone is concerned, I do not see that they can be improved. I think the talking machine has a wonderful future, and I hope to do my part in aiding its development. I may also say I consider The Talking Machine World the greatest publication devoted to the interests of the industry published."

## GROWING DEMAND FOR SEARCHLIGHT

Leading Jobbers Have Placed Large Orders—Big Foreign Shipments Made This Month.

The Searchlight Horn Co. have been hastening to enlarge their manufacturing facilities in order to take care of a trade which has developed at a phenomenal rate without causing a delay in shipments. The manager stated to The World this week that the searchlight facilities now were sufficient to meet a demand of 10,000 horns a month, and from present indications it would seem as if this entire output would be absorbed. Some of the leading jobbers of this country have, after testing the Searchlight horn, placed substantial orders with the manufacturers, and every day the list of orders is steadily growing. The foreign department, too, is developing at a rate which shows how American products of merit are esteemed abroad, an order for 1,000 horns being placed for foreign shipment this month. The dealers who have tested the Searchlight horn have been enthusiastic in praise of its reproductive powers.

## MacLEAN'S IMPORTANT MOVE.

F. C. MacLean, formerly with the Douglas Phonograph Co. and the Victor Distributing & Export Co., and more recently in the export business, assumed the position of manager of the American Telegraph Co., New York, on the 12th inst. "Mac" has acquired a block of stock in the company, and feels assured it is one of the most promising propositions now before the public. Having a wide acquaintance in the trade, he will doubtless be heard from in no uncertain way in connection with the Telegraphone, the handling of which, in a commercial way, he is of the opinion belongs to them. Machines will be ready for delivery about the first of the year.

## IDEAL FASTENER CO.'S LATEST.

Dealers should not overlook the Ideal Fastener Co.'s announcement, which appears in another part of this paper. Their new horn crane is steadily winning appreciation by reason of its special constructive features and the fact that it can be sold at a very moderate price. It should prove an immense seller, and we feel sure the trade will become very much interested in this specialty.

## A RECENT INCORPORATION.

The Folding Phonographic Horn Co., to manufacture phonograph horns, etc.; capital, \$25,000. Incorporators: Martin L. Munson, John W. Foster, Jr., F. Victor Lieken, New York.

The Gramophone & Typewriters, Ltd., London, England, has taken the agency of the Searchlight horn for Europe. They placed a stiff initial order with the Searchlight Horn Co., New York.

Cassell & Co., Buenos Ayres, S. A., have applied for the sole agency of the Land-o-phone for the Argentine Republic.

Lewis Anderson, of Clinton, has opened a music store in Maquoketa, Ia., and handles a full line of pianos, organs, small goods and sheet music.

## TO EXHIBIT AT MUSIC SHOW.

At the National Music Show, to be held in Madison Square Garden, New York City, from September 19 to 27, Landay Bros., the gilt-edge Victor jobbers of 288 Fifth avenue, will have a most interesting and distinctive exhibit. Besides their full line of Victor standard goods they will also display the new Victor Victrola machine and the Victor Auxetophone, likewise the Land-o-phone home recorder. Their space will be elegantly and tastefully arranged, and during the time they will give concerts in the recital hall.

## HAYNES AS EDISON JOBBER.

C. B. Haynes, widely known to the talking machine dealers, and one of the most popular traveling men, who has been eight years with the Edison Co., left this week for Richmond, Va., where he has opened up a store at 602 East Main street. He will job the Edison lines, the Rapke cranes and Mega horns.

Victor H. Rapke has an important announcement in another part of this issue, in which he notifies the trade of a decided cut in the prices of Rapke labels with and without titles. His advertisement is well worth close consideration.

## Business Opportunities

## For Sale

The oldest Edison, Victor and Columbia Wholesale and Retail Talking Machine House in Western Pennsylvania.

Established monthly trade over \$10,000 (about 40 per cent. retail), and showing a 10 per cent. net profit.

Will sell at Inventory to quick purchaser.

Reason for selling, ill health.

Here's an opportunity. Only those meaning business entertained. Write "E. E. N.," care The Talking Machine World, 1 Madison Avenue, New York.

## CHANCE TO BUY VALUABLE BUSINESS.

Party with \$7,500.00 can buy an interest in one of the largest wholesale and retail Music Houses on the Pacific Coast.

A rare opportunity for the right man.

Small goods or Talking Machine man preferred.

Address "Box 40," care of Talking Machine World, 1 Madison Ave., New York.

## FOR SALE.

Wholesale and Retail Edison, Victor and Columbia Talking Machine Business. Established 4½ years. Will sell at inventory. Stock will inventory about \$20,000. Did a business last year of \$93,000.00. Reason for selling to engage in other business. Address "Opportunity," Talking Machine World, 1 Madison Ave., New York.

## FALL TRADE WILL BREAK RECORDS.

Already Assuming Large Proportions—Manufacturers Preparing to Meet Demands, But Congestion Is Bound to Occur to Some Extent.

In talking machine circles the fall trade, that promises to eclipse everything on record, is already assuming large proportions. Even the most pessimistic jobbers declare that they feel far from being "grand, gloomy and peculiar," which was about the frame of mind they were in when the manufacturers failed to deliver the goods. Just now their stocks are in shape, and no complaint is heard, but the rumblings of trouble to come in this respect are perceptible, if faint. The manufacturers frankly confess a congestion is bound to ensue, and while they deprecate the fact, it cannot be helped. Naturally, the forewarned are forearmed, and have placed orders months in advance, and this buying is so much in favor that this class of jobber will doubtless meet every call of his trade without worry or embarrassment. The other kind will doubtless be called upon to take their chances, and then there will be weeping and wailing and gnashing of teeth.

W. J. AUGUSTIN, THE "TALKER" MAN.

W. J. Augustin, the talking machine man of Fond du Lac, Wis., was the subject of a clever cartoon at the hands of Artist Driscoll in the

Daily Bulletin of that city recently. Mr. Augustin, who originally went to Fond du Lac from Milwaukee, where he managed a branch for McGreal Bros., purchased the business on May last, and has been steadily developing it under his own management. He handles the Edison and Victor lines, and is one of the most popular men in the city. His parlors at 7 South Main street are headquarters for talking machine people.

## A CLEVER WINDOW DISPLAY

Originated by Hayward Cleveland for the Columbia Phonograph Co.'s Store at 812 Broadway.

In presenting ideas for novel window displays The Talking Machine World illustrates the recent adornment of the big show window of the Columbia Phonograph Co., at 812 Broadway, New York. It consists of a Columbia disc graphophone mounted on disc records for wheels, with Miss Columbia in the horn driving the Columbia eagle. The eagle was suspended by an invisible wire, giving it the appearance of flying through the air. A fleecy gauze under the wheels of the chariot produced a very effective cloud effect, while a background of atmospheric hue completed the illusion. The conception originated with Hayward Cleveland, the manager of this branch, whose original ideas as a window dresser have won for him an enviable reputation.

## FEATURE OF SUMMER BUSINESS.

A feature of the summer talking machine business has been the number of outfits sold to yachtsmen and vacationists of all classes. And the outfits were most complete, too, the cost running up into several hundred dollars in many instances. In the mountain camp, in the canoe, on seashore and on the yacht, everywhere was heard the music of the talking machine, and in many cases it was the talking machine that gave

life to the situation in the evenings and at gatherings. One returning vacationist from the Adirondack lakes was heard to say that a talking machine brought up by a party of young people received the blessing of every camper on that particular lake, for with the broken-down pianos at the various camps, dancing and accompanied singing were simply impossible until the arrival of the talker saved the day. And it might be added that that same machine's performances resulted in the sale of several similar instruments in the home towns of the campers upon their return.

The fact that the talker has "arrived" as a summer entertainer has been proven conclusively during the past season, and now is the time when new fields for its employment during the winter months indoors will be devised. And still "mechanical music" is decried by "authorities."

COLUMBIA CO.'S HANDSOME WINDOW.

## GEO. K. CHENEY'S SUCCESS.

One of the Most Prolific of Our Inventors—Gives Prof. Scripture Pointers on Acoustics.

One of the most prolific inventors in the trade is George K. Cheney, manager of the recording laboratory of the Universal Talking Machine Manufacturing Co., New York. He has two or three things in these patents—of course, the property of the company—that might put a different complexion on the expected outcome of several important suits, now pending in the higher Federal courts. In other words, what Mr. Cheney does not know about sound recording in its present stage of development no other expert possesses. He recently put a crimp in the ideas of Professor Scripture, of Yale College, and proved his point beyond the peradventure of a doubt. The professor is an acknowledged authority on acoustics, sound reproduction, etc., and had certain ideas about sound waves, but Mr. C. was "from Missouri," and showed the learned gentleman, where he was entirely wrong. George tells the story in a modest way, as clever men always act.

## POWERS & HENRY'S FINE STORE.

(Special to The Talking Machine World.)

Pittsburg, Pa., September 9, 1906.

With three sides of their store built of glass the Powers & Henry Co. have found a way to lessen the dull effects caused by the smoke of that city. Instead of having to use artificial light throughout the day, as is the case with most stores, Powers & Henry do not find it necessary to light up until evening.

This firm, by the way, have found Pittsburg society a profitable field for talking machine business, as well as scandal. The rich are quick to realize the merits of the talker, and as a result extensive and costly outfits go into their homes.

An addition to the Powers & Henry forces is H. H. Enders, who is well known in the trade for his salesmanship.

## Edison Dealers!

Your orders have our undivided attention as we are wholesalers exclusively. Our stock is complete to the smallest detail, our facilities practically unlimited and years of experience enable us to give you the best possible service.

## THE TRADE IN ENGLAND.

**Great Preparations Being Made for Autumn and Winter Business—Marconi's Move in Joining the Columbia Co. Widely Noticed—Barnett-Samuels Departure—New Artists for the Zonophone Co.—Columbia Phonograph Co.'s Fine List—Neophone Co. in Manchester—Thompson With Columbia Co.—Retail Protective Association—Gramophone as Theatrical Star—The Seymour Reproducer—Other News of Interest.**

(Special to the Talking Machine World.)

London, England, Sept. 6, 1906.

The month of August has been one of intermittent sunshine, both as regards the weather and the talking machine industry. Generally, actual business is not brisk with the factors and dealers, but a steady demand has ruled all the time, and as far as the manufacturers and their jobbers are concerned, great preparations are being made to cope with what is universally believed will be a season of exceptional magnitude. At this time, then, the dealer should look around and ask himself the question: "Have I made all necessary arrangements to promptly execute the many large orders this season is sure to produce?" If not, Mr. Dealer, get right down to it at once, as if you are not ready, remember your neighbor is, and you therefore stand to lose a good customer, perhaps forever. It would be of little use to lay down any fixed rules as to the amount of stock one should carry. You should know best the requirements of your customers and the district in which your store is situated. The chief thing is to be ready to fill those requirements and see that your record titles are suitable to the tastes of the neighborhood. There are many little enterprising departures that can be profitably turned to account—watch local events and adapt them to your business; don't lose sight of the value of local advertising, either in the form of newspaper space, handbills, circularizing by post, effective window display, and the many other publicity devices too numerous to mention. In the course of some recent conversations with certain enterprising dealers I have had many ingenious methods of business propulsion brought under my notice, some of which I believe could be, with a little moderation, successfully adopted by dealers in other districts. Dealers in all parts of the world are therefore invited to forward for publication particulars of any such methods that they have found useful and beneficial in promoting business.

### MARCONI WITH COLUMBIA CO.

The announcement that Dr. Marconi has associated himself with the Columbia Phonograph Co. has caused not a little stir in the general press. In trade circles, as was only to be expected, it has been warmly applauded. However, it seems to have raised no question in the minds of the public, the general conclusion being that some remarkable results are bound to follow now that the Doctor has commenced experiments. His wonderful achievements in successfully transmitting electric sound waves through miles and miles of space, insures an experience and knowledge that brought to bear upon improving the art of sound recording and reproduction, I believe, means much to the benefit of the talking machine as a musical instrument of the future. It is not too much to expect that such brilliant genius as displayed by Marconi in the past is but an echo of some interesting results to come from the brain of this great inventor.

### BRUCE, OF UNWEARABLE NEEDLE FAME.

Messrs. David Bruce & Co., of the unwearable needle fame, report a fair business turnover for the month of August. Things are not actually brisk, but there is a steady demand for their

needle and disc talking machines, which are becoming more popular each month.

### NEW DEPARTURE OF INTEREST.

I have received notification of a new departure by Messrs. Barnett Samuels & Sons, which will prove of great benefit to dealers generally in London. On the ground floor of their huge warehouse in Worship street a considerable space has been set aside exclusively for the town department. Complete racking is in course of erection, and when completed will hold something like 10,000 or more records, disc and cylinder. Thus London dealers can pop in at any time with the assurance that their orders will be fully and immediately executed.

### ZONOPHONE RECORDS IN DEMAND.

I found Mr. Malyon, the enterprising manager of the Zonophone Co., right full up with orders for the Zonophone records, which are undoubtedly gaining enormous favor every month. Many new artists, among whom I may mention the popular Earnest Pike and renowned Peter Dawson, two prime favorites, have added their names to the Zonophone list. In the provinces these records are constantly making record sales, which goes to confirm the fact that they have come to stay.

### COLUMBIA PHONOGRAPH CO.'S CATALOGUE.

A most comprehensive list of British and American records has just been compiled by the Columbia Phonograph Co. As a record catalogue, it is undoubtedly one of the best issued, and owing to the very convenient sectional tabulation, of every style of selections, be they vocal duets, trios, talking, bands, minstrels, comic or sacred songs, etc., the list must prove of great assistance to every dealer. In one section the record titles are classified according to their character; in another catalogued alphabetically, while in yet a third section is given the numerical numbers of each selection, so that any particular title can be instantly lit upon. In ordering it is only necessary to quote the given number. Special lists of records in foreign languages and a complete assortment of Scotch and Welsh titles will be available for all users interested.

### THE SEYMOUR REPRODUCER.

Perhaps one of the best reproducers on the English market is that emanating from the inventive brain of Henry Seymour. It is fitted with a patent pneumatic diaphragm and has been specially designed to suit the Edison and Graphophone types of machine. The tone quality reproduction is perfect, and it embodies many new scientific principles.

### NEOPHONE LIMITED IN MANCHESTER.

On behalf of his firm, Neophone, Ltd., E. J. Sabine, late manager of the Paris branch, will shortly pay a visit to Manchester in order to select suitable premises as a Manchester depot. Mr. Sabine reports good business in Paris, and is pleased with his new appointment, as his enthusiasm for the Neophone prosperity in the North is unlimited. No retail business will be done from the Manchester warehouse, so dealers in that neighborhood may, with confidence, place their orders with Mr. Sabine, although it may occasionally be necessary to supply direct in small towns where no agency exists. As readers of this paper are perhaps aware, Mr. Sabine is an old talking machine man, having had experience in England, France and Germany. I wish him every success in his new appointment. The Australasian agency for the Neophone products has been transferred from Messrs. Tozer, Kensley & Fisher, Ltd., to Mason & Bohanna, of Sidney. A large consignment of goods left by last month's steamer, so that in a few weeks business will have commenced in earnest.

### PRINCE GAEKWAR A VISITOR.

Prince Gaekwar of Baroda, and several other Indian potentates, recently paid a very interest-

ing visit to the Neophone headquarters. Quite a large order was given, and their royal highnesses left, delighted with their visit.

### WARM WEATHER ACTIVITY.

A very gratifying summer trade is reported by the Columbia Co. for the whole of Europe. The month of July shows a 45 per cent. increase in sales, compared with the same month in last year. As instances, the Welsh trade catered to by the Cardiff branch shows an increase of 70 per cent., while in respect to Paris, Vienna and Milan, the gain is over 100 per cent. Considering that July is the middle of the alleged dull season, these figures point their own moral to the dealer who doubts the possibility of a good summer trade. You see, Mr. Dealer, the stay-awake policy pays, as no business man likes to lose business, and if you keep awake during the summer time you can more clearly see and prepare for your winter stock than he who has to stretch and rub his eyes after an unnecessary sleep.

### W. P. THOMPSON JOINS COLUMBIA STAFF.

Walter P. Thompson, a gentleman thoroughly conversant with this industry, and well known amongst dealers, has recently joined the Columbia staff. Mr. Thompson is very enthusiastic over the Columbia goods and those dealers, if any, who do not share his opinion may soon expect to, as the September list of records contains some disc selections of unusual interest. The efforts of Miss Ruth Vincent, Mr. David Bispham and Mr. Romeo Berti are brilliantly effective and represent these famous artists at their best. Miss Vincent has had a most successful career from her first appearance in Gilbert-Sullivan opera to the very flattering reception she has just received in "Amasis" at the New Theatre. The singular purity and power of her soprano voice is well shown in her records of the ever-popular ballads, "Home, Sweet Home," "Kil-larney," and "Coming Thro' the Rye." Mr. David Bispham is well known to all opera lovers, both in London and New York for his magnificent interpretations of Wagnerian characters. Then again, in "Danny Denver," Robert Louis Stevenson's "Pirate Song," and "Annie Laurie" he exhibits a wonderful insight in rendering each song with true sympathy and dramatic expression. M. Romeo Berti's records on 10-inch discs are magnificent operatic selections in Italian, the singer's native tongue. His musical education was completed at the Paris Conservatoire, where he carried off many valuable prizes. His temperament and training are well exemplified in his renditions, which are marked by a blithe vivacity, or by impassioned ardor, as the case may require. His records from the operas, "L'Africaine," "L'Elisir," "D'Amore" and "Rigoletto" display these characteristics to a pre-eminent degree.

### RETAIL PROTECTION ASSOCIATION.

Much has yet to be done before the above can reach any definite stage. At present the idea is still but a suggestion and seems likely to remain so, unless Mr. Tobin's efforts are supported in a more liberal manner by the trade in general. The urgent necessity for such an organization is only too apparent when we consider that in London alone there are established price cutters to be found in almost every district. Perhaps the most flagrant case in evidence came under my notice one recent Saturday when in the Mile End Road. Attracted by an unusual complement of customers at one stall, I made investigation and as a result of which I found that cylinder records of all makes were offered for sale at prices considerably less than that fixed by the manufacturers. Now, the point is that these records were the very latest selections listed by the particular manufacturers and, in one case, were sold for 25 per cent. less than the many legitimate dealers in the district could offer them at. The result is a certain disorganization of trade in that

district and a general feeling of helplessness. It is in such instances that the value of protection is most recognized, but unless you, Mr. Dealer, are prepared to loyally support the movement right now, the consequences are you might not have a chance to later! Because Mr. Tobin made the suggestion, remember it is in the interests of all, and he should not therefore be allowed to bear all the incidental expenses. Some assistance should be given, and it would not be out of place for the factors and manufacturers to interest themselves and lend aid to such a worthy cause. If any one of the large firms will offer the temporary use of a large room for the purpose of calling together a meeting some valuable progress would undoubtedly be the result. Communications on the subject should be sent to Mr. Tobin at 382 Mile End Road, London.

## GRAPHOPHONE AS THEATRICAL STAR.

A sketch, entitled "The Jealous Wife," has recently been presented at the Metropolitan Music Hall and the Chelsea Palace, in which the Columbia Sound Magnifying Graphophone plays an important role. The graphophone, indeed, is at once the villain and the hero of the piece, for its lifelike songs and speeches are at first responsible for domestic disunion, but ultimately cement conjugal bliss. The audiences were frankly delighted with the contributions of the graphophone, and it is of special interest to learn that J. L. Shire, the writer of the sketch, hit on its central idea from an actual experience of his own in which a reproduction on the graphophone set him looking for a human singer!

## MEN OF THE MOMENT.

William Newton, of Newton & Co., Newcastle,  
One of the Largest Factors in the North.

(Special to The Talking Machine World.)

London, Eng., Sept. 1, 1906.

Up to the end of last century, to mention Newcastle-on-Tyne—to give the town its full name—instantly brought to mind Coals and Ships, as chief among the many industries for which the town is famed. With the advent of this century, though yet in its infancy, Newcastle, in print or in fact, will in future always be associated with the phono industry wherever the name confronts us.

Almost every town in England, even to the village that can boast a factory, however doubtful its output, has its attached "commercial tale," save the expression! With its enormous and up-to-date shipbuilding yards, numerous coal mines, etc., Newcastle was not satisfied; it wanted to lengthen its "tale," and what more suitable attachment than the industry so dear to us all! Foremost among the many who about this time commenced phono operations was the gentleman to whom this article is dedicated—William Newton—the result of his enterprise being that to-day Newcastle is one of the most important talking machine centers outside London. Less than five years ago, in Mr. Newton's own words, "I came across my first phonograph, sold at the present day for about five-and-sixpence. I was interested in it and took it home. It pleased me so much that I remarked to Mrs. Newton, 'If this pleases me it will please others.'" In spite of the many gratuitous expressions of caution urged by his friends, Mr. Newton purchased a better instrument, which definitely convinced him of the unlimited possibilities open for the talking machine in Newcastle. Going ahead without fear, studying his customers' wants, ever attentive and courteous to all, his early investment has been justified right from the commencement. From one small room, the business has grown so enormously each year, that to-day it requires a special wholesale department for each firm whose goods they factor. As a local man was overheard to say, "Newton, by gum! had only been a year or two at the phonograph trade, but he had taken all the gold medals, and had opened the eyes of everybody in the North to the value of the talking

machine as a musical necessity!" As an instance of the striking advance made in Edison goods alone, the turnover last year was about 400 per cent. over and above that of the previous season's business. Newton & Co., beyond the Edison factorship, are sole factors in the North for the popular "Sterling," "Odeon," "Fonotopia" and "Zonophone" records, much to the benefit of those successful firms. All indications confirm this view. It seems that Mr. Newton early developed the "booming" faculty; especially was

WILLIAM NEWTON.

this in evidence when the "Sterling" record was first marketed. It was not altogether the business done (although large), but the great value lay in booming, breaking the ground, and establishing the fact. In advertising, developing and popularizing the record, Mr. Newton was most zealous. "Popularizing" forms a great point, and as Mr. Newton informed me, it is what he works upon. Price is not in it. Their aim is to "popularize" it, and secure full price, price-cutting being an exhibition of weakness.

The firm occupy very commodious and elaborately fitted premises in Westgate Road, which are not confined solely to the talking machine industry. Many other lines, such as pianos, cycles, sporting goods, etc., having formed the

firm's chief trading commodities since their establishment, over twenty-five years ago. Their show rooms are a matter of envy to all, and dealers appreciating prompt and efficient service could not fare better than by dealing with Newton & Co., whose up-to-date methods are by now common knowledge. They have a motor-delivery van, and in matters of publicity are firm believers. The accompanying advertisement illustration is a good example of their local advertising. Although not a good sketch, it shows Mr. Wm. Newton at the driving-wheel, and his only son, A. V. Newton, as conductor, who, by the way, has won golden opinions as assistant conductor in his father's business.

## SOME IMPORTANT CIRCULARS.

Issued by the Gramophone & Typewriter Ltd.,  
and the Russell Hunting Record Co.—Literature That Concerns the Whole Trade.

(Special to The Talking Machine World.)

London, England, September 5, 1905.

I append copies of circulars as issued by the Gramophone Co. and Russell Hunting Co. These letters speak for themselves. That it is a serious matter cannot be denied, as it concerns the whole trade, not only manufacturers of disc goods, but the factors who are selling disc machines made specially by or for them:

London, Aug. 10, 1906.

Dear Sirs:—For some time past we have been looking for opportunities to encourage and recompense those of our good friends who are handling Gramophone goods only, so far as the Disc trade is concerned.

The following offer is made in order to help and encourage a large proportion of old friends who are dealing exclusively in goods of our manufacture:

From September 1st onwards, we intend to pay carriage on all goods to firm order to any part of the United Kingdom, provided the dealer is stocking and handling no Disc Machines or Records other than those of our manufacture. This does not apply to:—

(a) Records ordered on the approval system consigned either to or from the Gramophone & Typewriter Limited.

(b) Machines or parts sent in for repair.

(c) Worn Records returned for allowance.

If it is your wish, as a Gramophone firm, to participate in this new departure, we invite you to fill up the enclosed form which will entitle you to have your name registered on our "Carriage Paid" list from Sept. 1st onward.

Recognizing the trouble and worry that the old rebate system of allowance on carriage in proportion to turnover has caused the dealer, we propose to substitute the new system for the old one from Sept. 1st onwards.

THE GRAMOPHONE & TYPEWRITER LTD.

P. S.—Some dealers may find it advisable to stock a cheap class of disc record. We have no objection to Zonophone Machines and Records being stocked and handled.

London, E. C., Aug. 22, 1906.

Dear Sirs:—We beg to refer to a circular letter issued by one of our competitors some few days ago, offering the special privilege of free carriage to dealers who will not stock any other make of Disc Machines and or Disc Records, than the goods manufactured and or controlled by our competitor. We understand that this circular is directed against us, because our competitor fears the competition that will now arise owing to our having taken over the business of the "Odeon" Machines and Records. Our competitor is aware of this and knows that in consequence:—

We shall add to the existing catalogue of the Odeon Co. all selections made by us from the artists exclusively engaged for talking machines by us; be fears the increased sale of the "Odeon" Records which must result from our organization and goodwill with the factors and trade generally.

If you wish to take advantage of the special privilege offered by our competitor, you must cease to stock or sell our "Odeon" goods, as well as every make of disc machines and records, other than those controlled by the company mentioned in the circular referred to above.

We feel confident that dealers will not place themselves in a position of being subsidized so as to prevent their handling our records. We believe that records sell on their merits; if our records are not as good value as other makes they will not sell, and if they are as

**PHILIP NEALE,**  
**PHONO. EXPERT,**  
5 Chalk Farm Rd. LONDON, N. W.  
Talking Machines of every description repaired. Special terms to the trade. City address and price list on receipt of postal. No job too small—no job too large.

## Have You a London Representative?

If your goods are not represented in this market, they should be, as there is a good opening for smart American Talking Machine Accessories or Novelties. Communicate with Box 100, Talking Machine World, office, 69 Basinghall Street, London, England.

## LATEST NOVELTIES

The "Cordock" Concert Reproducer for Puck and similar type machines. Acknowledged by experts to be the finest reproducer on the market for small Phonographs, 50 per cent. louder than any other reproducer of its kind. For volume, clearness and distinctness of tone, it stands alone unequalled. Factors should write for sample and wholesale prices, to

G. W. CORDOCK & CO.

High Street, Scunthorpe, Lincs, England.

## FROM OUR LONDON HEADQUARTERS—(Continued).

good value as other makes they will sell, and if you do not buy them, others dealers will.

The circular shows a fear of our competition, which signifies that they expect our records to compete heavily with theirs. Furthermore, if you are a dealer in our competitor's goods you have up to now enjoyed a special privilege from them with regard to carriage which depended upon and was proportionate to the amount of business that you did with that competitor. The effect of the circular is that you can only buy on the same conditions as you have bought before and obtain the equivalent of the old allowance, providing you sign an agreement not to handle our goods or other makes outside of those under their control.

We leave the case in the hands of our dealers, knowing full well that the majority of dealers in talking machine goods will not be dictated to by any one concern as to what line they are to handle, and furthermore, will not cease to stock and sell our records, which are the only disc composition records manufactured in Great Britain for the purpose of favoring records imported from Germany and other countries. We shall be pleased to receive an expression of opinion from you in regard to this matter.

Yours truly,

THE RUSSELL HUNTING RECORD CO., LTD.,  
LOUIS STERLING, Managing Director.

### NOW MAKING A LONGER RECORD.

The Russell Hunting Co. Have Brought This Matter to a Successful Issue.

(Special to The Talking Machine World.)

London, England, September 5, 1906.

A matter of considerable trade—or for that—public interest, has just been imparted to me by Mr. William Manson, of The Russell Hunting Record Co. For some time past there has existed a general demand for a longer record. Certain phonograph enthusiasts have constantly hammered away at the company until it has almost become a duty, to be performed daily, in the hope that eventually their letters would influence the manufacturers to provide a record of sufficient length capable of taking two verses of a song, or certain operatic selections hitherto unobtainable on the ordinary standard size record. The man in the street does not realize the immense amount of technicalities to be overcome before such was possible, but his desire is now an established fact. Although it has taken a long time and has occasioned considerable trouble, after careful consideration and much experimenting, The Russell Hunting Co. have brought the matter to a successful issue, and in relation to the ordinary size, will be the first to place a longer record upon the market. By the first of September this new innovation, known as the "Sterling Special Record," will be on sale. The increased length is exactly half an inch and

the old price of \$1 still prevails. Mr. Manson, in his enthusiasm for the future reception of this new record, but voices the feelings of all who appreciate such first-class articles as Senor Bartolota and Bernal Resky, the famous Italian tenor and baritone, who will make some special grand opera records. Then, in addition, the company have secured the services of Mr. Allan Turner, who has made, perhaps, some of the best records ever produced. Mr. Charles Tree and Scot Skinner, the popular Scotch violinist, known throughout the north, to mention only a few of the new artistes who will record for this enterprising company. That the demand will be enormous is no matter for speculation, it is unquestionably assured. Good sales are reported for the Odeon and Fonotipia Records, and under the Sterling and Hunting control this is but to be expected. A splendid repertoire is promised for the future.

### HOWELL BROS. PIONEERS

In Introducing the Talking Machine in England.

(Special to The Talking Machine World.)

London, Eng., August 30, 1906.

CHAS. W. HOWELL.

Howell Bros. were one of the little band of pioneers who first introduced the phonograph from America to England. It is barely six years ago since they first handled a talking machine, and so rapidly did the business grow under the able management of Mr. Charles W. Howell that after a short period it was found necessary to close down their cycle business and devote themselves entirely to the talking machine industry. Mr. Howell claims to have practically introduced us to factoring or jobbing as a business, and at the present time they are one of the largest and most up-to-date firms in this particular sphere. About two years after commencing operations, their then premises, although of fair expanse, were not sufficiently large enough to cope with the ever-increasing batch of orders, and in consequence they removed into the spacious warehouse they now occupy. Mr. Howell is noted for quick choice of a "seller" or "hit" and at times makes a regular plunge on a num-

ber, and so far has had the good fortune to be invariably correct. One of his best plunges was on "Blue Bell," of which record his firm received over 9,000 in a week. Under Sir Marcus Samuel, of oil fame, Mr. Howell had the advantage of a good training in all matters pertaining to shipping, and as he is fully conversant with every detail, dealers throughout the world may place their orders for anything in the line of talking machines, etc., with every assurance of being faithfully and quickly served.

### "THE MAN ON THE STREET."

Some Observations of Interest Jotted Down by The World Representative on His Rounds of the Trade—Gramophones and Bombs—Dr. Michaelis Postpones Visit to States—Other Items of General Interest.

(Special to The Talking Machine World.)

London, England, September 6, 1906.

Many dealers find a certain amount of difficulty in arranging an easy method of stocking records. Shelves and boxes have their disadvantages, as also other methods of a more or less primitive nature. The trouble has been eliminated by the introduction of a strong wire rack marketed by Howell Bros., St. John street, London. This rack is three feet high by one foot six and will hold no less than seventy-two records. Its adaptability lies chiefly in the fact that the record titles are all on show, can be seen at a glance, and the rack is easily fixed and removed when necessary. It is a decided improvement on the old way of stocking records and the cost is reasonable. Messrs. Howell Bros. will furnish further information on request.

A very ingenious method of soliciting business comes to me from Mr. Hough, of the Edison Bell Co. It is in the form of a big postcard on which is asked the question: "Have you joined our list of up-to-date dealers?" It further states the terms and advantages of being on this list, and dealers, who are dealers, should apply for details. Attached to the big card is a smaller one which can be easily removed. This small card is addressed to the company and on the reverse side is just a printed request, to be signed by the particular dealer who wishes to add his name to the Edison Bell list of up-to-date dealers. Examples of new records are sent to the dealer each month, carriage paid, either direct from the company or through his factor.

The Neophone No. 5 model machine contains many improvements, and in consequence will be in great demand this season. It is a beautifully finished concert sized machine, crank side wind, good motor and concert reproducer. It embodies the most scientific principles and is equipped with a patent tapered sound arm, large flower horn (any color) and concert reproducer. The neolite record has seen vast improvements which go to make them more popular than ever.

An elaborate and artistically gotten-up reproduction of an oil-painting entitled "The Phonograph," comes to hand from the National Phonograph Co. The picture is by the celebrated artiste "Massani," who in a very realistic manner depicts the mingled delight and astonishment of an old couple listening to the phonograph, apparently for the first time. The subject is well chosen and admirably carried out both in design and color, including no less than twelve shades, which goes to make up a picture of exceptional and striking beauty. An unframed copy (size 17 x 25 inches) will be presented to every legitimate dealer, on request, together with prices for quantities, as it is anticipated that many applications for this splendid picture will be made by phonograph users amongst the public, to whom it is priced at one-third. A huge demand is certain and as only a limited number have been printed, dealers should make immediate application to the ad-

## FROM OUR LONDON HEADQUARTERS—(Continued).

vertisement department, National Phonograph Co., 25 Clerkenwell road, London.

Mr. John Nottingham is a proud man to-day, and no wonder! His new premises in Tabernacle street, taken and fitted up at enormous expense, receives praise on all hands. One hears such remarks as "Fine place you got here," "elaborate," and so on. To all of which comes the reply: "Yes, sir, thank you; but have you seen our new line of flower horns?" or whatever it may be. The firm mean business, and judging by the evidences on hand when I called last, thy are getting it. By the by, Mr. J. L. Young, late of the General Phonograph Co., has accepted a position with this company. Mr. Nottingham is to be congratulated upon having secured the services of so able a gentleman. Mr. Young has been actively engaged in the talking machine industry for the past twenty years, and what he doesn't know isn't worth shucks. Undoubtedly, as the company's representative, he will have plenty of scope to display those powers of versatility of which he has command.

What diverse associates! The perverseness of things in general is no matter for surprise, but when we get down to coupling in one breath bombs and gramophones, it occasions a subject for full explanation. Somewhere in the land of disorder, where the shedding of human blood is a matter of everyday occurrence, the Czar's satellites recently made an extraordinary discovery of membranes for bombs, stored, so the "telegraph" report states, in enormous quantities of all places in a gramophone factory! That the membranes were destroyed follows as a matter of course, but whether or not the Russian Government had the foresight to confiscate the gramophones is not stated. If the old proverb stands good in Russia, the Little Father could have provided himself with an immediate solution to his trouble. The gramophone is quite capable of soothing savage breasts (oh, yes! personal experience), and would, perhaps, prove a

surer method of silencing the bomb throwers than the use of bullets. At any rate it would be interesting to try the experiment.

Messrs. Popert & Co., of High street, Manchester, have now ceased business. The stock and goodwill have been acquired by Mr. Christian Dawe, the popular and enterprising factor of the same street and town. Many bargains will be in evidence, and although Mr. Dawe does not intend to hold a "bargain sale," dealers should immediately get into touch with him, as there are sure to be some cheap lines going.

I learn that the Edison Bell sales are ever showing an enormous increase each month. In one week in August—it has been a hot month all round—over eighty thousand records were dispatched. This is evidence that our summer business is not so much on the decline as some of our dealer friends maintain. A fine list of records is promised for September and succeeding months.

Owing to pressure of business, Dr. Michaelis has had to postpone his visit to America. But he may be expected sometime before the season fully sets in.

Messrs. Metzlers, of Great Marlboro street West, are factors for the popular Zon-o-phone machines and records. The talking machine department is under the capable charge of Mr. Callow, who informs me that they have good things in store for their dealer friends, particulars of which will be available later. The demand for the famous "Humanola" needle has continued in a very satisfactory manner throughout the Summer and the sales this coming season are expected to reach high water mark in comparison with previous years.

We are ever doomed to disappointment. It's as much a part of our existence as pleasure. Recognize it and you will in a great measure have

solved the riddle of how to be happy—though married or otherwise! But, to our text: In my last report I promised to give a few details concerning the disc and other new goods that are shortly to be placed upon the market by this company. I am informed at headquarters that unfortunately they are not quite ready, hence these few lines. Just as we experience a lull before a storm, so it is with Messrs. Pathe Freres, but I hope in a few days to have the pleasure of reviewing some of the new goods shortly to be issued, which I am confident will fulfil all expectations as to quality and tone. By the bye, I note Messrs Pathe have opened up handsome new premises in Charing Cross road for the purpose of their cinematograph and film departments.

The Imperial Record, handled by this company, is fast gaining popularity in this country. So much so that special arrangements have been made for weekly shipments, the last consignment amounting to over fifty thousand records.

## NATIONAL PHONOGRAPH CO.'S ARTISTS.

(Special to The Talking Machine World.)

London, Eng., Sept. 3, 1906.

Mr. Lemoine informs me that business is steadily advancing, the present demand indicating an exceptionally good season to come. The company are to be congratulated on having secured the sole services of Victoria Monks, the celebrated music hall artiste. One of her selections, "Take Me Back to London Town," will appear in the October list, and it is believed that this record will be a splendid seller. "Another Little Girl in Your Eye," by Miss Marie Blythe, should also "catch on." Miss Blythe has never previously made any records, but she is one of the best female artistes listed for some time by the National Co., and is certain to prove popular.

# Ready September 15th

The following list of **"WHITE" RECORDS** will be ready for distribution by the Wholesale Trade on or before September 15th.

**SPECIAL NOTICE**—All our records are to be slightly longer than cylinder records now on the market. The exact length outside measurement will be  $4\frac{3}{8}$  inches, this permits of our giving  $3\frac{3}{4}$  inches of music, or about a quarter of a minute more entertainment than records heretofore produced.

**NOTE**—The above records will play on any Standard Cylinder Machines.

Send us your name and full address and we will be pleased to keep you posted in all matters of interest.

**THE GENERAL PHONOGRAPH COMPANY, Ltd.**

26 Euston Building

Euston Road, London, N. W., ENGLAND

## FROM OUR LONDON HEADQUARTERS—(Continued.)

## THE GENERAL PHONOGRAPH CO. LTD.

(Special to The Talking Machine World.)

London, England, September 4, 1906.

The following circular has been issued to the trade by the above firm:

"Dear Sir:—In order that you may make provisions for stocking our Records we beg to give you herewith complete advice as to the dimensions of same. All Records which we turn out in the future will be slightly longer than the standard cylinder Records; the Record itself will measure  $4\frac{3}{8}$  inches over all, the length of music recorded on same will be full  $3\frac{3}{4}$  inches, this enables us to give about fourteen seconds longer performance than the standard Records and record two verses and two choruses of the ordinary ballads or comic songs. The length of our boxes will be  $4\frac{3}{8}$  inches inside measurement, the length of our boxes outside measurement will be  $4\frac{3}{4}$  inches, so that you should figure accordingly in providing racks for stocking."

Rapid strides are being made with the "White" record, and in a few weeks, or, in fact, by the time this is in print, the first batch will have made their appearance throughout the trade. A glance at this company's announcement in our advertisement pages will reveal a splendid list of vocal and band selections, and dealers should lose no time in placing their orders.

## A SIMPLE AND PRACTICAL TREATISE ON RECORDING.

BY PHILIP NEALE, LONDON.

In five cases out of six the recorder supplied with the machine is not workable, and the owner finds, however much he may try, that he cannot make a decent record, therefore I think, as the season approaches the phonoish will certainly like to use his recorder if it will work.

Now, to record, or, as Pathe puts it, to take the photograph of sound, is really a very simple matter if you only go the right way to work.

The recorder is composed of a metal shell to hold a diaphragm, upon which is fixed a cutter called a stylus.

The stylus is a wire shape piece of sapphire, polished and faced at one end, thus:

it does not matter whether it is hollow ground or plain; one is as good as the other, but it must be well polished and sharp.

The stylus holder should be built so as not to harbor the vigorous raps given to the diaphragm. To harbor, I mean that the raps given should be delivered in full to the wax cylinder. This I will simply illustrate. Take a punch 1-16 inch in diameter and 2 inches long, and try to punch a hole in a piece of tin; then take a punch  $\frac{1}{4}$  inch in diameter and try and punch the same

size hole and you will at once understand how the slight punch harbors the raps given by the hammer, while the stout punch delivers the raps in full.

You will now see that the soft turned up stampings supplied by the trade are not alto-

gether satisfactory, and you must try and make one.

Procure a piece of flat brass wire 1-32 by 3-32 of an inch, bend it exactly the shape and size as in Fig. 1. Now drill the hole as shown, the right size for the stylus, and make same firm with shellac. Now cement the holder to diaphragm, as in Figs. 1 and 2, and before the cement is set. Fix recorder to the machine. Now lower same carefully to the surface of the blank. You can then shift the stylus forward or backward until you secure the right position. See Fig. 2. Then allow it to set well before using.

The position of the stylus is a very important

matter, for if you set it too acute it will not record at all. It will hop all over the blank, making herring bones and deep spots, and making a noise like a small rattle. There must not be any noise from the recorder, and the shaving must not bunch up and collect on the cutting surface of the stylus, but the shavings must sail away like a ribbon in the breeze, leaving the stylus always visible and clean.

If you look again at Fig. 2 it would naturally occur to you that in the position of stylus there given that the stylus would glide over the surface of the blank without cutting, but it is not so. As soon as the point of the stylus touches the blank it will throw off a fine shaving like the hair of your head—the finer the better; but as soon as the slightest noise enters the trumpet the stylus will enter the surface of blank and, being perfectly under the control of the diaphragm, will print every movement of the diaphragm with perfect ease and accuracy. Now we will pass on to the diaphragm.

The best size, as far as my experience goes, is 3-32 millimeters, now in general use, but for the thickness we must see what kind of motor we

want it for, the better and more silent the motor the thinner the diaphragm.

Thus a motor running by electricity may use a diaphragm of 5-40 millimeter in thickness, while a cheap motor or one with shaky motor

would blast or ramble with anything under 8-40 millimeter, using a heavier recorder (which by the way, is just the opposite in respect to the reproducer); but the 6-40 millimeter is a very good thickness, and the one I generally use myself. If you do not possess a millimeter gauge you can proceed as follows: Procure one dozen 33-millimeter glasses, 8 degs., take them one by one, dropping them flatways on an ordinary table, afterward placing them in a row, with the high notes to the right and the low notes to the left, like a xylophone; now take the middle one and fix it up for work. If it does not blast, take the next lower one, and so on until it "jibs" at the high notes. Now we come to the recorder itself. The reproducer has a free lateral motion of  $\frac{1}{8}$  inch, but a recorder has no lateral motion (by lateral I mean horizontal, side to side), but both have a free vertical, or up and down, movement.

Although the recorder must not have sufficient room in the back stay to be able to shake itself like a horse does its head, it must be free to rise and fall. You must look at the back stay and see that the holes are not too large on the joint pin. The best and most simple is one generally adopted in good machines; a plain pin, if the four holes are all reamed at one time, will do.

The trumpet, if you don't want it to say anything while you are recording, must not have a bell if a brass one. The best receiver for an amateur is an eight-inch aluminum horn, with a short rubber connector, which must be sufficiently stout to hold up the horn without assistance, but not rigid. You may then stand a foot from the horn or farther. You can also make a brown paper horn, using a brass horn as a model and starch pasting layers of brown paper until about 6 to 8 layers are put on and allow to dry hard.

Don't expect to get a champion record for a start; but persevere.

Don't use a blank that has been washed off.

# THE BEST IN THE WORLD HOWELL BROS. SOUND BOX

Adapted for Victor Taper Arm and also Direct Horn Machines

Dealer's Price \$1.50

You can afford to pay duty on this and then have a better line than any in the States.

Europe, Asia, Africa and Australia have expressed their satisfaction with our Sound Box and now we want to supply the rest of the World

HOWELL BROS., St. John St., CLERKENWELL, LONDON

## FROM OUR LONDON HEADQUARTERS—(Continued.)

Don't get your brother to sing, "Down Upon the Dead Men," but get your sister to sing "Down at the Old Bull and Bush," or "Walking Out with Angelina."

Try and imagine you are a photographer, and that your sitter or stander is posing for a photo of their voices, and try and arrange them to the best advantage. Don't stop the phonograph as soon as the singer laughs or breaks down, but try and get them to start again as soon as you can, and note the effect on the record. You not only get an amusing record, but you learn a lot by their mistakes. Practice alone gets the best results. Recollect there are "professional organ-grinders."

## WITH THE INVENTORS.

(Special to The Talking Machine World.)

London, England, September 5, 1906.

The following list has been compiled exclusively for the Talking Machine World (69 Basinghall St.) by Cassell & Co. (Godfrey B. Shepherd, registered patent agent, by examination), 90 Chancery Lane, London, E. C., to whom applications and inquiries relating to all patents should be made.

No. 15105, dated July 3, 1906, Paul Breittmayer's "Improvements in and relating to phonographs."

No. 15128, dated July 3, 1906, Charles George Garrard and James Edward Hough's "Improvements in phonographs, graphophones and the like."

No. 15129, dated July 3, 1906, Charles George Garrard and James Edward Hough's "Improvements in phonographs, graphophones and the like."

No. 14130, date of application July 8, 1905, date of acceptance June 7, 1906. W. Michaelis, P. J. Packman, and Neophone Limited's "Attachment for recording, applicable to disc sound reproducing machines."

This invention relates to disc sound reproducing machines and consists in an attachment for enabling the possessors of ordinary disc sound

reproducing machines to utilize their machines for manufacturing records at home according to fancy or desire without any necessity for alteration or reconstruction of the same.

This attachment is of the kind in which the recording point is moved radially across the disc by mechanism, and comprises a carrier 1 supported at one extremity by the pivot pertaining to the turntable, and at the other extremity by means of the ordinary arm supporting the reproducer and trumpet or by means of a separate stand or holder 8. The recording point and trumpet are carried at the extremity of an arm 3 which is capable of adjustment. This arm is caused to travel radially in relation to the turntable by a screw 24 to which rotary motion is imparted by means of bevel gearing 22, the latter being driven by a socket 23 pertaining to the extremity which engages with the centre pivot of the turntable. The carrier is made extensible so as to be readily adjustable to the machine. The arm 3, whereby the recording point and trumpet are carried, may be engaged and disengaged with or from the screw 23 at will by means of a thumb lever 26 operating the transversing screw engaging device (not shown in the drawings).

No. 11688, date of application June 3, 1905, date of acceptance June 2, 1906. J. S. Goodwin's "Improvements in phonographs and the like."

This invention relates to the reproducers and recorders of phonographs and has for its object to amplify the sound whilst making it purer in tone.

As shown, the vibrating glass or other disc *b* is mounted in the receiver frame in the usual

way, but at a slightly greater distance from the base and secured to it is a three-armed style frame *a* having the arms projecting from the style centre and being secured at their outer

ends to the vibrating disc at points *c*, *d* and *e*, above the point of attachment of the arms to the glass disc, air channels *f* cut in the cell lead to a common air tube, the area of the common air tube being approximately equal to the combined area of the three channels. The arms are preferably disposed edgewise in relation to the disc so as to give great strength in the required direction combined with lightness. The arms are not symmetrically arranged, the arm forward of the common air tube being nearer the center than the other two. It has been found most convenient to use three arms, although a greater number may be employed if desired.

No. 17,179. Carl von Unruh. "Improved phonographic plate holder." Dated July 30, 1906.

No. 17,316. Edward Lincoln Aiken. "Improvements in phonographs." Dated Aug. 1, 1906. (Date applied for under Patents Act, 1901, Aug. 3, 1905, being date of application in United States.)

No. 17,767. Edward Charles Robert Marks (American Graphophone Co., United States). "Improvements in and relating to sound records for sound reproducing machines." Dated Aug. 7, 1906.

No. 17,787. Edward Henry William Elliston. "Improvements in or relating to reproducers for gramophones, phonographs and the like instruments." Dated Aug. 8, 1906.

No. 17,993. Peter Weber. "Improvements in phonographs." Dated Aug. 10, 1906. (Date applied for under Patents Act, 1901, September 27, 1905, being date of application in United States.)

No. 19,057. Robert Thorn Haines. John St. Vincent Pletts and Eugene Augustin Lauste. "New or improved method of and means for simultaneously recording and reproducing movements and sounds." Dated Aug. 11, 1906.

No. 18,059. Frederick Myers. "Improvements in or relating to sound reproducing machines." Dated Aug. 11, 1906.

No. 18,506. Thomas Knight Barnard. "Improvements in phonographs and similar sound-reproducing instruments." Dated Aug. 17, 1906.

No. 19,026. James William Turvill. "Improvement of gramophone tone arm or anything connected therewith." Dated Aug. 25, 1906.

No. 2,157. Date of application, Jan. 27, 1906; complete patent accepted, July 26, 1906. Oaskar Meester and Leon Gaumont's "Improvements relating to the synchronous operation of combined cinematographs and phonographs."

No. 3,891. Date of application, Feb. 16, 1906; complete patent accepted, July 19, 1906. William Phillips Thompson (Cyrus Crooks Shigley of Michigan, U. S. A.). "Improvements in Magazine Phonographs."

No. 4,825. Date of application, Feb. 27, 1906; complete patent accepted, Aug. 9, 1906. Ferdinand Sengel's "Improvements in the method and apparatus for recording and reproducing

sound." The object of this invention is to record and reproduce sound, or fluctuations of an electric current due to the action of sound waves, by means of a needle connected with a diaphragm and adapted to take part in the vibrations of the latter or to produce such vibrations by being moved in a suitably formed groove, a record being formed on a strip of material of suitable length and width instead of a cylinder or disc, the said strip being, while in use, slowly moved in a longitudinal direction and the needle being simultaneously moved at a more rapid rate in a

transverse direction. As shown in the drawing, the horn is supported by a bridge above a record strip moved by a spring motor, the stem of the horn being provided with an aperture level with arms (14), provided each with a diaphragm and needle, designed to revolve and travel intermittently on a sector-shaped guideway, so arranged that the needle supported by the arm is only in contact with the record strip when the arm is traveling through the gap between the ends of the guideway (19), the lines on the record taking the form shown, and each "sound arm" reproducing one of the record lines in turn.

No. 14,886. Date of application, July 19, 1905; complete patent accepted, July 19, 1906. Henry Harris Lake (The Tea Tray Company of New Jersey). "Improvements in and relating to horns for sound recording and reproducing instruments." The objects of this invention are to secure greater strength and rigidity at the large

ends of a "Flower horn," whereby the said horns will be better able to maintain their shape and appearance while in transportation and in use, and to this end the sections of the horn are joined together at their longitudinal edges, which overlap, and being doubled together to form ribs which extend at the large end of the horn beyond the centers of the ends of the sections so as to take the weight of the horn when the latter stands upon its large end.

No. 21,661. Date of application, Oct. 24, 1905; complete patent accepted, July 19, 1906. Piotr Lebedzinski's "Improvements relating to sound

boxes for phonographs, telephones and the like." The object of this invention is to enable sound box diaphragms to be "tuned" at any moment whether at rest or while in working order, it being adjusted in either of the two following manners, viz.: first, by stretching the material of the diaphragm in all radial directions without interfering with the stylus lever by means of a clamping ring bearing upon the diaphragm (A) and provided with a lever (M) and, secondly, by adjusting the tension or strain of the stylus lever by means of a spring (Q) and bolts and nuts (N and R), as illustrated in the accompanying sketches. A further feature lies in the manufacture of the diaphragm, which is stiff and inextensible at its middle part, but flexible, extensible and elastic at its edges, for extending the limits within which it may be "tuned."

## REPRODUCTION OF MUSIC BY RECORD MAKERS.

Fuller Details, from Our Milan Correspondent, of the Judgment Just Handed Down by the Tribunal of Milan Whereby Ricordi & Co. Secure Damages for the Illegal Use of Their Publications—Forbidden Henceforth from Using Such Works Without Paying—Ruling One of Great Interest to Talking Machine Men Throughout the World.

(Special to The Talking Machine World.)

Milan, Italy, August 28, 1906.

By a new decision, which was referred to in a message by wire last month, the Italian tribunal has recognized without restriction the principle that the reproduction of music being reserved property, intended to be used for mechanical instruments in general, is not legal without the consent of the author or his representative.

The Tribunal of Cremona had already established this in regard to the reproduction of music on the perforated rolls which are used for all kinds of piano players and player-pianos.

The Tribunal of Milan, by a new judgment just given, has affirmed the same principle as regards the reproduction of music for cylinders, discs or plates applicable to phonographs, gramophones, and in general for all talking machines.

The judge who has given the decision, Advocate Alberici, one of the most learned and intelligent among young lawyers, has made a careful study of the memorials which, in the interests of the firm of G. Ricordi & Co., had been presented by Advocate Campanari, as well as those presented by Advocate Valdata for the firm of Sonzogno, Advocate Auguste Ferrari for the Society of Authors, and Hon. Graffagni, of Genoa, for the French publishers. On the basis of these memorials, and referring to the precedents of Italian and foreign doctrine and jurisprudence, he has compiled a work which is well worthy of study, for it touches all the points of the delicate question.

Taking his stand on the provisions of the Italian law and on the correct application of the Convention of Berne, and especially on the third article of the protocol closing the aforesaid convention, the Tribunal of Milan has decided that the reproduction of music for discs, phonographs or other talking machines constitutes a violation of the author's rights when it is made without his consent or that of his representative.

Consequently the Tribunal has condemned the Gramophone Co. repayment of all damages incurred and to be incurred, to the firm of Ricordi & Co., for the improper reproduction of the works of the first and second period, whether for singing with piano accompaniment, or orchestral accompaniment, or any other form. It has also definitely forbidden the Gramophone Co. to reproduce henceforth portions of musical works belonging to the first period.

It has declared that all the reproductions of portions of works belonging to the second period which have been made up to the present constitute infringement.

In Italy the law considers two periods for the right of publication—one of 40 years, starting from the date of the first publication, in favor

of the author or his representative—a second period of 40 years, during which every one can publish a work, by paying, for the benefit of the author or his representative, a due of 5 per cent. on the price marked on each printed copy.

It has obliged the Gramophone Co. to set out, in the form desired by the law, the number of discs which the company has the intention of making of each work belonging to the second period, with the obligation of paying to the firm of G. Ricordi & Co. the 5 per cent. on the gross price marked for each disc.

It has also condemned "The Inventions" (a firm which sells the discs of the Gramophone Co.) to repayment of the damages toward the firm of G. Ricordi & Co. for the improper sale carried on until now of discs which are the musical property of Ricordi, with the injunction that in case of continuing the sale, the firm would incur the risk of the penalties provided by the law.

It has condemned the Gramophone Co. to the costs of the judgment and of the sentence.

Manufacturers of discs and sellers of same are therefore warned.

It is hoped that the abuse which has existed up to now of appropriating the music of another person, under the pretext that the music mentioned can be freely utilized by virtue solely of the fact that it is reproduced mechanically, will completely cease in Italy.

For all kinds of piano players the question remains definitely settled, for the judgment of Cremona was never appealed against.

For the phonographs, it is expected the judgment of the Tribunal of Milan will be soon confirmed by the Court of Appeal. For mechanical pianos the question will shortly be decided before the Tribunal of Bologna.

If these judges therefore also follow the same order of ideas as the Tribunals of Cremona and Milan, it will be decided that the reproduction of music by mechanical instruments in any form is forbidden in Italy without the consent of the lawful owner.

### UNIQUE MOVE IN PARIS.

Grand Opera Singers Found an Association for the Purpose of Making and Selling Phonograph Records of Their Own Performances.

(Special to The Talking Machine World.)

Paris, France, Sept. 3, 1906.

M. Note, of the Grand Opera, has founded an association of singers and actors for the purpose of making and selling phonograph records of their own performances.

According to the popular tenor, with the exception of three or four great singers, who are paid fabulous prices for singing into a phono-

graph, few opera stars make anything out of the records of their voices. Moreover, many of the records are taken without the knowledge of the singers, and are bad in consequence, because they are not made with the proper attention to acoustics.

"It is only fair to ourselves," says M. Note, "to leave the most perfect possible records of our voices. Moreover a singer who controls the sale of these records lays up for himself a source of revenue which will be welcome when the inevitable day arrives at which his throat refuses to produce the sounds which won him applause. When he can no longer make money out of singing on the stage his voice will still bring the old singer in money if he has a true and perfect reproduction of it at his disposal."

### EDISON ECHOINGS.

A change has been made in the lettering or branding of the Edison phonograph cabinets, the designations, "Edison Gem Phonograph," "Edison Triumph, Standard, Home," etc., being abandoned and the facsimile signature of "Thomas A. Edison," the trade-mark of the National Phonograph Co., substituted. The construction of the machines remains the same. The change was made for the sake of appearance only.

Hereafter Edison jobbers will not be permitted to do a jobbing business at branch stores in other cities excepting on the same conditions as a new jobber.

Frank E. Madison, instead of going to Boston as manager of a branch office of the commercial phonograph, will remain at the New York end in charge of the contract department.

Four well-known Edison jobbers who were found shipping goods to dealers in advance of the specified time, were "jacked up" by the National Phonograph Co. in the following letter from General Sales Manager Wilson: "For not complying with our conditions of sale in regard to the day (27th of the month), and hour (8 a. m.), on which new monthly records could leave their store or possession, we will be compelled to hold up shipment of October records to the following jobbers until such time as will insure their not being delivered to them until September 28, or one day later than the same records can be shipped or leave the store or possession of other jobbers." The names of the offenders appear in the official notice.

Last month the main offices of the National Phonograph Co. at Orange, N. J., were moved into the new administration building, in which they will occupy the first and second floors, going out of the old place, which has been occupied since the phonograph was first manufactured. The new record moulding building will be enclosed in another six weeks. This building is being pushed more rapidly than others, because it is hoped to occupy it before January 1 and thus greatly increase their record making facilities and materially aid in handling shipments.

## NOTES FROM THE EMERALD ISLE.

Motor Car Tour of Gramophone Co. Through Ireland—Notable Men Hear Twentieth Century Graphophone—Looking Forward For White Record—Edison Sales Very Large.

(Special to The Talking Machine World.)

Belfast, Ireland, Sept. 3, 1906.

The Gramophone Company, of London, have recently organized a motor car tour throughout Ireland. On the front portion of the car there is an excellent life-like representation of "his master's voice"—a fine specimen of a black and white fox terrier (stuffed), and of course the instrument into the trumpet of which that same dog (who has attracted so many pedestrians to the window of Osborne's depot in Belfast) has been vainly listening for the voice of his master for the past two years! Up till now, however, not even a "whisper has yet been conceded" (to borrow from Professor Tyndall) to the listening ear of that canine! The motor car and its occupants (including the dog) have been creating quite a sensation, and the trade results, I understand, have—so far—been most encouraging.

During the past month many thousands of Belfast citizens have been entertained by a "twentieth century sound magnifying Columbia graphophone which T. Edens Osborne equipped with a 56-inch copper trumpet. The latter was projected from the window of his reception room on the fourth floor of the Scottish Provident buildings, and the loud, clear and distinct reproduction of choice selections—vocal and instrumental—has undoubtedly been "the talk of the town" for the past few weeks. While a ball was being given in the new palatial city hall during the recent visit of the Lord Lieutenant of Ireland (Lord Aberdeen) the graphophone rendered a special programme which for four hours (7 till 11 p.m.) attracted an audience of five thousand, a most appreciative, dense, orderly crowd who, even at an hour before midnight, preferred to miss the last tram cars to their respective domiciles rather than leave without hearing all the popular selections so loudly reproduced. I may mention that the records used were genuine Edison, Sterling, Pathe and Columbia.

Mr. Osborne has just received advice of a few samples of the latest phonograph record on the market—the "White" record—having been forwarded to him from London. He and his staff

of assistants anxiously await their arrival. If they are as good as their namesake (J. H. White) their excellence and popularity are assured. The fact that they will be sold at one shilling each, and that they will be longer than the usual standard size will be excellent "sale points." In this connection it may be noted that the Russell Hunting Co. are also making "Sterling" records half an inch longer than standard size, and, by the way, this company are now "booming" Odeon disc records, the superior quality of which is being eulogized by experts, at which no one feels surprised who has enjoyed some of the band selections by H. M. Scots Guards, La Garde Republicaine, H. M. Irish Guards, etc., and the songs of Lloyd Chandos and other well-known artists.

The most popular disc instrument of to-day in the British Isles is, I think, the Gramophone Company's "Junior Monarch," with flower horn. Indeed, it is quite a "triumph," in fact a "gem," for "home" use, and the "standard" by which the value of other disc machines is gauged. (Pardonnez S. V. P. le "jeu de mots"!)

The various talking machine shop windows are now enlivened by displays of instruments equipped with flower horns of every color, and look more attractive than heretofore.

Notwithstanding the general exodus of city folks to the seaside during August the Edison jobber here reports that his sales of talkers for that month were equivalent to the aggregate output of June, July and August, 1905. With such figures before him he naturally anticipates a big winter's trade. His first consignments of Edison "standards" and "homes" will be shipped on the 1st and 15th of September.

## ROSTER OF COLUMBIA JOBBERS.

An Imposing List of Leading Men Now on the Register of the Columbia Co.

The following is a complete and corrected list of jobbers which have been established by Walter L. Eckhardt, manager wholesale department of the Columbia Phonograph Co., General:

W. D. Andrews, Syracuse, N. Y.; Arnold Jewelry & Music Co., Ottumwa, Ia.; J. D. Brenuan & Sons, Columbus, Ga.; George Borgfeldt & Co., New York City, St. Louis, Mo., and Chicago; Bowdoin Square Phono. Co., Boston, Mass.; Ball-Fintze Co., Newark, O.; H. R. Bonfoey, Binghamton, N. Y.; Theodore F. Bentel Co., Pittsburgh, Pa.; A. C. Becken, Cable Company and

Carson, Pirie, Scott & Co., Chicago; J. P. Crotty & Co., Minneapolis, Minn.; Clark-Horrocks Co., Utica, N. Y.; H. B. Claflin Co., New York City; W. A. Dean Co., Sioux City, Ia.; Denholm & McKay Co., Worcester, Mass.; W. C. De Forest & Sons, Sharon, Pa.; Duplex Phonograph Co., Kalamazoo, Mich.; N. D. Estes, Lewistown, Me.; Finch & Hahn, Albany; Finch & Hahn, Schenectady, N. Y.; Finch & Hahn, Troy, N. Y.; L. Fish Furniture Co., Chicago; S. A. Floyd, Harrisburg, Pa.; Charles Girvin & Co., Williamsport, Pa.; Dr. A. M. Gable, Shamokin, Pa.; Hibbard, Spencer, Bartlett & Co., Chicago; A. C. Huff, Bethlehem, Pa.; Kirtland Bros. Co., New York City; O. J. Juuge, Lincoln, Neb.; John S. Lengs Sons & Co., New York City; Lyon Bros., Chicago; M. M. Marrin & Co., Grand Rapids, Mich.; Neal, Clark & Neal, Buffalo, N. Y.; G. W. Newton, Van Wert, O.; Ohio Phonograph Co., Youngstown, O.; O'Neil, James Co., Chicago; P. A. Powers, Buffalo, N. Y.; Pittsburg Phonograph Co. and Powers & Henry, Pittsburg, Pa.; Portland Talking Machine Co., Portland, Me.; Reading Phonograph Co., Reading, Pa.; Rothschild & Co., Chicago; Seavey Bros., Haverhill, Mass.; Robert R. Smallfield, Davenport, Ia.; John M. Smyth Co., Chicago; Spalding & Co., Syracuse, N. Y.; Tiedtke Bros., Toledo, O.; E. H. Towle Co., Waterbury, Conn.; Warner & Settani, Brooklyn, N. Y.; Perry B. Whitsit Co., Columbus, O.; Maurice Wolfer, New York City; The Winchell Co., Boston, Mass.; Otto Young & Co., Chicago.

Next Tuesday, September 18, Walter L. Eckhardt, manager of the Columbia Phonograph Co.'s wholesale department, will personally conduct a bunch of prominent jobbers through the plant of the American Graphophone Co., Bridgeport, Conn. It promises to be an interesting trip, and the jobbers will see how things are done, and what a splendid plant the company have.

The Victor Talking Machine Co.'s two new products, the Victor Victrola and the Victor Auxetophone, are now in the hands of the leading jobbers with gilt-edge trade, as they are the highest priced goods made by the company.

James Landay, of Landay Bros., New York City, expects to go abroad next month for a pleasure trip. He will probably not lose sight of business, as several applications for agencies for the Land-o-phone have been received from the principal continental countries.

Dealers' Trade Price List of **RAPKE LABELS**, to take effect Sept. 15, 1906,

(Superseding all previous Quotations).

SIZE OF LABEL:

**RAPKE LABELS WITH TITLES FOR EDISON RECORDS.**

One each of all selections from No. 2 to 9433 and Grand Opera B1 to B40, \$3.50 per set.  
One each of all American and Grand Opera Sel., as issued during year 1907, \$1.20 per year.  
One each of any monthly list of American selections, 10 cents per month.  
Grand Opera Labels if ordered separate 5 cents per month, set of 10 labels.

Labels with titles for foreign selections as listed in Form 700, sold in separate sets as follows:

British, Chinese, French, German, Italian or Spanish, any set for 25 cents.  
Bohemian, Hebrew, Hungarian, Japanese, Polish, Russian or Swedish, any set for 10 cents.  
Labels for 303 Mexican selections as in Form 700, this set for \$1.30.

SIZE OF NUMBER:

**Rapke Numbers without Titles for Edison Records.**

One each of all selections from No. 2 to 9433 and B1 to B40, .....\$1.75 per set.  
One each of all selections from No. 12000 to 18851 as in Form 700 .....\$1.25 per set.

A limited number of all sets, whether with or without titles, can be had printed on white cardboard. Prices on these cardboard labels are double than quoted in this list.

Any labels or numbers, not specified in this price list, if furnished, will be charged for at the rate of 10 labels for 5 cents. This includes Grand Opera labels, or any other labels or numbers without titles.

When ordering, state plainly, whether LABELS WITH or WITHOUT TITLES are wanted. Terms: CASH WITH ORDER. Delivery: By mail, prepaid to any part of the Globe.

Write at once for Free Samples, etc., Address **VICTOR H. RAPKE**, 1661 SECOND AVENUE, NEW YORK CITY, or any Jobber.  
Creator and Mfr. of Record Labels, Trays, Horn Cranes, Etc.

**RAPKE LABELS FOR COLUMBIA X. P. RECORDS**

With titles, from No. 500 to and including December, 1906...\$5.00 per set.  
With titles, as issued during year 1907..... 1.00 per year.  
Without titles, from No. 500 to and including December, 1906... 1.75 per set.  
If ordered printed on Cardboard, the price is double that quoted.

## THE TELEGRAPHONE A WONDER.

Improvements Recently Made in the Apparatus  
So That Its Success Is Now Assured.

When the telegraphone was publicly exhibited for the first time in this country, *The World*, in its issue of April, 1905, described and illustrated what is spoken of by scientists and practical experts in sound recording and reproduction as one of the wonders of the age. Since then this marvelous invention has been exhibited in the principal cities, and everywhere its operation and results have occasioned interest and enthusiasm. Improvements have been made in the apparatus so that its commercial success is now considered as beyond the question of a doubt, and it is at this stage of development that the telegraphone becomes an article of direct interest to the talking machine trade.

As stated in *The World's* descriptive article referred to above the telegraphone was invented by Valdemar Poulsen, a scientist, of Copenhagen, Denmark, who found that magnetism could be "localized." Previous to this discovery the accepted scientific theory was that magnetism conveyed to a piece of steel, whether a flat surface, like a disc, or a round body, like wire, would spread and permeate the entire metal substance, as ink spreads through blotting paper. Mr. Poulsen immediately applied this principle to the recording and reproduction of sound waves. In other words, he discovered that if the conveying magnet was sufficiently small and delicate it would convey a dot, as it might be termed. In other words, that the magnetization would be localized at the exact place where the magnet was applied and no other, and that if the magnet was moved over the face of a piece of steel or the steel moved before it, it would make a magnetic line therealong. Not only this, but the steel could be varying magnetized at each point along the line by varying the magnetic intensity of the inducing magnet. On these two facts hang all the telegraphone and its claim of revolutionizing the art of sound recording and reproducing. The records are not reproduced with the loudness of the talking machine, but are clear and free from the scratching and hissing sounds peculiar to other voice-producing machines, and deliver every delicate as well as every strenuous intonation of the original speaker.

The commercial evolution of this epoch-making invention has resulted in two styles of telegraphone—the disc and the wire. The former in its manner of operation resembles the talking machine, the disc being rotated in the same way. As this disc, about five inches in diameter, rotates, the magnet and coil, which are held in a carriage, are gradually moved toward the center of the disc by a micrometer screw. The speed of rotation is increased as the magnet approaches the center, so that the disc rotates with a constant linear velocity of one-half meter per second. The discs may be filed away for future use, and many thousands of reproductions may be obtained from the original record. The discs may be sent by mail without injury.

In the other form of the machine, a steel piano wire is wound off one wheel to another between two magnet poles by an electric motor contained at the base of the instrument. Enough wire is carried on the wheels to make a record three-quarters of a mile in length. In this machine three pairs of magnets and coils are used, each pair consisting of two magnets and coils similar to the straight magnets previously described. The magnets are placed horizontally, one on either side of the wire. The sounds are recorded by the middle pair of magnets, the others serving for demagnetism or erasure. As the wire winds off, the magnet carrier travels back and forth, both holding and guiding the wire. In either form it is apparently impossible by wear or use to destroy the record, yet the record may be wiped out on either the disc or wire by passing a more powerful magnet over the surface.

## LATEST AMERICAN RECORDS.

The American Record Co.'s October Bulletin is one of especial interest, and is as follows:

- REGIMENTAL BAND OF THE REPUBLIC.  
031374 Waiting at the Church. Introducing "In the Summer Time."  
031375 Medley—Cheyenne. Introducing "La So-relle."  
031376 A Rare-bit Fiend. A hit of musical eccentricity  
031377 In the Gloaming.....  
AMERICAN SYMPHONY ORCHESTRA.  
031378 The Irish-American—Two-step.  
031379 March from Bocaccio. By Franz von Suppe..  
031380 The Nutmeg Dance.....  
031381 Oh! Eliza, Save a Little for Me.....  
ARTHUR COLLINS, ORCH. ACCOM.  
031382 When a Poor Relation Comes to Town. (Descriptive)  
031383 I Don't Know Where I'm Going, but I'm on My Way.....  
TENOR SOLO BY HENRY BURR, WITH ORCH. ACCOM.  
031384 Love Me and the World Is Mine.....  
BYRON G. HARLAN, ORCH. ACCOM.  
031385 In the Evening by the Moonlight, Dear Louise.  
031386 Grandpa, I'm Going to be a Soldier.....  
BILLY MURRAY, ORCH. ACCOM.  
031387 I Wouldn't Leave My Little Wooden Hut for You  
031388 Rosebud. A sailor march song.....  
STEVE PORTER, ORCH. ACCOM.  
031389 Seaweed. An English topical song.....  
SOLO BY MISS ADA JONES, WITH ORCH. ACCOM.  
031390 Waiting at the Church.....  
SPENCER AND JONES (DESCRIPTIVE).  
031391 Peaches and Cream.....  
FRANK C. STANLEY, ORCH. ACCOM.  
031392 Not Because Your Hair Is Curly.....  
031393 After They Gather the Hay.....  
STEVE PORTER (RECITATION).  
031394 You're Just Like Your Mother, Mandy.....  
ITALIAN SOLOS. BARITONE BY SIG. CESARE ALLESSANDRONI.  
031395 Dio Dell Or (Faust).....  
031396 Cavatina (Trovatore).....  
031397 Monologo di Scarpia (Tosca Puccini).....  
031398 Sortita di Amonasso (Aida-Verdi).....  
031399 Pura Siccome un Angelo (Traviata-Verdi).....  
031400 Barcarola (Gloconda-Ponchielli).....  
031401 Monologo (Rigoletto-Verdi).....  
031402 O Casto fior (Re di Lahore-Massenet).....  
031403 Di Provenza Mare suol (Traviata-Verdi).....  
SPANISH SOLOS. BARITONE, BY SR. A. DE G. ABELLO.

## SOME NEEDLEPOINTS.

H. S. Berliner, son of the widely-known inventor, Emil Berliner, of Washington, D. C., was in New York Tuesday en route to the national capital, where he will stay for several months, carrying on some important experiments in sound reproduction and other talking machine improvements. Mr. Berliner is secretary of the Berliner Gramophone Co., Canada, Ltd., of Montreal, and has a number of influential inventions to his credit. Siegfried Sanders, with the same company, sailed September 10 for Calcutta, India, to set up a pressing plant for the Gramophone & Typewriters, Ltd., of London, Eng.

The Universal Talking Machine Manufacturing Co. are getting ready a special bulletin of operatic records that will be announced next month. Bonci, the great European tenor, who will be heard in opera in this country for the first time this season, at Hammerstein's Manhattan Theater, New York, has made a number of splendid records for the Universal Co. J. Wagner is making his first trip for the company.

A large shipment of Searchlight horns have been shipped by the Douglas Phonograph Co., New York, to Bangkok, Siam, and to Australia. The Douglas Co. are also in receipt of a new line of needles from the factory in Germany, and for which they are the exclusive agents for the United States and Canada. Their needle business has grown to remarkable proportions.

The C. E. Osgood Co., of Boston, Mass., have elsewhere an announcement of interest to talking machine men, particularly those doing business throughout the New England territory. They carry a very full line of machines and supplies.

The J. F. Schmelzer & Sons' Arms Co., Kansas City, Mo., have recently remodeled their talking machine department, and now have seven individual demonstrating rooms.

## What IS the I. C. S. Language Outfit?

The I. C. S. Language Outfit consists of an Edison Standard Phonograph with I. C. S. repeating attachment, recorder, special head-band hearing tubes with patent sound modifier, 14-inch brass horn, brush, 25 conversational gold-mould records, and four textbooks for the study of French, German or Spanish. The records and textbooks may be sold separately to those who already have a cylinder phonograph. This outfit forms the most perfect language teacher in the world, and enables the student to speak the foreign language as the natives speak it, with a pronunciation guaranteed to be absolutely correct. The I. C. S. system is indorsed by the French, German and Spanish embassies and all the leading educators. FOR YOU it is a proposition that will appeal not only to new trade, and to people who would not invest in a phonograph for amusement purposes, but to every phonograph owner in your section as well, who will be only too glad to find a profitable as well as a pleasurable use for their phonograph. Past experience has proven that it will increase your business. For proof ask the dealer who has tried it. Write to-day for particulars and prices.

## TIMELY TALKS ON TIMELY TOPICS.

In the course of an interesting letter by Henry J. Hagen, assistant manager of the recording laboratory of the Universal Talking Machine Manufacturing Co., New York, from Buenos Ayres, S. A., under date of July 15, he says: "Buenos Ayres is one of the greatest commercial cities of the Western Hemisphere, and for beautiful streets and parks it compares favorably with the great cities of Europe. As to the talking machine end it is simply surprising the great number of high class records sold here, comparing favorably with New York. Price does not cut much ice, providing the goods are right. There is a good demand for fine cabinets and record cases. This is a great music-loving country, and the people know an artist when they hear one. One of the large houses here is selling Patti records for \$25 paper, which is equivalent to \$11 American. I sail for Genoa tomorrow on the steamship Umbria, and expect to arrive there about August 11." It will be remembered that Mr. Hagen and E. Long, manager of the Universal Co.'s export department, are in Italy recording "masters" from the leading singers and musical organizations.

The multiplicity and variety of records keep growing. Eventually every known tongue will be adequately represented. The Chinese list is increasing rapidly, and when George K. Cheney was in China for the Victor Talking Machine Co., Camden, N. J., he secured a large number of excellent "masters" of the leading dialects, and up to the end of April the company received orders for 64,000. An importer in Shanghai, writing Mr. Cheney says: "We are satisfied with your work; in fact, delighted, and it is not necessary to wait for samples and order from them. We want records, and if we could we would yell it out fifty times, proper fashion. We

find it hard to sit down and wait when orders are flocking in." That sounds quite American as a "hurry-up call" for goods.

Another example of this fact is the recent importation of Norwegian records direct from Christiania, by Andrew Olsen, an Edison dealer of Brooklyn, N. Y., who expects a large business with them when he gets sufficient stock. Speaking of his new line, Mr. Olsen said to The World last week: "As yet my stock of Norwegian records is too small, and they are rather expensive, because I must pay duty. My intention is to import the 'masters' and have the records manufactured here, which will enable me to give the jobber sufficient margin to sell to dealers. You know we have some of the best voices in Norway, artists who will never come here. Then another thing, there are about a million Norwegians in this country—actually half as many as still live in entire Norway. There is a big colony right here in Brooklyn, but the great bulk are in the West and Northwest. They are admirers of everything musical, and while the manufacturers here have a few Norwegian records, their quality and purity of tone do not approach these original productions, of which we have several hundred selections of all kinds—serious and sacred music, operatic numbers, popular songs and 'talkers.' Yes; it seems to be an excellent opening for these records, not only with Norwegians, but people of all nationalities who are interested in talking machine art, and make collections of every kind of record. They come in cylinder form only."

A silk operator of Paterson, N. J., is reported to be completing an entirely new talking machine—on different lines from the familiar mod-

els of the day—and records of special form and material. The invention has been shown to a few personal friends only, but to no one in the trade, the story runs. The party is so elated over his seeming success that he is piling up wealth (in his mind, of course) so rapidly that the purchase of a steam yacht and a trip to Europe has been decided upon. Should this sanguine inventor wake up suddenly his disappointment might be rather keen, to express it mildly.

A well-known publisher of music who has turned his attention to the talking machine proposition, declares that 60 per cent. of the music published in the next five years—possibly in half that time, he ventures to assert—would be played on mechanical instruments. With a firm belief in the correctness of his prediction he thinks there is a wonderful future in store for the talking machine business. That appears to be an opinion shared by others of prominence and having special information of what is going on behind the scenes. Improvements of a startling nature are enthusiastically discussed, and as they speak by authority the trade may rest assured their talk is something more than undiluted "hot air."

"Dubbing," as the unauthorized duplication of records is termed, may not be practiced openly, but it is a species of robbery that should be "more honored in the breach than the observance." As The World has previously taken pains to make clear, that parties in this line of business know they are appropriating other people's property which has, in many instances, cost the rightful owners large sums of money. To be sure, the only court case dealing with "dubbing" does not go far enough in its restraining provisions. The decision enjoined the duplication of records in which the factory or laboratory number was reproduced. Of course, that can be easily avoided, but it does seem that this questionable business, to give it a mild term of

# LYNN CARRYING CASES AND PEG BOXES

deprecation, could be totally suppressed under the plea of unfair competition, a doctrine which courts of equity have invariably sustained as just and proper. Further, it makes precious little difference in the nature of the offense committed where the "dubs" are sold."

Bandmaster Sousa is still persistent in his abuse of the talking machine, his latest diatribe in Appleton's Magazine, which appears on another page of The World, being absurd, ridiculous and false. John Philip is an impulsive proposition, but caustic criticism devoid of truth has never helped a cause yet, no matter how deserving. Since Mr. Sousa first aired his grievance against the talking machine in the hearings on the proposed revision of the copyright laws before the joint patent committee of the Senate and House in June, in which he declared this wonderful invention was detrimental to voice culture and the sale of musical instruments, the newspapers of the country have commented upon his assertions either sarcastically, in great good humor or according to their intelligence. No one questions Mr. Sousa's pre-eminent position in the musical world, but his averments in the above connection are merely statements, incapable of proof. On the contrary, wherever the talking machine has been introduced the interest in everything musical has increased perceptibly. The beautiful records of the highest cultivated voices in the world have been more than a stimulus. Singing has improved through their influence and the sale of music augmented. That such instruments as the violin, guitar, mandolin, banjo, etc., are falling into innocuous desuetude, Mr. Sousa may learn a few facts to the contrary from the primary handlers of these goods, who have stated, from their own experience, that the talking machine has materially improved their business in these lines. It is useless, as well as profitless, to argue the matter further, when the preponderance of evidence is against the silly asseverations of the world-renowned bandmaster. Should the copyright bill become a law, and record manufacturers be required thereby to pay royalty, then a remarkable change may be expected in the attitude of the famous march composer toward the trade and its products.

Now and then some writer for the daily newspapers will point out how fortunes can be made in desired inventions. This stuff usually emanates from Washington, D. C., and the latest advice on this score follows: "A device that will entirely obliterate the grating mechanical sounds of the talking machine will find a dozen bidders with certified checks waiting to purchase it." This must be so, else this oracle would not have inflicted his wisdom on a suffering world, and inducing inventors to hustle for the golden goal.

It will be remembered that the congratulatory speech to Thomas A. Edison engraved on the solid gold, standard size record, which was pre-

sented by the Edison jobbers last July, was written by William Homan, well-known in Masonic circles, being a thirty-third degree man. At a birthday anniversary reception given by Mr. Homan to a member of his family on August 20, a phonograph was a part of the evening's pleasures, and in describing its performance a guest writes as follows: "Nearly all present were contributors to the evening's entertainment, and the 'gold record' speech of the host was applauded as it rang out clear and firm from the 'mouthpiece' of the twentieth century wonder, the Edison phonograph." This incident calls to mind that in connection with the duplication in the regular material of the gold record, of which each person present at the Edison entertainment was given one with the compliments of the National Co., a trade demand followed at once. That is to say, jobbers in making up their list of selections, ordered the "gold record" also, stating a call was made for it by the dealers. Of course, these orders were not filled, as this record was not intended for public sale, and only for private circulation as a souvenir of a momentous occasion.

A few weeks back Judge Lowell, United States Circuit Court, Boston, Mass., held that a treaty cannot take away the rights of an American citizen in an American patent. In a case in which this decision was rendered the defendants set up the expiration of the British patents which, under a statute, retired the American patents. The complainants contended that an amendment to the treaty between the United States and Great Britain, proclaimed by the President August 5, 1902, nullified this provision, and they were sustained by the court. The point raised is a new one, and has a bearing upon a number of talking machine patents now in litigation.

Once again an effort will be made to have the record manufacturers establish an exchange system. After a long trial the plan was abandoned, chiefly on account of the sharp practices of the dealers, who shipped any old thing any old way, and expected full credit. Other exasperating drawbacks ensued, so that when the scheme was thrown incontinently overboard, the soft answer that turneth away wrath was not on the spot, and therefore it is doubtful whether a revival of this convenient form of disposing of "dead ones" can be accomplished.

Effective missionary work was done quietly at the gathering of the Edison clans in July to have jobbers, as yet not having declared themselves, become interested in the jobbers' association. Many pledges were given of a willingness to come into the fold, and consequently the next meeting may witness an entire change of policy.

F. Ensign Ogden, who was for a long time head of the credit department of the retail branch of the Columbia Phonograph Co., at 872 Broadway, and for the past six months has had charge of their store in New Haven, Conn., has

been voted as one of the five most popular young men in that city, receiving as a reward a free trip to Nova Scotia, offered by the New Haven Register. He left for his excursion last Monday, and will be absent about two weeks. Taking into consideration the short time which he has resided in this city, the fact of his selection speaks louder than words for his ability to win friends, and incidentally customers for the company that he represents.

The talking machine is credited with wonderful things, but until now we had not known of its wonderful powers in the piscatorial domain. The following despatch, however, from Brookfield, Mass., is interesting in this connection:

"Charmed by the sweet notes of 'Keep on the Sunnyside,' played by a graphophone on Lake Quacumquaist, a big pickerel jumped into the horn of the machine. The fish is on exhibition at present in M. J. Donahue's Central street store. The pickerel weighs 35 pounds and is 15 inches long."

In view of the foregoing, it is clear that fishermen would do well to take along with them on their "outing" a talking machine and some records. A variety of the latter would, of course, be necessary, for fish, like human beings, have varied tastes, and instead of jumping into the horn they may be tempted to jump on the man who might play rag time for instance.

### A HANDSOME PHILADELPHIA STORE.

(Special to The Talking Machine World.)

Philadelphia, Pa., September 11, 1906

One of the handsomest talking machine stores not only in this city but in the East, is that of the Musical Echo Co., at 1217 Chestnut street, this city. In fitting up their new quarters the company have expended nearly \$20,000. A very excellent view of the Chestnut street front of

their salesrooms appears herewith. The Saturday classical concerts, which are a feature of this establishment, are attracting a most fashionable class of Philadelphians, and the aristocratic furnishings of the rooms appeal to those aesthetically inclined.

## A Record Rack That Stands High in Favor— "2-C."

OUR "2-C" Record Rack is needed in departments carrying a wide variety of Disc Records. While it is only 39 x 42 inches in size, it will hold upwards of 800 Records, and by placing these in numerical order you can save a heap of time in selling as well as in stock-keeping.

Made of heavy, strong wire, plated and lacquered, attractive in appearance and practical. Holds records from 7 to 11 inches in size, is smoothly finished and will not damage records in inserting or withdrawing. \$8.00—less than 1 cent a record for space used.

**SYRACUSE WIRE WORKS,** 315 EAST WATER ST., SYRACUSE, N. Y.

## NEW VICTOR SPECIALTIES.

The Victor Victrola, the Latest Victor Machine, Has No Horn—Will Retail for \$200—The Victor Auxetophone Being Exhibited.

The Victor Victrola, which the Victor Talking Machine Co., Camden, N. J., have now ready for the trade of this country, is a combination of machine and record cabinet, minus the horn. Every mechanical part is concealed when not in actual use. The sound-box is attached to the tone arm in connection with the regulation turn-table, and is placed in the upper compartment of the cabinet, inclosed with a lid. As the descriptive circular to the public says: "There is no horn, the instrument is complete in itself. \* \* \* Open the doors of the cabinet and the melody pours forth. We have simply reversed the ordinary position. We lead the sound down from the sound box above the record through the sound tubes to a mahogany horn below rather than the horn above, and modify the volume by closing and opening, more or less, these doors. When the lid is closed down it shuts all sound of operation. The mechanical parts are a winding attachment, lid brace, tapering arm with sound box, speed regulating device, brake and knob gold-plated. The dimensions are: Height, 4 feet; width, 20 inches; depth, 22 inches. The Victor Co. speak of the Victor Victrola as "a musically artistic surprise," and the cost of which is \$200.

Another addition to the Victor line, and which is now being shipped to leading jobbers is the Victor auxetophone, which was first publicly exhibited at the annual conventions of the Piano Manufacturers and Dealers in Washington, D. C., in May. It is electrically controlled, and its adjustment is specific as to current, voltage, etc. The auxetophone is a machine noted for its tremendous volume of sound. The price is \$500.

## DOUGLAS PHONOGRAPH CO. BRING SUIT.

(Special to The Talking Machine World.)

Trenton, N. J., Aug. 31, 1906.

The Douglas Phonograph Co., of New York City, have begun suit in the United States Circuit Court here for \$100,000 against the Victor Talking Machine Co., of Camden, on contract. The New York firm say the Camden concern broke a contract to sell supplies to the

suit growing out of the company's refusal to sign the contract of the Victor Co. that went into effect July 1 unless modifications were made.

## TALKING MACHINE CASES IN COURT.

New York Phonograph Co. Up Against It Again—Duplex Record Suit Argued.

Another move was made in that now celebrated case of the New York Phonograph Co. against the National Phonograph Co., August 30, before Judge Jaycox in the Supreme Court, department 2, in Brooklyn, N. Y. Counsellor Hyman argued a motion for the complainants to have a commissioner appointed to examine the defendants, and to restrain 250 jobbers and dealers in the State of New York from handling Edison goods. The court reserved decision, but on September 10 Judge Jaycox denied the motion, in a brief memorandum, giving the complainants the privilege of renewing it if the proper procedure were followed.

Practically the same issues were thrashed out before Justice Keogh, in another branch of the court in June, when an application for an injunction, pending trial, was denied. On the motion calendar of the United States Circuit Court, Judge Lacombe sitting, among the adjourned cases was that of the New York Phonograph Co. against the National Phonograph Co. The latter company, on inquiry by The Review, stated they knew nothing whatever of the matter.

## DUPLEX RECORD ARGUED.

The suit of A. S. Petit against the American Graphophone Co. on the duplex record patent, which was called August 30 on the adjourned cases of the motion calendar of the United States Circuit Court, New York, was adjourned to September 13, when argument was heard decision being reserved.

Leon F. Douglass, vice-president of the Victor Talking Machine Co., Camden, N. J., who has been at Atlantic City, N. J., for the entire summer, with his family, has gone to California, where he will probably remain presumably on account of his health. Elbridge R. Johnson, president of the company, who has been abroad for several months, is expected back about October 1, possibly sooner.

T. P. Clancey, manager of the talking machine department of the Conroy Co., St. Louis, Mo., is

spoken of by the traveling men as one of the cracks of the business.

Thomas C. Hough, who jobs the Edison and Zonophone lines, with stores in Minneapolis and St. Paul, Minn., describes himself as the "automobile talking machine man." His goods are always delivered by a model motor car, in which he has traveled over the State and adjoining territory, drumming up business. Being a jovial party, of unusual physique, he makes friends and takes orders with neatness and dispatch.

S. A. Marks, who manages the talking machine department of John A. Smyth, the great mail order house of Chicago, sells a few million records in the course of a year.

## New Phonograph Record Cabinet

WITH EXTENSIBLE HORN HOLDER (Patented)

Quartered Oak.  
Opens Automatically.

## PRACTICAL SUGGESTIONS AND COMMENTS.

## RECORDS OF PIANO MUSIC.

D. S. Miller, of Mexico City, Mexico, writes The World to know if he cannot secure some good records of piano solos by well-known artists. As far as we know none of the companies has listed piano solos. There have been a number of inquiries for them, but it is not an easy matter to control the over tones in piano playing and to get a real effective record. Experiments in this field are being made by several companies, but the results thus far are not sufficiently satisfactory to permit the records being listed. In time, however, we feel confident that the wonderful skill of our acousticians and laboratory experts will insure a perfect record of a piano solo. The wonderful advance made in the perfection of talking machine records during the past ten years leads us to this conclusion.

## REVOLVING RECORD RACK.

A gentleman in a Northwestern city, who has just made his debut as a talking machine dealer, writes to know if there is a revolving cylinder record rack on the market. We may say that a very excellent rack of this character is made by the Syracuse Wire Works, of Syracuse, N. Y. It will hold a thousand cylinder records, and can be easily moved. It occupies but little space, being only 33 inches square. It hangs on ball-bearing cones, and can be easily turned so as to show and secure any key number instantly. It is compact, cleanly and convenient, and will be found most valuable where wall space is not plentiful. It is now in use by all the progressive talking machine dealers.

## RECORDING THROUGH THE TELEPHONE.

Hine Smith, of Sparta, Mich., in a communication to the "New Phonogram," says that records can be made by the aid of a telephone. His plan of operation is as follows: First, get your machine ready as usual; then get a rubber the

same as used for horn connections, about one inch in length, and put it on your machine instead of a horn. Take the telephone receiver, place it against the end of the rubber on the machine so that the rubber covers the hole in the receiver. Then start your phonograph and begin to sing or play close to the transmitter of the telephone. If your telephone is in good condition you can make a good loud record without the blasting sounds.

## A SCRATCHLESS RECORD.

A practical record maker has been making a number of experiments on substances that would produce a record that was practically scratchless, and has so far succeeded that he has a formula that has produced a record that contains absolutely no grit or clay on its surface. It is made of two compositions, the first being used as a backing, and is far less liable to warp than the present record. The surface has for its body a finely pulverized soapstone mixed with shellac and other ingredients to give it the requisite hardness. The claims for the new composition are that it will not wear out the needles, it will not scratch and that it will produce a better sounding record, particularly for soprano voices. It will wear as well as the composition now in use, and costs practically the same. He has also found that a combination of fuller's earth and graphite will produce a scratchless record, but not as durable as the other, although somewhat cheaper. He said to The World: "It is the record and not the needle that scratches. The grit in the present record acts like emery on the needle, and if a record that has been used a few times is examined under a strong magnifying glass, the interior of the grooves will show a very perceptible roughness, which increases with use. My formula is not patented, and any of the record makers who wish to experiment with it are at liberty to do so, as I am anxious, from a profes-

sional standpoint, to see a perfect record put on the market. Roughly speaking, the formula is as follows: Pipe clay and precipitate of chalk, equal parts; soapstone, equal in bulk to the two. The usual shellac formula. The pipe clay should be the finest obtainable. The records I have made by this formula have been perfect so far as reproductive qualities are concerned."

## MAKING EDISON RECORDS LONGER.

A correspondent of the "New Phonogram" asks why the Edison records are not made a half-inch longer so as to play one more verse and has been answered by the editor of that interesting publication as follows: "If records could be made of a material that would not expand or contract with the changes in the temperature, and they could all be made with precisely the same bore, then it might be possible to make them a half-inch longer. Even then it would be necessary to scrap special machinery, etc., worth hundreds of thousands of dollars, and spend an equal or larger amount in new machinery. Up to the present time we have not been able to find a record-making composition that is not affected by the temperature, nor can we yet make records that will not vary slightly in the diameter of the bore. The extra space that to the uninitiated seems so available for more verses is, therefore, absolutely necessary to allow for temperature changes and variation in the bore. The blank space at each end of a record, which numerous correspondents have thought could be utilized for additional words or music, is also a manufacturing necessity."

## SUBSTITUTE FOR BRUSHING RECORDS.

Hanson E. Hall writes as follows to the same publication concerning a substitute for brushing each record before using. He says: "I selected one of the boxes in which the cotton was very soft, and one into which the records would slip easily. As I take the record from the cabinet to play it, I slip the same into the cotton lined box and immediately draw it out again to place on the mandrel. The effect is that all dust or dirt has been removed from the face of the rec-

Fibre

## Nickels grow to dollars.

Do you know how much nickels that keep on growing amount to? Perhaps you do.

But do you know how easily people will put nickels into a slot to hear good music like that of the

## Regal Automatic Piano

and what a goodly sum those nickels amount to in a week? Perhaps you do.

But here's another point. It isn't only what the Regal Player *takes* in; but what it *brings* in — The extra nickels, dimes and dollars that people are sure to spend while they stay in the place to listen to the music. That's what counts.

Do you know the value of the Regal Agency to you?

Have you thought the subject over?

The Agency for the Regal will make you good money. You can easily handle Players with Talking Machines.

If not, it would pay you to think of it right now.

Many wise men are making money by having the Regal Automatic Piano to take in and bring in money for them every day. We believe if you knew how much profit there is in it, you would want one too.

### Genuine.

It is a genuine piano-player; gives the finest kind of music, loud or soft; every selection you want—popular or classic. Requires no attention; looks after itself, so to speak. Runs by pneumatic power, pumped by a small electric motor, which we supply to suit every kind of electric current.

### The very best.

It is the most musical, simplest, strongest, longest-wearing, and in every way the most satisfactory and profitable instrument ever made for supplying music to the music-loving public.

And it is a beautiful ornament anywhere you put it, and it blends perfectly with the talking machine business.

Why not make some money out of it yourself by selling it?

The Regal Player

# The Regal Piano and Player Company

890 Southern Boulevard

NEW YORK, N. Y.

ord, which is then perfectly clean. The method is very simple and the very best effect attained. I have used the same box at least three weeks, and it is just as good as when I commenced to use it, so that one box will last a long time before the cotton will wear off, and the records will be kept very clean."

#### INQUIRIES ABOUT COLLAPSIBLE HORNS.

A newcomer in a Western city in forwarding his subscription to *The World*, which, by the way, he highly compliments after investigating his first copy, inquires about a collapsible horn, and says: "In traveling the most inconvenient adjunct of the talking machine is the horn, particularly when so many people nowadays take both machines and horns to the country. Of course the horn should be really collapsible, and should firmly lock when opened up. Is one now being made, and by whom?"

In answer to our friend we may say that the New Jersey Sheet Metal Co., of Newark, N. J., are now placing on the market a collapsible horn, which is very highly praised. It occupies but very little space in the case, and can be locked for use or unlocked in a short space of time. It does not interfere with the transmission of sound waves, as the interior of the horn is absolutely smooth. An illustration of the horn appears elsewhere in this paper, and we suggest writing the company for further details.

#### WALTER H. MILLER THANKED

By the Committee of Talking Machine Men for His Skill in Turning Out the Pure Gold Record Presented Thomas A. Edison—Mr. Miller, However, Gives Credit to Mr. Wurth.

That the making or casting of the solid gold record presented Thomas A. Edison by the jobbers of the United States and Canada was no small undertaking everybody familiar with the facts knows. It was the first record of its kind ever moulded in the history of the business, and the work required skilful and delicate handling from the beginning to the completion. The greater credit for this unique production has been awarded Walter M. Miller, manager of the National Phonograph Co.'s recording department; but Mr. Miller insists that for the delicate electro-plating operation greater praise is due A. Wurth, a laboratory expert at the works in Orange, N. J., the secretary of the Muckers' Club, composed of the Edison experimental corps, who brought to bear on the process his great and exact knowledge in that line gained here and in Europe. The success achieved has been cause for congratulation among those concerned mechanically, and as Mr. Miller said to *The World* there was enough glory for everybody, no matter how much or little he contributed to the ultimate result.

Something of this spirit animated the Edison Phonograph Jobbers' Testimonial Committee when they formally congratulated Mr. Miller, under date of August 15, in the following letter: "We, the undersigned committee, representing the Edison Phonograph Jobbers of the United States and Canada, hereby formally thank you for the services rendered us in connection with the pure gold record presented Thomas A. Edison. We fully understand the difficulties you must have encountered in manufacturing this record, and appreciate that your interest and skill alone made it possible for us to consummate our ideas in this respect." The committee were: E. F. Taft, president Eastern Talking Machine Co., Boston, Mass.; W. D. Andrews Syracuse; P. A. Powers, Buffalo, N. Y.; L. E. McGreal, of McGreal Bros., Grand Rapids, Mich.; C. V. Henkel, president Douglas Phonograph Co., New York City.

#### ONE OF SALTER'S RECORD CABINETS.

The accompanying illustration shows No. 727, one of the latest styles of record cabinets placed on the market by the Salter Manufacturing Co., 102-108 North Oakley avenue, Chicago. This cabinet is 32 inches high, with top 17½ by 15.

It contains four trays, each fitted with 25 hard maple pegs, a total of one hundred. These pegs are hollowed out on the inside, making them very light and preventing cracking. As will be seen by the cut the trays slide out for convenience in handling the records. When the door is closed the drawers are entirely hid from view. The door is fitted with a good lock and key. The cabinets are made from selected quarter sawed oak front and top, and highly finished in any color desired.

The company now have a new catalogue in

press illustrating and describing fourteen different styles of disc and cylinder record cabinets. It will be mailed on application. The Salter Manufacturing Co. have been manufacturing music cabinets for the past thirty years, and talking machine record cabinets for the past three years. Visitors to Chicago are cordially invited to visit their big factory on Oakley avenue, which is only a block from the Oakley avenue station of the Lake Street Elevated, fifteen minutes' ride from the loop district.

#### TRADE NOTES FROM BOSTON.

The Most Important Happenings of the Month Interestingly Set Forth by The World Correspondent.

(Special to The Talking Machine World.)

Boston, Mass., Sept. 9, 1906.

There are happy men among the Boston talking machine trade, for business is not only good but there are prospects of a booming fall trade.

Since Labor Day there has been a marked increase in the amount of business done, both wholesale and retail, and it is still increasing. There is a marked increase, also, in the demand for higher priced machines, and those dealers who handle the new Victrola report a big demand for them—a demand that means the exchange of high-priced instruments purchased some time ago by customers who want the best at any price.

The new Victor Victrola promises to make a marked impression among the high-class Boston trade. Its simple exterior, with all the working parts of the talking machine covered up, and the wonderful sweetness of the tone takes mightily with the wealthy musical public.

Improvements are in order at the Winchell Co. The sheet music department has been changed around, new racks put in, and everything is now spick and span. T. N. Mason, the Winchell traveler, has just returned from a very successful trip through northern New England.

Among the visitors to Boston this month were Mr. Hawthorne, of the Hawthorne-Sheble Co.; Mr. Keene, of the Philadelphia Talking Machine Co., and Mr. Silverstein, of the Ideal Fastener Co.

At the wholesale rooms of M. Steinert & Sons business is more than good. A great run is reported on the Victrola and on the new wrapper record envelopes which Manager Cornell has invented. Over a third of the cost of wrapping paper is saved by these envelopes. A new record shipping box, made of strawboard, is also a feature of the business of this store. It costs less than a wooden box, takes up less room, and the records are sure not to get broken in shipping.

Charles G. Andrews, manager of the Boston Cycle & Sundry Co., returned this week from a business trip to Maine, much pleased both with the amount of business now being done and with the outlook for fall and winter trade. He reports the receipt of a fine lot of Searchlight horns.

At the Eastern Talking Machine Co. the cellar has recently been enlarged, giving much more room for storage, which was sadly needed. A. W. Chamberlain, wholesale manager, has just returned from a vacation spent at New Found Lake, N. H. He reports a big demand for the Edison machines and for the Victrola, but declares that he cannot get half enough from the factories.

"Wonderland," the newest song, rivalling "Dreamland," is a big seller at the Columbia Phonograph Co., this month. A fine demand is reported here in the medium grade machines.

At the Oliver Ditson Co., manager Winkelman says that the demand for Victor goods is enormous. He reports a great demand for 10 and 12-inch records, and for the new Victrola.

T. F. MURRAY'S INTERESTING TRIP.

He Discourses on Trade Conditions in Cuba and Mexico—The Present Revolt Unsettles Business in Cuba.

T. F. Murray, the foreign and domestic ambassador of the Columbia Phonograph Co., General, recently returned from an extended trip from Cuba and Mexico, and his observations on the general conditions existing in those countries are of great interest to the trade at large.

"The talking machine field in Cuba," said Mr. Murray, "promises to develop into splendid proportions, provided there are not too many revolutions. The present squabble is hurting business, as the conditions of the country are naturally unsettled. Trade with the interior provinces is damaged to a large degree, and for talk-

ing machine dealers to reap the full benefit of their labors, they must of necessity be in touch with all outlying districts. I noticed a great many foreign records being offered, and so far as the grade was concerned, they equaled the best put out in this country, most of the singers being stars at the La Scala Opera at Milan. The material and finish of these records, however, was far inferior to the cheapest put out here. Our Spanish records have made a big hit in Cuba, and our dealers there are ordering big supplies. The same is true of all makes of the Columbia machines. They are the prime favorites among all classes, and when the political conditions become settled, we anticipate a greatly increased output. The Cubans prefer an American product, all things being equal, but they want that product made to suit them.

"In Mexico there is a distinct gain in the talking machine business, and I look upon the outlook as being very bright. Our representative in that country is doing all we could ask, and the natives are delighted with our records in Spanish. In Mexico, as well as in all other Spanish-American countries, the natives exhibit decided preferences as to styles and kinds of music, and it is useless for the producer to attempt to educate them in a hurry; all that can be done is to cater to their wants."

HORACE SHEBLE OPTIMISTIC

Regarding Conditions in the Talking Machine Trade—Activity in the Summer with the Hawthorne & Sheble Mfg. Co. Unprecedented—Have Increased Resources to Meet All Demands the Coming Fall.

(Special to The Talking Machine World.)  
Philadelphia, Pa., Sept. 9, 1906.

Mr. Sheble, of the Hawthorne & Sheble Mfg. Co., in a recent interview as to the trade conditions in the Talking Machine line, is certainly very optimistic, and justly so, considering his opportunity to view conditions from the standpoint of a manufacturer. He states: We have been manufacturing talking machine supplies for a great many years, and, in fact, I believe we were the first ones to manufacture a line of horns for talking machines. In the old days the jobber who placed orders for one hundred horns was the exception, while to-day, even the smallest jobber exceeds this quantity many times over. It has been our custom in years past to run our factory on three-quarter time during the summer season, and to lay off about 25 per cent. of our help. This year we have been running three factories full time with all

the help we can put to work, and we are still back on orders. Our confidence in the stability of the talking machine business is unbounded. We are making every preparation for an exceptionally large season's business, and we predict from our outlook that this year's business in the talking machine line will be by far the largest ever recorded.

LORING LEEDS STARTS WEST.

Representative of Leeds & Catlin to Close Several Important Deals—Firm Issues New Opera Catalogue.

Loring Leeds, of Leeds & Catlin Co., started Monday (Labor Day) for a trip West, and may go as far as Denver. He has several important deals in Chicago to close.

The company last week issued the first descriptive catalogue of their "Imperial Grand Opera and Black Label Records," about twenty-five in number. They are 10-inch size, and were recorded in Europe. The book is a neat product of the printer's art, with green, gold and crimson cover.

W. A. Mullen and B. Feinberg, formerly with the Universal Talking Machine Manufacturing Co., have become associated with the Leeds & Catlin Co., the former traveling East and the latter West. Both are now on their respective territories exploiting "Imperial" records.

SEARCHLIGHT HORN ABROAD.

Exclusive selling agencies have been established in Australia and Mexico for the product of the Searchlight Horn Co., of New York. In making the deal a large initial order for Searchlight horns was placed for both countries. The company has made one of the most phenomenal successes ever known in the trade; that is, for the brief time they have been known.

B. R. Barklow, former manager of the Bettini Phonograph Co., is now attached to the sales department of the National Phonograph Co., with headquarters in New York. The gentleman, while comparatively new in the talking machine trade, has had a wide and varied business experience, at one time being attached to the United States Consular service in an expert capacity.

C. H. Wilson, general sales manager of the National Phonograph Co., who has been on a fortnight's vacation on his farm near Saratoga, N. Y., returned to business last Tuesday.

Cleapol Waterproof Metal Polish

IMPARTS A LASTING LUSTRE to all metals; will remove all Tarnish, Spots, Fly Specks, etc. Will not injure the hands; contains no acid.

NOTE.—All horns, etc., treated once with this polish can be kept in perfect condition always by using the **CLEAPOL CHAMOIS SKIN.**  
¶ Special discount now being given to jobbers and dealers.  
¶ Write for Samples and price lists.

THE CLEAPOL COMPANY  
288 Springfield Ave. NEWARK, N. J.

# Do You Want to Make Money, Mr. Talking Machine Dealer?

Good, big money. The men who sent in an order for a sample line of our instruments were delighted with the results.

They found our instruments blended perfectly with the talking machine line, besides helping to make the store attractive. If you want to help out in the profits during the holiday season you can't go at it in a better way than with our specialties; your musical friends will come to you when they learn that you have the Durro violins, bows, strings, etc. They have a high standing.

We are judges of the excellence of all kinds of small goods, such as Accordeons, Mandolins, Guitars and Harmonicas, and carry a large stock, of which we offer at lesser prices, but which are superior to any on the market at the same price.

It will pay you to order a sample line at once. You will then see how profitable it is to devote a portion of your store to the exhibition and sale of small goods. Write for catalogue.

Make good money for the new year. It is easy with our help. We can tell you how and go with the business tide when it serves.

### TALKERS AT STATE FAIR.

Formed Quite an Attractive Feature at the West Virginia State Fair—Tyler to Open in Parkersburg—Bard Bros. New Quarters Handsomely Equipped—Other News of Interest from Noted Southern Point.

(Special to The Talking Machine World.)

Wheeling, W. Va., Sept. 6, 1906.

Business during the past month has been typical of midsummer dullness. At this writing all the dealers are in the midst of preparations being made for the West Virginia State Fair, which is an annual occurrence. Bard Bros., the exclusive talking machine people, are arranging for a big display which will occupy a prominent space in the building. They say they will spring a number of brand new advertising stunts on the public during the week. The first of the month they moved their stock of Victor machines and records from their Market street store to their new store on Main street, where they have made extensive alterations and improvements during the past month. The entire first floor of their new building will be devoted to the sale of cylinder machines and records, talking machine supplies of every description and sheet music. The second floor is arranged for the disc goods, in the rear stockrooms and repair shop. They have been doing business all the while the improvements were under way, but as soon as everything is finished they will have a grand opening, inviting the public to come and inspect the conveniences installed for their benefit.

The F. W. Baumer Co. will be one of the large exhibitors at the Fair, this they have been doing for years, finding that it is one of their best advertising methods.

The various houses handling talking machines are making great preparations for business this Fall and Winter, stocking up in a manner unthought of prior to this time.

R. W. Tyler, who has been connected with C. A. House for a number of years, has resigned his position, having made arrangements to open an exclusive talking machine store in the second largest city of this State, Parkersburg. Mr. Tyler is receiving many expressions of good wishes from the host of friends made during the eight years residence in this city.

Miss Martha E. Sunman, who for years had charge of the sheet music department of the Hoebl & Gieseler Piano Co. and more recently with Bard Bros., intends to leave this city about the fifteenth of the present month. She will go to Denver, Col., where her near relatives have been living for several years. As Miss Sunman is a pianist of more than ordinary ability and thoroughly familiar with the many details of the sheet music business, it is probable that she will not remain idle for any length of time.

### A NEW LINE OF FLOWER HORNS.

The Hawthorne & Sheble Mfg. Co., of Philadelphia, Pa., are just placing on the market a new line of Flower horns which they designate as Artistic Flower Horns. These horns are bound to create a sensation on account of their very attractive appearance. They are constructed on the best approved acoustic lines, and their brilliant and rich coloring is bound to bring them into prominence at once. The horns are being made in the general styles, namely, Nickel Plated and Polished Outside, Brass Polished outside and Silk Finish outside, although the variety and style of the interior decoration is very extensive. The colors employed in the interior decoration are warm rich tones, producing an effect that is most pleasing to the eye. They report very extensive orders from jobbers who have seen the line.

The new Compartment Needle Box, which has been recently placed on the market by Hawthorne & Sheble Mfg. Co., is meeting with a phenomenal sale. Evidently the public appreciate the advantage of having a neat and attractive way of providing for several different style needles.

## It pays to have a good jobber

It doesn't cost you any more to deal with a jobber who is prompt and business-like than with one who is slovenly in his methods, and it is sure to pay you better.

The jobber who doesn't fill your orders promptly and keeps you waiting for your goods makes you hold up your customers, and puts you in constant danger of losing their trade.

A good live jobber understands that his interests are best served by looking after the dealers' interests, just as wide-awake dealers know that the way to build up a solid and profitable business is to take proper care of their customers.

That is why we are so prompt and ship all goods the same day the orders are received, and our bid for your trade is based on this service.

You can get from us whatever you need in trumpet horns, English needles, fibre cases and other accessories as well as Victor talking machines and records. You can be absolutely sure that the order will receive immediate attention. You can figure out just when the goods will reach you.

Think what a lot of worry this saves you, what an advantage it gives you over other dealers and how much good will it brings you.

Remember us on future orders. Try us on a rush order that is in the biggest kind of a hurry and you won't be disappointed.

Better write to-day for our latest catalogue

## LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS.

(Specially prepared for The Talking Machine World.)

Washington, D. C., September 8, 1906.

**REPRODUCER FOR GRAPHOPHONES.** Harvey R. Brocius, Summerville, Pa., assignor of one-half to James A. Haven, same place. Patent No. 828,836.

This invention relates to reproducers or sound boxes for graphophones particularly adapted for use on hard mold cylinder records, such as the Edison or Columbia.

The invention consists of the details of construction and combination of parts hereinafter

described, and more particularly pointed out in the claims.

In the accompanying drawings, illustrating the preferred embodiment of the invention, Fig. 1 is a side view. Fig. 2 is a plan view looking at the diaphragm. Fig. 3 is an enlarged sectional view on line x x of Fig. 2. Fig. 4 is an enlarged broken sectional view on line y y of Fig. 2, showing the manner in which the sounder arm engages the stud or pin secured to the diaphragm; and Fig. 5 is an enlarged view of the sapphire point.

**PROCESS FOR PRODUCING FLAT MOLDED SOUND RECORDS.** William H. Hoyt, Wyoming, N. J. Patent No. 828,604.

This invention relates to the manufacture of molded disc records, such as are used for some talking machines.

The object of this invention is to provide an improved process of producing such records,

whereby they will be given great strength and durability.

In the accompanying drawing there is illustrated an apparatus such as may be used in producing a talking machine record according to the invention, Fig. 1 being a sectional elevation of such apparatus with the record in process of formation, and Fig. 2 is a cross-section of the completed article.

**REPEATING ATTACHMENT FOR PHONOGRAPHS.** Earl L. Crabb, Indianapolis, Ind. Patent No. 828,598.

This invention relates to the class of phonographs that are inclosed in cabinets and coin-controlled; and the invention has particular reference to attachments that are adapted to be connected either permanently or detachably to well-known types of phonographs that are not originally constructed as repeating machines and not coin-controlled, the attachments when applied to such machines enabling them to repeat the records that may be on their mandrels and rendering the machines capable of being coin controlled.

Objects of the invention are to provide improved and simple attachments for phonographs and similar instruments and adapted to be constructed at relatively small expense for converting simple phonographs into coin-controlled repeating instruments, which attachments may be adapted to be readily removed from the instruments.

The invention consists in a phonograph attachment comprising brake-operating mechanism

for stopping the instrument at the end of the record and improved mechanism adapted to be put in motion by coins for restarting the instrument, so as to repeat the record, the attachment being designed to co-operate with phonographs that have reproducer arms movable on guides and carrying movable devices that may be interposed between the guides and the reproducer arms for holding the reproducers away from the records.

The invention consists further in the novel parts and in the novel combinations and arrangement of parts, as hereinafter particularly described, and pointed out in the appended claims.

Referring to the drawings, Fig. 1 is a front elevation of a phonograph having the improvement applied thereto and arranged in a cabinet, shown in section, of which parts are broken away; Fig. 2, a top plan of the machine and the improvement, the cabinet being shown in section on a plane above the phonograph; Fig. 3, a transverse sectional view on the line A A in Fig. 2, showing the parts of the instrument in proper position to operate; Fig. 4, a fragmentary

top plan view showing the reproducer near the end of its travel; Fig. 5, a transverse sectional view similar to Fig. 3, except that the reproducer is elevated, as when returning to repeat. Fig. 6, a fragmentary top plan view showing the reproducer at the end of its travel, as when locked at rest ready to be released to return;

Fig. 7, a fragmentary enlarged detail view showing parts seen in Fig. 1; Fig. 8, an elevation of the devices that co-operate to release and elevate the reproducer, so that it may return for repeating, and Fig. 9, a perspective view of the part that causes the reproducer to be replaced into contact with the record for repeating at the beginning of its travel.

**SOUND BOX FOR TALKING MACHINES.** John C. English, Camden, N. J., assignor to Victor Talking Machine Co., same place. Patent No. 828,602.

In the reproduction of sound from talking machine records, either of the type having vertical undulations in the record groove or of the type having horizontal undulations in the record groove, it is well known that the diaphragm of the sound-box or reproducer vibrates in parts, and the center of the diaphragm being farther from the points which are confined in the casing of the sound box responds more readily to the

vibrations of the stylus bar than at the portions adjacent the outer edge of the same. Vibrations which are of high frequency and which are not exactly sinusoidal or harmonic in form more readily act upon the center of the diaphragm than upon the outer portions thereof, which respond more readily to the vibrations of less frequency. The vibrations which are not true harmonic or sinusoidal curves are those caused by the inaccurate action of the stylus bar, due to frictional contact with the bottom of the sound groove or the sides thereof, and the sound reproduced is very much improved if these undesirable vibrations can be eliminated.

The object, therefore, of the invention is to

GENERAL SUPPLIES FOR ALL TALKING MACHINES.

**EDISONIA CO., NEWARK, N. J.** COR. NEW and HALSEY STS.

provide such a construction in connection with the diaphragm of a sound box as to overcome these objections.

A further object of the invention is to provide such a construction in the stylus bar of the sound box and the fulcrum pivot thereof that the parts will be made more efficient in action, simple in construction, and more durable in their wearing qualities.

For a full, clear and exact description of one embodiment of this invention reference may be had to the following specification and to the accompanying drawings, forming a part thereof, in which—

Fig. 1 is a central longitudinal sectional view of a sound box, showing the improvements applied thereto. Fig. 2 is a similar view to Fig. 1, but showing the diaphragm and stylus bar separated from the sound box. Fig. 3 is a plan view of the diaphragm casing, showing the manner of pivoting the stylus bar thereto, part of the casing being broken away; and Fig. 4 is an elevation of a stylus bar separated from the sound box, parts thereof being shown in section.

**SOUND BOX FOR TALKING MACHINES.** Eldridge R. Johnson, Marion, Pa., assignor to Victor Talking Machine Co., Camden, N. J. Patent No. 828,551.

In the reproduction of sound from talking machine records, either of the type having vertical

undulations in the record grooves or of the type having horizontal undulations in the said groove, it is well known that many sounds are reproduced which are due to imperfections in the construction and disposition of the

parts of the talking machine. One of the most serious of these undesirable sounds has been found to be due to the comparatively stiff and short connection hitherto employed between the end of the stylus bar and the diaphragm. This connection tends to oscillate about the center of the oscillation of the stylus bar, and therefore delivers the vibrations to the diaphragm at constantly varying angles to the plane of the diaphragm, dependent upon the position of the position of the stylus bar at any particular moment.

The object of the invention is to provide a construction in which a long and flexible connection may be used between the end of the stylus bar and the diaphragm, so that the angle which said connection subtends as the stylus bar oscillates will be greatly reduced, and that the connection will bend or be flexible to transmit the vibrations in a direction substantially perpendicular

to the diaphragm irrespective of the position of the stylus bar in its oscillation about its fulcrum.

A further object of the invention is to provide a construction in which such long and flexible connection may be applied to sound boxes constructed and arranged in the ordinary manner.

For a full, clear and exact description of one embodiment of the invention reference may be had to the following specification and to the accompanying drawings, forming a part thereof, in which—

Fig. 1 is a central longitudinal sectional view of a sound box embodying my improvement, and there is also a similar view showing the diaphragm and stylus bar separated from the sound box.

Referring to the drawings, the numeral 1 indicates the tubular portion of the sound box casing, which is adapted to be connected with the sound-conveying means or amplifying horn, and 2 the outer cylindrical part of the casing thereof. The tubular portion 1 terminates in a disc-shaped portion 3, between which and the end of the cylindrical casing 2 the diaphragm 4 is retained, suitable gaskets 5 being inserted between said diaphragm and the adjacent portions of the casing.

**PHONOGRAPH HORN.** Walter S. Fernan, New York, N. Y. Patent No. 829,066.

This invention relates to the delivery horns of phonographs and other machines of this class; and the object thereof is to provide a delivery horn for machines of the class specified which will do away with the mechanical, harsh and metallic sounds usually produced in the operation of such machines and also produce a full, even and continuous volume of sound in which the articulation is clear, full and distinct, a further object being to provide a horn of the class specified which is made entirely of wood or other fibrous material, and with these and other objects in view the invention consists in a horn of the class specified constructed as hereinafter described and claimed.

The invention is fully disclosed in the following specification, of which the accompanying drawings form a part, in which the separate parts of the improvement are designated by suitable reference characters in each of the views, and in which—

Fig. 1 is a side view, partly in section, of an improved delivery horn for phonographs and similar machines, and Fig. 2 a transverse section of the horn on the line 2 2 of Fig. 1.

In the practice of this invention is provided a delivery horn a for phonographs and other

talking machines or music reproducing machines provided at its smaller end with the usual nozzle piece b, by means of which connection is made with the machine in the usual manner, and in the form of construction shown a supplemental horn piece c is employed between the body portion of the horn and the nozzle piece b and in which the nozzle piece b is secured, the supplemental piece serving as means for connecting the body portion of the horn with the

nozzle piece, and the smaller end of the horn is also provided with a shield or covering d, which extends, in the form of construction shown, from the smaller end of the piece c a predetermined distance along the smaller end of the horn and serves as a reinforcement therefor.

The body portion of the horn is composed of a plurality of longitudinal ribs e, separated by tapering spaces which gradually widen from the smaller end to the larger end of the horn, and these spaces are filled in with web members f, composed of a plurality of layers of wood or other fibrous material secured together, and the edges of the said web members fit in grooves e2, formed in the opposite sides of the rib members e. In the form of construction shown the web members f are composed of three separate layers of material; but it will be apparent that other numbers of layers of material may be employed, and the said layers of material are in practice, if more than one layer be employed, secured together before the said web members are secured in place between the ribs e.

All the parts of the improved horn, including the nozzle piece b, the short tube member c, and the shield or covering d, are composed of wood or other fibrous material, and the invention is not limited to the use of the part c; but is preferred, as it forms a reinforcement and strengthening device for the smaller end of the horn.

A horn made in this manner will not produce the harsh metallic and other objectionable sounds usually produced by the delivery horns of instruments or machines of the class specified, and changes in and modifications of the construction described may be made without departing from the spirit of the invention or sacrificing its advantages.

**REVERSING GEAR FOR PHONOGRAPHS.** Arthur W. Cole, West Hoboken, N. J., assignor of one-half to Jacob Valensi, New York, N. Y. Patent No. 829,195.

This invention relates to means for reversing the diaphragm carriages of phonographs, and it

consists of electric carriage retracting apparatus and automatic circuit closing and breaking devices, whereby instantaneous return of the carriage is effected with economy of time, as compared with the common return screw device, as hereinafter described, reference being made to the accompanying drawings, in which—

Fig. 1 is a front elevation of an improved carriage reversing device with some parts of the contact devices in vertical section and with dotted lines indicating some parts of the phonograph base. Fig. 2 is a plan view with some parts of the phonograph in dotted lines and with part of the speaker-carrying arm of the phonograph in full lines. Fig. 3 is an end elevation of the reversing apparatus with a part of the contact apparatus in vertical section and with an end view of the phonograph slideway for the speaker carrying arm.

FRICTIONAL REPRODUCING ATTACHMENT FOR PHONOGRAPHS. Alexander N. Pierman, Newark, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 829,123.

This invention relates to reproducing attachments for phonographs of the type wherein a friction wheel is positively driven, and by a frictional connection between said wheel and the diaphragm the latter is put under stress, so that by providing suitable mechanism operated by the reproducing stylus for varying the amount of friction the diaphragm will be thrown into vibration in accordance with the movements of the stylus, and thereby reproduce the sounds represented by the sound waves of the phonographic record on which the stylus travels. Apparatus operating upon this general principle is well known in the art, being disclosed

in British patents to Hope-Jones, No. 15,245 of 1890, and to St. George, No. 3,473 of 1880.

This invention has for its object the provision of apparatus of this character in which the diaphragm, friction wheel, reproducer stylus and connecting parts are carried by a frame or support which is capable of being inserted and held in the sound box carrier arm of an ordinary phonograph.

Reference is hereby made to the accompanying drawings, in which—

Fig. 1 is a plan view of the improved attachment. Fig. 2 is a side elevation showing the improved attachment in operative position with respect to a phonograph record and showing also in section the sound box carrier arm of a phonograph and the support for the forward end of the same. Fig. 3 is a section on line 3-3 of Fig. 2 viewed in the direction of the arrows. Fig. 4 is a section on line 3-3 of Fig. 2 viewed in the direction opposite to the arrows. Fig. 5 is a section on line 5-5 of Fig. 4.

MOLD SUPPORT. David A. Dodd, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 827,295.

This invention relates to apparatus for use in the molding of phonographic sound records, and more particularly in a molding process wherein a tubular mold is caused to descend into a bath of molten material which fills the mold and a coating of which congeals on the interior surface thereof and adheres to the same when the mold is removed from the bath.

In the use of the apparatus contemplated by the inventor the support enters the bath with the mold, and obviously upon the removal thereof its exterior will be coated with congealed material. If this material is allowed to set or harden thereon, it will be difficult to remove the

same. It is, however, necessary that this material be removed after each immersion, because otherwise it would increase in thickness with successive immersions and interfere with the molding operation.

This invention has for its object the provision of an improved support from which the congealed material may be easily detached or removed.

Reference is hereby made to the accompanying drawing, which shows in sectional elevation one form of device in which this invention may be embodied.

SOUND BOX WITH COUPLED DIAPHRAGM FOR DISC TALKING MACHINES. Laurent Gardy, Perpignan, France. Patent No. 828,309.

This invention has for its object a sound box for disc talking machines in which two vibrating diaphragms arranged opposite each other are directly connected to a single pin-holder placed between them. By such a construction a double reproduction in two distinct horns or an amplified reproduction in one same horn can be obtained, as will be hereinafter explained. The same device can also be used as recorder.

In the annexed drawings, Fig. 1 is a longitudinal section of a form of construction of the sound box with coupled diaphragms. Fig. 2 is

a side view of the sound box. Fig. 3 is a longitudinal section of a slightly modified construction, and Fig. 4 shows the device by means of which a single horn can be employed in connection with the sound box with coupled diaphragms.

#### TALKERS IN SOUTH AMERICA.

Of the growing prosperity and importance of the South American countries to the talking machine trade, travelers' advices and observations on the spot are strongly corroborative. For example, in a recent letter from a well-known maker of "masters," he advised his company in the United States that if certain records proved successful in the reproduction one firm alone would order 100,000, another 20,000, and several 15,000 each. The writer declared the sale of American-made talking machine goods was phenomenal, and that the market was in its infancy. The buyers, however, insisted upon high quality, and that the practice of sending inferior records or imperfect machines would be a dead loss. He intimated that a word to the wise should be sufficient.

### REVIEW OF TRADE CONDITIONS.

**Trade During the Past Month Has Shown Marked Improvement—Unusually Brisk Fall Looked For—Great Demand Abroad for Automatic Machines—Nickelodeons in Great Favor—Talking Machine Men Should Pay More Attention to Automatic Machines as There Is Money to be Made With Them.**

As the result of a general review, the slot machine business during the past month has shown a marked improvement over the past few months, and there is every indication of an early fall rush. Never since its birth has the automatic business been on so firm a basis. Reports show that last year there was an increase of 33 1-3 per cent. over any previous year, while 1906 up to August 1 has equaled the entire year of 1905. The manufacturers up to the present time have endeavored to stock up during the early summer months—in preparation for the fall demand. Up to the present time, however, they have been kept working under high pressure filling back orders, with no opportunity to prepare for the annual rush, which they are now facing empty handed.

An unusual demand prevails abroad for machines of American manufacture, and during the past year they have had practically a monopoly. Japan especially has proven to be a great market for slot-controlled devices of all kinds, and a number of arcades have been opened in Tokio and other large cities in that country. According to reports reaching this office there is a practically virgin field for slot machines throughout Greece. The names of parties who might be in-

terested can be obtained from the Bureau of Manufactures at Washington, D. C.

\* \* \* \*

The Nickel Theaters, or what are commonly called "Nickelodeons," are carrying the country by storm. In every city and on almost every prominent thoroughfare these shows are springing up. Already moving picture machines and films are at a premium, while song slides are in great demand. Arcade managers are fast learning the value of running one in connection with their parlors. At first they were a little dubious, believing no doubt that it would detract from their regular business. However, the fact that all the large establishments have taken them up certainly proves their first stand at fault. Moving pictures always did and always will hold a strong attraction for both young and old. These are the whole substance of the show, while if you have a good singer, illustrated songs give a desirable contrast and add interest. Through the new rental system now in vogue with the large film manufacturers, one can obtain a constantly changing programme which is necessary for any great returns, especially in small towns, at a very low cost. This idea is a splendid one for the talking machine dealer. Secure a store as near your place of business as possible, one, say, that will seat 100 to 300. Then during intermissions have your talking machine there and give selections from the latest lists of records. The illustrated songs will also be big boomers for your record business.

\* \* \*

We have often wondered at the backwardness of the talking machine trade in obtaining agencies for different automatic machines. It is

true that on some of them the profit to be derived from their sale is small; however that may be, they are but a drop in the ocean. Many of these devices, among which the automatic piano figures conspicuously, offer big inducements. Another line of whose tremendous possibilities this trade seems to be in ignorance, is that of the moving picture machines and films. These offer a steady and lucrative investment to those who handle them. Like the talking machine business, the films take the place of the record, and the sale of a machine means a steady customage for the former.

\* \* \*

We have regretted in some ways the evident failure of most of the touring car companies to keep things going. This has not been due to the lack of attractive qualities, but to poor management. Did you ever board a train at a terminal on a warm day, sit there jealously watching your neighbor to see if he was suffering as exquisitely from the heat as yourself, glance at your watch after five suffocating minutes, to find you have ten more to endure before you will catch a refreshing breath of cool air as the train lumbers out of the station?

\* \* \*

Well, so far our amusement managers have succeeded fairly in reproducing these delightful (?) discomforts of the globe trotter. Only in this case the train waits for the passengers, and the only change noticeable in the atmosphere, as at last you start on your travels, is perhaps a raise of twenty degrees in the temperature. Never mind the past, however, that can be forgiven, if the future warrants it. But here again the martyr is likely to be doomed to

## THE LATEST AND LOUDEST

### New Departure in Coin-Operated Talking Machines

Has the Columbia Twentieth Century Loud Speaking Graphophone, equipped with the best tone regulator on the market.

Uses any cylinder record on the market, including the new Columbia 6 inch B. C.

Operator has choice of 25 selections.

Simple in operation. Does not get out of order.

WRITE FOR CATALOGUE AND TERMS

## THE VICTOR NOVELTY WORKS

81 SOUTH JEFFERSON ST., CHICAGO

disappointment for the films used are too often old, worn-out subjects, cracked and scraped by constant wear, until when at last he is shoved out a side door, he is still wondering whether he has attended a dog fight or a christening.

The touring car in many places has undoubtedly been a big paying investment, and would continue so with proper care. But it is too much to expect of a person to submit himself to so veritable a sweatbox more than once under the circumstances, especially since he is paying for the privilege.

### THE PICTURE-PHONE A WINNER.

**Has Made a Tremendous Hit With Talking Machine Men—The Disk-o-Phone Is Another Favorite With a Big Future.**

The picture-phone which has but recently been placed on the market by Louis P. Valiquet has met with what is perhaps the greatest success accorded any machine of like character in years. Experts in this line have pronounced it the greatest hit in the amusement field. However worthy this machine may be of praise, we must devote some of our attention to a new product of Mr. Valiquet's fertile brain.

Knowing the enormous demand for a slot-controlled talking machine, which could be used both with ear tubes for arcades and an amplifying horn when used in hotels, cafes and other public places, Mr. Valiquet designed and perfected the machine, which he has aptly called, "The Disk-o-Phone." This instrument is simplicity itself in construction, insuring against balking, breakdowns and other disturbing and costly weaknesses and reduces to a minimum the cost of maintenance and operation; motors built on the same lines by them are known to have been running for ten years without costing one cent for repairs. This is an important item. All parts of the disk-o-phone are easily accessible by simply opening the front or back panels and raising the top. There are no springs to break, no storage batteries, coils or other cumbersome and unnecessary machinery to get out of order.

The electric power is applied directly to the turntable shaft, and the machine is governed absolutely by the only scientific worm-screw governor ever invented, which is a positive guarantee of a natural and actual reproduction of the original tones. The speed will not be affected by fluctuations of voltage.

The sound reproducer is entirely new and specially constructed for the disk-o-phone, and according to the inventor produces a volume of sound much greater, clearer and more distinct than any machine of similar character. It can be diminished or increased at will by a single turn of a simple and perfect sound modifier attached to the ear tube connection.

The quality of the reproduction is a pure, round, natural musical tone, which the trade has long been looking for. Victor or Zonophone 10-inch records can be used on this machine. The disk-o-phone can be made to operate for any coin desired.

Talking machine dealers can derive a large profit by handling either the picture-phone or disk-o-phone; they will prove great sellers among arcade, cafe or other men who have stores or public places, and we firmly believe it would be a wise move for every talking machine man to look into this matter further.

### VICTOR NOVELTY WORKS

**Have Just Put a Clever Coin-Controlled Talking Machine on the Market Which Is Destined to Command Trade Attention.**

A new coin-controlled talking machine embracing some new and desirable features has just been put on the market by the Victor Novelty Works, 79-81 So. Jefferson street, Chicago, and is illustrated elsewhere in this issue.

The cabinet is a handsome one of quarter-sawn oak. The inside of the upper part of the cabinet has a mirror, and there are beveled French plate glass panels in front, giving a full view of the operating mechanism, including the unique revolving record magazine. This magazine has twenty-five black enameled wood holders,

each accommodating a cylinder record. The patron of the machine thus has a choice of twenty-five selections. He drops his nickel in the slot and sets the indicator on the metal dial, on the side of the machine, at the number he wishes to hear. The record previously played is at once automatically shifted back to its place in the magazine, the latter revolves, and the record desired is shifted onto the mandrel and the selection issues forth from the large horn at the top of the cabinet in the distinct and voluminous tones of the Columbia Twentieth Century Graphophone with which the machine is equipped. The volume of tone can be diminished as desired with an up-to-date tone regulator. The man who wants to "work" the machine will find that all steel and iron slugs will be rejected and deposited in a separate receptacle from that provided for the nickels. This is accomplished by means of a magnet. Any cylinder record can be used in the machine, including the new Columbia 6-inch B. C.

### ORDERS STEADILY COMING IN.

Since the appearance of their ad. in last month's issue of The Talking Machine World the New York Vitak Co. have been literally overwhelmed with orders, inquiries, etc. But they have wisely taken the stand of dealing exclusively through jobbers, sending one outfit to each dealer as a sample. They have so arranged their prices that a liberal profit is allowed each.

We can easily understand the general belief that this machine must be a toy on account of the low price it is sold at, but if one saw it without knowing its cost it would certainly be estimated at \$15 to \$25. The most attractive feature about handling this line is the steady and profitable business that can easily be built up on the film end of it. These films are of various lengths, and retail at 10 cents per foot. The short ones, 10 to 20 feet, are what are called endless; that is, the ends are joined and the pictures can be run for any desired length of time.

Talking machine men should be interested in this proposition on account of its close relation to their own business.

## TO MAKE AUTOMATIC MACHINES.

New Company to Make and Operate Them  
Files Articles.

(Special to The Talking Machine World.)

Grand Rapids, Mich., Aug. 4, 1906.

The B. & M. Automatic Co. have filed articles of incorporation in the County Clerk's office. The concern will manufacture and operate automatic machines and devices for weighing and vending and the production of music. The capital stock is given at \$10,000, which is divided into 1,000 shares of the par value of \$10 each.

Of this amount \$5,000 has been paid in in cash. The stockholders are H. G. Bedford, L. J. Bedford and Charles D. McDonald, all of Grand Rapids.

## NEW IMPROVED MUTOSCOPE.

This Big Money Maker Is Proving a Great Favorite With the Trade—Possesses Many Features of Interest That Commend It.

The American Mutoscope & Biograph Co., of this city, are to be congratulated on the new improved model E mutoscope. These money-making machines have from the first been recognized by arcade men as a most necessary part of their equipment; in fact, no parlor in the world is considered complete without a goodly supply of them. But unlike some, this company were not content to rest on past laurels, but strove to make a machine which in every way would be the acme of perfection. The type E mutoscope is the realization of this effort. The new iron cabinet finished in silver aluminum is much handsomer and more artistic than any heretofore in use. It will be noted from the cut in their advertisement that the base of the pedestal is raised considerably above the legs, giving an opportunity for cleaning beneath the machine. Radical changes have been made in the upper cabinet. The old style safe, which

necessitated opening the cabinet door in collecting the cash, has been done away with, and the money now falls direct into a cash drawer at the top of the pedestal, from which it may be rapidly collected. By means of this improvement the attendant in working about the mechanism of the machine has no access to the money. The slot device, whereby the penny first struck an anvil and then bounded to its position, has been changed to a direct contact.

The driving gear is made larger and more positive, and its contact with the worm gear on main shaft is wider. The friction discs have also been changed, giving greater bearing surface.

## MECHANICAL FIGHTER A WONDER.

Not Only Does It Deliver Straight Leads and Counters, but Varies These with an Occasional Uppercut—Blows Rained with Speed.

Prize fighters who are looking for new victims to conquer may now try conclusions with a versatile gentleman who is now introduced to the public in somewhat of an impersonal way as "the mechanical prize fighter." So far as outward appearances are concerned, the fighter bears resemblance to a human being, and its movements are well calculated to puzzle the most alert boxer. Not only does it deliver straight leads and counters, but it varies these with an occasional uppercut, and its blows are rained with a speed and power that are the envy of the professional boxer.

This machine does not give warning of a coming blow by a preliminary backward jerk, nor can the opponent escape these blows by sidestepping, because the automaton will follow him from one side to the other. At each side of the opponent is a trap door, connected with the base of the machine in such a way that when he steps on one or other of these doors the machine will swing around toward him.

The arms of the mechanical boxer are fitted

with spring plungers, which are connected with crank handles, turned by machinery. Separate cranks are used for the right and left arms, and they carry pulleys between which an idle pulley is mounted. These pulleys are connected with the main driving pulley by a belt, which is shifted from side to side, bringing first one and then the other of the boxing arms into action.

The belt shifter is operated by an irregular cam at the bottom of the machine, and this gives no inkling as to which fist is about to strike. Aside from this the body of the boxer is arranged to swing backward or forward under the control of an irregular cam, so that the blows will land in different places on the opponent; for instance, a backward swing of the body will deliver an uppercut.

The machine is driven by an electric motor, and can be made to rain blows as rapidly as the best boxer can receive them, or it may be operated slowly for the instruction of the novice. As the machine is fitted with spring arms and gloves, an agile opponent can ward off the blows and thus protect himself.

## RECENT INCORPORATIONS.

Telegraph Improvement and Securities Co., Manhattan, has been incorporated at Albany to manufacture and deal in and operate telegraphones, telephonographs, etc.; capital \$2,000. Incorporators: F. F. Phillips, Jr., W. M. Killeen and W. D. Eaton, all of New York City.

The American Automatic Machine Co., Fall River, automatic machines; capital, \$100,000. President, Joseph T. A. Eddy, Providence, R. I.; treasurer and clerk, Israel Brayton, Fall River, Mass.

The New York Vitak Co., New York (moving pictures); capital, \$50,000. Directors: W. E. Waddell, Joseph Johnson, Jr., and L. T. Waddell, New York.

# THE AUTOMATIC MARVEL OF THE AGE The Vitak Moving Picture Machine

This machine is constructed for Home use. It throws a moving picture from a photographic film. Can also be used as a Stereopticon. It is so constructed that not the slightest possible element of danger enters into its operation. Any child can operate it.

## "The Vitak" Has Proven An Instantaneous Success

Since the appearance of our wonderful offer in the August issue we have been overwhelmed with orders for sample outfits. To Dealers sending us \$4.00 with order for sample Vitak Moving Picture Machine and Stereopticon, we will send one 10 foot Film gratis.

*Talking Machine men can make money by handling "The Vitak," not to speak of a steady trade in Films, which can be built up as easily as the record business.*

Only one outfit will be sold to each dealer. All subsequent orders must be placed through your Jobber.

NEW YORK CITY

### USES FOR MOVING PICTURES.

Uncle Sam Writes History with Them—Also "Advs."—Epileptic Fits Photographed for the Use of Medical Students—Uses Found by Big Corporations for Moving Pictures—Films That Cost Thousands of Dollars.

The United States Government is trying to get recruits for the army and navy by exhibiting in interior towns and cities moving picture representations of the daily life of the sailor and soldier. As far back as 1889 moving pictures were used to record an eclipse in South America. Another Government use of moving pictures is to make records of the daily life of many tribes of Indians which are rapidly becoming extinct.

The same thing has been done with some of the remaining herds of wild animals in the West, which also will soon have disappeared, such as the buffalo, elk, etc.

Dr. Walter G. Chase, of Boston, took a moving picture machine some time ago to the Craig colony of epileptics at Sonoma, N. Y. He remained there for two months watching his chances. He succeeded from time to time in getting many moving pictures showing patients in epileptic fits. The value of these photographs as a means of demonstration to students is very great, for in no other way could an accurate illustration of the various forms of epilepsy be presented at a moment's notice.

Not long ago a man had moving pictures taken of the working of a car seat of his invention side by side with that of another car seat, which he alleged infringed upon his patent. By means of a thumb book of pictures showing the workings of the two seats he clearly proved his contention to be true in court and won his case.

An odd use of such pictures was found the other day by a rowing coach. His crew had been photographed while going at full speed by a moving picture machine. Afterward in looking slowly over the photographs he discovered one of the oarsmen right in the act of a faulty movement. He declared that never had he been satisfied with that particular oarsman's stroke, yet could never tell exactly where the trouble lay. But, the mistake having been made clear in this manner, it was soon remedied.

The United States army has had pictures taken of soldiers going through the manual of arms.

Thumb books with these pictures are made up and furnished to the recruit, who by looking carefully through them can easily trace every minute movement that goes to make up the completed action.

Football coaches use similar means to show new men the best methods of kicking the ball. A crack punter goes through the form of kicking the ball, and every movement is faithfully

recorded by the machine, which furnishes the beginner with better insight of the art of kicking than all the coaching in the world.

Nowadays many of the big corporations have moving pictures taken of the workings of the various departments of their plants. Before the subway was open to the public August Belmont had the subway photographed on a trip from the City Hall to 42d street.

TYPE "E" MUTOSCOPE.

## MUTOSCOPES

**New Model  
Type "E"  
Price \$50.00**

### IMPROVEMENTS

1. Artistic iron case.
2. Money box entirely separate from mechanism.
3. New style sign frame.
4. Direct coin contact.
5. Lighter weight.
6. Open space on floor.
7. Large driving gear.

The above are a few of the points distinguishing the new Model "E" machine over previous types. Pronounced by all arcade men the acme of perfection. Now ready for delivery. Send for new illustrated folder.

## Valiquet Novelty Company,

50-58 Columbia Street,

Newark, N. J.

A 500-horse-power electric converter connected with the third rail was placed on a flat car, back of which on another car rested a battery of lights of 80,000 candle-power. At a banquet shortly after of the rapid transit officials and engineers this reproduction was exhibited.

One of the best things of this kind was the reproduction of a scene in the forging room of the Westinghouse Co., which was shown after a banquet of the officials of the concern at the Waldorf-Astoria. The pictures showed the welding of a giant ring of iron used to encircle one of the largest dynamos.

The lights for taking the pictures were so arranged that every single detail stood out with remarkable clearness. One could almost imagine that he was looking at the actual scene. There were half a dozen workmen busily engaged in the work of welding the huge piece of metal, which was suspended from a traveling crane in such a way that it could be handled easily and quickly, and every part of the work was shown from the moment the metal left the forge until the finishing touches were made by means of a large trip-hammer.

As a demonstration it was in every way as clear as if one had been standing in the work-room. One of the striking features of the representation is the fact that at no time during the ten or fifteen minutes necessary to forge this piece of metal did any of the workmen glance in the direction of the picture machine or in any way show that they knew every action was being photographed.

A most complete series of moving pictures were taken to show the operation of the different departments of the New York Life Insurance Co. One of these shows the employees filing out of the main stairway at the end of the day. Another illustrates a meeting of the board of directors. This shows President McCall preceding the directors into the room. He is followed by Alexander E. Orr, George W. Perkins and others.

The costliest negative ever taken by one moving picture concern shows the occupation of Pekin by the foreign soldiers during the Boxer

rebellion. A photographer took pictures of the allied troops as they scaled the walls of the city. That film cost \$7,000.

Many of the films taken of the Boer and Japanese wars were almost as costly. On one occasion the vessel bearing a film to the United States was not moving fast enough, and the agent of the moving picture company demanded more speed. This was furnished, but as a result the company received an additional bill of \$500 for forced draught.

Another interesting picture was that taken of President Underwood, of the Erie Railroad. An annual banquet was to be given at the Waldorf-Astoria by the Erie Railroad officials. President Underwood found that other engagements made it impossible for him to attend, so it was suggested that a moving picture be taken of him and exhibited on the night of the dinner.

He consented and was photographed making a five-minute speech. This reproduction was shown on the night of the dinner, and made a great hit. It is said to be the only occasion of the kind when Mr. Underwood ever made a speech.

The greatest picture ever taken was that of the fight between Jeffries and Sharkey at Coney Island in 1898. The film was 37,125 feet long—over seven miles. On this were 198,000 photographs, and the machine ran continuously for 110 minutes.

Some idea of the cost of this film, according to a writer in the Sun, may be had when one learns it is estimated that the total expense per minute of running the machine is \$50. The film is used at the rate of 74 feet a minute, and costs 25 cents for each foot.

Usually in taking pictures of long duration three machines are used, two in operation and one in reserve. The films come in lengths of 250 feet, and the machines alternate. The size of the photograph on the latter-day moving picture film is 1 inch wide by  $\frac{3}{4}$  inch high. This size is used for ordinary work, but when especially fine photographs are to be taken they measure  $2\frac{3}{4}$  by  $2\frac{1}{4}$  inches.

#### SATISFIED NICKLIN CUSTOMERS.

The enterprising music house of Breman & Shepard, Clinton, Iowa, ordered a "Nicklin" electric piano, manufactured by the Neola Piano & Player Co. 201-203 East 49th street, New York, and after receiving same sent a letter, copy of which is below:

August 2, 1906.

Neola Piano & Player Co.:

Gentlemen—We wired to-day for three "Nicklin" pianos, same voltage as in previous order. We sold the Nicklin shipped us, and will sell a good many more. We want this territory. The piano sold here is giving satisfaction—took in \$15 in one day. We want to get the balance of business to be had here. Mail us at once catalogues for the Nicklin and Nicklin music. Ship as soon as possible. These goods are sold—in fact, we have the orders for them. Trusting you will make prompt shipment, we remain,

Respectfully,

BREMAN'S MUSIC HOUSE.

Clinton, Iowa.

Here is one more from Missouri:

Odessa, Mo., July 13, 1906.

Neola Piano & Player Co., New York:

Gentlemen—We are more than pleased with the "Nicklin" you sent us. Had but little trouble in getting it started. Have delivered it, and got the "stuff" we are all looking for. Everybody likes it. Think probably we can sell another. We will do our best. Thanking you for the assistance you have given us in this matter, we remain,

Yours respectfully,

FINE & REED.

#### HOW HE LOVED HER VOICE.

Sweet Young Thing—Yes, Jack had me talk into his phonograph so that he could hear my voice when I was away.

Dear Friend—Possibly he recorded your voice

in that matter in order that he might have the satisfaction of stopping it when he got tired listening.

#### PRICE REDUCED

## Business Possibilities of the Edison Phonograph

Whenever the name Edison is mentioned it creates interest.

Whenever the Edison Phonograph is used it attracts attention.

If you are not developing your trade in the Edison Phonograph, you are not realizing the possibility of Phonograph sales in your neighborhood. There are places where an Edison Phonograph may be sold where no other phonograph can be sold, because Edison Phonograph advertising has convinced people that of all phonograph ideas the Edison is the best.

It is the best because it has the best Phonograph.

It is the best because its Records are keenest, surest, most audible and most pleasing.

It is the best because there is a handsome profit for you—the dealer—in it, and because with every sale you create a chain of continuous business by selling Edison Records.

## ADVANCE IN LOS ANGELES.

**Mr. Richardson Discusses the Talking Machine and Its Use by Leading People in the Musical and Artistic World in Los Angeles—Makes a Strong Case.**

(Special to The Talking Machine World.)

Los Angeles, Cal., September 3, 1906.

One of the unique features of the musical year in this city has been the "arrival" of the talking machine as an artistic instrument. Music lovers scoffed, teachers ignored utterly, celebrated personages smiled indulgently—a year or two ago. Yet, when the celebrated personages, for superb emoluments, descended and held actual converse with the humble talking boxes, the music lovers listened and the pedagogues were finally forced into line.

Two or three reputable firms, working industriously to improve the marvelous but squeaky original models, have in large part overcome many of the elemental defects, and have accumulated colossal record libraries of great music, from every country in the world, by the world's greatest vocalists and instrumentalists, and by several of the greatest orchestras and bands.

W. H. Richardson, of the Southern California Music Co., has made a specialty of phonographic art work during several years, and has seen the instrument rise from the humble station of a mere toy to a position of interpretative eminence. In a chat with a Times man he held an interesting story of its progress:

"Only a little while ago," said he, "one never saw real musicians in a talking machine shop. We had records for the inartistic element among the populace, and lots of things for the children, but no one took us seriously. And I admit a great deal of it was the fault of the talking machines themselves. They squeaked dreadfully, and when they did go in for serious music, it was generally by cheap performers, and was an awful bore.

"Consequently, when the revolution came, it took months and months to convince the people or to get them to even let us give them a hearing. 'Can any good come out of a talking machine?' was the motto of most of them, and coon songs and cheap vaudeville trash continued in the largest sale, while the few good records accumulated dust upon the shelves. The companies that persisted in making good records, all the while improving their machines, are the only ones that survive to-day, or at least, are the only ones who manufacture and sell on a large scale.

"Probably no city has a larger record loving public than Los Angeles. Thousands of dollars are spent every month here for new music, and the bulk of the trade has turned, in the past twelve months, toward the finest records. I know several men here who have the voices of every great living singer in their lists, with grand opera collections representing a larger outlay than an expensive automobile. Teachers, who were the slowest in turn, are gradually being convinced, and at least two or three prominent instructors in this city have coached to good advantage from genuine-made records."

Typical American enterprise has been exhibited by talking machine agents here in procuring some of their novelties. Among the newest records are musical transcripts by the choir of the Sistine Chapel, the Imperial Court Orchestra of St. Petersburg, the National Band of Mexico, the Garde Republicaine band of France, and the complete chorus and orchestra of the Metropolitan Opera House.

## BARTLETT CO.'S HANDSOME SHOWROOMS.

The Bartlett Music Co., Los Angeles, Cal., have recently fitted up their talking machine de-

partment with six separate salesrooms, divided by heavy plate glass partitions and directly connected by a passageway. By this system it is possible for two salesmen or even one to handle five or six different customers, as an assortment of records placed in each room enables the various machines to be readily tested in a way to ensure sales.

## AMBITION AND QUALITY WIN.

**Impossible to Win Out Without Ambition—Aim to be a Leader—To Handle the Goods That Will Bring the Best Trade.**

You will never succeed without ambition. The man who is content just to take things as they come will be a "hewer of wood and a drawer of water."

Make up your mind to be the first man in the trade where you live. Aim to do better business, more of it and at a better price than any of your competitors, and you will soon be at the top of the ladder. You have to hustle in this age if you mean to get on. Hustling never means "slopping."

There are people who think that if they wriggle through somehow they are doing all right. The palm is awarded to the man who is most diligent and persevering. Don't be afraid to ask a good price for your goods. The world is always ready to pay for quality. Don't forget that when you are buying. Give your customers the right goods, do business in a straightforward way, and they will return again with a pleased smile when wanting anything in your line.

## MESSAGE FROM CANAL ZONE

**By Means of Talking Machine Record—Conditions Not as Bad as Painted.**

A Buffalo lady, Mrs. Caroline Cook, recently received from her son, Charles B. Cook, located in the Panama Canal Zone, at Culebra, an extended message on a talking machine record. The pleasure the mother derived from hearing the actual voice of her son at such a distance can well be imagined, and the experiment opens a new and broad field of talking machine usefulness.

In regard to general conditions on the Isthmus, Mr. Cook spoke in part as follows: "The climate and conditions of the Canal Zone have been greatly misrepresented. The dry season is merely six months of Buffalo's July and August, and the wet season about six months of April and May. There is considerable malaria at this time. I have so far escaped sickness in any form, and see no reason why I should not continue in good health. At the present time I see no reason why any one should not be able to make this a permanent home. It is always summer, and when the improvements, sidewalks and roads are completed, Culebra will be as fine a place to live in as any in the world."

## KNOWLEDGE OF LANGUAGES

**Can Easily be Placed in the Possession of Americans if They Take Brian Dunne's Advice—Some Pertinent Pointers.**

"This is the day of reforms, and one of the most needed in this country, in my opinion, is the establishment of some kind of Civil Service Commission which shall examine Americans as to their knowledge of languages before they go abroad. This may savor of Imperialism, but the National Pride would have Uncle Sam respected through other means than the 'Big Stick.'"

Such was the declaration of Brian Dunne, formerly a European newspaper correspondent, and now touring the world, propagating the

study of language through the use of the talking machine where native teachers are difficult or expensive to secure. "I well remember," he continued, "ten years ago I myself traveled to Europe to learn modern languages, finding it too expensive and difficult in this country. But the wonderful improvements in the talking machine in recent years and the efforts of language experts have now made it as easy to learn to speak French, German or Spanish as it is to speak English.

"The talking machine talks these languages into our ears, and all we have to do is to listen. Any one who is not deaf, can learn in this manner and with about as much effort as it requires a forefather to learn English while walking around one of the cities. Any one can find time, because the talking machine can be used in one's bedroom and while one is undressing or taking a bath, you can devote a few minutes a day and you will soon be able to speak phrases that will amuse, instruct and benefit you.

"Charles V. of Spain used to say, 'As many languages a man knows, so many times is he a man.' Acquiring a foreign tongue is indeed acquiring a new soul, and what greater development can one desire?"

## HISTRION'S NEWEST WRINKLE.

**Receive Instructions on New "Turns" Through the Talking Machine.**

A team of vaudeville artists at present doing a sketch in the lighter vein on one of the leading circuits, contemplate giving up straight comedy work when their present booking expires in January, and go in for a dramatic act. They recently had a difficult one-act play written for them, and were rehearsing their parts under a well-known stage director in New York when their contract called them to the western edge of the circuit for several consecutive weeks. In order to perfect themselves in the dramatic dialogue along the lines laid down by their instructor, they had him speak the parts with proper intonation and effect into a phonograph and carry the records with them in order that they may have his guidance while out of town. The experiment will be watched by performers who, having trusted to their own devices when rehearsing a new act on the road, met with dismal failure at the first performance on the Great White Way.

## ARRANGES FOR HIS FINAL BENEDICTION.

According to a Missouri paper, Rev. Daniel Bassett Leach, of Bone Gap, Ill., who for seventy years has been noted for the extreme length of his prayers, delivered as though through a megaphone, has recently dictated into a talking machine his favorite benediction, with the request that it be reproduced as a fitting ending to his funeral service when his demise occurs. It will be noted the story comes "from Missouri," where they "have to be shown."

## W. D. ANDREWS OPENS IN BUFFALO.

The latest addition to the talking machine jobbers in Buffalo, N. Y., is W. D. Andrews, who has opened a store at Seneca and Wells streets with his brother, C. N. Andrews, as manager. W. D. Andrews conducts a successful talking machine business in Syracuse, N. Y., handling Edison and Columbia goods, and is well known to the trade throughout New York state.

The Columbia Phonograph Co., who already have 150 branch stores in all parts of the world, 100 in this country, contemplate opening many new stores within the next year. All records for the European trade are now made at the new London factory of the company.

# HORN CRANES

**WE** manufacture a complete line of Horn Cranes, so as to place our attractive styles within the reach of all intending purchasers.

All our cranes are strongly made and handsomely finished.

No. 4	Horn Crane	.	.	.	.	List Price	\$1.25
No. 5	" "	.	.	.	.	" "	2.50
No. 6	" "	.	.	.	.	" "	1.50
No. 7	" "	.	.	.	.	" "	3.00

Prices on H. & S. Horn Cranes are established, both dealer and jobber make money in handling and secure satisfied customers.

---

NOTE.—Our patents on Horn Cranes, covering features at present embodied in our product as well as many other designs, have all been allowed. Our attention has been called to several Cranes at present on the market, which are directly infringing our claims. We propose shortly taking legal action against such parties as are at present infringing our rights either in manufacturing or handling an infringing horn crane, and hold them strictly accountable.

**HAWTHORNE & SHEBLE MFG. CO.**  
**PHILADELPHIA, PA.**

## JONAS SOLVED THE PROBLEM.

How the Talking Machine Became the Savior of the Bashful Man.

In all the village of Fairview there was no man quite so shy as Jonas Brown. As a child he became speechless with confusion when any one noticed him; he stumbled and stammered his way through the gawky age; and when he arrived at young manhood, although he was popular among his own sex, the sight of a girl's face would throw him into an agony of self-consciousness, says the Youth's Companion. He usually took to the other side of the road when he saw a young woman approaching. Every one wondered what would happen should Jonas fall in love. At length the day came.

Arabella Hawkins was an attractive girl from a neighboring town, as pretty as she was talkative, and Jonas, who first saw her at church, was captivated by her charms. A few days later he astonished all Fairview by walking home with her, and capped that performance by several tentative evening calls. But whether he strolled down flowery lanes, or sat with her on the porch in the evening, the words he wanted to say seemed to stick in his throat.

"Could you—could you—" he stammered on one of these occasions.

"Could I what?" she queried.

"Could you—could you—go driving with me to-morrow?"

It was not at all what he had meant to say; but he vaguely felt that perhaps in a buggy it would be easier to ask the momentous question. Yet even there words failed him.

"Will you—will you—" he began.

"Will I what?" encouraged Arabella again, very sweetly and patiently.

"Will you—" Jonas seemed to smother—"will you—take a walk with me to-morrow?"

"Certainly," said Arabella. And so it went on. Jonas was getting desperate.

"Better hurry up, Jonas!" his friends urged him. "There's a fellow in the town where she lives wants her just as much as you do."

Jonas groaned. What was to be done? He could rehearse it all right before he saw her; but in her presence words failed him. All one night he lay thinking the matter over, and rose next morning weary yet triumphant. He believed that he had solved the problem.

A few days later a crate arrived for him. "Looks as if it might be a typewriter," said the station agent. Still, as Jonas was not given to literary pursuits, this guess seemed rather improbable.

That night Arabella was roused from sleep by a voice beneath her window. Slipping on a kimono, she leaned out to listen. The tones of Jonas, a bit more nasal than she had ever heard them, reached her ear.

"I love you," the voice in the dark said rapidly. "I love you more than any one in the world. I'm not worthy of you, I know; but I'll do everything I can to make you happy. Will you marry me, Arabella?"

"Yes, I will," said Arabella, and a few moments later Jonas trudged home with his phonograph under his arm.

"I've always heard it was a grand thing, and now I'm sure of it," he muttered.

## "TALKER" ADVERTISES SOUSA.

H. C. Faber, the Well Known Talking Machine Dealer of Colfax, W. Va., Has Something to Say Regarding Sousa's Recent Contribution.

Colfax, W. Va., Sept. 26, 1906.

Editor The Talking Machine World:

Dear Sir—The World reaches me in due time each month, and must say I do not see how any progressive and up-to-date man can do without it. Mr. Sousa should not take the stand that he has taken, for it won't benefit him as much if he wins as it will if he leaves good enough alone. For instance, his name and fame are generally known through the country and the large cities especially; but what of the ruralite or hayseed? This latter creation buys himself a "talker" of some kind, and plays it to beat the band. He hears some of Sousa's pieces and then when the March King comes within one or two hundred miles of his lonely mountain home this very hayseed will put on his store suit and dig down into his jeans for the fare and go to hear the famous bandmaster, whom he would never have heard of if not for the "talker." I may say that the "talking machine proper" has given more publicity and honor to the Honorable Sousa than have all his Sunday concerts. If he fights this business he will also lose the audiences that he can now get by a simple flourish of that trumpet of his. Wishing The World success, I beg to remain, very truly yours,

H. C. FABER.

## GREAT ACTIVITY IN DENVER.

The demand for talking machines in Denver, Col., has reached a point where it is almost impossible for dealers to meet the demand, the Denver Music Co. having to telegraph rush orders to their jobbers in order to supply wants of customers. The Knight-Campbell Co. are also short of stock, and can't catch up, owing to heavy business, while the Hext Music Co., Edison agents, have enjoyed an unprecedented trade during the last two months.

## SENTENCED TO THREE MONTHS IN JAIL.

J. A. Bates, who conducts a talking machine store on West Main street, Middletown, N. Y., had a man named Palmer recently arrested for selling a talking machine and records worth \$20 which he had purchased on the instalment plan. The Recorder, before whom Palmer was brought, had little sympathy with the prisoner's plea that he sold the instrument while drunk, and promptly sentenced him to three months' imprisonment. This kind of punishment will prevent others from disposing of property which does not belong to them. Mr. Bates is to be commended for following this matter up.

## THE COUNTRY IN THE AUTUMN

A Fertile Field for the Progressive Talking Machine Salesman.

The rural districts are fraught with promise to the talking machine dealer, and the more isolated the district the greater the promise.

At this season of the year, when the days are shortening rapidly and the long winter evenings are almost upon us, it will pay the "talker" man to send his salesman laden with a complete line of samples out into the country, away from the conveniences and accommodations of city life, and there he will find in many a prosperous farm house a warm welcome for himself and a ready sale for his goods. Wherever the enjoyments of the great metropolis are heard only through the medium of the newspaper, where not even an echo of city life penetrates,

there will be found a happy hunting ground for the talking machine salesman.

Who can resist the pleasure of the theatre, the concert and the minstrel show when they come to him at home with no thought of the wind and snow outside except that they make the fire more cozily ruddy and the lamp light more mellow and soft?

As an entertainer the talking machine is king, for it will bring the joy of active life out over miles of wind swept fields, through snow laden forests and frozen rivers to the country village, making it throb with the quick pulse of the city. When this is explained and proved, sales must readily follow.

Every inhabitant of the really rural locality knows what winter evenings mean—a long weary wait between supper and bedtime. Of course, the daily paper may be looked over and an occasional book read, and then, perhaps, there is a social gathering or a church fair, but even at that the time hangs heavily and there is many an hour spent in pondering over events best forgotten. Winter evenings produce a state of pessimism which the talking machine will relieve at the very first dose, and the sufferer will enjoy an optimistic view of life ever after.

Mr. Dealer, the country is calling you, and it is up to you to answer its voice. What say you?

HOWARD TAYLOR MIDDLETON.

Mr. Hearst's campaign committee intend utilizing talking machines in the present gubernatorial battle.

## Victor Service

WHY WE CAN GIVE YOU THE BEST

We are the only Victor distributors in the East who devote an entire store to the Victor line. We have the space and facilities for carrying at all times as large and complete a stock of Victor machines and records as that carried by the factory.

We can guarantee to ship all orders the day they are received. Our shipping department is located in the very heart of the wholesale district of Boston with its numerous daily express collections covering every point in the United States; it employs a large and efficient force who give their entire time and attention to the filling of Victor orders.

We place all records in separate envelopes immediately upon receipt from the factory and deliver them in the same envelopes. Thus the retailer receives his records in the best shape to handle and in as perfect condition as when shipped from the factory.

M. STEINERT & SONS COMPANY

DISTRIBUTORS OF

VICTOR TALKING MACHINES—VICTROLAS, AUXETOPHONES, HERZOG FAMOUS DISC CABINETS

35-37 Arch Street

BOSTON, MASS.

## JOBBER and DEALERS in DISC RECORDS

Do you use envelopes?

Our envelopes are used by 75 per cent. of the largest jobbers. Their superiority is proved by the numbers of duplicate orders we receive. Ten different styles and sizes. Samples and prices on application.

## PRACTICAL SUGGESTIONS AND COMMENTS.

### F. M. BARNEY'S IMPROVEMENTS.

F. M. Barney, the well-known talking machine dealer, of Elm Creek, Neb., writes *The World* as follows: "Considerable has been said about correct position of the jewel on an Edison machine. Perhaps some of your readers will be pleased to learn of my method and results. I removed vibrating arm from my Edison c reproducer and made a new arm. This arm I made of aluminum, and made it just as light as was consistent with rigidity. I bored some holes along the long part of the arm to lighten as much as possible, and set the jewel sticking out behind instead of pushing forward as usual; in this position the jewel drags and has a tendency to free itself from foreign particles, then again such an arm can be made very light. The one I have in use does not weigh over two-fifths the amount of the common arm, and is as rigid. I have found the lighter the parts the quicker they recover, and the jewel is held in closer contact with the record, thereby doing away with tendency to blast. This results in purer tones. I have also been enabled to lengthen the long part of arm slightly, which causes increased amplitude and therefore louder tone, without injury to record. The reproducer which I use in selling records is equipped as above, and is pronounced by all who have heard it as being the clearest and loudest they have ever heard. About a year ago I bored a hole in the hanger weight and cemented therein a small camel's-hair brush such as is generally used by artists in painting, about one-eighth inch in diameter. This gathers all lint and dust, and requires little attention, and my jewel rarely ever clogs up. I recommend this arrangement as giving the best results I have ever heard."

### NOVEL USE OF VICTOR MACHINE.

Mr. Barney, who is a prominent jeweler as well as talking machine man, writes further: "I desire to call your attention to a novel method of using the Victor or disc machine. Am a jeweler, and in dressing my window I desired a striking method of attracting attention during our July 4th celebration. I took a Victor from stock and removed all outside parts (horn, hollow arm and support), and placed on the revolving table a large plateau or round mirror. I had previously turned the regulator about one revolution in 4 seconds. To raise the plateau above the center pin I put on four 10-inch records. I then put on the plateau a fine cut-glass bowl. In the bowl I placed a large cut vase. I then took some ladies' neck chains and festooned them around the top of the vase, also some gents' watch chains, from the top of the vase to the top of the bowl. On the plateau around the bowl I arranged some fine watches and rings, and put the display in my show window, which was plainly dressed so as not to detract from same. You would be surprised at the attention and remarks about the device. A Victor No. 11 motor is sufficiently strong to run same three or four hours, and will carry a large 14-inch plateau, a heavy 10-inch bowl, a 10-inch plateau on top of that and a large vase and many other articles for display, and when crank is removed some people wonder what keeps it going."

### REMEDY WHEN MACHINE LOSES VOICE.

Our old friend, William F. Hunt, of Wanatah, Ind., says that "the only effective and reliable remedy for the Columbia Twentieth Century graphophone when it has lost its voice through oil getting on the amber friction disc is to take off the rubber friction shoe and thoroughly clean off the amber disc with alcohol, after which dry it off carefully with a nice clean rag or cotton (cotton is preferable). Then use the finest grade of sandpaper (not emery cloth) and sandpaper the friction part of the disc thoroughly. The rubber friction shoe is destroyed, as it has become saturated with the oil, and will require a new one. Great care should be exercised in

handling these parts so as not to touch them with the bare hands or with anything that is damp or oily. If you have had no experience in the line of talking machine repair work you had better leave the work to an experienced repair man, as it will prove more satisfactory and economical. Some people may get the impression from this article that the Twentieth Century machine is very apt to get out of order, but I assure you that if every one who purchased one of the machines would only heed the warning instructions of the company not to get oil or anything damp onto the friction parts no trouble from this source would be experienced. To have the above trouble with a machine is plain carelessness on the part of the operator. Too many people are in the habit of flooding a talking machine with oil. Too much oil on any piece of mechanism is as bad as no oil at all. The bearing next to the friction device needs to be oiled but once in a great while, and then but sparingly. The best way to oil it is to dip a toothpick into oil and then permit a small drop from this to fall on the bearing.

### PIANO SOLO RECORDS ARE LISTED.

Mr. Hunt says further, and we thank him for the information: "In answering an inquiry in your last month's issue you stated that up to the present time no records of piano solos had been listed by any company. The Victor Co., as well as the Edison, each list one. The Victor record is No. 2508, Gavotte in A, by C. H. Booth, and the Edison No. 8394, Violets (Transcription), by Albert Benzler."

### HOW THE NEEDLE WEARS

A study of the point of a needle under the microscope after it has played a record shows that it is subject to far more wear than most people imagine, and clearly proves the necessity of changing the needle every time. A talking machine enthusiast, who has spent considerable

No. 1. No. 2. No. 3.

time in studying out the matter, has drawn several illustrations of the various styles of needles after use on a ten-inch disc. No. 1 is a "Perfection" and shows how the record has worn grooves in it. No. 2 is the ordinary Victor needle, showing the point planed off. No. 3 is a soft tone needle of the Columbia variety, which wears to a point resembling the edge of a chisel. These needles were used but once, and then on a new record.

### TALKING MACHINE FOR CHURCHES.

John T. Timmons suggests a specially made talking machine to be used in churches with a select number of records made for that purpose, and added: "It has become fashionable to have fine church choirs, and through the medium of the talking machine all the various hymns and religious songs can be placed upon the records as solos, and these with the church choir or even without will produce very satisfactory results. The records can be made from the very best voices in the country, and these can be heard in almost every church in the land on Sunday. It will be cheaper and just as satisfactory to the Lord. It will do away with choir practice, jealousy among singers, church rows and those who worship will not sit and watch the pretty girls in the choir, and will feel more like joining in with their own voices to swell the sacred song."

### TESTING RECORDS IN EGYPT.

An Egyptian official who has just returned from the Far East recently chatted with the representative of the London Daily Despatch regarding the growing importation of talking machines and records into that country, and the impression which they made. This official described a scene in which two officially attired

Beys sat upon a divan, smoked their hookahs, and examined roll by roll, and bale by bale, the large importation of records which had that day arrived by steamer from England. A huge phonograph was before them, and every tune was tried solemnly. If the melody sounded agreeable to the ears of the Faithful as they sipped their coffee, the record was shot dexterously under the divan; if, however, one or the other exclaimed, "By Allah! the all powerful, that is a tune for the dogs," it was promptly labeled "passed," and duly formed part of the consignment for the interior.

### THE SCARCITY OF REPAIRERS.

A subscriber to the *World* in Wichita, Kan., writes us regarding the scarcity of competent talking machine repairers in his section. He says in part:

"I am the owner of one of the more elaborate styles of talking machines, and though I am exceedingly careful when manipulating it there have been times when certain parts have become deranged. Upon three occasions I have turned it over to local dealers to be repaired at their own shops, but, sad to say, on each occasion they seem to have been quite unable to properly understand what was wrong and I was compelled to send the machine to a distant city to have it properly adjusted. It would seem that when a dealer accepted the agency for a certain machine he should be instructed by the makers or their representatives regarding the different parts in order that he could make the necessary repairs in a competent way. It means considerable expense where a machine has to be shipped to the factory or headquarters and carriage charges paid by the owner, and in addition that while in transit some of the more delicate portions will get out of adjustment. I hope you will advocate through your columns the study of the talking machine by every dealer, for if confidence can be placed in his ability to fix things it will mean steady customers, who will give him every part of the talking machine trade."

### DYNAMOPHONE MUSIC HEARD.

Electrical Society Attends Demonstration of the Telharmonium System.

The New York Electrical Society on the evening of September 27 attended a demonstration of the Dynamophone and Telharmonium systems now being installed at its plant at Broadway and 39th street. This apparatus, already described in *The Talking Machine World*, is designed to transmit music to the home by means of an electric current and a kind of telephone receiver, just as power or messages are transmitted. The service is supposed to be "taken." The music is made at the "power house" by means of vibratory electric energy stored in 145 graded and tuned reservoirs, and played on by a keyboard. At this affair the resulting music was heard. Under the circumstances—the crowded hall, the scrappyness of the music played, the lack of technical experience—a music judge would have been loath to form an opinion. However, this much may be said: The instrument is not a mechanical player; it does produce a musical tone under control. It has the quality of wood wind, of an oboe, with deeper tones of a similar quality. Of how great a development into organ effects it is capable one hearing is not enough to determine.

### THE POOR OLD GOAT NOW GOES.

A new use for the talking machine has been discovered by a New York lodge of a prominent secret society. At the initiation ceremonies, where it was desired to frighten the blindfolded candidate, members used to imitate the gentle voice of the goat until some one happened to think up a phonograph. The voice of a goat belonging to one of the members was recorded in all its stages, from savage to plaintive, and the record turned loose on the next candidate with results far exceeding the fondest hopes of the originator of the scheme.

## Develop the business

for *Victor* goods that lies in your vicinity. There are plenty of dollars within your reach if you only make an effort to get them.

We drum up trade for you among the 49,000,000 magazine readers to whom our advertising goes every month, but it is for you to develop this trade up to the buying point.

One of the best helps toward this end is for you to advertise

## Victor Talking Machines and Records

in your local newspapers. Besides this you can use window displays, circulars and other means to make known to your community the fact that you sell the *Victor*.

These methods enable you to get the greatest benefit from our advertising and lay the foundation for a larger and more profitable business for you.

Many dealers are already doing these very things and making it pay, and you can safely follow in the same direction.

### Victor Talking Machine Company

Camden, N. J.

**P. S.**—Just a suggestion for you—it's a mighty good one: Place standing monthly orders for the new records with your distributor, and push this feature. (Keeps your customers calling at least monthly—they look for them.) Artistic Monthly Supplements furnished free for this purpose.

## THE QUAKER CITY NEWS BUDGET.

Complaints as to Difficulty in Getting Machines and Records So Active Is the Business Demand This Fall—What a Visit to the Victor Factory Reveals—More Buildings Being Erected—Talking Machines Aid Anti-Race Suicide Ideas—The Leschbrandt Manufacturing Co. Incorporated—What the Leading Talking Machine Men in Both Retail and Wholesale Lines Are Doing Is Interestingly Recorded by The World Man.

(Special to The Talking Machine World.)

Philadelphia, Pa., Oct. 10, 1906.

Little or no complaint is heard as to business conditions in local talking machine circles. Wholesalers, jobbers and retailers almost unanimously say they are "very busy," and that the outlook for fall and winter business is of the best. While less complaint is heard as to difficulty in getting machines and records, the fact remains that jobbers would be pleased to get in a lot of goods they could readily sell; but meanwhile they are losing no time in marketing large and well selected stocks in hand and business is "all to the good."

Without going into minute details it can be said that jobbing houses, like the Wells Phonograph Co., Lewis Talking Machine Co., Penn Phonograph Co., Western Talking Machine Co., Musical Echo Co., Columbia Phonograph Co., General, the Keeu Co., etc., are most satisfactorily busy, trade being reported far ahead of the same period a year ago. Retail dealers on North Eighth street and other thoroughfares are doing a good business, especially in new records and supplies.

With their additional factory facilities, the Hawthorne & Sheble Co., horns, sounding boxes, supplies, etc., are better prepared than ever to fill orders "on time." Both plants of the company are busy, and Manager Sheble and assistants have about all they can handle in the way of orders, etc.

A visit to the Victor Talking Machine factory, Camden, N. J., showed that that plant, as usual, is very busy. H. C. Brown, who succeeds F. B. Middleton (now assistant secretary), as manager of the publicity department, said: "We are busy

in every department and behind in orders thousands of machines. We are simply 'swamped' on the two new machines—the Victrola and Auxetophone; have more orders in than we can hope to fill within a year. As it is now, we can't begin to make shipments of them because of piled-up orders for other machines and records. We are doing the very best we can, let me add, to get out records and machines—doing everything we can for our patrons."

A recent court injunction, it should be here stated, prohibits the Victor Co. from operating its power plant after 10 o'clock p. m. Nearby people complained of the jarring, etc. But up to 10 p. m. and from 7 a. m. the factory is going "lickety-split," and as new buildings, already figured on, are erected, doubtless the company's output will be increased.

Elbridge Johnson, president of the company, has not, at present writing, returned from abroad, but will do so sometime in October.

The company has made extensive improvements along Cooper street in the way of cement sidewalks, driveway, etc.

One of the two large new buildings to be erected by the Victor Co. will be used for office and laboratory purposes. This building will be erected on the corner opposite the present main building at Front and Cooper streets, and will be a four-story structure, of reinforced concrete, faced with brick and stone. Building plans are by A. C. Middleton, the versatile secretary of the company. Construction work on the addition to the packing, etc., warehouse, two blocks north of the main plant, is going along steadily. It will be a four-story, reinforced concrete structure, with brick and stone facing.

An attractive sign, 20 by 40 feet in size, was erected the past month on top of the east tower of the main building of the Victor plant. It is an "electrical sign," and the familiar figures, "His Master's Voice," dog and machine, form an important part of it. "Victor Factory" stands out boldly, and the entire sign, illuminated at night, can be seen for miles. It faces the Delaware River and Philadelphia, and is attracting attention from people on ferry and other boats as well as countless others. The sign makes a weighty "advertising card," and is another example of the Victor Co.'s pushiveness.

"According to my way of thinking," said a Ninth street retailer, "talking machines are aiding President Roosevelt's anti-race suicide ideas very much. Given a nice parlor, a maid and a prince and a 'talker' reeling off one of the good old-time love songs or ballads and it is dollars to doughnuts Dan Cupid will soon arrive on the scene. I'm single myself, and I'm dished if the combination of a pretty damsel and a love song-playing talker doesn't take my fancy."

Einar Leschbrandt, Jules E. Aronson and Samuel W. Woolford, Jr., have organized the Leschbrandt Manufacturing Co., and will duly incorporate it. The object of the company is to manufacture, deal in and operate talking machines. Beyond the facts given your correspondent can learn little more of the company, but it is understood they will have a manufacturing plant of their own.

Jonas Shaw, East Camden, N. J., retailer of Edison and Zonophone goods, "plays" the latest records as they come out to friends and visitors, and then "winks the other eye" as they call "for their favorite" and hand over the money. Mr. Shaw uses clever local advertisements in home papers to boom sales—and with success.

The handsomely dressed show windows of the Columbia Phonograph Co., 200 Broadway, Camden, N. J., reflect credit on Manager C. E. Gabriel. The windows are of practical utility, for they are "business pullers," attracting the attention of countless passersby, any of whom may be induced by the display, and music, to become

# We Sell Victor Machines and Records

THE BEST IS GOOD ENOUGH FOR US—HOW ABOUT YOU?

Being Distributors of Victor Machines and Records only, it stands to reason that we can give you better service in this line than can those who job several lines, as we give our whole time and attention to satisfying the wants of those dealers who want Victor Goods and who want the best service possible.

Not an Experiment, but a Perfected Musical Instrument  
Has a Two-Inch Diaphragm. For VICTOR TAPER ARM only

Simple in construction, true in tone—giving a reproduction which surpasses anything you have ever heard. The tone is natural. Voices enunciate more distinctly and instruments are true to life. We have satisfied a great many distributors and dealers. Can we not satisfy you?

WE WILL SEND A SAMPLE UPON RECEIPT OF THE PRICE. If it is not satisfactory, return it, and we will refund your money. Regular Victor Discounts to Distributors and Dealers.

AMERICAN TALKING MACHINE COMPANY  
586 FULTON STREET, BROOKLYN—N. Y. CITY

Largest Talking Machine  
House in the City

good customers. Business has been and is very good at the Columbia's Camden branch. A heavy stock of records is carried as well as a fine line of machines, and Camden people get as good for their money as anywhere.

Talking machines are to be found at the neat salesrooms of the Haverford Cycle Co., 827-829 Arch street. This company carries a good stock of all makes of machines and records, and vigorously pushes sales by advertising and other ways. They are doing an increasing business, and with others anticipate big fall trade. They sell talkers for cash or on the "\$1-down-and-\$1-a-week" basis, a plan, by the way, which seems to grow in favor right along.

The new quarters of the Musical Echo Co., at 1217 Chestnut street, are in the building occupied by the Philadelphia Public Library. The shrewdness of those of the company who selected such a "good location" is to be commended. Thousands of girls and matrons going to and coming from the Library are pretty sure to be attracted into the handsome concert rooms of the Musical Echo Co., and sales follow as a matter of course. The "talking machine concerts" given by the company are a distinct and very popular feature.

Through the jobbing houses it is learned that most of the retail talking machine dealers up-town, downtown and in the suburbs are "getting along very well." H. H. Henrici, 1127 South Broad street, is catering to a growing list of fashionable patrons. The Automatic Graphophone Co., 1731 Columbia avenue, is "catching" the best of trade in that lively district. Kensington lovers of music have their wants well looked after by the Hoffman Cycle Co., 3036 Kensington avenue.

Charles E. Robertson, 4074 Lancaster avenue, which is out near pleasant Fairmount Park, has a music loving people to deal with—and he is prospering. Howard Leadbeater, at No. 620, is capably looking after the phonograph interests of the good folks of Lehigh avenue. C. B. Stahl, 2510 Ridge avenue, is handing out records, etc., very profusely for money. Frank Neide, 1407 Susquehanna avenue, is building up a good business.

"Needles Free!" was the attractive offer recently made by the Lewis Talking Machine Co., 15 South Ninth street, and conditioned that applicants furnished number and make of machines, Mr. Lewis promptly furnished needles for discs—a good move, as it attracted many new patrons. The Lewis Co. are very busy, and will be, no doubt, until the first of next year, or beyond.

Walter L. Eckhardt, of the Columbia Phonograph Co.'s selling staff, was a recent welcome visitor and, as usual, infused new enthusiasm in Columbia jobber and dealer circles.

At the Wells Phonograph Co.'s quarters, North Ninth street, the "boss" was too busy with customers to be seen, but an attache of the firm stated that they were "very, very busy," and that the trade outlook was most promising. The basement of the Wells Co.'s quarters, where thousands of records are stored, is veritably "a good sight for sore eyes." They carry a very heavy stock of records and supplies. Their out-of-town trade is growing rapidly, while city trade some time ago was such as to necessitate additional employees to adequately handle it.

Having put the soft piano pedal on their door the "amusement parlor" men of North Eighth street have won the friendship of neighboring merchants who once were "kickers."

The manager of an Eighth street "amusement parlor," in a chat, said: "After all is said and done, talking machines are the life and soul of amusement parlors. In here we have mutascopes, punching, fortune telling and other innocent amusement machines, but visitors, I notice, soon tire of them all and fall back on the phonographs. The talking machines are what we depend on for our money and they 'make good' every day. Beyond almost everything else, people—and I mean the general run of people—like music and seem bound to have it. The phonographs give them all the latest songs, marches and popular pieces for a mere trifle. They can come in and help themselves—and they

do it. As to popularity of amusement parlors—well, you do not find any of them closing, and on this street alone one or more have enlarged by renting the adjoining store and putting in more phonographs. We have good care taken of our machines by experts; keep a big selection of records and attend right up to business, and I presume that has something to do with our success. Pennies? Sure! How many do you want? Yes; those are all new tunes—fresh out."

Stanislaus Saboski, Jr., of Camden, N. J., gave his younger sister a "lickin'" for rendering useless—with a nail—records which belonged to his talking machine. Stanny's father took him to task, and then a general row occurred in the Saboski abode, resulting in the arrest of three participants. Pa struck son with a beer bottle, son said Pa used an axe, but refused to prosecute Pa, and all hands were discharged by the police magistrate. Son has bought new records and is again happy. Sister says she mauled the records because brother worked the talker overtime.

Manager Schock, of the phonograph and moving picture parlor, at 955 North 11th street, offers it for sale—"on account of a disagreement," he states.

After an extended traveling trip in the political interests of William R. Hearst, J. A. Smith, jobber and dealer of talking machines, Camden, N. J., is home again and giving close attention to business. Mr. Smith is an energetic type of business man; uses printer's ink with discretion, and is enjoying good trade with a large number of talking machine patrons.

"Odd thing happened t'other day," said a Ninth street retailer. "I was testing a new talking machine just in, and, as chance would have it, had a 'Silver Threads Among the Gold' disc on. An old lady passing by stopped, listened, came in and heard the tune out, and then asked me to repeat it. Of course, I did so, and she up and bought the machine and record. She said her husband, long since dead, used to sing the song to her years ago. She bought the outfit for sentimental reasons, I suppose, but the incident led me to believe that if you have the right tune on a talker at the right time and the right person hears the tune, you'll make a sale. What bothers me, is how to corner such a combination."

F. R. Bayley, who opened a retail store at 5004 Baltimore avenue last month, has already secured a flattering amount of trade, and is assured of business success. He is in a new and rapidly growing neighborhood, and carries a good-sized stock of general talking machine goods.

While fire did some damage to the warerooms

of the Keeu Co., Eighth and Cherry streets, the past month, it did not materially interfere with trade. Business is reported much better, and Mr. Keen and his assistants are putting out a large number of good machine and record orders.

In the show window of one "enterprising" retailer your correspondent noticed the show card, "August Records for Sale." This in October! It conveys its own moral, this incident.

Naval officers from the battleship Washington, lying at League Island, visited the F. A. North Co.'s warerooms, 1308 Chestnut street, early in October, and bought a Lester concealed player-piano. They already have a Lester piano and phonographs and records aboard the battleship.

At least two of the large piano houses—Bellak's and Heppe's—are selling talking machines, having regular departments for these products, and both firms are getting their share of business. Many of the smaller music and instrument dealers are putting in stocks of records and supplies. "Straws show which way the wind blows."

Is the day of the clothing store "barker" nearing an end? A side street dealer here in hand-me-downs has been experimenting with a talking machine, proposing to utilize it as a sidewalk "barker" to attract passersby inside. He figures that a man "barker" costs him \$2 per, whereas a "canned barker's" expense would be merely nominal. All he lacks, outside the "talker," is a mechanical "puller-in."

Unanimous regret is expressed by the trade at the death of C. J. Heppe, president of the Heppe Piano Co., who died suddenly of heart failure, October 4.

#### WOODIN SUCCEEDS PITOT IN NEW HAVEN.

C. J. Woodin has succeeded George Pitot as manager of the talking machine department of the M. Steinert & Sons Co.'s establishment in New Haven, Conn. He has also charge of their branches in New London, Meriden and Danbury. In a recent chat he said: "I look forward to an exceptionally large fall and winter trade here. Our new Victor parlors (we handle the Victor goods only) are being remodeled, and when finished will be the finest in this section of the State."

#### ROUSH BUYS OUT E. G. HAYS.

The talking machine department of E. G. Hays & Co., Pittsburg, Pa., has been purchased by J. C. Roush, who conducts it under the name of the Standard Talking Machine Co. Victor, Edison and Columbia lines are handled.

## New England Dealers

will be interested to know that we have for six weeks past been preparing to supply their wants promptly when the Fall and Winter rush is on.

¶ We had on hand by October 1st a surplus stock of over twenty-five hundred Edison and Victor machines and over two hundred thousand Edison and Victor records. This surplus with the deliveries the factories will make us during the rush season will enable us to give dealers' orders the same attention as we would ordinarily during the Summer.

¶ *Prompt and Full Shipments on day order is received.*

¶ Send for our new list of "Live Ones" of the Edison Record List.

¶ If you are not already handling the Mega Flower Horns (plain and decorated) send for descriptive circulars and prices.

## WHAT THE CLEVELAND TRADE IS DOING.

Dealers and Jobbers Are Most Optimistic Regarding Present and Prospective Conditions—Higher Priced Machines and Better Class of Records in Demand—"Talker" Has Won a High Position as Musical Instrument and Educator—Automatic Piano and Commercial Talking Machine Big Factors This Year—Expansion With Leading Establishments—What a Run Around the Trade Reveals to the Talking Machine World Man.

(Special to The Talking Machine World.)

Cleveland, O., Oct. 9, 1906.

Talking machine trade at present is splendid. All the dealers are optimistic and making preparations for an unusually heavy fall and winter business. That the business is expanding is noticeable on every hand, in the establishment of new concerns and the enlargement of old ones. It is also noticeable that the higher-priced machines and better class of records are being purchased more generally than heretofore, indicating that the masses are being educated in this channel to a correct understanding and appreciation of music. The better class of people recognize the talking machine of to-day as a meritorious musical instrument and educator.

The automatic piano business is getting a strong hold in the Cleveland cafes and restaurants and other places of business, since the high saloon license has necessitated other sources of revenue, and they are proving attractive and remunerative.

The picture arcades are all doing nicely. The parks have just closed and claim to have done the biggest business in their existence.

The October records are meeting with unusual sales; some of the dealers' original orders were exhausted on the third day of sale.

Dealers complain of their inability to procure from the manufacturers sufficient Victrolas and 20th Centurys to supply the demand.

The Columbia Phonograph Co. have on exhibition in their window a Columbia machine which passed through the San Francisco fire, in the company's store in that city. In a small way it illustrates the utter destructiveness of that conflagration and elicits attention and comment.

The Columbia Phonograph Co. report their commercial graphophone department, presided over by H. E. Jones, a decided success. Active trials are being made with a number of business houses, among others the Forest City Paint Co., attorneys Kline, Folles & Goff, Engeline Refining Co., Cleveland Steel Co., Chamber of Commerce, Buckeye Electric Co. and Strong, Carlisle & Hammond Co. "We are finding," said Mr. Jones, "a greater demand for machines than the factory can supply us with. When our stock of new alternating current machines are received we confidently look for a very large trade in this special line."

H. B. McNulty, with the Eclipse Musical Co., is an original genius in talking machine circles. Recently he took an old telephone table and manipulated it into a talking machine, which he calls the Eclipse-o-phone. He has placed the disc on top of the table and the horn underneath, with a record case attached to the upright, which formerly held the telephone. It makes an original and quite novel talking machine, and he has placed it on exhibition in the large show window of the company, making an unusual attraction.

W. J. Roberts, Jr., has just received and placed on exhibition a number of the latest style cabinets which lend additional charm and coziness to his attractive store. Business was reported to be picking up in fine shape after the close of the vacation season and the cooler weather of late. "I am sending in," said Mr. Roberts, "the records discarded in cottages by the National Phonograph Co. and giving my stock a general renewal. Am having a nice trade in October records which customers pronounce very fine, and have been unusually successful in the last few days in selling a large number of cash outfits. The new \$200 Victor Victrola is in high favor. We have quite a number of prospective purchasers and are delayed in making sales early by the inability of the manufacturers to supply us."

At the store of the Eclipse Musical Co., the

exclusive distributors of the Edison goods, trade is notably remarkable for the large increase and urgent requests for immediate delivery. "In our jobbing department," said Mr. T. H. Towell, "we have simply been swamped. Dealers seem to be taking the bull by the horns and are stocking up more extensively than usual for the fall and winter trade. The question of the volume of our business will be regulated largely by the ability of the factories to supply the demand, which at present is beyond all precedent. Our retail trade has increased constantly in the past four weeks, and the prospects are that the fall and winter demand will be far in excess of any heretofore established record. We are going to make some extensive improvements in our retail department and shall add two private record demonstrating rooms."

Fred. S. Silverback, traveling salesman for the Cincinnati Columbia talking machine store, was in the city a day or two ago. He reported that business was fine throughout the State, and that he had taken orders for quite a number of 20th Century machines.

G. J. Probeck, manager of the Columbia Phonograph Co., returned from his vacation trip to Yellowstone Park last week, sun-burned to an Indian brown and in robust health. He says he feels more like working than he ever did before in his life and in the very best of shape for the big fall trade coming on. Cleo. S. Bourgeois, assistant manager, said: "Business is certainly good and is daily increasing, both in the jobbing and retail departments, especially the former. We are having many inquiries for 20th Century machines which have thoroughly gratified themselves in the public favor. We rented a 20th Century graphophone to the Columbia Telephone Co. for use in their exhibit at the county fair, recently held at Chagrin Falls, in this county. We made a series of records for them, detailing what a convenience it was for the rural people to install telephones, and these records were played alternately between band, orchestra and vocal selections. This saved the employment of a 'barker' and proved effective, as the people stayed to listen to the music, which gave the

telephone company an opportunity to drive home a few arguments in their favor. The graphophone proved such a success, employed in this capacity, that the telephone people have signified their intention of using the talking machine hereafter in their exhibits throughout the country."

A lady called at one of the talking machine stores the other day and called for some "loud-toned needles." Said she didn't want "soft-toned" ones because it made the records play slower.

Mr. Gullery, manager of "The Victor," No. 254 Prospect street, is having a fine trade, and stated that demand was perceptibly increasing since the cooler weather had set in. He reported there were numerous inquiries for machines, and that the October records were selling rapidly. He is in line for a big fall trade.

Business at the store of W. H. Buescher & Son is reported to have been exceptionally fine all summer, continues good and they are looking forward to a large fall and winter trade. "The new Victor Victrola," said Mr. Buescher, "is proving a great success. Its sweet, melodious tone charms all who hear it, and is admired by every one. The October records are selling well, as are also the old, and oldest records." The company have just completed some improvements, making two demonstrating rooms, and two departments, one for the Victor talking machines and one for the Edison phonographs, making it an ideal establishment.

The "Amuse," a new penny arcade, is being neatly fitted up and nearing completion on Superior street. It is owned by the Columbia Amusement Co. and is intended to reach the transient trade on the public squares.

The May Co., department store, are making preparations to enlarge their establishment by adding a quarter of a million feet to their floor space, giving them a total of fully five hundred thousand feet. An ample portion of this space will be devoted to the talking machine department, which at present is located on the fifth floor in a very neat, attractive demonstrating room. They are distributors for the Victor machines and are doing a large local and out-of-town trade. On November 1 they will put in a large and full line of Columbia goods, in which they do a retail and general jobbing business.

The Columbia Amusement Co. are doing a fine business at their headquarters, 635 Superior avenue.

In their talking machine department Flesheim & Smith report business picking up in good shape since the cooler weather has set in. "The Zono-

## YOU HAVE WAITED FOR THIS!

AN ATTACHMENT FOR HOLDING SOFTERTONE AND MEDIUM TONE NEEDLES IN THE NEW SPRING CLAMP NEEDLE ARM OF THE VICTOR EXHIBITION SOUND BOX

Here it is attached to the sound box. The sound box is turned up and the attachment inserted with its flat side opposite the lever, as shown in illustration.

Here is the Needle Clamp Attachment separate.

Without this attachment it is impossible to use softer and medium tone needles on the spring clamp needle arm. It is perfectly simple, easily attached, holds like a vise and is made in two sizes—for softertone and for Medium tone needles. Order as NEEDLE CLAMP ATTACHMENT and specify which needle is to be used.

Price, 25 cents each

Special prices to jobbers and dealers

**The Softertone Needle** is growing in popularity every day. The loud tone needle, of course, is a necessity to the dealer for selling machines, but it is often too loud for home use. When a customer takes a machine home he finds the softertone needle a great relief. Instead of tiring it perpetuates the use of the machine. This means record sales.

**It Costs Less** One Softertone needle will play six records. Less time is used in changing needles, and there is less wear on the records. A record will last three times as long when the softertone needle is used. We did not accept this fact until satisfied by numerous tests. You owe it to yourself to make a test if in doubt.

phone," said Mr. Smith, "is a very popular machine in Ohio, and our sales are constantly increasing. The October records are having a splendid sale. Prospects are fine—never looked better." They are making a fine display of machines and carry a large stock of records.

The Marlo Amusement Co., moving pictures and penny arcade, No. 236-8 Erie street, are doing a big business, each exhibition being well attended.

The American Amusement Co., No. 716 Superior street, claim theirs is the largest moving picture show in the State, and the business all that could be desired. They have three 20th Century machines, one operated and repeated by electricity, at the above number, the others used in exhibits at fairs, etc. Wm. Bullock is manager of the company.

Mr. Smith, a wholesale grocer of Cleveland, is a born general and a strategist. Not long ago he moved into a flat in a nearby new apartment house on Euclid avenue. The flat has six rooms, hardwood floors, electric lights, telephone, a haughty janitor and an all-night elevator service. The rental is up in the J. D. Rockefeller class. "I really think," said Mrs. Smith, the first day, "we are going to have nice neighbors."

Two of the rooms, a bedroom and the dining-room, open on a court. Below, above and opposite are other windows exactly like the Smith's. The Smith's soon made the discovery that the acoustic arrangement of the court was most remarkable. The walls, ceiling and asphalt floor acted as sounding boards. They could plainly hear every word said by their neighbors, and out of the potpourri of domestic expressions which flooded the court on evenings the Smiths garnered the knowledge that the fat couple just opposite were unhappy and quarrelsome; that the youthful people under the adipose couple were of recent marriage and spoony; the ones above anticipating a visit from the stork; that some one on the same side as the Smith's, but higher up, took roomers, one of whom practiced nightly on a clarinet, and that the blond lady at the top had a beau.

There were several pianos in the building, which pleased the Smiths, who are fond of music. The family with the red dining-room carpet and the rubber plant in the window bought the first phonograph. They started it on one hot evening when all the windows were open. It played "Dearie" and "Forty-five Minutes from Broadway" very nicely. The owner of the phonograph liked "Dearie" so well that he used that record twenty-five or thirty times that evening. Soon after dinner the next day phonograph No. 1 struck up "Dearie" again. This musical treat had evidently suggested to the family below that they too should have a phonograph, and the head

of the family had dissipated no time. His taste was of the music hall quality. His first tune was "Give My Regards to Broadway," which he followed up with other Geo. Cohan things and ended a long repertoire with Marie Cahill's "Robinson Crusoe." And through it all No. 1 was true to "Dearie."

The following evening No. 3 was set in motion. It belonged to the family who had linen covers on their furniture and had a line of "Tannhauser" and "Bohemian Girl." There were evidences of commotion about the premises. Everybody seemed to be taking notice. The fat man got one next. His taste ran to the tum-tum Indian sort, full of pow-wows and Cherokee maidens. Other cylinders sang about Mamie and Lulu and other favorites.

The Smiths had preferences. They stood all until the fat man introduced "A Sailor's Life Is the Life for Me." Mrs. Smith went to bed and sobbed herself to sleep, while the lines around her husband's mouth grew hard, as they do when he is thinking. The next day he bought a 20th Century graphophone. That evening the phonographs began their concert as usual. When well under way Smith placed the horn of his machine through the dining-room window and started it going. In a few minutes every other machine had been retired. Smith had beaten them to a stand-still.

#### BROUGHT HIM GOLDEN MEMORIES.

"Thank you, senior."

His voice choked with emotion. Antonio Cardina waited until the last note of the phonograph died away and silently left the store.

Antonio Cardina was an Italian. He spoke good English although he had only been in the country a short time. J. E. Lightner had just received some new Edison grand opera records and was playing a few for an admiring group when Cardina came in, says the Painesville, O., Republican.

Enraptured he stood in the background and said not a word until the impromptu concert was finished.

The last selection was by Signor Constantina, a noted tenor. Cardina listened intently. Soon the record was finished.

"Please play ze piece again," pleaded Cardina. Tears were in his eyes and his voice wavered like a shutter in the wind.

And no wonder, the music of the Italian tenor brought back to him dear days in southern Italy. Cardina's father had once been a tenor in the Royal Theater, and Constantina, this very man whose voice was reproduced in the phonograph, had succeeded Cardina's father.

"Much obliged, Meester," said Cardina, when the record finished its second rendition. "You make me very happy."

#### RUDOLPH WURLITZER'S GREAT BUSINESS

(Special to The Talking Machine World.)

Cincinnati, O., Oct. 7, 1906.

The Rudolph Wurlitzer Co. have built up their talking machine business to an immense point, doing over 200 per cent. more business in 1906 than in 1905. As a result the wholesale and retail departments have been separated, as have the local and foreign departments, and at present three floors are devoted to the "talkers," and twenty-five employees are necessary to handle the business. Nearly a quarter of a million of records are carried in stock, and about 500 machines are to be found on the shelves.

The company carry on an extensive advertising campaign, which accounts for their success, and they contemplate spending \$5,000 in advertising within the next two months in anticipation of the holiday trade.

The Jones Lloyd Music Co., of Richfield, Utah, are doing some excellent advertising for the Edison phonograph in their locality, and from time to time publish the testimony of purchasers of these instruments as to the marvelous merits of the famous Edison goods.

## QUAD-RUPLE

### Your Cash Sales

WE can refer you to leading jobbers and dealers successfully operating our plan.

Large profits; greatly increased demand for records; profitable "exchanges" for more expensive machines.

Our proposition involves no violation of your phonograph contracts.

Royalties paid by us on 17,494 Lyra phonographs alone, from June 15th to September 15th, showing the success of our talking machine and our selling plan during the three dullest months of the year.

Write for particulars.

Exclusive privileges granted. Don't let your competitor get there first.

## AN INSTRUCTIVE INTERVIEW.

A Talking Machine Jobber Tells The World Representative a Few Things Which Show How the Talking Machine Stands.

I called on a large talking machine jobber the other day in the interests of The World, and after the usual pleasantries had been indulged in, I asked him if he had anything of an original character to offer my paper in the way of talking machine news.

He smoked a few moments in silence; then turning to me with a smile that spoke of some-

TEACHING THE PARROT TO TALK.

thing good to come, he replied, "Yes, I will confess to having a few little things up my sleeve which may be of interest to you, and which are yours for the asking.

"As a beginning, let me tell you this: the talking machine has come to stay, thereby assuring permanent prosperity for the dealer. I have been in the 'talker' line for sixteen years, and I have always said I would live to see the day when the phonograph and its numerous brothers and sisters would outgrow the mere toy period and become articles of real value to the world, and now that day has dawned.

"I sold ten machines to one man yesterday, and he was not a dealer either. Now, I'll just bet you a dollar to a doughnut, you'd never guess what he wanted them for."

I shook my head.

"Well, he is the proprietor of a bird store. Are you on yet?"

I again declared my ignorance.

"Ha! ha! I thought so," he laughed. "Why, he is the principal of a parrot academy; teaches them to talk, you know, and makes money at it, too. I was just as much surprised as you are when he began telling me about it. Neverthe-

less, before he had finished his explanation I was convinced beyond doubt of the practicability of the scheme. The parrot's cage is placed directly in front of the machine, upon which a specially prepared record containing the words, "Pretty polly, polly wants a cracker," and the hundred and one phrases that talking parrots are supposed to utter, is played over and over again until the bird is able to recite his lesson perfectly. Then the record is changed, and in a few weeks the feathered linguist has quite a repertoire of conversation, profane and otherwise, and his value is greatly enhanced in consequence. Twenty-five dollars is charged for a full course of instruction, which is accompanied by a guarantee. So much for the parrot.

"Probably the greatest work the talking machine is doing at the present time in an educational way, is teaching the deaf mutes."

He handed me a clipping from "Farm and Fireside," which I read with much interest. It was as follows: "When a deaf mute child is received at the Wisconsin School for the Deaf, a record of all of the sounds that he is able to utter, is made by having him sound them into a phonograph. The work of training him how to talk then commences, and as he progresses, other records are made. He is taught to say the words and sentences written on the blackboard, and others. After a period in school, the progress from the first day is shown by the records that the machine has made. A visitor is at once struck with what he hears, for all of the tests have been made on the same cylinder. When the record is put on and started, it repeats the gutturals that the child first uttered when he came to the school. Then it calls out a sentence that the pupil tried to say after a period had elapsed. The same sentence is repeated more clearly, and again and again it is sounded out of the big horn, until it is as distinct as a person having the full sense of speech is able to utter it. Then the child himself is called and one sees a living example of what kindness and patience and ability of a teacher is able to accomplish for the unfortunate."

"Truly wonderful!" I cried as I handed the clipping back.

"You're right," he answered, and then continued: "Here's another tip you had better jot down in your notebook. The telephone companies are getting wise to the fact that the talking machine is all right for their business. They tried it once, years ago, without success, but that was before the vast improvements which now make it an almost living being were even thought of, and they realize its adaptability to the extent that they are seriously considering installing it in their central offices as an aid-de-camp to the 'hello girl.'"

"There are various other uses to which the talking machine is being put, which further prove my assertion that it has come to stay. The things which I am about to tell you now," he explained, "may not be at all new to you, but at the same time they go to show that I am right, viz.:

"Concerts are being given in the parks of all our large cities by loud voice talking machines; dancing academies are using them to advantage; authors and actors make use of them for dictation purposes in preparing their books and plays. Then there is the Pennsylvania Railroad Co.; that corporation is taking advantage of a good thing by substituting the talking machine for men in announcing trains at their great terminal stations. Business men are using it in their offices in lieu of stenographers, and I noticed in your paper not long since that an attachment for an alarm clock has been thought of in connection with a talking machine in such a way that instead of an ear-splitting buzz and ring, we may both be awakened in the morning by one of Sousa's stirring marches. Or had we better leave Mr. Sousa out since his declaration against the talking machine? I believe if this attachment comes before the public it will sell, and I for one expect to lay in a supply as soon as possible."

He glanced at his watch with a look of sur-

SUPPOSE your next customer should ask you, which horn in your opinion was the best for results, metal or fibre.

You'll have this inquiry sooner or later.

If you have been handling metal exclusively it's perfectly natural you'll tell him metal. Probably you have never considered the matter further.

We know every inquiry of this sort answered in this way is absolutely wrong. It's an injustice to your customer and it's a further injustice to your own pocket.

Take our word for it you can keep a talking machine user interested longer if he has a horn that gives him the best possible results. That's the "Mega." The extra record sales resulting therefrom and those you can make by using a "Mega" professionally in your store will be to your advantage.

You'll interest a prospective machine customer more quickly and sell more machines with a "Mega" than would be possible by using metal as a medium.

Dealers everywhere have appreciated these facts and have handled and pushed the "Mega" ahead of anything else for years.

At one time or another some of your trade probably have told you their records did not sound as well in their homes as they did in your store. They have blamed the records or the speaker, never the horn. No doubt you have told them the carpets or draperies have been the trouble. This is true to a certain extent; but at the same time your customer has felt a little dissatisfied.

You can overcome a great deal of this trouble and have your trade feel better satisfied if you will get them to use a "Mega." Try this in one instance and see if we are not right.

One of the "Mega's" chief points of superiority over metal is the fact that it cannot be dented. This in itself should commend it to the wise dealer. The "Mega" fibre material can be likened to rubber for its flexibility and durability.

When you think of fibre don't imagine the "Mega" is a fuzzy, dull appearing product. The baking process to which all "Megs" are subjected gives them a high glaze finish.

You can pay less for horns—but why deceive yourself? The best is none too good for the trade you are trying to hold.

The "Mega" is made in Trumpet and Flower shape and Flower-Shape Decorated, also Recording. Let us send you our literature. We'll send you copies of some of the "Mega" testimonials from both Jobbers and Dealers on application. They'll convince you, if our arguments fail, that the "Mega" is the best horn for all-around satisfaction on the market to-day.

If your Jobber cannot supply you with the "Mega" write us direct.

TEACHING A DEAF MUTE TO TALK.

# An Unusual Opportunity For a Small Investment

Buffalo Times—"The one weakness of the telephone as a means of communication—that it keeps no record—has been eliminated."

Washington Post—"There is no scratching sound, the words coming from the machine as clearly as from a human throat."

Cleveland Plain Dealer—"A thoroughly practical piece of office equipment, for which the demand has already outrun the supply."

Pittsburgh Gazette—"Promises to make as many fortunes as were made by the Mergenthaler typesetting machine."

Had you invested only \$10 in Bell Telephone stock a few years ago you could sell your interests to-day for more than \$20,000. Such opportunities for fortune-making investments occur only once or twice in a lifetime, when some great practical discovery is made which like the telephone, is susceptible of a "basic patent," securing to its owners an absolute and legitimate monopoly.

Such an opportunity is now open to the first few investors whose quick intelligence will enable them to see the vast practical usefulness of the

## Telegraphophone

The general interest in this epoch-making invention has grown day by day until it is now the most earnestly discussed device in scientific and commercial circles throughout the world. This is because men realize that the practical usefulness of the TELEGRAPHPHONE will quickly make it a coveted thing

for every man who has a telephone,  
or owns a typewriter,  
or employs a stenographer,  
or enjoys amusement,  
or wishes to learn a foreign language,  
or is deprived of his eyesight,  
or writes letters,  
or sends telegrams.

The TELEGRAPHPHONE has a broader field and a greater future than the telephone, the telegraph, the typewriter, or the phonograph, because

It renders a telephone conversation as tangible and as safe as a written contract,—

It supplements greatly both the wire telegraph and the wireless,—

It supersedes the phonograph in the office and in the home,—

It is not only a wonderful saver of time, but also a great convenience, and insurance against error, both for the correspondent and the typewriter.

**LARGE CLAIMS?** Yes, but you will agree that these are modest claims when you have seen this perfected machine in operation and perceived its marvelous capabilities. Every one of these claims will be demonstrated to your entire satisfaction.

The U. S. Patent Office will tell you that practically all patents issued are based upon improvements or modifications of some already known scientific or mechanical device, but that the TELEGRAPHPHONE is one of those rare instances of a discovery susceptible of a "basic patent," because it embodies entirely new principles of applied science. It is an application of electro-magnetism by which sound waves, even those produced by the minutest whisper or respiration, are electrically projected into the mole-

cules of steel, there to remain and be reproduced at will. There have not been a dozen basic patents of importance issued in the last quarter of a century, and without a single exception such basic patents (legitimate monopolies) have made vast fortunes for early investors.

A limited portion of the treasury stock in the American Telegraphophone Company will be sold to the earliest applicants at \$10 per share. Each subscriber will be limited to a few shares, because the more investors we have, the more general will be the interest aroused in the Telegraphophone. **THERE ARE NO PREFERENCE SHARES AND NO BONDS—ALL SHARES ARE ALIKE AND EACH SHARE CARRIES WITH IT THE RIGHT TO VOTE**, so that with a single share you will have every right, privilege and protection possessed by any other stockholder, and being in at the birth of a great industrial business, you can not only watch it grow, but also assist in some measure in your own community, until the TELEGRAPHPHONE surpasses in magnitude, as it surely will, such vast interests as the Telephone, Air-brake, Phonograph, Sewing-machine, Kodak, and many other industries which originally started in a small way, but by real merit have achieved enormous power in the commercial world.

The net proceeds of the present limited sale will be devoted entirely to manufacturing and to enlarging and equipping the plant for the manufacture and sale of the TELEGRAPHPHONE. The instrument has met with an immediate demand of surprising proportions—orders having already been received for a number far in excess of the factory's utmost capacity of production for many months to come.

We invite your fullest investigation. If you cannot call to see the TELEGRAPHPHONE in operation,

### —THEN CUT OUT THIS BLANK AND MAIL IT TO US TO-DAY—

With your permission, we should like to mail you, entirely at our expense, an illustrated booklet describing the Telegraphophone, and pointing out some of the far-reaching influences which this unique invention is already beginning to exert upon scientific, social and commercial life. To avoid all chance of error or delay in forwarding this booklet to you, please write very plainly:

YOUR FIRST NAME SPELLED OUT:	MIDDLE INITIAL:	YOUR LAST NAME:
MR., MRS. OR TITLE: YOUR MAIL ADDRESS (P. O. BOX, OR STREET AND NUMBER)		
YOUR RESIDENCE (CITY AND STATE):		[K 651 B]

Our object in the free distribution of these interesting booklets is primarily to inform the public of the practical capabilities of this remarkable discovery, and so by returning this blank, with the particulars asked above, you will be placing yourself under no obligation whatever to us. In the belief that you will wish to take advantage of a most unusual opportunity to make a small, safe and very profitable investment, we will mail with the booklet full information as to how you may secure a few shares of a limited issue of treasury stock, which is about to be made.

**STERLING DEBENTURE CORPORATION.**  
56 Wall Street, New York.  
F. C. MacLEAN, Manager.

prise, and closed the interview as follows: "Young man, I could go on indefinitely telling you about the practical uses for the greatest money maker, and grandest invention that ever happened, but I won't, because I am very busy to-day, and have already given you more of my time than I should. You see," he went on apologetically, "it makes me feel so good when I realize that my business is on as firm a foundation as groceries or hardware, that I have to talk about it."

"Now, I will just say this in closing, then I must say good-bye. We are catching up nicely on record shipments. That little courtesy of the National Phonograph Co.'s in cutting out the June list helped wonderfully, and taking the time of year into consideration, things are certainly 'going some.'"

Bestowing upon me a hearty hand clasp and a good cigar, he bowed me out.

HOWARD TAYLOR MIDDLETON.

### EDISON BUSINESS PHONOGRAPH.

Commencing With Sept. 1 the Sale of This Instrument Was Placed with a Number of Jobbers—This Plan Likely to be Extended.

Commencing with September 1 the sale of the Edison business phonograph was placed in the hands of a number of jobbers by the commercial department of the National Phonograph Co. Others are trying it out, and it is likely that the leading jobbers in the country will take on the new line as rapidly as their business can be adjusted for its proper and efficacious handling. Nelson C. Durand, manager of the National Phonograph Co.'s commercial department, who returned last week from an inspection trip of the company's offices in the Middle West, in explanation of this policy, said to The Review: "We are not throwing open the commercial system to the entire trade, but only those who can qualify. That is to say, the National Phonograph Co. will give the preference to the Edison jobber or dealer to handle the business phonograph in their locality when they reach their city, and

not before. We will give full and free instructions to the local man's operator, so that he or she can in turn teach his client, and likewise his mechanic will be taught how to install and care for the machine.

"That is to say, the local jobber or dealer must install and do all repairing, but need carry no stock. The company will ship the equipment and bill the goods. Now, another thing, in according this privilege the commercial department will not permit the agent of a concern in some other place to handle the business phonograph. The arrangements will be made with the principal only, and he can sell where he pleases—no exclusive territory is given under any circumstances. We shall issue no printed matter in connection with this move, and, for heaven's sake! tell the trade not to write, for Durand is too darned busy! Oh, yes, our present branch offices will be maintained as heretofore, for the convenience of those taking on the new line."

### SOUSA'S MACHINE MADE MUSIC.

Some London Comments on Sousa's Article.

In commenting upon Mr. Sousa's rabid attack on "canned music" recently, our esteemed London contemporary "Music," says that "some of his (Sousa's) strictures on machine-made music might even be applied to his own work, for anybody who has heard one of his marches can recognize all the others as having been drawn, so to speak, from the same tap."

A member of the Gramophone Co., of London, when interviewed on the subject, said: "So far from lowering the musical taste of the people, talking machines have educated and elevated it. We find that when a man first buys a gramophone he lays in a stock of the most amusing songs and the lightest kind of orchestral selections. In his early enthusiasm he plays his records over and over again, with the result that the comic song, the oft-repeated joke of the comedian, and the frivolous tunes pall on him and he turns to a higher class of music."

Mr. Sousa seems to be in the position of the

logger who pries out the key log in a jam. Everything seems to be coming his way in a manner, it may be safely assumed, he hardly expected.

### COLUMBIA AT INDIANA STATE FAIR.

At the Indiana State Fair held recently the Indianapolis branch of the Columbia Phonograph Co. prepared a special window exhibit in honor of the occasion. In the center of the window was placed a large graphophone on a mahogany pedestal, in front of which was placed a large banner bearing the words, Columbia College. Placed around this banner and completely filling the window were pennants of the most prominent colleges of the United States. The exhibit is said to have influenced many sales.

### MUSICAL ECHO CO. CONCERTS.

The Musical Echo Co., Philadelphia, have been giving a series of concerts in the auditorium of their handsome warehouses in Philadelphia every Saturday evening during the summer, which have proven great successes—the auditorium, seating 350 people, has been packed to the doors at every concert. Last Saturday evening the records listed were all Victors, and embraced numbers by such leading artists as Eames, Caruso, Scotti, Kubelik, Juch, Melba and others, and were rendered on the new Auxetophone, the latest achievement of the Victor Co.

### "TALKER" ON PRESS CLUB OUTING.

On the recent trip of the International League of Press Clubs through the Cripple Creek district following their convention in Denver, a Victor machine and a fine assortment of records in charge of Miss Ethel Irvine, of the Knight-Campbell Music Co., who was a guest of the clubs furnished the music.

Saying good things of yourself and your goods makes you believe good things—and as you believe so will you bring others to believe, and from the belief will spring profitable business.

# THE PETMECKY MULTI-TONE SELF SHARPENING Talking Machine Needle

**Plays loud or soft and intermediate tones with the same needle.**

**Sharpens itself. Each needle plays ten records.**

**Saves wear on the records.**

**Makes disc machines as smooth and scratchless as cylinder machines.**

**Makes worn records play without scratch.**

**Helps the sale of disc machines and records.**

**The only needle that has a character.**

**Pays dealers a better profit than any other needle.**

**The price is restricted and profits are certain.**

## WHAT DEALERS THINK OF PETMECKY NEEDLES:

**The A. Hospe Co. of Omaha, Neb. say:**—"We have tried the Petmecky needles thoroughly. Last week the writer played sixteen twelve inch red seal records with one needle and after the test the needle seemed worn but little."

**The Unique Talking Machine Co. of Houston, Texas, say:**—"We have sold quite a few of your needles and each sale brings others. As to our opinion: we use them on all our high priced records. Did we not consider them the best we would not use them on records worth from \$3 to \$5."

**H. A. Guyon of Red Bank, N. J., says:**—"I have done some investigating with your needles and have come to the conclusion that you have the real thing in needles. I would suggest that you retail them at 25c. per hundred. There is no use throwing a good thing away competing with the needles now on the market when none but yours will play a twelve inch record through distinctly."

**The Huff Music Co. of Bethlehem, Pa., say:**—"The sample needles received. We gave them immediate trial in the presence of a number of persons and the various loud and soft effects produced by the change of fronts is marvelous."

**Harry C. Lansell of Phila., Pa., says:**—"Philadelphia is the home of the Victor and all improvements in anything pertaining to the talkers must have decided merits. Your needle, however, needs no explanation. It speaks for itself."

**Write for free samples, descriptive circular and terms to dealers.**

## THE VICTOR VICTROLA.

Illustrations of the Remarkable Instrument Put Out by the Victor Talking Machine Co. Which Has Been So Highly Praised.

Nothing in years has made such a tremendous impression throughout the country as the Victor Victrola, the remarkable new instrument

VICTOR VICTROLA WITH SOUND BOX AND CABINET OPEN, recently placed on the market by the Victor Talking Machine Co., and referred to recently in these columns.

SHOWING SOUND CHAMBER CLOSED AND RECORD CABINET OPEN.

The Victor Victrola is 4 feet high, 20 inches wide, 22 inches deep, and weighs, unboxed, 137 pounds. It is made of solid mahogany in light and dark shades, and superbly finished. The metal parts are heavy gold plated. As can be observed in the cut there are ten disc albums, which afford space for sixty 12-inch and ninety 10-inch records, or 150 in all. At the bottom there is a drawer, or compartment for extra supplies, while a sliding needle drawer is placed just above the drawers which open into the horn.

There is an enormous demand for the Victor Victrola in all parts of the country, and the ability to regulate the volume of tone as well as to remove all mechanical sounds have won for it a unique position in the talking machine world.

The Victor Co. have recently issued some literature bearing upon the Victor Victrola, which explains its functions most interestingly. They say in part: "Just open the doors and the melody pours forth. Don't you see we have simply reversed the ordinary practice? We take the sound, as it were, by the hand, and lead it down from the sound box above the record through the tubes to a mahogany horn below rather than to a horn above, and modify the volume as we please by closing and opening, more or less, these doors."

## THE TRADE IN WHEELING, W. VA.

Business With Leading Dealers Shows Great Activity.

(Special to The Talking Machine World.)

Wheeling, W. Va., Oct. 9, 1906.

At this time it would seem as though the season of preparation is about over, and the busy season on the verge of starting.

September was a quiet month with the trade here, and it gave dealers an opportunity to get their stocks in condition for the great trade expected this fall and winter. The conditions in this section are most promising, all the mills, mines and factories working full time with orders ahead to keep them busy during the winter. The Columbia Phonograph Co. are making preparations to open a store here. They will occupy the half of a room on Main street. Thos. Rodgers, formerly manager of the Homestead, Pa., store, will be in charge. As he has had several years' experience in this line, he will no doubt do much toward popularizing the Columbia goods in this section.

The several music stores are making creditable showings of the Victor and Edison machines. Bard Bros. invited the public to come and inspect the many changes made at their Main street store. This was a popular event, and several thousand people visited their store during the day and evening. The different salesrooms were beautifully decorated for the occasion. Each visitor was presented with a carnation as they entered the building. This firm has placed an immense sign on the top of their building. It is painted and cut out to represent an Edison phonograph with large horn. In the bell of the horn there is a picture of Mr. Edison. At night this is illuminated by many small electric lights, attracting much attention.

## EDISONIA CO.'S NEW QUARTERS.

A. O. Petit, of the Edisonia Co., of Newark, N. J., is now preparing a new home for his company at 58 Halsey street. On account of the extensive alterations under way at the new place it will be a month at least before he can get established.

Their new quarters, when finished, will be among the handsomest in the State. The whole front of the building will be of solid plate glass, which will not only ensure bright, cheery rooms, but a wonderful opportunity for window display on a large scale.

Heintzman & Co., who handle Edison and Columbia talking machines, records and supplies in Winnipeg, Man., report an exceptionally good demand for these products in that vicinity.

**Don't  
disappoint  
your  
customers**

If you're out of anything and have to send to your jobber for it, tell your customers just when you will have it—and don't disappoint them.

Sounds well enough, but how are you going to do it? That's between you and your jobber, and your jobber ought to be able to size up to the mark.

Every one of our customers know they can swear by us, for we ship every order the same day it is received, and they can figure out without any trouble just when the goods will arrive at their store.

Wouldn't you like to enjoy this service? Wouldn't it be better for your store and tend to draw your customers closer to you?

We're ready to fill your orders whenever you send them to us. We always have on hand a complete stock of Victor talking machines and records, trumpet horns, fibre cases, English needles and other accessories of every sort, and never keep you waiting.

Write to-day for a copy of our latest catalogue. When you get it, make up a trial order and see if all we have said about prompt service isn't backed up by actual performance.

**The Victor Distributing  
and Export Company**

77 Chambers Street

New York

# TONE REGULATORS

## FOR ALL TALKING MACHINES

### "Junior" Tone Regulator

Illustration represents The Tone Regulator as it looks on a Victor Tapering Arm Machine. If you will notice the cut you will find part marked "E." This is aluminum cup, which fits over the Exhibition sound box and when reducing the tone the cup prevents the tone escaping through the sound box. With this Tone Regulator one can change the tone from very loud to very soft by simply turning the thumb screw marked "C" in cut. The Tone Regulator does away with the soft tone needle. The volume of tone can be reduced without impairing the quality of same, thus enabling one to hear the loudest band piece in a very small room.

**Price \$1.00**

### Tone Regulator for Edison Machines

The illustration is an exact cut and size of our Tone Regulator for phonographs. By simply turning the thumb screw you can regulate the tone so that the loudest band pieces may be listened to with pleasure in the smallest room. The Tone Regulator is placed between the reproducer and the rubber connection or the horn.

**Price 75 cents each**

### The "Universal" Tone Regulator

The "UNIVERSAL TONE REGULATOR" is designed to fit Tapering or Straight Arm Victor Machines, also Columbia and Zonophone Tapering Arm Machine. With the "Regulator" the tone from the horn can be reduced to any desired volume at the will of the operator without stopping the machine. By the use of the cap over the outside of the reproducer the sound which comes from that side is cut off, and only the pure tone which comes through the horn is heard. This outside tone has a higher pitch than that which passes through the horn and causes much of the harsh metallic sound often noticed, which is really a discord.

To apply the "Regulator" loosen the screws which fasten the reproducer to the arm and remove the reproducer. With the Victor the same screws can be used, but with others they must be replaced by ones furnished with the "Regulator," which are slightly longer than those originally on the machine. Place the "Regulator" against the rubber disc in such a manner that the slide valve will be away from the rubber and against the metal back of the reproducer, and so that the screws will pass through the proper holes; those marked "A" being made to fit the Victor and Zonophone, and the three marked "B" to fit the Columbia. Place the reproducer against the "Regulator" so that the screws will enter the proper holes, and set the screws tight to place. The instrument is then ready for use.

**Price \$1.00**

### The "Victor" Tone Regulator

With this Tone Regulator one can change the tone of a talking machine from very loud to very soft by simply turning the thumb screw, which is shown in the cut, and marked letter A.

First—It does away with the soft tone needles which are detrimental to the records.

Second—The volume of tone can be reduced without impairing the quality of same, thus enabling one to hear with pleasure the loudest band piece in a very small room.

Third—With the Tone Regulator one can give expression to the selection, thus doing away with the *monotony* of the record.

Fourth—By reducing the tone in vocal selections the words are more distinct. This can only be done by the Tone Regulator.

**Price \$3.00**

Dealers will find it advantageous to carry a stock of these Tone Regulators as it is very often the means of selling a machine to parties who would otherwise not purchase.

**Discount to dealers same as on Victor Machines.**

We are the only distributors carrying a complete line of Victor Records in sealed Envelopes, which is a guarantee that the Record has not been used and is in perfect condition. Send us a trial order.

## THE TRADE IN ENGLAND.

Trade Satisfactory—Longer Records Commanding Large Sale—Indications of Strikes May Interfere With Trade Somewhat—The Edison Bell Co.'s Long Record—Interesting Chat With Mr. Rühl—A New Incorporation—The New Columbia Quarters Centrally Located—Russell Hunting Co. Expansion—Growth in Talking Machine Popularity Everywhere—Used as an Aid to Drilling and in Recitals in the Hop Fields—A Birmingham Concern—Other Items of Interest.

(Special to The Talking Machine World.)

London, England, Oct. 6, 1906.

The general trend of our September trade has been good. Reports from all quarters bear out the fact that the longer records now supplied by the Edison Bell, Russell Hunting and General Phonograph Co., have commanded an exceptional sale, and have awakened great public interest. Unfortunately for us, this country is at present threatened with many trade disputes, that in two cases have already matured into strikes. Employes in the Scotch and South Wales collieries, the Clyde boilermakers and British railwaymen are agitating for higher wages and a shorter working day. We are not so much concerned with the justice or otherwise of the disputes as to what bearing it will have upon the talking machine trade. As these labor wars tend to divert capital from this country, it will be felt that at any rate in the particular strike counties some detrimental effect must result to most trade, perhaps more so to our own when we consider that the talking machine is not so much a necessity as a luxury.

In my August report I gave currency to the fact that the Edison Bell Co. were placing a longer record on the market. Instead of one-quarter to three-eighths of an inch, it will occupy almost the whole length of the mandril. The extra space will, of course, be utilized in many cases to the full, and consequently certain selections can now be rendered complete, which hitherto was not possible on the ordinary standard length record. Interviewed on the subject Mr. Hough said that the output of the larger record will naturally be limited, in comparison with the whole amount of trade. For some time to come the greater part of the business will be in the standard size, but undoubtedly the longer

record will grow rapidly in public favor and probably lead to a revolution in demand, which from one too obvious point of view is much to be regretted. On the principle so characteristic of humanity, "get as much for your money as you can," the masses will clamor for the longer record, whether or not it contains more music than the ordinary. Asked as to condition of sales Mr. Hough said trade was splendid. Last month was synonymous with marvelous sales, and this month bids fair to outshine all its previous records. Great preparations are in hand, and new plant has been put down with the object of being ready for those sudden expansions of trade, which appear to be characteristic of this business during the winter months. A splendid range of new artists is promised for the future, some who have never yet been known to the phonograph. Asked if he wished to tell The World readers anything more, my informant replied that it might interest them to know that there had been no recent fire at the works, nobody had died in their connection, and he wished to say nothing more, except to assure friends throughout the world that "all's well."

### Disc Records Made in Great Britain.

The Columbia Phonograph Co. drew our attention to a statement circulated in the trade to the effect that certain disc records are the only composition disc records made in Great Britain, very properly pointing out that the statement is untrue, inasmuch as Columbia disc records come within this description, being made of composition and manufactured in London.

### Recent Columbia Records.

The 12-inch Columbia disc records by Miss Ruth Vincent and David Bispham, to which I drew special attention last month, have proved exceptionally good sellers. The demand for them even in the first few days of September was indeed so great that the shelves were soon emptied. A further stock was speedily requisitioned by cable, and before the month closed another large shipment had arrived, so that the company are again in a position to give prompt attention to the large orders which these excellent records are calling forth.

### Mr. Marconi's Plans.

Mr. Marconi is evidently not the man to let the grass grow under his feet. We announced last month that he had accepted the position of consulting physicist to the Columbia Phono-

graph Co., General, and we are now able to say that he has already given attendance at the company's American laboratory and made such arrangements as will enable him to proceed with his projected experimentations forthwith. Just now, we hear, he is back in Europe on important business concerning his wireless telegraphy undertakings, but it is his intention to give his immediate attention to the talking machine, and in pursuing his investigations he will, of course, make the fullest use of the unique resources which the Columbia Co. can offer him in their laboratories on both sides of the Atlantic.

While in America last month he spent a day at the Columbia's Bridgeport factory, and in the evening was entertained at a banquet at the Waldorf-Astoria Hotel in New York. He expressed himself as delighted with the splendid manufacturing and experimental facilities the Columbia people have provided in America and proposes to visit their London plant at the first opportunity.

### Carl Lindstrom's Great Business.

The famous house of Carl Lindstrom stands out as one of the largest manufacturing firms on the Continent. They occupy commodious premises in Berlin, besides having their depots and agents throughout the world. Their principal outside agency is in London, under the able management of Mr. O. Rühl, a gentleman of wide experience as a talking machine manufacturers' agent. In the course of a very interesting interview with Mr. Rühl I learned some particularly good news in relation to the firm he represents. The fact that their output increases not only each month but right throughout each whole year, summer as well as winter, shows a very satisfactory state of affairs. This condition is but the "effect." Let us trace the "cause" and we are immediately led to quality, workmanship and service. These three form the basis of business progress. They stand for the word "recommendation," which means everything in these times, when the market is overrun with articles of gaudy and inferior quality. From time to time the growth of Carl Lindstrom's business has rendered it necessary to secure additional space; to-day the needs of the business have demanded still more room, and the new up-to-date warehouses situated in a central quarter of Berlin will enable them to offer dealers still better service in the future. As an instance, I

## FROM OUR LONDON HEADQUARTERS—(Continued.)

may say that no less than fifty new workmen have been taken on within the last month or two. Disc machines form their specialty, and these are now being turned out as fast as the capacity of the works will permit. A specially reliable motor is fitted and, as a whole, these disc machines constitute first-class value. In his announcement Mr. Rühl invites correspondence, and dealers—no matter in what part of the world you are located—you should write to him for further particulars.

**David Bruce & Co.'s Specialties.**

David Bruce & Co. report business as good, but not brisk. Their unwearable needle commands great attention, and sales are increasing in a very satisfactory manner. Gardner's patent sound box, with the screw attachment, is another good seller. The disc record library in connection with this firm is as yet in its infancy, but now that the season has almost commenced it is anticipated that the library will increase in popularity, especially as for a subscriber there is no limit to the number of tunes, records can be exchanged. Dealers should address David Bruce & Co., 151 High Holborn, London, for further particulars of their specialties.

**Henry Seymour, Ltd., Registered.**

Henry Seymour, Ltd., were registered September 10, 1906, with object to take over the Seymour specialties hitherto manufactured by the Microphonograph Co., and to further engage in the manufacture of disc and cylinder machines and records on improved principle. The first public issue of 5,000 shares at £1 each will shortly be published. Henry Seymour is managing director, W. J. Pope, secretary, while the remaining directors are Ernest Hamilton Burgoyne, James Gray, William Mayland, G. Lawrence Holland, Alfred Cornell and Louis Berlyn.

**Columbia Co.'s New Quarters.**

In the course of a chat Mr. Shields mentioned that the present month will see the Columbia

Phonograph Co., General, installed in their new premises at 64 and 66 Oxford street. Now that the boardings are down, the stately five-story edifice with its tastefully ornamented stone frontage impresses every passerby. As soon as the building is tenanted by the company, the already striking effect will, of course, be considerably enhanced. A brilliant window display will focus attention on the purpose to which the premises are devoted. The visitor, on entering the new establishment, will find the attractiveness of the interior arrangements complementary to the fine effect of the front. The shop will occupy the ground floor, while the upper stories, which may be reached by means of a hydraulic lift, will be devoted to office uses. The location of the building—just above the junction of Oxford street and Tottenham Court road, where crowds of shoppers and sightseers are always to be found—coupled with its commanding appearance, gives a unique advertising value to this new establishment. It has always been the policy of the Columbia Co. to go to any expense so long as they were represented in the chief thoroughfare of every city where they have a branch. The old Oxford street premises, with their brilliant lights, were at one time the talk of the neighborhood. It is intended that the new building shall be still more prominent in this respect, and good publicity will therefore be secured. The old premises in Great Eastern street will be retained for the present; at any rate, until the new warehouse is in working order.

**Neophone Co. Open in Japan.**

At the Neophone Co. I learn from Mr. Sabine that branches have been taken in Japan. The company will be known as the Japanese Neophone Co., with their offices at Tokio and Kobe. This is without doubt an enterprising move of the mother company, and deserves the utmost success. There are several Japanese artists now in London, busily engaged in making the first Japanese records.

**Sterling Special Wins Tremendous Vogue.**

Another record! It is not a new cylinder or disc, but just a record in output of the now famous record known as the "Sterling Special." Everywhere I went the dealers always told the same tale, "sold out." This whetted my curiosity for more, so I immediately paid a visit to the manufacturers, the Russell Hunting Record Co. Here Mr. Sterling informed me that the extra music given on the longer record was appreciated so much that they were unable to deliver, or for that, manufacture fast enough. A complete set of the thirty-six new titles were dispatched by order to no less than 5,000 dealers in the record time of two days and nights. Think of it, 180,000 in 48 hours. Regarding the "Odeon" records Mr. Sterling stated in answer to my question that it was not possible to make out exact tables of comparison of the sales under their management against those of the old London firm. But there was certainly a material difference. Under their guidance and assisted by the additional publicity given, the "Odeon" record is fast gaining popularity and new adherents. A further tribute to enterprise lies in the fact that the Russell Hunting Co. are shortly sending Mr. Ditcham to represent them in South America. Elsewhere will be found other particulars concerning this new departure. Before taking my leave Mr. Sterling kindly paid a compliment to the general get-up and contents of our September issue, stating that it was most interesting and generally a splendid number indeed.

**Big Orders Received for White Records.**

Said Mr. Latham, of the General Phonograph Co.: "The orders for the White record are coming in as fast as we can take care of them." The huge extent of their factory output makes that statement very interesting. No long rows of figures are given—it is not necessary. Just the fact that they are hard pushed to dispatch the orders fast enough, is a very satisfactory condition, and must occasion no little pride to

those who have marketed the "White" record. Letters of appreciation are constantly being received, and inquiries through the medium of The Talking Machine World have come in from all parts of the globe. A new record box has recently been selected. It is slightly longer than the old one, and is artistically gotten up in white and gold with a royal blue background, and is of a most striking and pleasing appearance.

**New Arrivals Sell Well.**

The new "Jewel" cylinder and the disc "Regal" graphophone of the Columbia Phonograph Co.'s are both enjoying an unprecedented sale. Dealers who display these lines are in consequence doing a good business; a new catalogue of 7-inch and 10-inch disc records has just been published. The list includes many popular titles. The Columbia Co. have also prepared a new edition of their machine catalogue, containing full details of the different styles and types of the Columbia graphophone. During August the Columbia business throughout Europe shows an increase on the same month last year.

**The Power of the Phonograph.**

The Rev. J. Allard Pride, rector of Bridlington, in the current issue of his parish magazine, makes some scathing remarks anent the vocal powers of his choir, and incidentally pays a compliment to the phonograph. After attacking the congregation for not putting enough money in the plate, the reverend gentleman turns his attention to the lady members of the choir, and severely admonishes them for the poor quality of their voices—poor things! Not content with this, he strongly recommends them to take lessons in singing, and adds: "Would that every one before singing in public could sing into a phonograph and hear the sound of her own voice." There is talk of reprisals on the part of the choir, but the best thing they can do is to get that phonograph, a supply of blanks, and set to work right away to improve matters.

**The Gramophone an Aid to Drilling.**

The latest instance of modern ingenuity is the use of the gramophone in aiding recruits to become efficient soldiers. Experiments have been successfully conducted in drilling native Malay levies by word of command emitted from a gramophone in place of the ordinary drill sergeant. Even the Zulu can now hear his own native songs and war dances from records made by the West End Gramophone Co., who have sold more than twenty machines to swarthy warrior

chiefs in South Africa. Folk songs of the Pygmies were recently secured, and a machine has been dispatched to Lapland for the purpose, if possible, of procuring Eskimo folk songs.

During this summer talking machines of all descriptions have been a regular feature of riverside life. By the aid of an immense gramophone Sunday afternoon variety entertainments were given at Hampton Court. Music, singing and recitative records were played one after the other, and that they were appreciated was evidenced by the swarms of well filled punts and boats gathered around.

**Gramophone Recital for Hoppers.**

The most unique feature of the Hopping season this year was undoubtedly on the musical side. Hitherto the music (sic) emanated from mouth organs, accordions and such like instruments, but these were entirely forgotten when the strains of "Molly, I Love You," "Everybody Works but Father," etc., floated on the air from a huge gramophone located on a farm at Pad-dock Wood. It was a soft, cool night. Everything seemed to harmonize, and, in fact, it was just the time when the gramophone was heard at its best, and it is no cause for wonder that the savage spirits of the hop pickers were for once held up.

**A Horn That Is Much in Demand.**

Whitelock's patent improved concert horn is generally conceded to produce the most mellow notes with the best effect. For increasing, throwing and toning power it has no equal. The Bell is spun in one piece, and the stem takes apart from bend with a slip joint for convenience of packing.

**Russell Hunting Co.'s Show Card.**

The Russell Hunting Co. send a sample of their new show card. It is of unique design, and by a special arrangement of shade color, the record box, which forms the illustration, is thrown out into bold relief. Another novelty is the record shaped cards of various designs and colors, whereon is a picture of the Sterling artist and the selection he has recorded. Foreign and colonial dealers should write to the company at 81 City Road, London, England, for copies.

**Lyon-a-Phone Talking Machine Co.**

From the Lyon-a-Phone Talking Machine Co. comes to hand a unique machine catalogue in the shape of a show bill. It is very effectively set out, and contains illustrations of various machines, sound boxes, phonograph springs and

other talking machine accessories. Particular attention is drawn to their Lyon-a-Phone opera sound boxes, which have obtained much popularity in this country, and are issued to the public at a very moderate price. This company are now specializing flower horns for cylinder and disc machines, and are booming Zonophone and Sterling records.

**Imperial Records Handled by Cook's Co.**

In my last month's report the second paragraph in the last column on page 35, referring to the "Imperial Record," is made to read as being handled by Messrs. Pathe Freres. This is to advise all and sundry that the "Imperial Record" is handled in this country solely by Cook's Athletic Co., of Beech Street House, Barbican, London. In conversation Mr. Cook said it is a time of great activity with them just now, and although supplies come in pretty quickly, they are not quick enough to cope with the many orders now in hand. No finer indication of the popularity of the "Imperial Record" could be found than this, and much credit is due to Mr. Fisher, who looks after the selling end of the proposition. By the way, a most attractive show card has just been issued by Cook's Athletic Co. It illustrates a gun shooting record, and the title refers to the "Imperial" as the great gun of the record world. The whole is very effectively gotten up in striking colors, admirably blended together, and will be sent to dealers on request.

**Mr. William Ditcham.**

In another part of this report I made reference to the Russell Hunting Record Co. and their South American representative, Mr. William Ditcham. As the interests of this journal extend to South America, and, for the matter of that, the whole world, it occurred to me that our South American friends particularly would be interested in the subject of these few lines, hence I set forth to find the gentleman in question, which proved an easy matter. "Yes; I sail from here on the 5th of October for South

America. I first go to Paris, where I meet my partner, who will act as interpreter, and thence we go direct to our destination." "Will you tell the readers of The Talking Machine World the exact object of your visit, Mr. Ditcham?" "Cer-

WILLIAM DITCHAM.

tainly; my company already have their agents out there, and while there will, of course, be other business matters to attend to, the principal reason of my journey is to obtain and superintend the recording by native artists." "Another question, Mr. Ditcham. How long have you been connected with this industry, and what is your exact experience?" "Well, altogether I have had over ten years' knowledge of the business, having previously been connected with another large cylinder record firm, as well as the 'Electric' record, which I helped to place upon the market." Mr. Ditcham is also a practical man, apart from the musical side, and his experience in recording was gained under the able tuition of Mr. Russell Hunting. Since, from these few words, it is obvious the Russell Hunting Co. have secured the right man, we may expect to hear some very interesting selections as early as possible. Wishing Mr. Ditcham a safe and comfortable voyage, I took my leave, hoping to hear from him later.

**The Edison Bell Co.'s Long Record.**

Now that the Edison Bell Co. have placed a longer record on the market, dealers should stock them, as there will undoubtedly be a large public demand for these famous musical records. Write, therefore, to the company at 39 Charing Cross Road, London, England, for lists.

**Enterprising Birmingham House.**

The Colmore Co., of 31 Colmore Row, Birmingham, have launched out very extensively as factors in the phonograph trade. They believe that one thing done well is much better than several done indifferently, and they are therefore making a specialty of Edison productions

and also Sterling records. They boast that they have every record in stock of both the above makes and what is also important, they can place their hands on any record in a few seconds. Their trade is increasing by leaps and bounds, and as they have a large and industrious population in and about Birmingham, their prospects are particularly bright.

**LATEST ENGLISH PATENTS.**

Compiled for the Talking Machine World by an Expert in London—Will Give Americans an Idea of Developments on the Other Side.

(Special to The Talking Machine World.)

World Office, 69 Basinghall Street, E. C.,  
London England, Oct. 5, 1906.

The following list has been compiled exclusively for The Talking Machine World by Cassell & Co., 90 Chancery Lane, to whom inquiries relating to all patents should be made.

No. 6613, Alexander Morris Newman's "Improvements in records for Phonographs and like sound recording instruments." Date of Application March 19, 1906. Complete patent accepted August 16, 1906.

The object of this invention is to produce a record in which the indentations forming the sound image are efficiently protected from injury

by contact with other objects, and further to produce a record adapted to itself guide the sound box needle or stylus when sounds are being received without the necessity of special driving appliances.

As shown, the record disc 1 is formed of hard material with a groove 2 therein, the walls of which are designed to guide the sound box while sounds are being recorded in a second groove 3 formed therein and filled with record material. The groove 2 also protects the record groove 3 from injury. In the modified form, the groove 2 is dispensed with and a groove 4 formed in

the disc material parallel to the record groove 3 and designed to receive a projection carried by the sound box by means of which the latter is guided.

No. 26,522. A. J. Boulton (Henry Joly). "Improvements in or relating to synchronizing the movements of cinematographs and phonographs or like instruments." Date of Application December 19, 1905; completed patent accepted September 6, 1906.

The synchronizing apparatus forming the sub-

ject of this invention is a speed indicator which enables the speed of the cinematograph to be ascertained at every moment and regulated in accordance with that of the phonograph. The apparatus is characterized by putting each of the apparatus, that is, the cinematograph and phonograph, in gear with a speed indicator, which is constituted by a rotating needle, the movements of which is effected by one or other apparatus by means of a motor mechanism, the speed of which can be varied at will and actuated in such a manner that the movement of the said needle is always in concordance with that of another needle actuated by the motive mechanism of the other apparatus, while one of the needles can be replaced by a rotating indicating dial.

No. 5062. Matthew Atkinson Adam's "Improvements in or relating to phonographs and like machinery." Date of Application March 1, 1906. Complete patent accepted August 30, 1906.

This invention relates to phonographs and the

like of the type wherein the diaphragm operates both a recording and a reproducing style which are adapted for alternative engagement with

# THE BEST IN THE WORLD HOWELL BROS. SOUND BOX

Adapted for Victor Taper Arm and also Direct Horn Machines

**Dealer's Price \$1.50**

**HOWELL BROS., St. John St., CLERKENWELL, LONDON**

the blank or record, the object being to mount the styles on the diaphragm and tilt the diaphragm to obtain such alternative engagement without rotating it, as will be clearly understood from the accompanying sketches showing the diaphragm in both positions.

No. 17,016. George Winfield Gomber's "Improvements in phonographs and the like." Date of application August 22, 1905. Complete patent accepted August 22, 1906.

This invention relates to a tablet carrier and

mandrels for talking machines whereby a plurality of tablets are grouped together in one machine so that any one of the tablets may be moved into co-operation with the reproducer as desired, and as shown the tablet carrier comprises a disc-like plate 6 having a plurality of bearing seats struck up therefrom and arranged in pairs, a sleeve secured to each pair of seats, a shaft rotatably mounted in the sleeve and designed to receive upon its extended end a tablet mandrel and means to rotate the shaft, also means to rotate the carrier in either direction whereby the tablets on the mandrels are moved in a common radial path. The tablet mandrels are so arranged as shown as to yield when the tablet is forced home thereon, and at the

same time afford a positive or unyielding form of support for the tablet and truly center the same around the axial plans of the mandrel shaft.

### BRITISH COPYRIGHT BILL.

F. M. Prescott, General Manager of the International Talking Machine Co., Berlin, Germany, Takes Issue With Sections Exempting Records as Infringement.

In the appended letter, F. M. Prescott, president and general manager of the International Talking Machine Co., Berlin, Germany, takes issue with that provision of the new British copyright law exempting records as infringements. The exemption, Mr. Prescott contends, precludes the copyrighting of records in any form, and in this he believes it works an injustice. In other words, he takes the same position as Horace Pettit, counsel for the Victor Talking Machine Co., Camden, N. J., does toward the bill now before Congress. The communication follows:

Weissensee, Bei Berlin, Sept. 25, 1906.

The Talking Machine World, New York:

Gentlemen—I have received a copy of the new British copyright act of August, 1906, and am surprised to see that this exempts mechanical contrivances for the reproduction of words or music as being a copyright infringement, and on account of this I cannot but think that the British legislators have given very little thought to this important subject.

I believe that the recent act of Parliament is a slight to our honorable trade of talking machines and all other mechanical contrivances for the reproduction of words and music. In other words, I insist that the phonograph or gramophone records or the cylindrical roll of an automatic piano or a music box is just as much an edition of the music as the printed sheets of music to which the copyright law alone gives protection.

To illustrate, the edition of sheet music is only one way of recording or preserving the musical

composition, both words and music, or either singly. Any one understanding to read the notes on the sheet music and the words, and who is competent to play these notes upon any musical instrument or sing the words with the proper notes as written in the music is able to give a more or less proper reproduction of the composition as composed by the author.

Now what are our reasons for considering a phonograph or disc record of a mechanical piano roll an edition of the music?

In such countries as Turkey, Egypt, Arabia, India, Burmah, Siam, and others which we might mention, there are no such things as notes or written music by which to record the musical compositions of the composers of those countries. When a composer in one of those countries composes anything new, he composes the song in his head and learns it by heart, and teaches it by the singing of it to other persons, and in this way, from person to person and generation to generation, the songs of the composers are handed down and made public.

One can readily understand that in this way the musical compositions of those countries deteriorate, and by the time they have passed from person to person, before long they are no longer the original song or music of the composer.

Now, what part does the mechanical record play?

After the author has composed his song or music he sings or plays it to a talking machine, thus making an absolutely accurate and faithful record of his composition, which, if put upon any other talking machine reproduces at once the new composition accurately and faithfully as composed by the author. Here we have another means than that by notes and sheet music of recording correctly and accurately musical compositions, in other words, it is another way of editing music and songs.

This new song can then be sold broadcast all over the world, and it does not deteriorate or change in any way from the original composi-

New England Distributors for Disc and Machine Cases,  
**M. Steinert & Sons Co.**  
Boston, Mass.

All our cases are made from select lumber, covered with a genuine book cloth, imitation of seal grain leather. An inside flange, which is cut from the solid wood, forming the top, thus giving strength and keeping out dust and dampness, is a point I claim exclusive to our case. Cylinders are made on especially constructed machines and are correct size and uniform diameter. By my special method of fastening in, they are absolutely secure.

tion of the author; in fact, without music notes in the above-mentioned countries the talking machine record is to-day the only means of edition that the author or composer has, and we maintain that the talking machine record is a more accurate method, a more accurate system, than sheet music, because in sheet music you cannot put into it the soul and expression of the author, and each purchaser and player of the sheet music is bound to give it a different expression to that of the author or composer, whereas by the talking machine record, when sung or played by the composer, we have a perfect copy and transmit to all generations the actual music just as composed and expressed by its author.

Recently European music publishing houses have acknowledged this fact, and our company, the International Talking Machine Co., have already commenced for certain music publishers the work of making new records from all new sheet music as fast as it appears. The music publishing houses in question consider the phonographic record just as much a proper edition of these new editions as their sheet music; in fact, I believe they consider them better than the sheet music, because they advertise and supply these phonographic records to their branch houses and customers to show them how the new composition should be played or sung, and in this way the trade and public get an accurate idea of the new composition.

I believe that on a proper presentation of the above facts to the British Parliament, that they would be bound to acknowledge that the mechanical means of reproduction are just as much an edition, if not more so, than the present sheet music of to-day.

There is no question but that the talking machine should be protected in their editions against the copying of these by unscrupulous parties who do not wish to pay for the artist or other expenses for making the records.

The present British copyright bill of 1906 is far from just, and we trust that the Parliament will rectify the error in this bill.

Yours very truly,  
F. M. PRESCOTT.

### OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York for the Past Month.

(Special to The Talking Machine World.)

Washington, D. C., Oct. 10, 1906.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the Port of New York:

#### SEPTEMBER 10.

Alexandria, 16 pkgs., \$254; Bombay, 38 pkgs., \$250; Havana, 25 pkgs., \$416; 7 pkgs., \$264; Havre, 9 pkgs., \$352; Milan, 33 pkgs., \$353; Montevideo, 5 pkgs., \$542; St. Johns, 9 pkgs., \$197; Tampico, 1 pkg., \$243.

#### SEPTEMBER 17.

Bangkok, 12 pkgs., \$1,300; Berlin, 240 pkgs., \$2,305; Buenos Ayres, 8 pkgs., \$164; Callao, 13 pkgs., \$1,714; Colon, 7 pkgs., \$216; 4 pkgs., \$64; Guayaquil, 18 pkgs., \$415; 11 pkgs., \$168; Havana, 46 pkgs., \$427; 46 pkgs., \$1,350; Havre, 11 pkgs., \$402; La Guayra, 81 pkgs., \$4,125; Limon, 11 pkgs., \$457; London, 3 pkgs., \$1,085; 828 pkgs., \$12,796; 974 pkgs., \$7,489; Manila, 2 pkgs., \$1,179; Para, 9 pkgs., \$219; Rio de Janeiro, 5 pkgs., \$164; Santiago, 3 pkgs., \$134; Shanghai, 24 pkgs., \$1,193; St. Petersburg, 16 pkgs., \$559; 11 pkgs., \$296; Sydney, 1,896 pkgs., \$25,367; Tampico, 3 pkgs., \$348; Valparaiso, 16 pkgs., \$968; 1 pkg., \$127.

### PHONOGRAPH KEEPS DYING WORDS.

Wife Talks Daily into Cylinder So Husband May Always Hear Her Voice.

With death near at hand Mrs. Edward J. Mungen, the wife of a wealthy oil operator of Fostoria, O., talks daily into a phonograph so that when she shall have passed away her voice may cheer her sorrowing husband. Together the Mungens have made a tour of the world, and in each place of interest they visited Mrs. Mungen has recorded upon the cylinder her impression of the sights seen. Besides, much of the conversation between herself and her husband is recorded by the phonograph.

When the physicians at Fostoria and Toledo pronounced the "death sentence" upon Mrs. Mungen, who is now seventy-one years old, they said she probably would live longer if taken to other climates. Thereupon the Mungens set out upon a globe-encircling tour. Last week they arrived in Denver, having come from India via Victoria, Seattle, Portland and Salt Lake. If the doctors

think Mrs. Mungen's present state of health will permit they will make a tour of Colorado.

Upon arriving in Denver Mrs. Mungen's first act was to repeat into the phonograph her impressions of the sights between there and Salt Lake. She has a little chest in which she keeps cylinders which contain comments neither her husband nor any one else has ever heard. These will be repeated to him by the machine after Mrs. Mungen dies. "It will be like making another tour of the world with Mrs. Mungen," he said to-day. He is sixty-eight years old, but possesses a rugged constitution.

### FEW "TALKERS" FOR EXCHANGE

Demonstrate That Their Hold on Possessors Is Greater Than Many Musical Instruments.

The small number of talking machines offered for exchange in the exchange columns of the various publications running such departments would indicate that they have a hold on their owners that is greater than their other possessions, while many of the advertisers offer some prized possession in exchange for the talking machine. Dealers say that they have but few offered them except in exchange for more expensive styles. These second machines are always in demand, but sooner or later come back in exchange for a better one. Dealers never refuse the antiquated ones, as they are always good for window displays with the sign of "Then and Now." Some of the very old machines are at a premium, some of the dealers in sections where the trade has only recently developed desiring them for advertising purposes.

### CAN NOW HEAR THE KORAN.

The Mohammedan University of Al-Ashar in Cairo has admitted the phonographic reproduction of verses from the Koran as an entirely appropriate and not irreverent way of hearing the prophet's words.

Foreign demand for talkers is unparalleled.

## The Highest Authorities say the I. C. S. Language System is of Sterling Worth—Are YOU Selling it?

The leading educators and authorities everywhere who have investigated the I. C. S. System of teaching foreign languages have pronounced it to be the most perfect in the world. Take the following endorsement from the German Embassy at Washington, for instance:

I have, with great interest, taken notice of the Language System, through the phonograph, as taught by the International Correspondence Schools, of Scranton, Pa. The pronunciation of German and the rendering of the German specimen recitations, in verse and prose, which the machine delivers, are absolutely irreproachable, and the method applied to the Grammar appears to me thorough and practical. I deem the system well adapted to further the acquisition of the German language according to its Grammar and pronunciation.

SCHELLER-STEINWARTZ,  
Imperial Councillor of Legation,  
Secretary of the Imperial German  
Embassy at Washington, D. C.

This only goes to show that the language feature of the business is well worth YOUR investigation. Another thing that proves the same fact is that dealers who have tried it have greatly increased their business thereby. We have been telling you this for some time. Probably you have meant to look it up, but have forgotten to do so.

Why not sit down and write us a postal NOW

# NEW TAPERING ARM ZON-O-PHONE

\$27.50, \$35.00, \$45.00, \$55.00

## THE NEW GRAND OPERA ZON-O-PHONE

has been on the market for six weeks. The motor has triple spring, cabinet hinge top  $13\frac{1}{2} \times 13\frac{1}{2}$ , ten-inch turntable. We wish to call special attention to the new speed regulator; also the brake; as you will note when you shut off the instrument it doesn't stop with a jerk. The Grand Opera Machine is equipped with either regular horn or all brass morning-glory horn. Retails at \$55.00.

## THE CONCERT GRAND ZON-O-PHONE

will be ready October 1st. The brake and speed regulator are the same as on the Grand Opera. The motor is exactly the same, except that it has two springs instead of three. The cabinet is different in design but is the same size and has the hinge top. It is equipped with the regular horn or the morning-glory horn—red, blue or green. Retails at \$45.00.

# UNIVERSAL TALKING MACHINE MFG. CO.

28 Warren Street, New York

## TIMELY TALKS ON TIMELY TOPICS.

Dealers in all parts of the country are adding sheet music to their stock, and with profitable results. For the exploitation and effective demonstration of the music they have found the talking machine a valued assistant and one far superior to the piano, or any musical instrument, whether automatically or manually played. The voice is reproduced by the record in its correct vocal interpretation and phrasing and beauty of finish that is entirely beyond the function of any instrument. Besides, the dealer avoids the cost of a piano or the service of a "professor," items of no mean account in the aggregate. The success of this experiment is established in little time, the customer is delighted, sales follow as a matter of course, and, what is more to the point, the income of the store is increased. How many homes are blessed with the charms of music properly rendered and sung, through the medium of the talking machine! This is a suggestion so pregnant with benefit to the dealer in connection with the sale of sheet music—that is, the selections reproduced on records—that it is self-recommendatory.

A visitor to the works of the National Phonograph Co., at Orange, N. J., will see in the magnificent reference library—a quiet, restful place after looking over the hum and bustle of the great plant—one of the original Edison tin-foil phonographs, occupying a position of honor in an alcove by itself. There are said to be three of these historic instruments in existence, one of which is in the British Museum, London, England, that monumental collection of all that is interesting in the development of human endeavor.

No little talk is heard in the trade of "cutting out" the sale of "stencil" records; that is, those made bearing a dealer or a jobber's name or

trade-mark as distinguished from the lines produced by established manufacturers who will make no other. It is a moot question whether the trade at large acquires any distinctive reputation for so-called enterprise by handling stencilled records. This, however, is a matter for each individual concerned to settle for himself, and The World merely directs attention to the subject as a current topic of discussion, on which much may be said on both sides.

It has been suggested that the record manufacturers also pay tribute to T. P. O'Connor, M.P., whose valuable services in connection with the enactment of the new British copyright law the leading American music publishers desire to recognize in some manner during the distinguished statesman's sojourn in this country. The act specifically exempts talking machine records as copyright infringements, and as the amendment was introduced through the direct influence of the Gramophone & Typewriters, Ltd., of London, presumably it was accepted by the famous Irish member in order to remove all serious objections and expedite its passage. If this action may be regarded in the light of favoring the talking machine trade, why should not the record people participate in this function? But what would the music publishers say? There's the rub.

As an executive, W. E. Gilmore, president of the National Phonograph Co., Orange, N. J., is considered a figure in the trade approximating in importance the scientific standing and inventive genius of Thomas A. Edison himself. That is, those who have the pleasure of an intimate acquaintance or close business relations freely express this opinion. The old saying that a man is seldom if ever a hero to his valet finds an exception in Mr. Gilmore, so to speak. In ad-

dition to his wonderful capacity for initiative and acute discernment in business affairs, as well as the energy and rapidity with which he disposes of matters coming before him for final settlement, Mr. Gilmore's personal interest in the welfare of his entire office staff, his generosity to his associates in time of storm and stress or misfortune are spoken by the recipients and those who have knowledge of his bounty as princely, and always unostentatious. When George Ilsen, of Cincinnati, in his remarks presenting the mammoth silver loving cup of the Edison jobbers to Mr. Gilmore, spoke of him as having "the largest heart in him of any man I ever met," the entire official corps of the National Co. applauded the sentiment vigorously, for they declared these words struck the nail squarely on the head. When a subordinate is at fault he gets all that is coming to him at once, and there the matter is dropped, but the offender is quickly made to understand that the president bears him no malice—it is in line of business, and every one is expected to do his level best when on duty. The rewards for faithful and diligent work are also commensurately liberal.

A promoter of parts whose name, were it mentioned, might cause a few harsh comments to be made, though he is acknowledged a pretty bright chap, has a new scheme. He proposes a plan of centralizing business by forming manufacturing companies with guaranteed orders. That is to say, talking machine stores should be established at every available spot when a demand was apparent, a la the cigar trade. The high thinking promoter either overlooks or ignores—after the manner of his kind—such minor things as details, even not taking into account the vast difference in the lines and desirability of independence on the part of the dealer. This combination is to handle only the goods made by their own factory—whatever they might be—and to cut out entirely the machines and records known the world over, and accept "stuff just as good."

Worth buying if you sell on installments.

though not bearing the names and trade-marks of concerns which have become household words. The schemer further contended the present manufacturers were getting it all, while the jobber and dealer were a negligible quantity, therefore their interests should be consolidated and co-operation supersede prevailing methods. When this tale, with oratorical embellishments, was recited to several officials of a prominent talking machine manufacturing company, they exploded with laughter, and promptly advised the narrator to let go of his comet, come back to earth and cease having pipe dreams.

A scarf or cover manufacturer made up a sample line of what he considered very appropriate and handsome designs for record cabinets. They were submitted to the jobbers, but the enterprising originator received no encouragement, let alone orders. It was conceded that a scarf may be a suitable adornment for a piano, but that record cabinets of the highest grade should not have any of their beauty of line or finish concealed by a cover. Besides, the disc cabinets have the machine mounted on top, and a scarf, they hold, would be altogether out of the question. Perhaps this opinion may change with time, and then the cover manufacturer will have his innings.

Walter P. Phillips, editor of the Columbia Phonograph Co.'s "Columbia Record," and manager of their advertising department as well, an experienced newspaper man, has become a partial convert to the alleged spelling reform idea. He now writes "fotograf" and "telegraf," but fails to be consistent by not spelling it "fonograf," "grafofone" or "diafram." It must be remembered, however, that great reforms, like large bodies, move slowly.

The two-for-one exchange proposition that was effective from October 1 to 6, inclusive, will return to the National Phonograph Co., whose explanatory circulars to jobbers and dealers were distributed under date of September 25, approximately a million "surplus, cut-out and defective Edison standard (not grand opera or concert) records." This is the rough estimate made by C. H. Wilson, general sales manager of the company, and before the last returns had been tabulated. At the same time Mr. Wilson ventured that possibly he may be a half million out of the way in his reckoning. The trade have until December 1 to file orders for new records in compliance with the basis of exchange, and as it has been figured that the individual orders of jobbers range from 12,000 to 30,000 monthly, they are enabled to have a "clean bill of health" and not buy any more stock thereby than in the ordinary course of business. The company's offer has certainly been most liberal and comes at a time of year when a clearing out of stock is most appreciated. The trade generally have taken advantage of the proposition, one of the most notable events during the past month.

A scarcity of men equipped with a thorough knowledge of the talking machine business and

possessing executive ability, also, is a matter of complaint. That is to say, men who can work out the details of a general policy in the sales department. It must be admitted persons of this standard are not to be had for the asking; in many instances they are developed or grow, as one pleases to phrase it. The lightweights, with amplifying horns of large dimensions that are constantly kept going at full blast, are only too plentiful, but are a costly extravagance of any establishment.

### COMPETITION THAT IS DISLIKED.

**Leading Manufacturers of Horns Find Fault With Parties Turning Out Inferior Goods and Selling Them to Dealers Instead of Through the Regular Channels.**

During the past month several of the leading manufacturers of horns have complained to us of a competition which is working a great injury, not to them especially, but to the retail dealers throughout the country. This has been brought about through the action of a number of individuals—former employes of horn factories—who are manufacturing horns in a very small way in their homes, and then offering them to dealers at ridiculously low prices. Not, however, lower than they are worth, for they are made of the cheapest material, decorated in a most inartistic way, with the lacquer and paint coming off after very short use. In addition to this, the horns do not fit the machine. They rattle badly, because of their being put together in a slipshod manner.

One of these horns sold by a dealer never fails to engender hard feelings between him and the purchaser, for not only does the latter fail to buy another horn from the same man, but he refuses to purchase anything else, as he has lost confidence in him.

The parties manufacturing the horns complained of have a perfect right to enter this business. No one can deny them the opportunity of entering the battlefield of trade; but they must fight fairly. Indeed, they will do well to adopt the policy followed by all reputable manufacturers in this trade, namely, selling to the jobbing trade only, and making an article that will afford satisfaction to the jobber and dealer handling them.

While this method of selling to dealers above referred to is to be condemned, yet the dealers who invest in these cheap devices are not deserving of sympathy, because they have been willing to sacrifice in many instances their good name for the extra profit inducement held out. The proper handling of horns affords the jobber and dealer a fair return, and it rests with them to preserve this satisfactory condition of affairs by buying only the best on the market.

The Zenith Music Co., a new concern at 6 East Superior street, Duluth, Minn., carry a full line of Edison phonographs, Victor talking machines with an extensive stock of records, supplies, etc.

### TRADE NOTES FROM THE TWIN CITIES

**The Fall Trade Has Opened With Much Greater Activity Than a Year Ago.**

(Special to The Talking Machine World.)

Minneapolis and St. Paul, Oct. 9, 1906.

The fall trade has opened up with much greater activity than a year ago, and the dealers all look for a largely increased business from now on to the holidays.

"The outlook is certainly a very encouraging one," said L. H. Lucker, president of the Minnesota Phonograph Co. "We are adding new agencies throughout the State right along, and supplies of a good grade are being ordered. We have a constantly increasing demand for Victor goods. The Edison trade keeps up steady, and two carlots of Edison goods were received last week."

W. A. Lucker, in charge of the Minneapolis branch of the same firm, reported a splendid trade during September, and several prospective sales in sight of the Victrola machine, only two samples of which have been received.

W. J. Dyer & Bro. are in splendid shape to take care of their talking machine trade this fall. As stated some time ago, the entire five stories of the building they occupy were remodeled during the summer months, and the talking machine department was removed from the fourth to the ground floor, and is now equipped with separate rooms for testing the various machines. Results for September, it was reported, were better than a year ago, the demand for records being much larger, while the demand for both the Edison and Victor machines was for the more expensive kind.

T. C. Hough, who has two stores in Minneapolis and one in St. Paul, exploiting Edison and Zonophone machines, reports a bigger September than last year. He anticipates a big fall trade.

J. W. Wheeler, manager of the Columbia Phonograph Co. in Minneapolis, also reports an increase in September over a year ago. The machine trade, he says, is of the better grade. C. W. Long, in charge of the St. Paul branch, also reports excellent results last month.

A. M. Magoon, in charge of the Victor department for the New England Furniture Co., said: "We had a splendid demand for records all through the summer, but in machines the sale has just opened up, and is of such satisfactory proportions that the outlook for the balance of the year is exceptionally encouraging. We have had a larger demand for the Victrola than we can supply."

J. Jones, manager of Donaldson's talking machine department, reported a satisfactory September, the results being much better than during summer months. Here all lines are represented—the Columbia, Edison, Victor, Zonophone and Reginaphone.

George Ornstein, representing the Victor Co., was a visitor in the Twin Cities last week.

B. Feinberg, of the Western Supply Co., was also a caller on the trade during the week.

## THE THOMPSON MODIFIER

### PERFECTION AT LAST A Modifier That Really Modifies

Softens the tone, eliminates the metallic sound, takes all the "scratch" out and makes the reproduction of voice or instrument as soft, smooth and harmonious as the original.

THE THOMPSON MODIFIER is entirely new and different from anything on the market. The best machine in the world is improved by its use—the poorest sounds well with its help. Made pear shape, it fits any size or shaped horn and can be used with any machine on the market.

MADE OF BRASS, NICKEL PLATED, PRICE, \$1.00

## THE GRAPHOPHONE MODIFIER CO.

279 STATE STREET, CHICAGO.

# The COLUMBIA Graphophone

The Music Master has discovered the Columbia Graphophone and everybody has discovered the Music Master.

In all the popular magazines and other advertising mediums he is talking Columbia Graphophones and Records to millions of people who have the money to buy and who want the best for their money.

He is talking in a manner so interesting and convincing that every reader is impressed with his arguments.

You can't satisfy these people unless you give them the Columbia goods.

*Have you got them?*

*If not, take the matter up to-day with your jobber. Put in a full line of Columbia goods to meet the demand created by the strongest talking machine advertising ever put out.*

You can sell Columbia Graphophones and Columbia Disc and Cylinder Records when you *can't sell any other kind.*

*You make big profits by selling them.*

Your profits on Columbia goods are *guaranteed against fluctuation or shrinkage* by our restricted price plan.

A line of talking machines without the Columbia is *as incomplete as a band without a leader.*

Make your line complete; put in the leader—Columbia.

WHY YOU SHOULD HANDLE THE

# Columbia Disc and Cylinder Machines

Because of the unapproachable excellence of the Columbia machines. They have no equal in quality and variety of models.

The aluminum tone arm and new Columbia Analyzing Reproducer with which Columbia Disc Machines are equipped have sufficient merit in themselves to sell Columbia Machines without calling attention to any of the other exclusive selling features of this line.

The Improved Lyric Reproducer, with which all Columbia Cylinder Machines are now equipped, has of itself placed these machines in the lead mechanically and commercially.

WHY YOU SHOULD HANDLE THE

# Columbia Disc and Cylinder Records

While Columbia Disc Records excel all others in the point of *durability*—meaning twice as long—it is the marvelous tone quality of the Columbia Disc Records that has made it so easy for the trade to sell them.

The retail price of Columbia Cylinder Records is 25c. No better record is made at any price. The dealer who handles Columbia Cylinder Records makes more money out of them than out of any other, because *both price and quality* create a big demand which results in a volume of sales many times in excess of records which are listed at a higher price.

The public appreciates the Columbia product and the dealers who handle Columbia goods are uniformly the most successful in the business.

If you wish to know how to become a successful Columbia dealer, write us to-day and we will give you some valuable information.

Cable Address: "Elhill," New York.

NEW YORK, OCT. 15, 1906.

THE talking machine in its present stage of development is but little understood by the public and there was a splendid opportunity which was not embraced by manufacturers to illustrate its marvelous advance at the National Music Show which recently closed at the Madison Square Garden. Thousands of people could have been entertained by the talking machines and would then form a correct idea of their present development to the exclusion of the "toy" theory. It seems that every now and then in the daily papers articles appear similar to the following, which is from a lengthy editorial in the New York Mail and Express. It shows that the average writer is not familiar with its musical powers:

"There is a large and legitimate place for the phonograph in a business office, as a means of instruction in language, as a toy, in acquainting the music student with scores of classics; but it should not be forgotten that it is a toy, a curiosity, a piece of soulless mechanism, and not a musical instrument responsive to the singer or player."

The man who penned the lines quoted above must have been closely perusing Sousa's knocking article, in which he contemptuously referred to the "canned music" of to-day.

WHAT an opportunity the Music Show would have been to have exhibited the talking machine in its present remarkable state of development. Demonstrations could have been made there which would have clearly eliminated the false impression given by many writers in the daily press who seem over-fond of indulging in flings at the talking machine. There are many people to-day who have not the faintest conception of the powers of the modern talking machine. They associate the creation of these days with the thin voiced, squeaky, scraping machine of years ago, and they have no knowledge of its

marvelous entertaining possibilities of to-day. Then, too, it may be said that all of the trade influences are not helpful to-day, for there are a good many poor records which are placed on the market by some of the concerns who are over-anxious to produce them in vast numbers each month and who invariably sacrifice quality to quantity.

GOOD records are essential to the upbuilding of the trade, and the wide sale of poor records is a positive injury to the business. The process of the elimination of records cannot be studied too carefully by the record makers. Records which are correct in every musical attribute are the ones which help the talking machine business, and do much to entirely eliminate the false impression created by some writers. If the talking machine had been largely in evidence at the Madison Square Garden Show it would have been helpful to the business. Then, too, it would have been the means of attracting visiting music dealers to the talking machine as a business getter. Madison Square Garden has now become the headquarters of annual shows of nearly all sorts. The variety and scope of these affairs have been gradually amplified, until now, one after another, they make nearly a continuous sequence through the season.

THE Music Show was the first of its kind, but it has come to stay as an annual feature, and it would not be surprising if within the very near future some enterprising manager should inaugurate a talking machine show at the Madison Square Garden. The show could be confined to automatically operated instruments, thus enlarging the scope to include piano players, and coin-operating machines as well as talking machines. It would certainly give the automatic music makers tremendous prominence, and it would give the talking machine a national prominence, and would show up its present attributes. The daily papers would comment upon the exhibition, thus calling the attention of the public to the talker. The universal appeal of music suggests opportunity for scope and bigness in a music show. There might be some misgivings as to the propriety of making a show in the public sense out of music or music producing inventions outside of those played upon by hand, but it is far more likely that public knowledge and taste will be benefited rather than harmed by an increased knowledge of automatically operated music producing instruments. Why not a national talking machine show?

MANY of our people have in mind the talking machine of early days when it was, to a large degree, a scientific novelty, and they do not have the faintest conception that years of painstaking experiments and the expenditure of enormous sums of money have wrought a wonderful evolution in the talking machine which makes it a wholly different instrument, and one well fitted to occupy a prominent place in the musical creations of to-day. Dealers who sell the talking machine cannot emphasize its educational features too strongly. It is creating a love for music that cannot be gratified in any other way. It is acquainting thousands of people with the works of great composers and stimulating a regard for music which would be impossible for them to attain without the medium of the talking machine.

THERE is a note of good cheer in every report of trade conditions which comes to hand. Never before in our national history has the volume of business equalled that which is at present pouring through the various channels of commerce. The restoration of normal conditions in the various lines consequent upon the ending of the vacation season, and the fact that there is unusual freedom from labor troubles have had the effect of giving the country the full benefit of its heaviest trading power at a time when probably its largest crops were being harvested.

THE wave of prosperity does not appear to be confined to any particular section or sections. It is covering the entire land and varies only with the productive capacity of shops, mills and earth. The talking machine factories, running to their utmost capacity, some with day and night shifts, are still unable to keep up with the demand. We know of concerns that are over 100,000 instruments behind in their orders, and yet they have a producing capacity of over six thousand instruments per day. These figures furnish only an illustration of the enormous growth of the talking machine business. It has advanced by leaps and bounds, and as a well known traveler remarked the other day: "The World was absolutely correct in its first editorial utterance when it stated that the talking machine business was only in its infancy." Of course, we were. It is going ahead all of the time, and men who three years ago figured that the business had reached its highest point are amazed when they find that this year is several times ahead of the output of three years ago. It is a comparatively new trade, and there is plenty of new, vigorous life in the business. There are plenty of young men who see an opportunity to win good results for their efforts and they do not hesitate to cast their lot with the talking machine industry.

THIS fall certainly should be a most prosperous one for talking machine men everywhere, for all reports which reach The World offices are of the most optimistic character. Mercantile collections are reported prompter in spite of the recent tightness of the money market, and the fall distribution of goods is unusually heavy. There is really nothing but hopefulness in the future. As the man at The World masthead views the situation, it is full of hope and promise for the talking machine men, and this trade will well repay every effort which is placed upon it. There are a number of new concerns in the business who have organized good business machinery for the sale of talking machines and accessories.

ACCORDING to some reports which have reached The World office there will be some new factors in the business in the snow days. Well, it is competition which makes the business world hum, and it is impossible for men in any industry to long occupy exclusive preserves.

THERE seems to be no dearth of legal complications in this line, and presumably troubles will multiply as the years roll on, for a number of inventive minds will constantly be at work on new patents and devices, with, of course, possibilities of infringement upon the rights of others.

## NEW COMMERCIAL GRAPHOPHONE.

Just Placed on the Market by the Columbia Phonograph Co.

It is now about twenty years since the original Commercial Graphophone was made in the Volta Laboratory at Washington, D. C. Since that time there has been a constant march of im-

provement in recording and reproducing sound from a commercial standpoint.

In the Commercial Graphophone, a picture of which appears at the head of this article, a high water mark in this art has been reached. The picture represents the new model Commercial Graphophone, which the Columbia Phonograph Co. will have ready for the market about the middle of the present month, and which it will exhibit at the Office Appliance and Business System Show in Madison Square Garden from October 27 to November 3, inclusive.

The distinctive features of the new machines are sensitiveness in recording, absolute simplicity, and mechanical perfection. The recorder is

the most sensitive device ever placed upon any Commercial talking machine.

In order to get a good clear record it was necessary with the earlier types of Commercial machines to talk in a loud tone of voice and to maintain an even pitch all the way through the dictation. With the new machine it is possible to dictate in a tone just above a whisper and to have the dictation clearly recorded and reproduced with absolute fidelity. The recording stylus and the reproducer of all are mounted on the same arm and the same diaphragm is used for both operations. In order to change from recording to reproducing it is merely necessary to throw a small lever at the top of the machine through a radius of about three quarters of an inch. The reproduction is rotund and full, and more like the human voice than any reproduction that has ever been achieved before on a Commercial talking machine.

The point of simplicity has been well covered. There is absolutely nothing to the machine except an electric motor (either alternating or direct), a belt and a mandrel to hold the cylinders. The liability to get out of order is thus reduced to a minimum.

So far as mechanical perfection is concerned, it is sufficient to say that this machine is the product of the best talent and ability that the Columbia Phonograph Co. has in its service. The original models were designed and built by Thomas H. Macdonald, the manager of the factory at Bridgeport, and no detail has been allowed to escape his attention.

Talking machine experts and the users of the Commercial Graphophone, who have been shown the new machine are loud in their praises of its beauty and utility. The exhibit of the Columbia Phonograph Co. showing these machines at the National Business Show will be in spaces numbers 88 and 89, and is sure to attract much attention.

## H. J. REDLING WITH JACOT.

The Jacot Music Box Co., 39 Union Square, whose Mira music cabinet has become a prominent factor with dealers in talking machines, are large jobbers in the Edison and Victor lines as well. They carry a full line of everything pertaining to the talking machine trade, and have recently engaged the services of H. J. Redling, who will handle that department on the road as their wholesale representative. As he is well known as a hustler and an expert salesman in this line, it is but natural that his firm feel that in him they will have an able representative.

## A MEGA HORN BOOKLET.

E. A. & A. G. Schoettel, makers of the Mega horns at Maspeth, N. Y., have just sent out to the trade a well printed folder describing in detail the various horns which they manufacture, consisting of the flower type, plain and decorated, for cylinder and cylinder machines. There is also a very interesting talk upon the value of the horn as a medium of tone production, from which we quote in part herewith:

JAMES W. COOPER CO.

Washington Ave. and 17th St. PHILA., PA.

"At one time or another some of your trade probably have told you their records did not sound as well in their homes as they did in your store. They have blamed the records, the machine or the speaker—never the horn. No doubt you have told them the carpets or draperies have been the trouble. This is true to a certain extent; but at the same time your customer has felt a little dissatisfied.

"You can overcome a great deal of this trouble and have your trade feel better satisfied if you will get them to use a 'Mega.' Try this in one instance and see if we are not right.

"One of the 'Mega's' chief points of superiority over metal is the fact that it cannot be dented. This in itself should commend it to the wise dealer. The 'Mega' fiber material can be likened to rubber for its flexibility and durability."

### BERLINER PATENT LITIGATION

Up for Argument on Thursday Last—Decision Awaited With Interest.

When the cases of the Victor Talking Machine Co. against Leeds & Catlin Co. and the Talkophone Co.—Nos. 166 and 167 on the calendar of the United States Circuit Court of Appeals, Second Circuit—were reached Tuesday, the 9th inst., Judge Townsend was on the bench, and as his decision in the United States Circuit Court was up for review, he could not qualify. Therefore argument was postponed until Thursday, October 11, when Judges Wallace, Lacombe and Coxe were sitting. The suit, which has reached its final stage of adjudication, involves the validity of that portion of the famous Berliner patent covering the free-moving stylus

generally used in reproducing sound in connection with the disc record.

The Victor Co. previously, in their suit with the American Graphophone Co., had the patent sustained in the Circuit Court, Judge Hazel writing the opinion, which was unanimously affirmed by the Circuit Court of Appeals. On the representation of newly discovered evidence the foregoing two cases, on which the issues are joined, were argued before Judge Townsend, April 9, and on the following 26th he rendered a short opinion, in which he held that the evidence submitted was not altogether new, and rather resented the insinuation by defendant's counsel that the American Graphophone Co.'s case had been insufficiently contested. On the interpretation of a Canadian patent law, which the defense urged was the keynote of the situation, the court conceded he was not quite clear, and would prefer to have it reviewed by the Court of Appeals. Accordingly an injunction was issued, but stayed pending the appeal. This was argued Thursday, and decision was reserved.

### IMMENSE ORDERS BEING BOOKED

For Talking Machines and Records—All Previous Business Has Been Thrown in the Shade—Manufacturers Pushed.

Judging from the orders booked by the traveling men the record of talking machine sales will touch the highest notch this fall. When jobbers in cities of 10,000 population order 2,000 machines and 35,000 records at one time from a single manufacturer, besides having half that stock on hand, some idea may be gained of what the volume of business will aggregate before the middle of December. Manufacturers in every branch confess they are already being pushed to supply goods in the quantity called for, and the trouble of the general sales managers will soon begin; in fact, it is now obvious that all previous records will be broken.

### UNITED HEBREW RECORD CO.

Now Owned by Louis Rosansky—The Latest List of Records.

Perlman & Rosansky, proprietors of the United Hebrew Record Co., New York, recently dissolved partnership, and Louis Rosansky continues the record business under the former firm name at 257-261 Grand street, New York. In this connection their announcement elsewhere is worth reading. He has about ready a list of Hebrew records for October and November, representing the best and most popular selections on the Hebrew stage. The list is as follows:

- BY MR. SCHMULEVITZ.
- 1222 "Luft, Luft" (com.)
  - 1224 "Ihr salt noch a griner."
  - 1225 "Trerin Lieder" (Moris Rosenfeld)
  - 1226 "Es is given amol given"
  - 1227 "Lesheno toivo."
  - 1228 "Aher, Aher."
  - 1229 "Ich lach" (com.)
  - 1230 "Man darf nit sein fershlofen."
  - 1231 "Pleasure" (com.)
- BY MR. ROSENSTEIN, WITH ORCH. ACCOM.
- 1233 "Die Seider nacht (fur op. Taibele)
  - 1234 "Schabes bet men sich iber (fun. Mogulesky)
  - 1235 "Gedankt un Gileibt Cistu Gott"
  - 1236 "Chanuke Lichtlach."
  - 1237 "Schma Israel" (op. Ben. Jankef)
  - 1238 "Der kidesh" (tate mames. tzares)
  - 1239 "So lang der Mentse is young."
  - 1240 "Wail du Cist a Id (Patr.)"
  - 1241 "Zion, Zion." (fun op. Esra)
- BY MR. ROSE.
- 1242 "Wen ich hob die macht."
  - 1243 "Oi die gelt."
  - 1244 "Maine 3 Walber"

### FOR SALE.

Retail Victor and Edison Phonograph Parlor, located at Carbondale, Pa., Lackawanna Co. Reason for selling, have sufficient business in Scranton.

Doing an excellent business in Carbondale, and have trusted out on leases about \$4,000. Will sell stock which amounts to \$2,000, or am willing to take good man in partnership.

Address, S. P. Michlosky, 307 Lackawanna Ave., Scranton, Pa.

OUR NEW CATALOG SHOWS 15 STYLES, and will be mailed for the asking. Write to-day and get details

**SYRACUSE WIRE WORKS, Syracuse, N. Y.**

**"TALKER" NOW ELECTIONEERING.**

Hearst's Campaign Committee Using Talking Machines—Will be Heard Throughout the State—Records Made by the American Record Co. and the Columbia Phonograph Co.—New Departure in Campaigning.

Following the example of the last election campaign in England the talking machine is now to be utilized in a very large way in the great political battle now being fought in this State for the Governorship. Wednesday W. R. Hearst, editor and proprietor of a string of daily newspapers from New York to California, the combination candidate of the regular Democracy, Independent League and other partisan organizations, made a number of disc records of political speeches at the laboratory of the American Record Co., New York, under the supervision of J. O. Prescott, manager. Two months ago a set of cylinder records of like import were made for the distinguished Gubernatorial nominee at the laboratory of the Columbia Phonograph Co., General, but a professional did the talking, and it is likely the same procedure was followed with the "blue" records, as Mr. Hearst has a poor voice—lacking the essential vibrant quality and depth—for satisfactory sound reproduction. These records will be used in places where only the ordinary spellbinders appear, and with the gestures of Mr. Hearst thrown off by the moving picture machine, before which he posed, these "canned" speeches, as they are termed by his opponents, are expected to arouse the enthusiasm of the auditors to the highest pitch, and possibly carry conviction for the sentiments reeled off. The Columbia Twentieth Century machine will be used. The New York daily papers, in treating of this departure in campaign methods, laud it highly, one of them saying: "It is not known in whose fertile brain this scheme originated, but it looks very much as if it would be a grand success, from a show standpoint if from no other." As to the facts regarding the making of the records, they were wrong, as a matter of course, and wrote up the "story" in their usual exaggerated and misleading style. Perhaps it is unnecessary to add that these political records will not be listed, but are the private property of Mr. Hearst, who will doubtless supply stock gratis on application.

**COLUMBIA CO. ENTERTAIN LENG FORCE.**

September 18 Walter L. Eckhardt, manager wholesale department of the Columbia Phonograph Co., General, had the entire traveling force

of J. S. Leng's Son & Co., recently created Columbia jobbers, on a visit to the factory of the company at Bridgeport, Conn. The road party were ten in number—keen, bright men—and they were shown every department of the works, and how the graphophone is made, from start to finish, which proved both entertaining and instructive; and as the latter purpose was foremost the drummers will now be equipped to talk up machines and records to "beat the band," as one of them remarked on his return. Thomas H. Macdonald, manager of the factory, and Mr. Eckhardt did the honors, and were also the hosts at a pleasant dinner given in Bullen's, the swell restaurant of Bridgeport. J. S. Leng's Son & Co., who are heavy in bicycles, etc., opened their talking machine department October 1.

**LANDAY BROS.' NEW STORE**

Directly Opposite Tiffany's Palatial Structure, When Opened This Week, Will be One of the Handsomest in the Country.

The new store of Landay Bros., 400 Fifth avenue, New York, directly opposite Tiffany & Co., when the alterations, furnishing and decorating are completed, about October 15, will be the most elegant talking machine emporium in the city, and where Victor goods only will be handled. The place, 25 by 125 feet, is in the heart of the ultra-fashionable shopping district, and the formal occupancy is set down for the 15th, when the official opening is scheduled, to be celebrated by a champagne supper, according to Max Landay, who will be in charge. Their present premises at 288 Fifth avenue will not be relinquished, and this will be looked after by James Landay. On the same day Max will start on a selling trip to the coast, and is to be gone about six weeks. The firm last month placed an order for 400 Victor Victrolas.

**GROWING SEARCHLIGHT POPULARITY.**

The Searchlight Horn Co., 753-755 Lexington avenue, Brooklyn, N. Y., are manufacturing a line of horns which is acquiring a rapidly growing popularity in various sections of the Union. On a neighboring page in this issue of The World appears a reproduction of a telegram from the J. W. Jenkins Sons Co., of Kansas City, Mo., ordering by wire a thousand horns. This leading southwestern jobbing concern have recently taken up the distribution of the Searchlight horn for Kansas City and vicinity. The shipments of these horns last month were surprisingly large.

**HERE AND THERE IN THE TRADE.**

H. B. Babson Returns—Max Landay's Trip—J. O. Prescott as a Nimrod—Wilson's Report.

With the return of Henry B. Babson, president of the Universal Talking Machine Mfg. Co., from abroad on the "Kaiser Wilhelm II.," October 10, the trade gossips have ceased to speculate why he took the journey. Elbridge R. Johnson, president of the Victor Talking Machine Co., and he had a confab in London, and Henry F. Hagen and F. Long met him in Paris, when an exceedingly decorous time was the programme. The following day Mr. Babson hiked to Chicago and is again expected in New York on November 1. The offices of the company will be removed from 28 Warren street, New York, to the Newark factory by the middle of next month.

Landay Bros. made a small, but effective display of Victor goods at the National Music Show, September 19-27, in Madison Square Garden, New York. Their concerts in the recital hall with the Victor Auxetophone were largely attended and greatly appreciated. The Jacot Music Box Co., of the same city, exhibited a well-assorted line of Edison and Victor machines, records, horns, etc. Both exhibits occupied conspicuous positions. These were the only talking machines exhibited in the show, and they have taken space for next year, when a much larger representation of the trade is expected.

Max Landay, of Landay Bros., New York, whose smiling countenance The World expected to present to its readers, but was disappointed at the last moment, will call upon every jobber in the leading cities on his way to the coast, starting to-day (15th). He will exploit the Land-o-phone home recorder and other specialties, and is anticipating a splendid business.

The Standard Metal Mfg. Co., 10 Warren street, New York, are outdoing in their new line of Standard horns Joseph's coat of many colors, of biblical memory. The contrasting brilliancy of the interior shades with the bright nickel-plating of the exterior makes a charming effect.

J. O. Prescott, manager of the American Record Co.'s New York laboratory (Hawthorne, Sheble & Prescott), started on a fortnight's hunting trip October 13 in the jungles of Long Island. He has been confined so closely by business that his physical condition was detrimentally affected, and therefore his physicians ordered Mr. Prescott into the open, to banish dull care and forget he ever made a record or worried over unsatisfactory "tests." The World wishes him a pleasant time, lots of game and a return in blooming health. Wm. McArdle, the A1 traveler of the company, went South on the 11th for a three weeks' tour in the trade, expecting to soothe some one's savage breast with the charm of the blue records.

C. H. Wilson, general manager of the National Phonograph Co., told The World that on October 1 they were 100,474 behind on orders, and for the week previous 107,000. These were not for immediate shipment, but were to be strung along between now and January 1. Further, that machines contracted for delivery on the 1st could not be shipped until some time before November 15. On records Mr. Wilson said the company were never in better shape.

The Valiquet Novelty Co., of Newark, to manufacture automatic talking machines, picture machines, etc., with capital of \$100,000, was incorporated last week by L. B. Valiquet, Newark; J. E. McArthur, Jersey City; E. W. Hine, Orange, and T. J. Keane, New York City.

**WANTED.**

A Phonograph Department Manager in a large store in New York State. One competent to take full charge and obtain satisfactory results. Only hustler need apply, stating salary expected. All correspondence confidential. Address, J. F. G., care Talking Machine World, 1 Madison Ave., New York.

Patent Applied For

**Automatic Lift Lever**

A DEVICE designed to disengage the sapphire point from the record by automatically lifting the speaker arm. No more "swish, swish, swish," when your phonograph is running at the end of the record. You may continue your conversation or work without the objectionable "swish" interfering. Reduces the wear and lessens the danger of loosening or breaking the sapphire. Made to fit the Home and Standard Phonographs, instantaneously applied. No screws, no holes to be bored. Made of spring brass, nickel-plated.

**Price 25 cents.**

## A HANDSOME CATALOGUE

Which Is Worthy the Consideration of Dealers  
Has Just Been Issued by the Syracuse Wire  
Works of Syracuse, N. Y.

The Syracuse Wire Works, of Syracuse, N. Y., have long been noted not only for the splendid line of specialties which they turn out, but for their literature, which is always admirably conceived and executed. Their reputation in this respect has been reinforced by the appearance this week of a new catalogue in booklet form, which is a very complete and attractive piece of work. The cover, of which a reduced facsimile is reproduced herewith, is gotten up in three colors and embossed, while the handsome exterior

opens the door, so to speak, to descriptions and handsome illustrations of their entire line of racks, with prices, etc.

This is a volume which will surely interest all talking machine dealers, for the specialties of the Syracuse Wire Works are well and favorably known throughout the trade, for their excellence and originality. This company are tireless in their efforts to provide specialties that will insure an up-to-date store equipment, and those members of the trade who have not given this subject the consideration which it deserves would do well to look up this handsome booklet which is now ready for distribution. Every talking machine dealer will be wiser through its perusal, and will become cognizant of opportunities, whereby he may save space in his warerooms,

and have his stock present a better and more pleasing appearance.

## NEWS FROM THE EMERALD ISLE.

Auxetophone Excites Interest—Used in Municipal Concerts With Great Success—The Phonograph Makes the World Seem Smaller—The Latest News from the Other Side.

(Special to The Talking Machine World.)

Belfast, Ireland, Oct. 6, 1906.

The most noteworthy feature in talking machine circles here that has occurred recently has been the arrival of the Auxetophone. Naturally an instrument costing £100 was sure to excite widespread interest, and for some days after it came to hand the time of the local agent, Mr. Osborne, was almost monopolized in explaining its mechanism (Parson's electrically-driven air blower, the double sound box, etc.) to callers representing the elite of the city. The Chief Clerk of the City Corporation, R. Meyer, Esq., evinced a lively interest in the instrument, and accordingly granted permission to demonstrate its efficacy in the largest hall probably in Ireland—The Ulster Hall—which is the property of the city and which accommodates over 2,000 people. An Auxetophone concert was therefore arranged for an hour prior to the organ recital in the hall on Saturday, September 22. Although advertisements announcing the function appeared only one day prior to the recital, the hall was packed to overflowing.

When the instrument pealed forth its first selection, a band piece, one could immediately observe each face turned toward the platform, every sound was hushed, but the climax was reached when Melba's dulcet voice was reproduced loudly, clearly and distinctly in the "Jewel Song" (Faust) and "Ave Maria" (Gounod), with violin obligato by Kubelik; the former was encored and greeted with considerable applause. The choice programme which was executed included selections by well-known bands and instrumentalists, songs by Patti, Caruso, Scaramberg, Harrison, Grant, Dawson, Shepard and others.

"His Master's Voice" will ever be associated with the gramophone, but an incident which transpired in Belfast last week makes the phrase, "His brother's voice," quite as valuable an asset to the National Phonograph Co. Twenty years ago Mr. Osborne, the local Edison jobber, was in partnership with a Mr. Jennings, who left Belfast for Glasgow in 1886. We visited Belfast on September 22 last, and called upon his old partner and had the pleasure of listening to the voice of a brother now living in Australia—12,000 miles away—reproduced on an Edison "Standard" phonograph from a record which said brother made in Melbourne last winter and forwarded to Mr. Osborne. He recognized "his brother's voice" easily, which he had not heard for many years.

The samples of "White" records which have come to hand are excellent.

Last month's consignments of Edison phonographs have come from London to Belfast—car-

riage between these ports 5 guineas per ton! How would American factors relish the payment of such transportation charges out of their profits on Edison phonographs?

Mr. Lemoine, the advertising manager of the National Phonograph Co., paid Belfast a flying visit third week of September.

There has been quite a "run" on special zono-phone records of Irish selections by Peter Dawson, entitled "Memory of the Dead," "The Singer Was Irish," "Bantry Bay" and "The West's Asleep," songs which appeal to a large section of Irish people.

The Belfast City Council have just contracted for hire of the Auxetophone for a series of Saturday evening Ulster Hall concerts during the forthcoming season.

## RECENT INCORPORATIONS.

The Portland Talking Machine Co., of Portland, was incorporated last week with the Secretary of the State of Maine, with a capital of \$25,000. It is their purpose to handle talking machines and supplies of all kinds. The incorporators are C. A. Hanson, president, and J. M. Dunn, treasurer, both of Portland.

\* \* \*

Among the incorporations filed with the Secretary of the State of New York last week was that of the Biondi Panoramic & Amusement Co., with a capital stock of \$300,000. Directors: M. Santangelo, A. F. Biondi and N. Biondi, New York.

\* \* \*

The Sonora Chime Co. was incorporated last week at Albany, with a capital of \$100,000, for the purpose of manufacturing chiming mechanisms. Incorporators: C. J. Stoll, J. H. Browner, W. H. Haschke, Brooklyn; H. M. Pilkington, Rockville Center, L. I.

## TOPHAM'S FINE LINE OF CASES.

(Special to The Talking Machine World.)

Washington, D. C., Oct. 10, 1906.

James S. Topham, manufacturer of carrying cases for disc and cylinder records, 1219 F street, N. W., is enjoying a large share of the prosperity now as prevalent in the talking machine industry. Notwithstanding the resources of their factory they are very busy in all departments.

Members of the trade desiring something very choice in the line of carrying cases will do well to write to Mr. Topham, whose reputation is of the highest, both personally and for the quality of his goods. For many years Mr. Topham has been furnishing the United States Government with supplies for the army and navy, and his wares have always been deemed most satisfactory. This in itself is a pointer worth taking to heart by talking machine men.

John Dodds has purchased the talking machine business of Tom Chilcote in Washington, Iowa.

## Rapke Horn Crane, No. 15

**S**IMPLEST and best ever produced. Will support any horn up to and including 36 inches. Is nicked throughout, and fits into small space. Weighs only 13 1/4 lbs. Can be attached in an instant to any Phonograph without injury to cabinet.

## TRADE NEWS FROM ALL POINTS OF THE COMPASS

Elbridge R. Johnson, president of the Victor Talking Machine Co., Camden, N. J., who has been living in the suburbs of London, Eng., with his family for the past six months, is expected home around the early part of November. Mrs. Johnson has not been in the most robust health, hence the prolonged stay abroad. The wiseacre, however, had the Victor's clever chief executive's trip inextricably twisted up with trade affairs, one blandly stating that he had it on the best authority that Mr. Johnson went over to sell out to the Gramophone & Typewriters, Ltd., of London; another smart Aleck positively asserted that a European Victor Co. was determined upon, and so the tongues wagged during the entire period of Mr. J.'s absence. Then it was put up to a high company official, who neatly side-stepped when Henry F. Babson's visit across the water was mentioned in connection therewith. At least so the story runs.

Monday, the 8th inst., H. N. Macminimen started to touch up the trade for the Universal Talking Machine Mfg. Co., New York, in Pennsylvania and New York State. He had recently gone over the New England territory to some purpose.

The Duplex Phonograph Co., the double-horn machine, Kalamazoo, Mich., who are looking for direct business via magazine advertising, in which the dealers' prices on standard lines are held up to adverse criticism—a talking point only—are being threatened with litigation for alleged infringements of prior patents. This is a bit of news coming out of the West—where the winds do blow.

At one time Walter L. Eckhardt, manager wholesale department of the Columbia Talking Machine Co., General, before his entrance into the business, of which he is a bright and shining light, held the record as the champion short-distance bike rider. That was years ago, however. Since then he has been awarded the high mark for more solid achievements; but it only goes to show that the way the twig is bent the tree will grow.

Last week Fred C. MacLeau, manager of the Sterling Debenture Corp., who are managing the investments in the American Telegraph Co., called on the New York State trade, selling a number of machines and a large block of securi-

ties. Some time this month the corporation will tender a banquet to their salesmen at one of the prominent hotels. They have also selected space in the National Business Systems' Exhibition, that opens October 27 in Madison Square Garden, New York, where a complete display of their apparatus and appliances will be made. Mr. MacLean will be in charge, with an able corps of assistants.

C. W. Casper, Marshall, Mich., who is forming a company to exploit talking machine specialties—in fact, is now in the business—is a man of varied accomplishments. At one time he was an extensive dealer in bicycles, and held the record for the fastest century run. Subsequently he studied medicine, and is a graduated physician, but not practising. At the present time he is interested in three drug stores, and owns the Casper Hardware Co. Mr. Casper believes a well conducted trade paper is an indispensable adjunct and invaluable assistant in any line of business, consequently he is an attentive reader of the paper dealing with the line in which he has investments, the latest addition to the list being The Talking Machine World. He frankly admits he has not read a novel in eight years—hasn't got the time.

"The Phonograph Girls" is the title of a melodrama now on tour and being presented by the "Jersey Lilies," a company which opened in New Orleans last month and is now on the Western circuit. The sketch originated in London, England, and was reported a success. One of the scenes represents the interior of a talking machine store, and the Columbia Phonograph Co.'s Twentieth Century machine is employed to advantage in revealing the plot. The machine is also used outside to attract the crowd to the theater, and has proven an effective advertising medium. This is the first play known in which the talking machine and its commercial environment has figured in a professional way and carrying off the honors.

Henry Goldsmith, a music dealer of Columbia, O., formerly having a talking machine department, selling out to Perry Whitsit & Co., is contemplating going back into the business if he can obtain additional room to his present place of business, said to be one of the best locations in the capital.

Early next month E. Long, manager of the Universal Talking Machine Manufacturing Co.'s export department, is expected to return to New York from Italy, where he is associated with Henry J. Hagen, of the company's recording laboratory in obtaining a complement of "masters." Mr. Hagen accompanies Mr. Long home.

A recent letter from Peter Bacigalupi, of San Francisco, his father-in-law, says that Leon F. Douglass, vice-president of the Victor Talking Machine Co., Camden, N. J., is living 150 miles from that city in retirement, and that his health has greatly improved since coming to California.

The Keen Talking Machine Co., northwest corner of Eighth and Cherry streets, Philadelphia, Pa., suffered a loss of \$500 by a fire which occurred on the third floor of the building, September 27. There was no deterrence to business.

In filling an order for records from Harvey Kopp, of Fairmont, Pa., Miss Kathlene E. Mulligan, of the Pittsburg branch of the Columbia Phonograph Co., worked the old romantic game of putting a slip containing her name and address in one of the boxes and suggesting an answer. As she signed K. E. Mulligan, Mr. Kopp replied to "Mr. Mulligan," assuming it was a young man, and as the friendship grew gave out his secrets of the style that one man gives only to another. When a meeting was arranged he nearly died when he saw "Mulligan" in skirts.

### TO THE TRADE.

For your information we desire to bring to your attention the fact that all metal which has been coated with a "baked-on" finish will be far more satisfactory both as to its durability and beautiful appearance than any other method of decorating can possibly be. The goods that we manufacture have grown steadily in popularity year by year, until to-day the large business that we are handling is the result of our endeavor to give standard quality at reasonable prices, and this year will show the largest amount of business for the Tea Tray Company of any since its organization in the year 1867.

All imitations that have been made of the goods we have furnished, as far as we can find, have been so inferior that the trade now are coming to us and commending us because of the fact that we have adhered strictly to our policy of improvement in methods, and have constantly endeavored not to furnish a cheap grade of goods.

Most of the colors which we are using on our work are practically unfading, as they are "baked-on" and not dried in the open air. Any chemist will bear witness to the fact that Chrome Yellow and Chrome Green and the various lakes made from cochineal are more permanent in tone than the similar colored aniline substitutes. It is not possible for any of the former pigments to be used in lacquer, on account of their non-solubility in alcohol. "Baked-on" coatings of the very best character, such as we use, do not fade in strong sunlight nor are they affected by water, alcohol or other liquids which will readily remove the lacquered surface. The lacquered surfaces are likewise extremely brittle, while a "baked-on" surface is the most impervious coating that can be applied. A test can be made by anyone so that you can readily grasp the idea. It is not as easy to produce a smooth or beautiful surface on air dried work as it would be if the surface was thoroughly "baked on." The very rapid evaporation of the solvents in lacquer is likely to show very much greater defects because of the fact that the colors do not flow evenly, while the "baked-on" coating keeps the color in a fluid condition until every pore in the metal surface has been sealed and the color has flowed out to a state of perfection in the heat of our ovens.

The artistic effects of the hand painted and carefully selected articles that we have so long been noted as originating take a vast amount of experience and care, and our artists have to be trained by years of careful studious application to their work to bring the results that have brought this Company the confidence and good will of a very large patronage.

Trusting that the foregoing information, which is given in the interest of all users of Talking Machines, may be interesting and valuable, we are,

Very truly yours,

ALBERT S. MARTIN,

Pres. The Tea Tray Co., of Newark, N. J.

## Important Announcement to the Trade

THE UNITED HEBREW DISC RECORD CO. beg to announce that they have opened up new wholesale warerooms at 257-261 Grand Street, and now have ready for distribution a very complete selection of Hebrew Records made by the best artists on the Hebrew stage.

Twenty-one new numbers will be ready for shipment by October 20th. All of these selections will prove to be fast sellers because of their remarkable clearness and popularity of the titles.

Our new stock will be found complete at all times, and the new records are positively the best Hebrew Records on the market.

This business is under new management, and the best attention will be given to dealers who have a demand for this class of records, and they will find it to their advantage to correspond with Mr. Louis Rosansky, owner of the firm, at once, as he feels disposed to deal liberally with first class dealers who will act as representatives for this concern.

**THE UNITED HEBREW RECORD CO.**  
257-261 GRAND STREET, - - - NEW YORK CITY

Patents—Big Needle Order—Polish Records in Demand—C. W. Noyes Making a Great Road Record—Recent Visitors from Many Points—Geissler's Counter Display Rack—Salter Mfg. Co.'s Handsome Catalogue—Joseph T. Leimert's Eastern Visit—Entertained by Geo. W. Lyle—Cheery Reports Everywhere.

(Special to The Talking Machine World.)

World Office, 195 Wabash avenue,  
Chicago, Ill., Oct. 10, 1906.

With the local retail trade business is picking up beautifully, and the indications are all for a remarkably good reason. The keenest interest is being shown in the higher priced records. This winter promises to establish the talking machine stronger than ever in the musical art class. Jobbers are well pleased with the demand from the country dealers. The only thing that is worrying them is whether they will be able to secure the goods to fill the demand.

Manager G. M. Nisbett of the recently established wholesale department of Babson Bros., at 304 Wabash avenue, the old National Phonograph Co. location, returned late last month from a trip through Wisconsin. He says he found the dealers already enjoying a fine fall trade, and looking forward to a record breaking holiday business. "One thing that impresses me forcibly in viewing the trade situation," said Mr. Nisbett, "is the fact that the phonograph is rapidly graduating from the side line class even in the country. For instance, I had four Edison dealers call on me to-day. They were all from small Western towns, and three of them were exclusive talking machine dealers. The third is a jeweler, but his talking machine trade is rapidly forming a very vital factor in his business. While perhaps not in the proportion indicated by my visitors, this tendency is growing very rapidly, and it speaks volumes for the progress of the business."

Now that the Cable Company's talking ma-

chine department is fully organized in both its retail and wholesale branches a change has been effected which will permit that perfect division of executive labor which is a prime desideratum in the conduct of a large business.

J. W. Harrison, who, in consultation with Joseph T. Leimert, has had charge of both the talking machine and electric piano departments, will devote his entire time to the latter department, which has also developed to the point where it requires the undivided attention of an experienced and capable man. Mr. Leimert has secured as manager of the talking machine department C. W. Long, now in charge of the Columbia Phonograph Co.'s store at St. Paul, Minn. He assumes his duties at the Cable Company on Oct. 15. He was formerly secretary of the Indiana Talking Machine Co., Indianapolis, but two years ago went with the Columbia people, representing the Chicago office in the Far West. When the Salt Lake City branch was opened a year ago he was made its manager, and three months ago promoted to the management of the St. Paul office.

Mr. Long's successor as manager of the St. Paul office of the Columbia Phonograph Co. will be Ed. Wheeler, who was in charge prior to Mr. Long's incumbency.

The Cable Company have introduced an innovation at their afternoon concerts given in the interests of the talking machine department in Cable Hall. The Victor machine holds the boards uninterruptedly from 12 until 2.30, then a programme concert commences, lasting until 4 o'clock. Besides the Victor selections a couple of suites of light classics are sung with the ac-

companiment played on the Mason & Hamlin piano. The first week of these programme concerts the soloist was Miss Ada Mae Cameron, the sister of L. Kean Cameron, assistant manager of the retail talking machine department, and who has charge of the concerts. Miss Cameron, although but eighteen years of age, has a clear lyric soprano of remarkable beauty, and has already won golden opinions as a concert singer in Chicago. Last week the soloist was Miss Edna Dunham, also an accomplished vocalist. The programmes for the entire week are published in pamphlet form, and the selections are all such as appeal to persons of cultivated musical taste.

B. Feinberg, for the past two years representing the Zonophone Co. in the Northwest, and a man of long experience in the talking machine line, has come to Chicago, and has associated himself with Frank Dillbahrner under the name of the Western Talking Machine & Supply Co., Dillbahrner & Feinberg, proprietors. They will operate as manufacturers' agents, selling to the jobbing trade, and will handle everything from a needle to a machine. They have already secured a fine line of accounts, embracing disc and cylinder machines, records and accessories. Mr. Feinberg leaves to-day for a month's trip "around the loop." The firm's office is at Suite 405, 185 Dearborn street.

H. L. Willson, manager of the local office of the Columbia Phonograph Co., has certainly proved that his promotion to the management of the Chicago office less than a year ago was a wise move on the part of the company. The business has been pushed very aggressively all along the line, and when the new Columbia store at Duluth is opened this month, under the management of A. W. White, now connected with the Chicago office, it will be the twentieth now operated from this point.

No. 19 will be opened at Davenport, Iowa, on October 15. It will be located at 118 West Third street, in the heart of the business district, and will occupy a fine large store, elegantly fitted up, and which will boast the largest

# BABSON BROTHERS,

WHOLESALE

Edison Phonographs

AND RECORDS.

We desire to announce to the trade that we have secured the old quarters of the National Phonograph Co., at 304 Wabash Ave., Chicago, and G. M. NISBETT as Manager of our wholesale business.

*Complete Stock and Prompt Shipments.*

304 Wabash Avenue,

CHICAGO, ILL.

electric sign in the city. The manager will be A. D. Herriman, who came to Columbia headquarters at 88 Wabash a year ago to take charge of the retail sales there. He was formerly manager of the talking machine department at Siegel, Cooper & Co.

President E. D. Easton and General Manager George W. Lyle, of the Columbia Co., spent Wednesday, October 3, in Chicago, leaving the same evening for the East via Pittsburg.

A. C. Becken & Co., wholesale and manufacturing jewelers in the Powers Building, Wabash and Monroe street, have recently enlarged their talking machine department, jobbing the Columbia goods on a large scale. Mr. Turck has charge of the department.

The business of the Tone Regulator Co., of Chicago, has been purchased by the Rudolph Wurlitzer Co., of Cincinnati and Chicago, and the patents of the Universal tone regulator have been bought from the inventor and patentee, Eugene M. Robinson. The Universal tone regulator was put on the market a few months ago by the Tone Regulator Co., and is adapted for the Victor, Zonophone or Columbia disc machines. The Rudolph Wurlitzer Co. already had an excellent business on these regulators as jobbers and will push them very extensively. It is also understood that they are about to take steps to protect the patents which they now control against devices now on the market and which they claim are infringements.

Mr. Peacraft, of the Tea Tray Co., was a recent Chicago visitor.

One of the largest, if not the largest, needle orders ever placed in this country was recently given by a Chicago jobber to C. W. Noyes, of the Hawthorne Sheble Mfg. Co. It called for 10,000,000 needles for immediate delivery.

Manager A. D. Geissler, of the Talking Machine Co., is justly proud of the enthusiastic, hustling force of assistants with whom he has surrounded himself. E. W. Moody, the local sales manager, has been doing some great stunts, and has not only created a number of new Victor dealers locally, but furthermore has greatly increased the sales to old customers of the house. James Miln is maintaining his old-time record as a road salesman distinctly in the crackerjack class. He has just returned from a very successful trip through Michigan. Daniel Creed, who has had charge of the city sales on the floor, has been promoted to the credit desk. G. W. Davidson, Mr. Geissler's private secretary, recently added to the spirit of happiness pervading the office by causing the wedding bells to ring merrily. He went east for his bride, who was formerly Miss Leedom, of Philadelphia.

H. A. Steadman, manager of the talking machine and gun department of Hibbard, Spencer & Bartlett Co., has returned to his desk, after a siege of typhoid fever lasting over three months.

While in the east the latter part of last month Joseph T. Leimert, of the Cable Co., was entertained by George W. Lyle and went with him to Bridgeport, Conn., for an inspection of the factory of the American Graphophone Co.

The new Polish records of the Columbia Co. are destined to make a hit in Chicago. A. J. Morrissey, city wholesale man for the Columbia people, sold no less than 8,000 of the October Polish issue from samples.

Under the management of W. L. Brind the mail-order department of the local office of the Columbia Phonograph Co. is already making a weekly average of several times the volume of business when he took hold less than two months ago.

C. H. McGriff, of New Madison, O., has built an addition to his piano store and will add a talking machine department. He has not yet decided upon his lines.

C. W. Noyes, of the Hawthorne-Sheble Mfg. Co., and western representative of the American Record Co., returned last month from the East, accompanied by Horace A. Sheble and Mrs. Sheble, who spent several days in Chicago. Mr. Noyes left on the 25th for New Orleans. From thence he will travel through Texas, Oklahoma and Indian Territory visiting the principal jobbing points. During his absence the office at 185

Dearborn street will be in charge of H. Tilt, who has just joined the Chicago forces and will travel in this territory for the Hawthorne-Sheble Mfg. Co. and turning the orders over to the jobbers in their respective territories.

W. H. Aton, manager of the Charles Wild Music Co., Baraboo, Wis., was a recent Chicago visitor. Mr. Aton has recently inaugurated a talking machine department, handling the Edison and Columbia goods.

Nelson C. Durand, manager of the commercial department of the National Phonograph Co., was in the city recently consulting with C. L. Hibbard, who looks after the interests of the Edison business phonograph in Chicago.

Arthur C. Mestraud, representing the International Correspondence Schools, of Scranton, Pa., is in the city visiting the jobbers with a view to interesting them in the trade possibilities of the phonographic language courses.

W. W. Parsons, manager of the commercial department at the Chicago office of the Columbia Phonograph Co., has just received several of the new type alternating current commercial graphophones, and says that already orders are coming

in from the country and from manufacturing suburbs where there is no direct current.

Lyon & Healy are sending to the trade their first catalogue devoted entirely to a line of high-grade cylinder and disk cabinets made especially for them after their own designs. Not only are these cabinets of extremely artistic appearance, but they are strongly built and are models in point of convenient arrangement.

John E. Moyer, of Dixon, Ill., a talking machine dealer of the up-to-the-minute class, was a recent Chicago visitor. He reports business as good in his locality and looks for the best holiday business in the history of the trade.

Miss E. O. Lane, who has had charge of the sales in the talking machine department at the Fair for the past six years, has joined the forces of the Healy Music Co. as chief assistant to Manager Faber in the talker department.

The Chicago Stand Co., 266 Wabash avenue, are having an excellent business on their Chicago horn support for Edison phonographs. It has many points of excellence, including that of "invisibility" when the machine to which it is attached is viewed from the front. It is simple

## Chicago Horn Support FOR EDISON PHONOGRAPHS

FRONT VIEW—SUPPORT INVISIBLE

The simplest, neatest and most practical Horn Support on the market. Has many advantages over other devices of this kind. Is adjustable to different size horns, holding the largest size bell horn perfectly without tipping the machine.

This support is so constructed that it comes directly under the machine and practically out of sight, leaving the top of machine perfectly clear. This support is quickly attached and detached, and folds up into a package 1 3/4 inches by 2 1/4 inches by 15 inches in length, allowing same to be packed inside of machine case. Handsomely finished in heavy nickel plate.

Ask your jobber to send you a sample. Retail price \$1.50 each.

**CHICAGO STAND CO.**  
266 Wabash Avenue, CHICAGO

SIDE VIEW

## Record and Machine Cases

We manufacture a full line of cases for Cylinder and Disc Records, Machine Cases and Horn Cases. Carrying goods in stock, we can make prompt shipment. Our quality is the best, and prices right. Ask for our catalogue.

**CHICAGO CASE MFG. CO.**

142 and 144 W. Washington Street, Chicago, Ill.

in construction, neat in appearance, and when not in use can be folded into small compass and packed in the machine case.

Mr. Ornstein, the sales manager of the Victor Co., was a recent Chicago visitor. He was on a general trip among western Victor jobbers.

A. D. Geissler, of the Talking Machine Co., has just brought out a very handsome counter record display rack. It holds 36 ten or twelve inch records. The cabinet work is beautifully finished and the device seems destined for a large sale.

Mr. Moody, city sales manager for the Talking Machine Co., has just placed a Victor line with the large furniture house of Barwig Bros., on Milwaukee avenue, securing an excellent initial order.

One of the most popular men visiting the Chicago jobbers and representative dealers is Mr. Chandler, city man for the National Phonograph Co. He has a personality that absolutely radiates good cheer and optimism of the most approved type. He has a sunbeam storage capacity that would have made him a king among the prehistoric plants of the coal era, and the way he can jolly orders out of the dealers on a rainy and gloomy day is a never ceasing source of wonder to the recipient jobbers.

O. D. Weaver & Co., 195 Wabash avenue, have added a complete line of disc and cylinder record cabinets and are out with a new illustrated catalogue describing their offerings.

James I. Lyons has opened his fourth retail store. It is at 1071 Lincoln avenue, and is in charge of Mr. Wurst, who has had several years experience in "talker" rebuilding.

The Salter Mfg. Co., 102-108 North Oakley avenue, Chicago, have just issued a handsome new catalogue of their line of talking machine record cabinets made by them. It shows seven styles of disc and a similar number of cylinder cabinets, all beautiful examples of the cabinet maker's art and two of the leading styles are illustrated in the company's advertisement elsewhere in this issue and we here quote the catalogue descriptions:

No. 705, Talking Machine Disc Cabinet.—Size, 36 inches high. Size of top, 15 x 20. It has three compartments for about 270 discs, the lower space holds 12 inch and the two uppers 10 inch. Made of the very best selected quarter-sawn white oak. Paneled on all four sides, door fitted with solid brass catch, same as shown on our No. 704. Golden finish. Polished or weathered oak waxed, and imitation mahogany on birch wood, polished.

No. 710, Cylinder Cabinet.—Size, 36 inches high. Size of top, 15½ x 19. This is our latest improved swinging drawer cabinet and will hold 138 records. The six drawers are well fitted with special hinges and 12 solid brass knobs, two on each drawer. Fancy shaped top and base. Made of quarter-sawn white oak and finished on all sides in golden finish polished or weathered oak waxed.

#### "TALKERS" TO BRING SALVATION.

In another part of The World reference is made to the use of talking machines by the Salvation Army in Cleveland, and in this connection the following letter appears in one of the Chicago newspapers:

"I notice that the Salvation Army in Cleveland is to economize by using graphophones instead of preachers. While the living preachers are saving souls in one place the graphophones with slots for contributions are to be saving them in another. Suppose that hereafter in the testimony meetings converts will relate how they 'attended' a graphophone and experienced a change of heart under its preaching. The first thought one has about such a thing is that it degrades religion, but on reflection it does not appear so bad. Perhaps if the army had no other kind of preachers the results would be just as good and the collections just as large."

There is a growing demand for talkers in first-class cafes.

#### E. C. PLUME'S CONTRIBUTION

To the International Encyclopedia on the Subject of Graphophones.

(Special to The Talking Machine World)

World Office, 195 Wabash Avenue,  
Chicago, Ill., Oct. 11, 1906.

E. C. Plume, who has charge of the wholesale interests of the Columbia Phonograph Co., in Central Western territory, has been signally honored by being selected as the author of the article on the "Graphophone" in the forthcoming new edition of the International Encyclopedia, which will make its appearance about January 1 next. The World is able to print the article through the courtesy of the manager of the Chicago office of Dodd, Mead & Co., the publishers of the International. It is as follows:

"GRAPHOPHONE.—(from Greek voice *Γράφειν*, Graphein to write, *φωνή*, phone), an instrument for recording and reproducing sound. The graphophone, invented in the Volta Laboratory,

E. C. PLUME.

Washington, D. C., in 1886, by Dr. Checester Bell, brother of Alexander Graham Bell, of telephone fame, and Prof. Charles Sumner Tainter, a scientist, was the first practical talking machine. Its basic principle is the act of engraving sound on wax or wax-like material. All modern talking machines embody the features first made known in the inception of the graphophone.

"The problem of recording sound was solved long before its reproduction was accomplished. As early as 1807 Dr. Thomas Young discovered a method by which a tuning-fork might be made to trace a record of its own vibration; but nearly eighty years seem to have elapsed before this hint was put to practical use by the invention of the graphophone, which gave to the world a machine whose uses are manifold; among the principal of which are the teaching of languages without a teacher and for dictation purposes, it being used in many of the largest business concerns in the capacity of amanuensis and substitute for the stenographer. Its best known use, however, is for the purpose of entertainment, the delicacy and accuracy in reproduction being remarkable. It has a tympanum or diaphragm that, like the tympanum of the ear, vibrates in unison with the sound waves that beat against it, but does more than the ear's tympanum, for it makes a perfect record of what it is. Like the voice, the graphophone sets in motion the waves of sound, but it is not limited as the voice is to the production of a comparatively few sound waves, for every musical tone from the most delicate thread of sound to the melodious crash of a great military band can be re-created.

"Recent years have brought marvelous im-

provements. Prominent among these was the entirely new method of making cylindrical records. A permanent master record has been invented which consists of a metal matrix within which the finished records are moulded from molten wax. Another was the developing of flat or disc records, the sound waves in this style of record being lateral. In the disc records a sinusoidal line is traced upon a revolving wax disc. The disc is then left in a solution of chromic acid, and the plate thus made is used for stamping the records which are made of a hard rubber-like substance. This latter style of graphophone is fast supplanting that using the cylindrical records."

Mr. Plume's career in the talking machine field has been a varied and interesting one, although his activities have been confined entirely to the Columbia Co. He started in with them in 1893 at the San Francisco office, first looking after the instalment business there and later traveling covering the entire Pacific Coast. He finally went to Portland as acting manager of the branch in that city and from thence came to Chicago, took a trip over the territory covered by the Chicago office and visiting the branches under its control, and then took charge of the Record-Herald premium department here. In February, 1904, he was given management of the retail at the Chicago office including the various branches and in addition looks after the city wholesale, which he increased materially. He assumed his present position on October 1 of last year and since then has made no less than fifteen new Columbia jobbers in this territory. Mr. Plume is prominent in Masonic circles and is a Mystic Shriner.

#### THE "TALKER" AN EDUCATIONAL FACTOR

The new Boys' High School, Reading, Pa., has been added to the list of institutions using talking machines for educational purposes, as the entire second floor is given over to language classes taught by means of talking machines. The records contain speeches, dialogues and songs in the languages to be taught, most of the records having been imported from the foreign countries where the languages are in vogue. Absolutely correct pronunciation is thus secured.

The use of the "talker" as an educational factor raises it above the level of the purely entertaining or commercial product, and proof of its usefulness in this field should effectually silence the criticisms of that body of our citizens who harp upon these machines being only annoying "toys" and only fit for producing "canned music."

#### IMPROVED HOLDING TRAY

For Cylinder Records Is Being Placed on the Market by J. N. Blackman—Envelope System Another Specialty—Blackman Brush in Demand.

A patent application has been made by J. Newcomb Blackman, proprietor of the Blackman Talking Machine Co., New York, for an improved folding tray for cylinder records. It is shipped

flat and very simply folded. One of the principal features of this tray is that the bottom or sides are perfectly smooth, allowing the boxes to be withdrawn and replaced without danger of pulling out and upsetting other trays. They also lay closer, economizing space, the locking folds being on the end of the box. They are made of heavy jute paste board.

Another new specialty of the company is the Blackman envelope system, that provides a complete file—one envelope for every record in the catalogue. The number of the record is entered at the top right-hand corner, as shown in the accompanying illustration. If the record is sold the envelope is removed from the box and laid one side to be ordered.

The Blackman Co. are now manufacturing three styles of brushes for the phonograph, and a new style (No. 10) for disc records, that clamps on the sound box, of which the models are illustrated and described on another page. The company also desire to inform the trade that Messrs. Rogers and Forsell, Providence, R. I., with whom they were in litigation, have made to the company a complete assignment of all claims on record brushes. Therefore, the Place brushes

will be manufactured under the Place and Forsell patents, issued September 26, and October 2, respectively, that appear elsewhere in The World's patent department. Another patent will be issued shortly.

#### NEW VICTOR MACHINES.

Under date of October 1 the Victor Talking Machine Co., Camden, N. J., sent out the subjoined circular to their dealers, in which the latest style Victors, with the new worm or spiral gear motor, are announced as coming through the factory, viz.:

"We are pleased to inform you that our new style Victors 4, 5 and 6, with the new worm or spiral gear motor, are now coming through the factory in fair quantities, and we are commencing shipments of these machines in small quantities to your distributors. There is no change in the general appearance of styles 5 and 6, the cabinet only being slightly

larger to accommodate the new motor. The style 4 will appear in a solid mahogany cabinet, with the speed regulator as used on style 6, and will be shown only in that wood in our forthcoming machine catalogue to be issued in about one month.

"This, then, will give you two styles (4 and 6) in mahogany—a very acceptable wood—and we think improves the salability of the entire line. We predict a great future for style 4 in its new cabinet and equipment. With these changes our line is uniformly consistent throughout, with motors practically standardized and built on a principle and of a quality such as will insure perfection in their operation."

#### COOPER CO.'S NEW LINE OF CABINETS.

The James W. Cooper Co., of Philadelphia, Pa., have just brought out a complete new line of over 50 disc and cylinder record cabinets. These embody all the skill and excellence in construction gained after years of experience in this line of work. Without solicitation their goods have been handled for a number of years in this trade, and the quantity of orders which they are receiving is now keeping their plant at the corner of Washington avenue and 17th street working overtime, speaks most strongly for the high quality of their product. However, they are now going into this business on a larger scale, and have just compiled a handsome new catalogue for an entirely new line of cabinets, with special prices, which will be of immense interest to the talking machine dealer everywhere. In their advertisement, which appears in this issue, can be seen a sample of this attractive line.

#### C. C. COLLIER WITH REGINA CO.

Charles C. Collier, at one time manager of the Musical Echo Co., Philadelphia, and more recently head salesman with Sol Bloom on 42d street, New York, has become connected with the talking machine department of the Regina Co., 17th street and Broadway, in a like capacity.

#### NEAL, CLARK & NEAL CO. REMOVE.

Neal, Clark & Neal Co. have moved out of their old quarters at 647 Main street, Buffalo, N. Y., and are established in their new and elaborate quarters at 643-645 Main street. A feature of the firm's progressive policy will be monthly recitals, and several innovations entirely new to the talking machine business are under consideration by the firm.

## IMPORTANT TO JOBBERS!

We are direct factory representatives for manufacturers of  
**Talking Machines, Premium Machines,**  
**Disc Records, Sound Boxes,**  
**Cylinder Records, Record Racks,**  
**Record Cabinets, Tone Modifiers,**  
**Horns, all styles Carrying Cases,**  
**Cranes and Horn Stands, Needles,**  
 and a full line of parts and supplies.

## TRADE NOTES FROM BOSTON TOWN.

Every Talking Machine Store in the Hub a Hive of Industry These Days—Exploiting the Auxetophone—The Victrola in Great Demand Reports the Eastern Talking Machine Co.—Columbia Co. Open New Branch Stores—Read & Read to Remove—Winchell Co.'s Activity—Osgood's Campaign of Publicity—Reports from Oliver Ditson Co.—A Story Worth Relating—News of the Month in Detail.

(Special to The Talking Machine World.)

Boston, Mass., Oct. 8, 1906.

Every talking machine store in the city is like a hive of industry just now; the fall trade began in earnest with the first day of this month, and no let up is in sight as yet. It seems as though the demand for high-grade machines grows with each week, and the arrival of the Victor Victrola and the Auxetophone is going to give a further impetus to this demand.

An excellent idea for making popular the Auxetophone is put forth by a salesman at the Eastern Talking Machine Co.'s store. He suggests arranging to give a recital in the different sections of the city, before men's clubs, church organizations and even in private houses where wealthy men have large halls. A number of the newer mansions are equipped with halls for dancing, and here the Auxetophone will be invaluable, for when the guests get tired of dancing and want to rest, they can be entertained with opera or ragtime, as best suits their fancy.

The Victrola is "going some" at the Eastern Talking Machine Co., and the demand is "900 per cent. greater than the supply," as Wholesale Manager Chamberlain says. "We are all out of them, both for wholesale and for retail. The \$500 machine will be a great seller as soon as we can get enough of them," he says.

The little Victor dog is making a hit at this store. He is placed upon the floor directly in front of the open door. At his back is a fine Victrola, and as people pass by the door they see this tiny pup sitting there, his ear cocked up, and he looks at them with the cutest expression imaginable. The people stop, laugh and come into the store to get a closer look at him. Then it is but the work of a moment to get them interested in the Victrola and the talking machines of a lower grade. Many a sale has been started by this little dog of papier mache. And the best of it is, he doesn't demand a commission.

The Columbia Phonograph Co. have opened two new branch stores, one in this city at 10 Bowdoin Square, under the management of Aaron Schaubel, and the other at 55 Market street, Lynn, under the management of Kenneth Campbell, formerly of the commercial department. Business is reported as "bang-up" and improving every day. A fine display of Columbia records is being made in the window this month.

Messrs. Read & Read are to remove within a week or ten days to a street floor store in the same building, having rented a fine store on Essex street, opposite the new Henry Siegel Co. store. This will give them added room, better light and be a much better location for them than up one flight. A number of new

lines of machines and records will be carried, and it is hinted by Mr. Read that he is to have some one come to aid him in the management of the store. Just who it is he will not announce at present.

The Winchell Co. are doing a rushing business on the Zonophones this season, and despite their enlarged quarters are finding themselves crowded for room. The glass-walled rooms for display of records, which this firm was among the first to adopt, have proven a blessing both to customers and to salesmen. Mr. Winchell keeps on hand all the latest cabinets for keeping records and has a big sale on them.

Manager Winkelman, of the Oliver Ditson warerooms, reports an enormous trade on the Victor operatic records. "It seems as if everybody in town wanted to hear the grand opera singers," says he. The Ditson clientele is just the sort that appreciate the Victrola. A number of improvements are in contemplation at this company's stores in order to give much needed additional room.

"When in doubt buy of Osgood" is the catchline that has made C. E. Osgood famous, and it is being used to good advantage in the advertising campaign on talking machine goods. This concern is doing a splendid business.

At the Boston Cycle & Sundry Co. the addition of a department for the manufacture of the famous Boston traveling case for records, is adding to their already large business in wholesaling talking machines and supplies, and makes things lively there at all times. A big line of Searchlight horns is now carried, and there is a big demand for them among the dealers to whom this firm sends supplies.

There was a bit of fun the other afternoon in one of those phonograph parlors opposite the Common that was not down on the programme. A typical son of Ireland strayed in, picked up an ear trumpet and adjusted it. Gradually his face broke into one great, big heart-winning smile. The next minute he was doing a stunt that looked like a cross between the can-can and an electric shock. An inquisitive individual peered over his shoulder to ascertain the cause. The old fellow had been listening while the phonograph rendered "Old Rosin, the Bow," and found the broad grin not a sufficient vent for his feelings, hence the steps.

P. Pomero, of the well-known firm of P. Pomero & Co., of Philadelphia, manufacturers of orchestrions and other musical specialties is now on an extensive trip to call on the trade throughout the country, and is not expected back for about six weeks. The business of this company is rapidly expanding.

## HOW THE "TALKER" EDUCATES.

The Average User of the Talking Machine Now Discusses All the Great Masters of Music With an Ability That Would do Credit to Our Leading Critics.

"Had Sousa been on the train with me a short time ago I am sure he would retract some of the statements he has made regarding the bad effects of the talking machine on the cultivation of musical taste," said W. H. Rider, a big piano dealer of Kingston, N. Y., to The World recently. "A short time ago I was riding on the Ulster & Delaware with a customer, and in the course of our conversation he began to talk very intelligently on musical matters, the great singers and classical music. I knew that he had never received a musical education or never had had any opportunity to hear the singers or operas he talked about, and expressed my surprise at his knowledge, and asked how he came to be so well informed."

"'Why, through my talking machine,' he replied. 'I buy the best records and study them out, making myself familiar with the voices of the leading artists and the themes of the pieces that they sing. I purchase the scores of the best operas, and follow them on the talking machine. The result is that I have familiarized myself with music that was heretofore a sealed book to me. My children are taking a great interest in classical music, and I am confident that the talking machine has been a great incentive and auxiliary in their study of music.'

"I have followed up the matter, and now am a firm believer in the talking machine as a musical educator," continued Mr. Rider. "I find that it not only instills a love of music, but is educating the masses to an appreciation of the best. The demand for the classical records continually increases, and I find that nearly every one with an ear for music, and children in particular, become very critical, and train themselves to pick out flaws and discords in the music produced in the home. I believe that they will have a great influence for the best in the development of music, Sousa to the contrary, and no one that is fond of the great art will be content for very long to have their music ready made. At the same time it will be invaluable to the student, just the same as in obtaining a correct pronunciation in languages, in obtaining a correct interpretation of difficult passages by the greatest artists. I know of singers who have greatly improved their voices by singing with a talking machine, keeping at it until their expression, time and enunciation were correct. I believe they will ultimately aid in the sale of all kinds of musical instruments, and for that reason I advocate and push their introduction."

The Springfield Bargain Store, Springfield, Vt., have taken the agency for Edison phonographs and records.

The Home Talking Machine & Music Co. have opened a store at 12 West Second street, Dayton, O., with E. R. Austin in charge.

## PAUL H. CROMELIN'S SPEECH

At the Banquet Given to Mr. Marconi Last Month—A Very Able Address Which Will be Read With Interest by Our Readers.

In last month's World reference was made to the visit to the United States of Mr. Marconi, the noted inventor of the wireless telegraph, who visited the factories of the Columbia Co. at Bridgeport, Conn., for the purpose of touring that great establishment and becoming acquainted with the personalities of the company, with whom he is now connected.

At the dinner tendered Mr. Marconi in the evening of his visit at the Waldorf-Astoria some very interesting addresses were made, that by Paul H. Cromelin, vice-president of the Columbia Co., being of especial interest, so much so that we deem it worthy of reproduction herewith:

"Mr. President, Honored Guest and Gentlemen: I understood that this was to be purely an informal gathering to meet and greet our distinguished guest and to mark his association with our enterprise. It occurred to me that one of the features that would contribute to this delightful informality would be the tabooing of after-dinner speeches. It seems, however, that this is not to be, and as my friend, Mr. Emerson, has not yet perfected his new invention for the tongueless transmission of mental conceptions, and we still must resort to such common, ordinary, vulgar methods as spoken words and mouth our speech, let us for a few moments this evening consider the sound recording art; the achievements of the past, the promises for the future.

"The Phonographic Book, or Story of the Art of Recording and Reproducing Sound, is one which tells of things accomplished. It contains many interesting chapters. It does not relate the performances of any one man, and no one individual occupies the cover, the inside page, the several chapters and the back. The name Edison is found on the opening page and in frequent passages—for to Mr. Edison is due the credit for first reproducing sounds previously recorded. Interesting and unique, however, as was Edison's discovery, it remained for Prof. Alexander Graham Bell, Dr. Chichester Bell and Prof. Chas. Sumner Taintor, to give to the world an actual living invention—something on which an industry could be grounded—and in the Volta laboratory in Washington, D. C., in the discovery of the wax engraving process in 1886, the present world-embracing talking machine industry was born. Twenty years of progress and to those who have watched it from the beginning, twenty years of splendid achievement.

"Skimming through the pages we find passing mention of Berliner, and then our own MacDonald and Emerson occupy prominent positions—Emerson, the man who does things; MacDonald, the inventor, the designer and the builder. Poulsen's telegraphic achievement is deservedly given prominent mention, and the book concludes with an account of Higham's wonderful contribution towards the amplification of sound. What a fascinating story of surpassing interest; of steady, constant improvement in the sound-recording art. A second book is about to be begun, and we look confidently to the future in the knowledge and certainty that all the glorious achievements of the past will appear but as insignificant when the new story is completed, and we have reason to hope and to believe that the portrait of our distinguished guest, Mr. Marconi, will illumine its title page, and that the record of his achievements will be found to be the most absorbingly interesting chapter of all.

"Last Saturday night I watched with greatest interest the presses in the New York Herald building turning out daily papers at the rate of 300,000 an hour; and then I thought of the present methods of manufacturing disc records, and permitted myself the privilege of taking a peep into the future, when talking machine records would also come from the presses in one constant stream. Some progress along this line has been made. Much remains to be done.

"Last night, while on the elevated cars in Brooklyn, we were delayed a while in front of the Post-Office building, and, looking down on the animated scene, I saw hundreds of clerks hauling thousands of letters—letters which had been written; and I thought of the hours of careful, painstaking, laborious toil that had been spent in penning or type-writing these letters. As I watched, it was with the thought and hope that we might speed the day when we can personally converse with our loved ones in distant cities and across the sea; when the merchant will make his orders, the traveling man his reports, and all ordinary business communications will be spoken, listened to and understood without the tiresome and useless intermediary of written signs and figures. We all know that a cornet or other brass instrument sounds better than an ordinary voice record, because the horn of a talking machine approximately resembles the instrument recorded, while vocalists do not ordinarily sing through a funnel. Speed, oh, speed the day, ye inventors, when the horns of to-day will go the way of the rubber hearing tubes of the past!

"It is not disputed that a talking machine without a diaphragm or other medium than the air is actually possible and practicable—no needles, no friction, no noise. Be on the lookout for it, for it surely is coming. The future offers much more of a field for inventive effort and application than has been covered in the

past. The surface has hardly been scratched. I have an abounding faith in the lasting quality and permanency of the talking machine enterprise. I have little faith in the permanency of the present forms of either machines or records, and I seriously believe that before the second book is finished, and the works of Marconi and his contemporaries become history, present-day talking machines and records will be looked upon as curious specimens in the evolution of the art much as we to-day consider the Edison tinfoil phonograph and the original Bell and Taintor treadle graphophone.

"And then in the field of metaphysics. To you, distinguished sir, by reason of your matchless achievements in wireless telegraphy, is due the credit also for conveying the idea, the germ of thought, the missing link heretofore required, to give a plausible and ready explanation of the phenomena known as mental telepathy—the mental transmission of thought. Before your wireless discovery it was impossible to conceive how such a force could really exist. It was thought that some tangible, corporeal, organic medium must necessarily be required. But when your work was announced to the world, and messages were flashed across long distances without wires, many things previously inexplicable seemed not only possible, but entirely reasonable. I mention this subject particularly, because I believe it to be akin to our industry, and it requires no stretch of the imagination to conceive of some future system, not of recording sound, but of recording thought by the use of some proper and suitable organic or inorganic media hereafter to be discovered, so that our thoughts, ideas and wishes may not only be passed to the minds of others, but actually visually recorded so as to be readily understood.

"Perhaps this is a long look into the future, but these are good things to think about and, particularly at this time, when, crowned with laurels in that branch of science which you have adorned and to which you have already contributed so much, you will devote some time and thought to a kindred art, which offers such a rich field for future endeavor. That there is still room and need for immediate improvement is evidenced by a squib, which some person wrote who evidently does not fully appreciate what has already been done. When he heard that the great Marconi, the 'Wireless Wizard,' was to give some of his time to the perfection of talking machines, he sent the following to the papers. If I may be pardoned for repeating the lines, permit me to address you thus:

Say, Mr. Marconi, get busy, please,  
Give us a tip—set our minds at ease;  
They say you've hitched up with the Columbia staff  
And soon we're to hear your improved phonograph.  
Will it be noiseless and screechless and scratchless?  
Raspless and gaspless and hornless and grassless?  
If so, G. Marconi, to thee be the praise  
From morning till night, till the end of our days.  
You've done some great stunts, flashing news 'cross the sea,

But say, billy gee! That ain't one, two, three  
To what you'll be when you perfect your idee,  
And land in every home

Your Noiseless,  
Screechless,  
Scratchless,  
Raspless,  
Gaspless,  
Hornless,  
Grassless GRAPH-O-PHONE.

"So, Mr. Marconi, it's pretty nearly up to you."

At the conclusion of Mr. Cromelin's address, which was greeted with great applause, an interesting address was made by Mr. Binder, who dilated on Italy from the standpoint of the historian. As already related in The World, Mr. Marconi responded with some very happy remarks to the greeting extended to him, and his appreciation was further expressed the following morning by a marconigram from the steamer to President Easton of the Columbia Co.

## WHY SOME DEALERS CANNOT SELL

Talking Machines—They Fail to Know the Mechanism of Their Instruments and Lose Many Sales—What a Jobber Learned on His Travels.

A successful jobber in talking machines recently made a tour among the retail trade in cognito, to study the methods employed in making sales, and details his general impressions thus: "There are a number of dealers scattered throughout this part of the country who have not the slightest idea of how to sell talking machines or records against keen competition. They seem to have an idea that the mechanism of all machines is much the same, and that the name on their goods is its chief selling merit. The consequence is that they lose many good sales to the other fellow who has familiarized himself with what may be termed the talking points of the machines in his stock. He will dilate on the springs in the motor, the ease

of regulating speed and many minor technicalities, all of which will convince the customer that he is dealing with a man who has made a study of all machines, and carries in stock what he believes to be the best. Another point I scored against the first mentioned class of dealers is that they show their low-priced machines first. This is a poor policy. They should reverse the process, as it is far easier to come down than go up a bill of prices. A customer who has heard the best machine is never satisfied with a cheap one, and will almost invariably compromise between the machine he intended buying and the one he would buy if he could. This is human nature. Another bad feature in some of the stores is the employment of ignorant salesmen to play records. In the heart of this city I had an amusing experience recently. A young man of perhaps eighteen was showing records, and among them was the 'Ave Maria,' 'Who is singing that?' asked the customer. 'Miss Gounod,' he replied. 'And who is it by?' asked his patron with a smile. The young man looked at it hastily and answered, 'Mr. Sembrich.' Such ignorance is inexcusable, and unless the customer had a keen sense of humor, would result in the loss of future sales. Dealers and salesmen cannot become too familiar with their line, and if they are wise, will carefully study the line of their opponent so as to be able to intelligently answer any question put to them. The successful men in the trade I found to be those who have studied out every detail of the business, and such men always receive the backing of their jobber."

## CAL STEWART'S LATEST RECORD.

During the recent visit of Cal Stewart to Columbus, O., he made a young man in that city, Henry Ferguson, very happy by making a record for him. He chanced to be in a music store getting a part for his machine when Mr. Stewart came in, and he succeeded in persuading the entertainer to speak for a blank record for him. Cal Stewart's record specialties are Uncle Josh Stories, and to the record he told an inimitable story called "Uncle Josh Joins the Union."

## Some Facts Worth Considering

THE talking machine man frequently asks, "How can I increase my business?" The answer is easy. Place on a side line which takes but little space, which is attractive, and a standard in its particular line. Take the **Black Diamond Strings**, for instance. Steel and wound. New process. They are the finest manufactured. They are used by all of the prominent artists, and you will have a trade coming your way when it is known that you handle the "Black Diamond." Music dealers all over America, and all over the world for that matter, know full well the value of this product.

National Musical String Co.  
New Brunswick, N. J.

## A GOSPEL SONG TO A JURY.

The Graphophone Court Argument of a Rosedale Lawyer—"Ask the Saviour to Help You," Sang the Machine—The Jurors Decided a Man of 58 Wasn't Guilty of an Assault and There You Are.

Ask the Saviour to help you,  
Comfort, strengthen and keep you,  
He is willing to aid you—  
He will carry you through.

A graphophone in George H. Cooke's justice of the peace court in Rosedale ground out these words yesterday afternoon. It was a part of the argument of Rush L. Fisette, a lawyer. He was attorney for Joseph Ager, a German, 58 years old, who was on trial. John McDonald, a farmer living two miles west of Rosedale, accused Ager of attempting to stab him with a paring knife Sunday, September 6. After the hymn Mr. Fisette went on:

"Now if each member of this jury will apply the words of that song to himself and ask for Divine help in arriving at a verdict in this case it won't take you long to acquit this old man. I brought that graphophone down here thinking its music might inspire us all. Already I feel better. I am sure it has done the court good; the jury looks refreshed and the prisoner seems reassured."

McDonald, his wife and daughter and two other witnesses testified that Ager took the knife from his pocket and made a "lunge" at McDonald. The jury was only a few minutes in signing a verdict of "not guilty."

A month ago Fisette succeeded in freeing four boys accused of stealing watermelons by reading a chapter from the Bible to a jury in Justice Cooke's court.—Kansas City (Mo.) Times.

## "TALKER" TO PREACH THE GOSPEL.

(Special to The Talking Machine World.)

Cleveland, O., Oct. 6; 1906.

To spread the gospel in the streets of Cleveland the Salvation Army is planning to use the talking machine. In this way Major Connett, commander of the Citadel in the absence of Col. R. E. Ho'z, hopes to have sermons delivered to passersby who never stop to listen to street preachers or enter places of worship.

## A HANDSOME TALKING MACHINE WINDOW IN CLEVELAND.

Talking machine dealers throughout the country are steadily appreciating the value of window display. There is no better advertiser than the window, and the dealer is very unwise who does not use it advantageously, and his display should be always unique and often changed.

Speaking of window displays brings to mind the very effective showing made by the manager of the Columbia Phonograph Co.'s establishment in Cleveland, O. The window, which is

pictured here, was, of course, designed to catch summer trade and was most successful in this connection. It moreover attracted considerable notice and praise aside from being a trade incentive.

The talking machine is playing such an important part in so many varied fields that it is not over difficult to utilize it effectively for window advertising, provided some effort and originality are concentrated in the work.

## NEW SLOT DISC TALKING MACHINE.

Jules Welner, the prominent manufacturer of music boxes, of Philadelphia, is just recovering from a severe accident sustained some fifteen

weeks ago while superintending some changes at his large plant at Valley Forge.

Mr. Welner is the inventor of a remarkable new slot disc talking machine. This machine changes both the records and the needles automatically, and has won great favor wherever seen for its perfection in results.

Parisian singers are joining a trust which has for its purpose the making and selling of phonographic records of their own voices. Down with the trusts!

## TRADE NOTES FROM ST. LOUIS.

Dealers, Without Exception, Report a Lively State of Business—The Victor-Victrola Makes Decided Hit—Columbia Manager Makes Good Report—Order for Edison Phonograph for Manila—Recent Trade Visitors—Other Items of Interest.

(Special to The Talking Machine World.)

St. Louis, Mo., Oct. 10, 1906.

The past month has been a very satisfactory one to the dealers in talking machines here, and they all report a lively state of activity during that period, with prospects that it would be hard to improve upon.

D. S. Ramsdell, manager of the St. Louis Talking Machine Co., reports a very good trade, and says that the arrival of the Victor Victrola, their new \$200 instrument, made a decided hit. Mr. Ramsdell reports the sale of eight of these instruments in one week recently. The new Auxophone arrived a few days ago, and is making numerous friends. This firm is still short on Nos. one, two, three, four and five Victors.

Manager W. C. Fuhri, manager of the Columbia Phonograph Co., reports trade very good all through his territory, and that he looks for a very large business during the fall and winter months.

W. F. Standke, manager of the Columbia Phonograph Co., Memphis, Tenn., spent several days here recently, and reported trade very active at that point.

Manager T. P. Clancy, manager of the talking machine department of the Conroy Piano Co., expresses great satisfaction with present trade and future prospects. He received an order for a fine Edison phonograph from Manila, P. I., recently.

Marks Silverstone, president of the Silverstone Talking Machine Co., reports trade as being excellent. This concern has just erected a fine display booth in their store.

Prominent trade visitors here during the last two weeks were: A. E. Dunk, traveling sales manager of the Talking Machine Co., Chicago;

Mr. Myers, of the Victor Talking Machine Co., Camden, N. J.; A. H. Kloehr, Edison Phonograph Co., and C. H. Noyes, western representative of the Hawthorne & Sheble Mfg. Co.

The Thiebes-Stierlin Music Co. have let the contracts for building their new talking machine department, and work is expected to commence shortly. They expect to have it in operation by Nov. 1.

## WE ARE ENLIGHTENED

By a Solomon Regarding the Functions of the Various Kinds of Talking Machines and Their Weak Points.

"It is quite a general notion, born partly of ignorance, partly of Mr. Edison's intimate connection with things electrical, that the phonograph and its congeners, the graphophone and gramophone, are somehow electrical in their action. This is not the case," observes a writer in the American Inventor. "The phonograph is purely mechanical from first to last—as mechanical as the string telephone. There is a mouthpiece, a diaphragm, a cutting point fixed thereon, and a sheet of wax. Words uttered in the mouthpiece cause air vibrations. These cause the diaphragm to vibrate, raising and lowering the cutting point or stylus. This cuts into the wax, making long, wavy lines or tracks or jagged indentations. When this track is drawn beneath a stylus it jogs the diaphragm up and down, causing the air in the mouthpiece and the attached horn to vibrate therewith, and, voila, the reproduced speech.

"I have used the term 'jogs' advisedly. It precisely conveys the action and suggests the crudeness of the means used. The result is as crude as an old sand casting compared with those marvels turned out by the Franklin process. A man who went on rather too frequent sprees was once referred to as 'jumping from jag to jag, like an alcoholic chamois.' Very much the same state of affairs exists in the mechanical phonograph, minus the alcohol, of

course. The indentations, hollows, waves, etc., are of infinite complexity. Each slightest curve is a factor in the complete sound, and when reproducing from a record the stylus does not follow these curves exactly. It jumps from one crest to another, striking on the high places, and though the resultant sound is approximately true, it is only approximately. The finer vibrations which distinguish one note from another, and which give character to the sound, are lost.

"On the recording side of the matter also, the mechanical phonograph is inadequate. The faint, infinitesimal vibrations of a tenuous medium are put to do work for which they are not strong enough. It is like setting Ariel to Caliban's employment; yoking a race horse to a plow; using a razor to cut wood, to employ these delicate air vibrations to scoop out humps and hollows in wax or cut a sinuous track through composition. The faults of the present phonograph and its derivatives, lie not in their construction, but in the principle on which they are built, and the three elements, the mechanical record, the mechanical stylus, and the mechanically operated diaphragm."

This Solomon of the pen writes, indeed, glibly of one of the wonderful arts of the world, and it is evident what he does not know about sound reproduction, as demonstrated by the talking machine, would fill several volumes.

E. A. Vaughan, the music dealer of Princeton, Ill., is giving particular attention these days to talking machines, and is carrying an unusually large stock. A recent advertising feature was the distribution of sheet music containing his advertisement on the back cover page.

The Folding Phonographic Horn Co., New York, has been incorporated, with a capital of \$20,000. Directors: M. L. Munson, J. W. Foster and F. W. Leikerm.

"De Luxe" is the title of a series of extra high-class records now being manufactured by the Victor Co.

# The Place Automatic Record Brushes

## For Edison Phonographs and Victor Talking Machines

Patented Sept. 25th and October 2nd, 1906. Other Patents Pending.

Phonograph Styles Nos. 1, 2 and 3—Price 15 cents.

Can be used on all Phonographs.

Removes lint and dust from record automatically. Saves sapphire from wearing flat and prevents rasping sounds. Insures a perfect playing Record. It is equally as efficient when recording. It is too cheap to be without.

No. 1.

No. 2.

No. 1 fits Triumph. No. 2, Standard and Home. No. 3, Gem.

Disk Style No. 10

For Victor Exhibition Box

Price 25 cents

**PRESERVES THE LIFE OF DISK RECORDS.**

Automatically cleans the RECORD GROOVES and gives the needle a clean track to run in. Insures a clear Reproduction and prevents Record getting scratchy. Makes the Needle wear better. Dust and dirt in the Record grooves wear the Record out quickly and grind the Needle so it cuts the Record. SAVE THE LIFE OF YOUR RECORDS.

### COMPETITION AS A STIMULATOR.

**Battle for Trade Becoming Keener—Dealers Must Adopt Every Modern Idea and Improved Device to Maintain Their Position.**

Competition is keen in the talking machine industry and is becoming keener every day, and to the man who believes in and utilizes up-to-date methods will fall the laurels of success. It is an old saying with The World that you cannot evolve too many ideas to help trade. Dealers cannot be too busy, and some of the essentials to this end are to keep the store at all times attractively arranged. Present in the daily advertisements special features which will lure the public from the vacation spirit and put them in the mood to stay indoors and enjoy the good things provided by the modern "talker."

Often some dealers wake up too late to the modern spirit of commercial enterprise, and then they wonder how it is that "the man down the block" has had to move into more spacious quarters while he has all he can do to pay the rent. There is one certain rule for success: "Always be on the go." When trade is brisk see that you can supply it promptly and satisfactorily; when things are dull work doubly hard to improve them.

The giving of concerts to which the public has free admission is a good instigator to business. Advertise the giving of these entertainments, and impress on the people the fact that they are under no obligation to buy. Attractive window displays are also a strong drawing card and one which should receive close attention. All these things tend to make the successful business man, and to such men there is no dull season.

The Perry B. Whitsit Co., of 213 South High street, Columbus, O., have been holding extended and successful demonstrations of the teaching of languages with the aid of the talking machine.

### THE GOOD OLD SUMMERTIME.

**An Impromptu Comedy Not on a Set Stage, However, But Under Heaven's Canopy—Moral Discovered on Reading.**

Scene—A crowded car from Flushing.

Characters—A wonderful mixture of Teutons, Scandinavians, Orientals, Africans, representatives of the Latin races, an Anglo-Saxon or two, and lastly a large talking machine, liberally supplied with late records and in the possession of a crowd who had been generously imbibing of the famed product of Milwaukee.

In a corner of the car moodily rehearsing the happenings of the evening sat a youth who had received a "dressing-down" from his "best," an exponent for higher education of women, for addressing a companion as "slob." He was aroused from his reverie by hearing the strains of "Is It Warm Enough for You?" followed by "Let Me See You Smile" and "Travel On." He was the first to strike the platform—the music was too personal.

A German sat dozing and dreaming of his Gretchen in the Vaterland. Suddenly the strains of "Hans and Gretchen" rent the air, and he sat up and asked, "Vas iss?" Before his curiosity was satisfied the "Stein Song" from the "Prince of Pilsen" was played, and thoughts of the flowing bowl brought Hans to the platform to look for a thirst-quenching dispensary. None in sight, so he and the youth remained outside—veritable outcasts for sentiment.

A Swede from one of the boats moored nearby was the next victim, his tears becoming too copious to admit of his facing the fellow passengers when the machine ground out "Necken han spelar par pa boljanbla," and another folk song dear to his people.

A darkey and his "gal" were next in order and when he gave her an especially fervent

squeeze he was greeted with "A Darktown Courtship" and "I'm Tired of Eating in Restaurants," pieces indicative of matrimonial intentions. "Sambo" was game, however, until he was assailed with "Bill Simmons," and he had to retire to the platform to do a buck and wing. Could any colored gent keep still with that music?

As each of the pestered ones made his exit the crowd at the machine greeted him with loud guffaws, and as a consequence the outcasts became more angry every minute when they realized that they were being made butts for the jokes of the happy ones.

The crisis was reached when "Rocked in the Cradle of the Deep" and "Bon Voyage," played to a sailor, were followed by "Waiting at the Church." It was the straw that broke the camel's back, and when, after being warned to keep still, the crowd started the machine on "It's Up to You to Move, things happened. The six, composing the guard of the "talker" and the machine itself, landed in the ditch at Woodside. That the latter was not injured was evident from the fact that before the car started "General Mixup U. S. A." was rendered as an appropriate piece for the occasion, followed by "I'm Up in the Air About Mary," addressed to a youth with auburn hair, who had just boarded the car, and that was all. Two bells from the conductor and the "talker" was left in the distance, while the bunch on the platform heaved a united sigh of relief and started to search for ferry tickets.

Moral—Music may sooth the savage beast, but it can also rouse the sleeping lion.

A Philadelphia manufacturer making a new line of flower horns called Artistic Flower Horns, reports sales recently made to several jobbing houses aggregating over ten thousand. As these horns are somewhat more expensive than the ordinary flower horns at present on the market, it speaks well for their general attractiveness.

## INCREASE YOUR RECORD BUSINESS

### THE TRAY SYSTEM FILLS THE LONG-FELT WANT

Every dealer will readily see the advantages obtained by using this System of carrying records in stock. It is concise and appeals at once to the prospective customer. Every dealer using this System speaks in the highest terms of its convenience and selling power.

By actual experience sells as many records as a first-class salesman. Makes a more attractive looking stock than can be obtained by any other method.

*Sold to the trade in complete outfits, consisting of 1350 Trays and Labels for every Edison record listed in the Domestic catalogue.*

48 Hanover Street, BOSTON, MASS.

## THE BUSINESS TALKING MACHINE.

Vast Strides Recorded in the Development of This Great Commercial Aide—An Important Adjunct of the Trade.

It is within a year that special departments were created by the manufacturers for the promotion and introduction of the commercial or business talking machine. Success followed immediately, and this branch of the trade has grown so rapidly as to astonish even its most

NELSON C. DURAND, MANAGER EDISON COMMERCIAL SYSTEM.

sanguine advocates. Branch offices have been established in the principal cities by the manufacturers, who are handling the business direct, though it is possible the general trade may be accorded a portion of what promises to be as important a proposition as the entertainment machine is at present. The cleverest and brightest men have been engaged to demonstrate

J. W. BINDER, MANAGER COLUMBIA COMMERCIAL GRAPHOPHONE DEPARTMENT.

and introduce the commercial system, schools of instruction have been established, and a plant created, the organization and success of which is most gratifying.

Quoting from the handsome catalogue issued by the commercial department of the National Phonograph Co., as to the Edison business machine, the following brief but comprehensive description is found: "Several years ago Mr. Edison applied his wonderful energies to the perfection of the phonograph as an amannensis for the business world. With characteristic insight into the commercial situation, he recognized that the business men required not only an instrument that

would give nearly human service, but a system recommended with it would make its operation clear and avoid any trouble or experiment on his part. The outcome was the Edison commercial system, in which the business phonograph is made a link of the greatest economical importance in the chain of modern business dictation and transcription."

The only known other system in the market is the graphophone, manufactured by the Columbia Phonograph Co., General, and its sale is being pushed vigorously and aggressively. At the eighth annual meeting of the National Shorthand Reporters' Association, the commercial graphophone department of the Columbia Phonograph Co. had a very interesting display of commercial graphophones and supplies in charge of J. W. Binder. Two of the new model machines exhibited elicited much favorable comment, and not a little substantial business. At the same convention Frank Weller, one of the oldest users of the graphophone for transcribing testimony, read a paper on "Reporting Testimony Direct on the Graphophone." The address dealt with an experiment substituting a "recorder" for a "reporter," who dictated testimony direct to the graphophone, instead of taking it down in shorthand and then redictating.

Early last month Nelson C. Durand, manager of the Edison commercial system of the National Phonograph Co., went West to visit and inspect the various offices handling the business phonograph.

### EASTERN TALKING MACHINE CO.'S WARNING.

E. F. Taft, general manager of the Eastern Talking Machine Co., Boston, Mass., has sent out the following warning to the trade: "We have been informed that a person using the name of A. Freich and representing himself as an agent of ours, is calling on the trade throughout New England. We have no representative of this name and no knowledge whatever of the man or his object, and therefore will not be responsible for his actions." The Eastern Talking Machine Co. would like to get information regarding this party, and will appreciate any information in this connection.

The Hawthorne & Sheble Mfg. Co., of Philadelphia, Pa., report the sales on their new line of Artistic Flower Horns as being simply phenomenal. Their rich color effects and general attractive designs seem to have taken the country by storm.

## WHY NATIVES WERE NOT SURPRISED.

Excellent Story from the Land of Don Which Shows That Talking Machines Are Now Found in Every Corner of the Globe.

A Spaniard from one of the small peasant villages, hidden away among the passes of the Pyrenees, who had come to the United States and been very successful in a certain line of trade, decided to return to his native heath and renew friendships among his old neighbors.

In thinking over what would be the most appropriate and representative souvenir of his adopted country, rich in its wonderful productions, he decided that a talking machine would cause the greatest astonishment, and purchased a machine forthwith, not overlooking a liberal stock of records. When he got to his home village and started the "talker" to work with one of the standard records, it did not produce the effect he had anticipated, the audience expressed their appreciation of music, but even after the second and third numbers, they did not stand spell-bound with amazement. Upon inquiry it was found that nearly every household had possessed a talking machine for some time and they had become part of the life of the village.

The foregoing is merely an instance of the far-reaching influence of the "talker" and the remote places to which it is carried. Very likely it would have been almost impossible to have transported pianos safely through, even if the villagers had had the price. The mandolin and guitar of the serenading cavalier was becoming monotonous, so the twentieth century talking machine stepped in.

### NATIONAL PHONOGRAPH CO. NEWS.

Among the recent appointments made by the National Phonograph Co. are those of Gilbert R. Harris as manager of the commercial machine department in Boston, and M. R. Compton, manager of the commercial phonograph department in Philadelphia. Both these gentlemen were formerly connected with the New York headquarters.

### RECENTLY INCORPORATED.

The Leschbrandt Mfg. Co., Philadelphia, Pa., has been incorporated under the laws of Pennsylvania with the object of "acquiring, manufacturing, operating and displaying of talking machines and rights appurtenant thereto." Incorporators: Einar Leschbrandt, Jules E. Aronson and Samuel W. Woodford, Jr.

## BUSINESS BOOMING IN TEXAS.

**Jobbers and Dealers Report Unprecedented Demand—The Texas Phonograph Co.'s Big Task of Covering State—Womble Opens in Winston Salem—Edison Line With Oliver House—Reduction on Freight Rates on Talking Machines from 1 1-2 to First Class Granted by Texas Railroad Commission—Southern Music Co. Now Handling "Talkers."**

(Special to The Talking Machine World.)

Houston, Tex., Oct. 10, 1906.

The talking machine business in Texas is booming. During the heated season there has been no let-up and all the jobbers and dealers report unprecedented business. The newspapers have enjoyed splendid advertising patronage from the progressive phonograph dealers. Many are using quarter and half-page copy to exploit talking machines, and great rivalry exists for supremacy.

The largest establishment in Texas is the Texas Phonograph Co., at Houston. They job Edison and Zonophone lines, requiring two traveling salesmen to cover the State. Texas is so large that outsiders, crossing the State for the first time, are amazed that when they enter the State at Orange, Tex., on the east, that they are a thousand miles from El Paso, in the western part of Texas. The fare is \$30, and in this distance (equal to a ride from New York to Chicago) a traveler often rides 100 miles without seeing a town of 100 people. There are three cities en route—Beaumont, 20,000; Houston, 75,000, and San Antonio, 93,000, the largest city in Texas. It cannot long remain sparsely populated, as the tide of immigration is taxing the railroads to handle. Last month the roads brought over 40,000 homeseekers from the Middle West on their low-rate homeseekers' excursions, and nearly all bought some of the cheap school lands, and at least 10,000 will remain as permanent residents. In a few years the Empire of Texas will be a good deal better territory and more economically covered by traveling salesmen.

S. H. Womble, secretary of the Texas Phonograph Co., has resigned to engage in business for himself at Winston Salem, N. C. He will retain his interest in the above corporation until a successor is found who will pay the bonus he asks for it.

The Oliver Music House, in this city, has taken on the Edison line. For many years they have been extensive handlers of pianos and organs, but this is the first time they have shown an interest in talking machines.

The Texas Railroad Commission has at last recognized the arguments of H. M. Holleman, of Houston, and reduced the State rate on talking

machines from one and one-half to first class, and they now conform to rates in eastern and central states territory. Better late than never, but until now the rate between cities in Texas has exceeded the rate from New York to same points, and it was a wonder the New York jobbers did not take advantage of this feature and grab the Texas dealers' business upon the argument that their freight charges would be less. However, the opportunity passes with the reduction in rates effective October 1. Mr. Holleman, who worked very hard with the commission for many months, was formerly in the railroad service, and is one of the best-posted men on railway matters in the talking machine business, and possesses a wide acquaintance among railway officials throughout the United States.

C. B. Haynes, who recently established himself as a jobber at Richmond, Va., is well known to the Texas trade, and there have been many good-will expressions sent to Mr. Haynes in his new venture.

The Southern Music Co., Edward Anderson, president, have extended their business to include talking machines, which they plan to handle extensively on the piano instalment basis.

## TRADE NEWS FROM ATLANTA.

**Talking Machine Business With the Dealers Has Assumed Undreamed of Proportions.**

(Special to The Talking Machine World.)

Atlanta, Ga., Oct. 1, 1906.

The talking machine trade throughout the Southern states, and especially in this section, has assumed undreamed of proportions and is still steadily growing, with no immediate prospect of a decline. With the dealers it is not a question of securing business but of getting sufficient goods to satisfy the demands of present customers, and it is a tough proposition in many cases.

The National Phonograph Co. have opened a correspondence school in languages at the branch here. A special demonstration was held lasting a week, and results are said to have been excellent. Phillips & Crew were the pioneers in this direction in Atlanta, having opened a language school some time ago, although not on the correspondence plan. Phillips & Crew, by the way, are having great success with the Victor line, due, perhaps, to a handsome wareroom environment and attractive window displays. They have also successfully introduced the new Victrola, and predict a great future for this model. The Victor is also handled by the Alexander Elyea Bicycle Co. who, in order to acquaint the public with their new line, have been giving talking machine concerts in various parks.

The Columbia Phonograph Co.'s branch has

been the subject of much favorable comment recently owing to the artistic and novel window displays devised and carried out by the management.

Special efforts in store decoration were made recently in order to attract the crowds here to welcome W. J. Brvan on his visit to Atlanta, and the results were very satisfactory.

## "TALKERS" EVERYWHERE.

**How a Visitor to the Backwoods of British Columbia Made a Discovery.**

"One song hit out of a thousand songs in a year seems a small percentage, but it is true that very few of all the songs written are out-and-out hits," said a publisher recently to T. O. McGill.

This publisher is the man you seldom see, who hires six or seven hundred people a year for one of the big theatrical firms.

"What particular song makes you speak thusly?" we asked.

"I'm thinking of 'Bill Simmons,' which one of the clever comic artists on the Evening World has developed into a funny series.

"'Bill Simmons' has just begun to move forward into the backwoods, where a New York hit don't reach in all its volume for about six months after it has begun to be whistled in the metropolis.

"'Bill Simmons' has attracted the attention of everybody. A man who has just come back from Alberta, B. C., says he was gliding down the waters of what seemed to him to be undiscovered streams after trout, and he had reached a part of the wilderness where it seemed no man could ever have been, and out of the deep shadows of the forest he heard the tickling sound of 'I've Got to Keep a Dancin'.' And he set up and pinched himself.

"He felt sure he must be dreaming.

"Just then the canoe turned a bend in the stream and he came full in view of a camp where a party, who were lounging around a camp-fire, were listening to a talking machine that was singing out loud and free to the echoes of that wilderness the troubles of 'Bill.'

"The party had come upstream from Fort Roe, and they had secured the 'Bill Simmons' record from a pack peddler, who makes the trading post twice a year."

## BALL-FINTZE CO.'S GREAT STOCK.

E. F. Ball, of the Ball-Fintze Co., Newark, O., recently made a sworn statement the company had in stock over 163,000 records, including Edison, Victor, Columbia and Zonophone makes. The company contemplate carrying in stock over 300,000 records during the winter, as large shipments are already being received.

For a Powerful Organ-like Tone the New

## M. Hohner "TRUMPET CALL" Harmonica

Surpasses any mouth-organ that has ever been placed on the market.

No. 220. This instrument which has lately been offered to the trade is endowed with a phenomenal amount of tone power. The reeds are directly connected with a wooden sound-box, into which the tone passes, and finds an outlet through five Brass Trumpet Horns which protrude from the box. No Harmonica of this kind has ever been shown to the trade before, nor is there any which increases the tone so wonderfully. In the hands of an expert player this instrument can be made to sound like a church organ. In producing this instrument the house of Hohner has again shown great results from its constant effort to bring the Harmonica on the level with a high-class musical instrument. The mouth-organ has 10 double holes, 40 reeds, brass plates and is full concert.

**M. HOHNER, 475 Broadway, NEW YORK**

**76 York Street, Toronto, Canada**

## RECORD BULLETINS FOR NOVEMBER, 1906.

### NEW EDISON GOLD MOULDED RECORDS.

Edison Gold Moulded Records are made only in Standard Sizes. Both Standard and Concert Records may be ordered from this list. Order by number, not title. If Concert Records are wanted, give the number and letter C.

A youthful musical prodigy in Atlanta, Ga., has discovered a new use for the talking machine. With an Edison phonograph and a large supply of high class records the six-year-old has created quite a sensation by playing piano accompaniments to the music of the talker.

## PRODUCT FOR RECORDS.

Reported by Wm. H. Hunt, Our Consul at Tam-  
 atave, Madagascar—Some Details Sub-  
 mitted That May Interest.

Wm. H. Hunt, United States consul in Tama-  
 tave, Madagascar, in a recent report writes of  
 a certain product obtained from the raffia palm  
 of that island, which has the consistency of  
 beeswax and which has been thought to be  
 suitable for talking machine records. Certain  
 parties contemplate experimenting with the  
 substance, and results will be awaited with in-  
 terest. Regarding the securing of the product,  
 Mr. Hunt says:

"The process of extracting the wax is simple.  
 The natives who gather the raffia fiber generally  
 pitch their camp in the neighborhood of a raffia  
 grove, to which they bring the leaves. The fiber  
 is taken off and the leaves are thrown aside in  
 large quantities. The wax is collected as fol-  
 lows:

"First, by beating the dry leaves on a dry mat  
 or cloth and gathering the pellicles and white  
 powder which fall from them. Then, after boiling  
 these pellicles and powder, the wax thus formed  
 is kneaded into cakes of any form. This wax,  
 which is very pure, will probably be more highly  
 valued than beeswax, although yet an entirely  
 new product. It first made its appearance in the  
 market place at Marovoay in October last. The  
 curiosity of the merchants of Majunga being  
 aroused, they bought the whole lot at fifty cents  
 per pound and shipped it to France in order to  
 ascertain its industrial and commercial value.  
 When the governor-general of Madagascar  
 heard of the discovery he ordered a sample of  
 twenty-five pounds to be forwarded to Doctor  
 Heckel, director of the Colonial Institute at Mar-  
 seilles, who will make an analysis.

"The labor of gathering the leaves can be  
 reckoned a negligible quantity, as the wax is not  
 the primary product taken from the tree, but a  
 refuse product obtained from the leaves already  
 cut down for the preparation of raffia fiber. Sup-  
 posing that raffia wax turns out to have a value  
 about equal to beeswax, this means a yield of  
 wax equal to three-fifths of the value of the  
 raffia exported. Certainly a very valuable new  
 resource of produce which the natives are likely  
 to take to. In fact, the process implies no great  
 difficult innovation, being merely the utiliza-  
 tion of the refuse of an already well-established  
 and remunerative industry."

## ORDERS \$92,620 WORTH OF GOODS.

What is claimed to be one of the largest sin-  
 gle orders for talking machines ever issued was  
 placed recently by the Victor Distributing & Ex-  
 port Co., of New York, with the Victor Talking  
 Machine Co. It aggregated in all \$92,620 worth  
 of goods, figured at jobbers' prices. The as-  
 sortment included machines of all grades up to  
 the Auxetophone to sell at \$500, and among the  
 records ordered were those recently made in the  
 Chinese language by the Victor Co.

George F. Standke, manager of the Columbia  
 Co.'s branch in St. Joseph, Mo., was married re-  
 cently to Miss Myrtle L. Rigdon, of Kansas City.  
 They will reside in St. Joseph, Mo.

## LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

Washington, D. C., Oct. 4, 1906.

HORN. Charles R. Breen, New York. Patent No. 829,836.

This invention is an improvement in talking machine horns, and the object of the invention is to produce a superior horn or trumpet to those hitherto devised—one which is highly resonant, but devoid of the objectionable metallic sound so often encountered in devices with a like object in view. Another object of the invention is to so construct the horn as to have

a removable outer section which may be wrapped about the small end of the horn in order that the whole may be packed in a small compass.

Fig. 1 is a partly sectional side elevation of one embodiment of this invention. Fig. 2 is a partly sectional side view showing the removable section detached and wrapped about the small end of the horn, and Fig. 3 is a perspective view of the removable section.

PHONOGRAPH ATTACHMENT. James Vincent Cruso, Newark, N. J., assignor of one-half to Thomas J. Hinton, same place. Patent No. 829,848.

This invention relates to an improved phonograph attachment, and has for its object to provide a device by which the ordinary cylinder

record operating machines may be employed for operating a disc record, and thus adapting the one machine to both forms of records. Fig. 1 is a perspective view, illustrating the improvements applied to the ordinary cylinder record machine. Fig. 2 is a sectional elevation of the same. Fig. 3 is a detail view showing the horn supporting device. Fig. 4 is an enlarged sectional face view of a machine having my invention applied. Fig. 5 is a detail view illustrating the reproducer and the manner in which it is secured to the supporting lever. Fig. 6 is a detail section of the same drawn on the line 6-6 of Fig. 5, and Fig. 7 and Fig. 8 are detail views of the reproducer, showing the form of

stylus holder employed, and Figs. 9, 10, 11 and 12 are detail views of the stylus holder, Fig. 11 being of the blank of which a portion of the holder is made.

PHONOGRAPH TONE REGULATOR. Eugene M. Robinson, Chicago, Ill. Patent No. 831,188.

This invention relates particularly to means for reducing the volume of sound-waves passing through the horn of the talking machine, whereby a machine designed for outdoor work or for a large auditorium may be used in a small room without discomfort to the audience. This invention is in some respects an improvement upon patent No. 778,271, and Serial No. 251,470. As shown in Figs. 11, 12, 13 and 14 of the latter, this invention consists in the use of a valve in the sound conveyer consisting of a sheet or plate of imperforate material so mounted adjacent to an opening in the side of some portion of the sound conveyer that it can be moved to a position in which it lies crosswise of or obstructs the sound-wave passage of the sound conveyer. In its preferred form the invention consists in the use of such a plate valve in combination with a novel form of mechanism for moving the plate of the valve backward and forward between opened and closed positions.

More in detail, this invention consists in an article of manufacture comprising a plate with a hole in it, with a valve plate mounted in a re-

cess in said supplemental plate to close said hole, the whole being so constructed that it may be inserted at some convenient point in the sound conveyer of the phonograph.

Referring to the drawings, Fig. 1 is a plan

view of a portion of a phonograph corresponding, except as to the mechanical means for moving the valve plate, to Fig. 11 of said prior application. Fig. 2 is a sectional plan view through the reproducer and valve plate operating mechanism, taken on the horizontal central plane of Fig. 1. Fig. 3 is a detail sectional end view taken on line 3 of Fig. 2. Fig. 4 is a side view of the valve mechanism proper removed from the phonograph. Fig. 5 is a side view of the simplest form of my mechanism, the same being identical with Fig. 12 of said prior application. Fig. 6 is a horizontal sectional view taken on line 6 of Fig. 5, the same being identical with Fig. 13 of said prior application. Fig. 7 is a detail view of a modified form of this invention in which the valve plate is pivotally mounted.

GRAMOPHONE. Conrad Hilgenberg, Chicago, Ill. Patent No. 831,344.

This improvement relates to the gramophone "reproducer" and the connections with that part

and the horns, and the object is to increase the volume of sound and improve the tone of the instrument. Fig. 1 is a side view of the gramophone, showing the reproducers, connections and horns in position supported by the bracket and

in contact with the "record." Fig. 2 is a full-size side view of the reproducers, showing the relative positions of the needle points on the record and part of the supporting bracket fork and clamp. Fig. 3 is a front view of the reproducers and conical box inclosing them, showing the relative position of the needle points and connections for the horns. Fig. 4 is an inside face view of one of the reproducers. Fig. 5 is a detail view of the supporting bracket fork and clamps.

**RETURNING DEVICE FOR PHONOGRAPHS AND OTHER TALKING MACHINES.** Thomas F. Morrissey, West Orange, N. J., assignor of Rosenfield Manufacturing Co., New York. Patent No. 831,456.

The objects of this invention are to secure automatically a return of the reproducer or

speaker of a talking machine to an initial position in said talking machine after the stylus of said speaker or reproducer has traversed the record, whereby said stylus will again be enabled to traverse said record and repeat the sounds to be reproduced, to perform said function more perfectly and at a reduced cost of construction, and to secure other advantages and results. Fig. 1 is a front elevation of a portion of a phonograph to which the improvements are attached. Fig. 2 is a plan of the same. Fig. 3 is a section taken on line x. Fig. 4 is a detail sectional view, showing a in Fig. 1. Fig. 5 is a detail showing a certain returning dog in engagement with a screw shaft, the section being on line x of Fig. 1, but with

the parts in a different position from that shown modification of construction, and Fig. 6 is a section of the same, taken on line y.

**SOUND REPRODUCER.** Thomas H. Macdonald, Bridgeport, Conn. Patent No. 830,446.

This invention relates more particularly to the reproducer of a graphophone, and has for one of its objects the adaptation of what are

called "pivot point" reproducers for use with records of varying depth. Illustrations of pivot point reproducers are given in prior applications for patent, Serial No. 153,143, filed April 17, 1903, and Serial No. 187,295, filed December 31, 1903. Fig. 1 is a cross section of a graphophone, showing the reproducer in operative position. Fig. 2 is a similar view of the carriage and reproducer, the latter being raised out of contact with the record. Fig. 3 is a similar view, showing the recorder in place. Fig. 4 is a detail of the spring plunger. Fig. 5 is a detail in cross section of the sound conveying chamber of the reproducer, and Fig. 6 is an enlarged detail of part of the reproducer.

**SAFETY DEVICE FOR SOUND BOXES FOR TALKING MACHINES.** Louis P. Valiquet, New York, assignor to Victor Talking Machine Co., Camden, N. J. Patent No. 830,689.

The object of this invention is to provide a device in connection with sound boxes for talking machines such that the stylus of the sound box will not rest in contact with the record or the turntable when the machine is not in use and which will also prevent the needle, stylus bar and diaphragm from becoming injured should the sound box and amplifying horn or tube be dropped or otherwise receive rough handling.

A further object of this device is to prevent the records from being injured by the needle or stylus if the sound box should be suddenly

dragged across the record disc transversely to the record grooves.

Briefly this invention comprises an attachment for a sound box which is preferably pivoted thereto, but which may be manually operated or may be made automatically operative and inoperative by removing the sound box and needle from said disc and by the movement of the record disc.

Fig. 1 is an elevation of a sound box and a portion of the amplifying horn and showing the record in section. Fig. 2 is a rear elevation of

the same sound box shown in Fig. 1. Figs. 3 and 4 are detailed views of the means for retaining the safety device in its operative position. Fig. 5 is a front elevation of a sound box embodying another form of the invention; Fig. 6, a rear elevation thereof; Fig. 7, a transverse sectional view; Fig. 8, a view of the safety device detached from the sound box; Fig. 9, a view showing a modified form of the safety device or guard, and Figs. 10 and 11 views showing another form of safety device.

**REPRODUCER FOR TALKING MACHINES.** Eduard Runge, Berlin, Germany, assignor to Jean P. Henri, De la Croix, Germany. Patent No. 831,995.

This invention relates to a recorder and reproducer attachment for talking machines of

the usual construction. One of the objects of the invention is the provision of means for automatically adjusting the style holder. A further object is the provision of means for the reception of the style in the holder and for maintaining the same in a locked position. Other ob-

Fig. 6 is a front view of a speaking attachment similar to that shown in Fig. 1, but having a magnet provided.

**PHONOGRAPH RECORD CLEANER.** Henry A. Place, Providence, R. I., assignor to J. Newcomb Blackman, New York. Patent No. 831,987.

This invention relates to improvements in brush attachments for cleaning phonograph records, and has for its object to simplify the construction of such brush attachments, so that

they may be manufactured easily and economically. In the accompanying drawings, illustrating the invention, Fig. 1 is a vertical section, partly in elevation, showing a sound reproducing instrument constructed in accordance with the present invention. Fig. 2 is a similar view, showing a modified means of securing the brush in position. Fig. 3 is a detail plan view, showing part of the construction illustrated in Fig. 2. Fig. 4 is a perspective view of the brush shown in Figs. 2 and 3. Figs. 5 and 6 are detail views of the brush shown in Fig. 1.

**SOUND REPRODUCING MACHINES.** Curtis A. Smith, Elgin, Ill. Patent No. 831,900.

This invention relates to improvements in sound reproducing machines, and has special reference to the means for modifying the quality

of the sound issuing from the sound ducts to the audience.

Fig. 1 is a rear elevation of a sound reproducing machine with the invention as applied thereto. Fig. 2 is a vertical sectional view of the invention. Fig. 3 is a detail view of a part of this invention, showing the position of parts when this invention is thrown out of operation. Fig. 4 is a detail sectional view of the extension piece with the mute or stop disc in position and the exteriorly located button for operating same.

**SOUND RECORDING APPARATUS.** Thomas A. Edison, Llewellyn Park, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 831,606.

This invention relates to improved sound recording apparatus of the type wherein a graphic sound record is produced on a disc-like or cylindrical blank and which is formed of a sinuous groove of substantially uniform depth and width as distinguished from the phonograph wherein these dimensions of the record groove are not uniform.

Sound records of the kind to which the present invention relates are relatively simple in character, and the matter of duplicating them

does not present the difficulties of duplicating phonographic records.

Prior to the invention in the making of sound records on a disc blank—for example, in the form of a sinuous groove of substantially uniform depth and width—a suitable plate or foundation was covered with a thin layer or film of wax-like material, which was engaged by a needle-like recording stylus connected to the diaphragm, the arrangement being such that in the absence of vibrations the stylus removed the film of wax-like material to its full depth to disclose the foundation and in the form of a spiral groove of uniform width. By vibrating the diaphragm the said groove was caused to partake of sinuosities and undulations corresponding graphically to the sound-waves. By suitable etching, electroplating, photographic or allied processes a matrix was secured from the master so formed and used for the production of duplicates by various methods. The processes used prior to this invention for the making of these records were objectionable for many reasons, and especially because the records produced are not accurately representative of the sound-vibrations, first, because the recording stylus, in order that it may certainly cut through the depth of the wax-like material, must

be engaged with considerable friction against the foundation on which the wax is carried, thereby offering unnecessary resistance to the vibration of the stylus, and, second, because the stylus, being unprovided with cutting edges, in its vibrations merely displaced or compressed the wax-like material in the formation of the groove, instead of cleanly cutting it.

The object of this invention is to provide improvements in the art of making records of this kind in the apparatus involved and by which the resulting records will be more perfect and capable of more accurate reproduction than records of the kind as heretofore made.

The invention in its preferred form resides in the utilization of means co-operating with the recorder for causing the latter to always cut to the desired depth in the wax-like material irrespective of variations in the thickness of the blank or other eccentricities in the plane of the recording surface. This feature of the invention is carried into effect by engaging the recorder to the desired depth in the recording material by gravity and mounting the recorder so that it is free to rise and fall to accommodate itself to any changes in the plane of the recording surface. The accompanying drawings form a part of the specification. Fig. 1 is a plan view of the complete apparatus for operating on a disc-like blank, and showing the recording stylus as being mechanically adjustable with respect to the blank; Fig. 2, a side elevation of the same; Fig. 3, a section on the line 3 3 of Fig. 1; Fig. 4, a section on the line 4 4 of Fig. 3; Fig. 5, a bottom view of the recorder proper in its preferred form; Fig. 6, a longitudinal section on the line 6 6 of Fig. 5; Fig. 7, a longitudinal section through the swinging arm, illustrating an

## You're Not the Only Dealer Who

doesn't sell "3-in-One"—but you will be, pretty soon, if you don't hurry. Are you sure you know just how good "3-in-One" is? If not, simply write us for **FREE** sample bottle—then try it. Then you'll know what "3-in-One" really is—the greatest oil on earth for talking machines. Then you'll sell it, as other smart dealers do—and net 50 and 100 per cent. profit—without bursting a blood vessel making sales.

"3-in-One" sells itself. The name is a household word—the oil is a household need. "3-in-One" has been lubricating, cleaning, polishing and preventing rust from Maine to California for 12 years. "3-in-One" has stood the test of time—the tests of hundreds of thousands of users. Then why labor to sell unknown, untried oils in its stead? *Cui bono?* Think it over, Mr. Dealer.

Your jobber is waiting for your trial order for "3-in-One." Will he get it? When?

embodiment of that feature of the invention by which the recorder will engage the blank by gravity so as to cut to the desired depth irrespective of mechanical variations in the blank; Fig. 8, a plan view of the same; Fig. 9, a greatly enlarged view showing the blank in section, also the preferred form of recording stylus in operative position and on the same scale, a grooving tool preceding the same; Fig. 10, a section on the

line 10 10 of Fig. 9, showing the side cutting edges of the preferred recording stylus; Fig. 11, a sectional view of a modification of the stylus; Fig. 12, a corresponding view of a further modification thereof; Fig. 13, a view corresponding to Fig. 11, showing a further modification

of the recording stylus; Fig. 14, a bottom view of the stylus shown in Fig. 13; Fig. 15, a corresponding view illustrating a slight modification of the stylus shown in Figs. 13 and 14; Fig. 16, a greatly enlarged view of the record groove formed with a cutting edged recording stylus of the improved type, showing also the smaller non-sinusoidal groove; Fig. 17, a section on the line 17 17 of Fig. 16; Fig. 18, a section on the line 18 18 of Fig. 16, and Fig. 19, an enlarged cross sectional view illustrating the engagement with the record groove of a spherical reproducer.

**SOUND-BOX FOR TALKING MACHINES.** LEON F. DOUGLASS, Philadelphia, Pa., assignor to Victor Talking Machine Co., Camden, N. J. Patent No. 831,546.

The object of this invention is to produce a sound box for a talking machine in which the stylus bar is more delicately, perfectly and efficiently mounted than heretofore and also whereby the position and tension of the stylus bar may be quickly and easily adjusted.

The further object of this invention is also to provide, in combination with the features above referred to, means for delicately mounting the diaphragm of the sound box, so that the same may be vibrated with the most delicate and minute vibrations of the stylus bar.

Heretofore in sound boxes in which the stylus bar has been mounted upon a torsional device for giving a tension thereto or for holding said stylus bar in position the torsional device or spring has been attached rigidly to the casing

with the above features, of a diaphragm which is mounted so as to vibrate freely in response to the most minute and delicate vibrations of the stylus bar.

Fig. 1 is a perspective view of the improved sound box; Fig. 2, a transverse sectional view thereof, taken substantially on a line passing longitudinally through the center of the stylus bar. Fig. 3 is a side elevation thereof, showing the device for torsionally mounting the stylus bar in cross section; and Fig. 4 is a view taken substantially upon the line 4 4, Fig. 3, showing a portion of the casing of the sound box.

**MAGNETIC SOUND RECORD.** VICTOR H. EMERSON, Newark, N. J., assignor to American Phonograph Co., Washington, D. C. Patent No. 831,779.

This invention consists of the production of a magnetic sound record. In the drawings, Fig. 1 represents a side view of a talking machine,

illustrating the invention. Fig. 2 is a plan view of a sound record produced in accordance with the invention.

**METHOD OF DUPLICATING PHONOGRAMS.** MAURICE JOYCE, Washington, D. C., assignor by mesne assignments to New Jersey Patent Co., West Orange, N. J. Patent No. 831,668.

This invention relates to the method of duplicating or multiplying phonogram cylinders, and

the object is to reproduce facsimiles of phonogram cylinders in as large numbers as may be desirable. These cylinders are reproduced ac-

cording to this invention in the manner herein-after set forth.

Fig. 1 is a side elevation of a phonogram with metallic end connections ready for application to an electro-deposition apparatus. Fig. 2 is a broken cross section of a phonogram and one of the metallic end pieces and connections; Fig. 3, a face view of one metallic end piece. Fig. 4 is a broken longitudinal section of metallic mold or shell; Fig. 5, a section of mold with all parts assembled and duplicate phonogram or wax therein.

**PHONOGRAPH.** WILLIAM W. ROSENFELD, New York. Patent No. 831,630.

This invention relates to automatic return mechanisms for phonographs. In the drawings herewith Fig. 1 is a plan view of a phonograph provided with automatic return mechanism embodying my invention. Fig. 2 is an elevation of

the return mechanism with the auxiliary or return feed shaft broken away, so as to more clearly show other parts. Fig. 3 is a section taken on the line x x of Fig. 1 looking toward the left, and Fig. 4 is a section taken on the line y y of Fig. 1 looking toward the left, parts being omitted from Fig. 3 for clearness which are shown in Fig. 4.

**PHONOGRAPH RECORD CLEANER.** FRANK E. FORSELL, Providence, R. I., assignor to J. Newcomb Blackman, New York. Patent No. 832,249.

This invention relates to an attachment for cleaning the record on a phonograph, and has for its object to provide a brush to be preferably suspended from the traveling arm that carries the reproducing point. It is found in practice that when a recording roll collects dust it is apt to lodge in the grooves on the face of the roll, and if it is not thoroughly removed before the record is used this dust and grit comes in contact with the sharp point or edge of the reproducing needle and wears the same off and quickly destroys it. To obviate this difficulty a little brush is provided which may be made of hair, felt or other soft or suitable flexible material.

of the sound box and to the stylus bar—that is to say, no means have been provided for the axial adjustment of the stylus bar so that its pressure or tension in relation to the diaphragm may be varied. Furthermore, heretofore when the diaphragm has been mounted between a pair of gaskets which contact with the marginal portions of the diaphragm said diaphragm is more or less confined by the surfaces of the gaskets and its free vibration to some extent hindered. This feature when taken in connection with the lack of adjustability of the torsional mounting for the stylus bar is a disadvantage which reduces the efficiency and quality of the reproduction by the sound box.

Briefly, this invention comprises the embodiment in a sound box of an improved torsional mounting and also a mounting which may be easily adjusted by means of suitable clamping or holding devices both in relation to the stylus bar or in relation to the bearings for the torsional device. It also comprises the combination,

## With the Makers, Sellers and Users of Automatic Specialties

### TRADE CONDITIONS REVIEWED.

**Prosperity Prevails in the Automatic Field—**  
New Arcades Springing Up Throughout the Country and an Increasing Demand Prevails for All Kinds of Specialties Suitable for These Parlors—Equipment at All Times Should be Kept in First Class Condition, and Public Satisfied in Order to Hold Custom.

The past month has been one of exceeding prosperity in the slot machine trade, the arrival of cool weather bringing back to town the thousands that still lingered amidst the pleasures at mountain and seashore.

Hundreds of new arcades and nickleodians continue to spring up throughout the country, and manufacturers are kept on the jump filling orders. One of the most promising features of the fall market is the number of new machines being put out that are radical departures from the old beaten paths followed for the most part by manufacturers heretofore. And by this we do not mean to depreciate in any way past efforts in this line. However, it is with pleasure that we welcome new ideas in this trade.

As we have stated in previous issues, the slot machine business is one wherein change is imperative to success. Of course, there are devices such as automatic pianos, talking and moving picture machines, that are standard and will exist. But here, too, the public demand for the new must be gratified, and this is evidenced in the tremendous improvement in the modern talking machine and automatic piano playing devices which are simply amazing in their satisfaction-giving qualities.

Manufacturers, in every branch of this industry have been overwhelmed with inquiries concerning "where, when and what to buy to fit up an arcade" by men or parties starting out in this business. These interrogations, without minute details, are impossible to answer. For instance, a man on a main thoroughfare in a large city will not only need more capital than another in a less pretentious locality; his whole plan may need an entirely different treatment. For example, John Jones has a place in a neighborhood frequented by the working class, men who earn their living through physical exertion. Here punching bags, target and muscle testing machines will reign supreme, while John Smith, in another section, seriously considers relegating this part of his equipment to the junk pile, only waiting for something to take their place that will appeal to his more refined patrons.

Prospective operators, however, must rely on their own perspicacity for the solving of these minor problems. As to general cost of equipping a parlor, a fairly accurate estimate of cost is possible only when floor space, approximate number of machines and style of decorations are given. Then market values on material vary in different sections of the country, and therefore investors could arrive at more satisfactory results if they lay their plans before their local architects.

To secure the best results in the automatic or arcade business, close attention to details is necessary. In many cases we notice a flagrant disregard on the part of managers in seeing that the machines are properly cared for. No matter how perfect a product a manufacturer

may turn out, it cannot do its work as it should unless thoroughly cleaned and overhauled every two or three days. No machines on the market receive such constant wear and tear as do these penny-in-the-slot devices. On their intake depends the success of the arcade—and yet this oversight is nearly universal. Go into almost any parlor in this country, and out of 100 to 400 machines you will find anywhere from six to ten bearing the sign, "Out of order." Nine times out of ten these are the ones that have proved to be the most popular, therefore receiving all the rough usage.

Causes for breakdowns are innumerable, slugs, however, giving the most trouble, with dirt a close second. The former nuisance is all but impossible to eliminate, but need not cause a hold-up of several days, as is often the case. The latter is inexcusable. It is not so much the fact that the public cannot deposit their pennies in this or that particular machine, but if their desire to see a particular picture or hear a certain song is denied, it creates a feeling of disappointment—the very thing an arcade man should avoid.

\* \* \* \*

So much for those machines that are actually out of commission, for after all this is a minor thing compared to having the majority of the machines in the parlors in imperfect condition, and this is so often the case that it is deplorable.

Here again the public is cheated, and this is remembered. The slot machines of to-day, wonderful as many of them are, are not so perfect that an operator can afford to let them for a moment drop below their best. Again, man-

agers finding such machines giving imperfect results, turn on the innocent manufacturer, claiming that the goods have been misrepresented and are no good. These things are small in a way, but are the cause of much trouble.

Every arcade should have a thorough mechanic and electrician, a man who understands this particular line of work perfectly. And it should be the duty of every manager to see that his work is done not only properly but promptly.

### PHONOGRAPH STEREOPTICON.

New Form of Producing the Illustrated Song and Story.

Phonographic parlors have passed the experimental stage and have universal approval. The combination of the "talker" and the kinematograph has also proven popular. At the present time an enterprising promoter is said to be establishing permanent biograph exhibitions in the larger cities, the admission being small, with a change of pictures twice a week. A New York city inventor still further improves the biograph by the assistance of the phonograph. In other words he has simplified the production of the illustrated song by means of an apparatus whereby, simultaneously with the projection of pictures upon a screen, a phonograph is utilized to render a musical composition in conjunction with the illustration.

### A CLEVER ENTERTAINER.

A Chicago concern has been exhibiting an instrument styled "Gable's Automatic Entertainer," an ingenious arrangement of the coin-operated talking machine, whereby any one of a series of twenty-four Victor records placed on either side of the machine may be played at will by the turning of a dial which places the record in position on the rotating table, and incidentally inserts a new needle in the reproducer. The whole contrivance is in a large cabinet, with the horn projecting from the top.

### TO REPRODUCE BASE BALL SCENES.

Moving-Picture Machine Will Record Plays in World's Championship Games at Chicago.

Following the example of those who have turned photographic reproductions of big fights to profit, a big Chicago concern has made a bid for the privilege of making moving pictures of the world's championship baseball games held at Chicago last week. If the pictures turn out well they will be exhibited around the country the coming winter.

It is a question as to whether moving pictures will convey to the spectators any correct idea of the intricacies of play on the baseball field. The movements of the pitcher, catcher, and batter could be reproduced, but it would take twice as long to spread the films before an audience in a theatre as it would to play the game, and many of the scenes would be tiresome. However, the routine play could be eliminated and a grouping of the exciting plays would serve as excellent entertainment.

The outfielders would cut very little figure in such pictures, as they would be too far from the machine. A long hit could not be followed by the camera. Perhaps the new innovation may prove a success, but it is difficult to see how a spectator can follow the progress of a game if there is much long hitting.

### HERE'S A MONEY MAKER.

Roth & Engelhardt, the well-known manufacturers of the Peerless Electric Piano, Windsor Arcade, New York, through their agents, the L. Grunewald Co., Ltd., the well-known music dealers of New Orleans, La., are in receipt of the following communication from Salvo & Berdon Candy Co., Natchez, Miss., which speaks eloquently of the money-earning powers of the Peerless player, which is winning its way into such favor in arcades, hotels, restaurants and public resorts, and which is proving such a very excellent proposition for talking machine men:

"Gentlemen: The Style D Peerless Electric Piano we bought from you through your Mr. Delfraisse has proved a valuable addition to our business as an attraction and trade stimulator. It has been praised by every one for its sweet tone and wonderful execution. It has not cost us one dollar, having more than paid for itself monthly. We will take pleasure in having you refer to us at any time."

### PHOTOGRAPHS BY WIRE.

Marvelous Invention Now Put in Practical Operation by Dr. Arthur Korn, of the University of Munich.

Dr. Arthur Korn, professor of applied physics in the University of Munich, has practically solved the great problem of sending photographs by telegraph, having brought to perfection the previous attempts of Capelli, Cerebatani, Bakewell and others.

"For three years," said Professor Korn, "I have been working hard at the subject of sending photographs and fac-similes by telegraph. Two years ago I discovered that I was making progress and manufactured a sending apparatus to be used with the Nernst lamp and a gas cylinder.

This apparatus is capable of transmitting a photograph any distance, let us say 10,000 kilometers (between 6,000 and 7,000 miles). The quality of the photograph is not dependent on the distance of transmission. But it would take a longer time in transmission.

"For instance, I could telegraph a portrait from London to New York as easily as from Munich to Berlin. The portrait in New York would be as clear as that in Berlin, but while it would only take twenty minutes to appear on the film at Berlin it would perhaps take thirty minutes for the New York picture; but please remember that this difference of time does not arise from the distance, but simply because one must be more careful with the sending of the current-throbs. As soon as my invention has been properly taken up I shall conduct some

long-distance experiments. But I think I can assure you that if I telegraph from London a portrait for The World your men in New York could use it as an illustration within thirty minutes after it had left my hands.

"But the chief matter I had in view was the use to which my invention could be put in police and criminal affairs. A writ and a photograph could be telegraphed in a few minutes to all parts of the world.

"I am in communication with a company to exploit the invention, but whether it will come to anything I don't know yet. The company must establish international stations for tele-photography. The tariffs must be regulated by the different states. In addition the cable companies would make arrangements with the press, I suppose. I am quite sure that something of the kind will be arranged in the immediate future. It is a necessity of our modern life."

### SOME ARCADE POINTERS.

Side Lines Largely Ignored That Would Prove Money Makers and Trade Getters.

Like everything else the arcade business has grown until the modern emporium bears but little semblance to the early ventures outside the mere name. This growth has been manifest not only in the number of machines utilized, but in a broadening out of the arcade, and then by the addition of a large number of side issues, that have increased the intake enormously. Therefore a few suggestions along these lines will be timely, especially to the uninitiated.

#### AUTOMATIC PHOTOGRAPHY.

Wherever a crowd gathers at a park or pavilion the "tintype" man has always been known to gather in the coin, and yet comparatively few even among the largest arcades have taken this into consideration and devoted the small amount of space necessary for such an equipment.

It is something worth looking into. It is not necessary to have an expert photographer. Twentieth century progress has done away with all this. All the visitor has to do is to give the man in charge a nickel or a dime. He tells him to watch the birdie—drops the coin in a slot—the machine does the rest. It takes the picture, develops and frames it. Simple—yes; but a big winner.

#### THE CIGAR SALESMAN AND CANDY.

Another machine on the market which is never seen in an arcade, though they appear in a few ferry and railroad stations, is what might be called the cigar salesman. This device is in the form of a cabinet standing about 3½ feet high, and in appearance very similar to a regular cigar show case. Looking down through the plate glass top you can see a dozen or so boxes of well-known brands, the cigars ranging from five cents each to, say, a quarter. You take your pick, set the indicator, insert your coin and receive your purchase.

Candy has been found to be a good paying side line. Why, therefore, wouldn't such a machine be a valuable addition? By placing it near the front, with an attractive sign, it would be sure to attract the lovers of sweets.

#### SHEET MUSIC AS A SIDE LINE.

The sale of sheet music has now grown to be one of the biggest side ventures connected with the arcade business. A number of ways for booming it have been adopted which deserve mention. Of course in the larger places a piano player is hired, also one or two singers, which generally attract a big crowd and make things cheery throughout the place. Watching the programmes of shows playing in the town and featuring the popular songs on the talking machine, with a sign, "Hear this song at the music counter," placed on each, has proven a great trade inducer. Those arcades having a Nickleodian adjoining where illustrated songs are sung between the moving pictures, will find the same announcement works well.

#### RECORDS THAT WOULD SELL.

Since the talking machine has leaped into universal popularity it seems strange that no arcade manager has thought of laying in a stock of the records being played on the slot phonographs. There is good profit to be derived from their sale, and if handled rightly should make a first-class investment.

#### THE REAL FORTUNE TELLER PAYS.

Fortune-telling machines have always proved great money makers, but after all they are but a poor imitation of the real article, especially if a pretty woman plays the part of Madame Mystereous. There is a lot of magnetic force in one of those cosy corner affairs, draped up in Egyptian fashion, and arcades that have tried it have found it a gold mine.

### TO HELP THE BLIND.

John T. Timmons Is Working on a Device Which Will be an Effective Aid to the Blind.

John T. Timmons, who has always new ideas on tap, said recently: "I am now working on a device which, if I am successful in perfecting, will be a great blessing to the thousands of unfortunate blind persons in the world. I have no hopes of being able to bring back the lost eyesight to most of them, but I have hopes along that line for a few. There is a great variety of kinds of blindness and I firmly believe many of the cases could be permanently benefited that are now looked upon as hopeless.

"The device I am experimenting with and wish others would join me in developing is an electric and magnetic device, which I expect to temporarily give them sight. The apparatus is too large to carry about, and will have to be permanent, and the blind person who is benefited will have to go to the machine and there, after properly connected, I expect to transmit to their brains certain scenes, such as are shown to those with perfect vision now by means of the moving picture machine. This would be a useful contrivance in schools where the unfortunate blind pupils are educated, and it would also afford them much amusement. It would give them a glimpse of the world, and the gloom in which they must live on this earth would be removed to a certain extent."

### WIRELESS TELEPHONY AGAIN.

It is reported from Paris that M. Maiche, the well-known electrician, has removed many, if not all, the obstacles in the path of practical wireless telephony—hitherto a laboratory pastime. According to M. Maiche's own account, published in Le Journal, five years ago he was able to telephone two miles without the aid of wires, using the earth as a conductor. A year later, he says, he communicated with Ajaccio, across the water from Toulon. Recently he spoke with a person standing thirty-five yards away, separated from him by four or five walls and many shrubs and trees.

It is still doubted by M. Maiche's colleagues, however, whether wireless telephony will soon be placed on the same footing as wireless telegraph.

## THE PIANOVA COMPANY,

Manufacturers of

44 AND 65 NOTE ELECTRIC PLAYERS

with or without nickel in the slot attachment

SECURE THE AGENCY NOW.

117-125 Cypress Avenue,

New York.

Every Manufacturer in this country should be represented in this department. The cost is slight and the advantage is great. Be sure and have your firm in the November list.

You wish to see  
a small investment  
grow into big money,  
do you not?

The Regal Player

Have you ever figured how much nickels that keep on growing amount to? Perhaps you have.

But do you know how easily people will put nickels into a slot to hear good music like that of the

Do you know, Mr. Talking Machine Dealer, that the Agency for the Regal will make you good money? You can easily handle Players with Talking Machines.

Arcades and places of public resort can be easily reached with the Regal.

Do you know the value of the Regal Agency to you?

Have you thought the subject over?

If not, it would pay you to think of it right now.

Many wise men are making money by having the REGAL AUTOMATIC PIANO to take in and bring in money for them every day. We believe if you knew how much profit there is in it you would want one, too.

## Regal Automatic Piano

and what a goodly sum those nickels amount to in a week? Perhaps you do.

But here's another point. It isn't only what the Regal Player *takes* in; but what it *brings* in—the extra nickels, dimes and dollars that people are sure to spend while they stay in the place to listen to the music. That's what counts.

### Genuine.

It is a genuine piano-player; gives the finest kind of music, loud or soft; every selection you want—popular or classic. Requires no attention; looks after itself, so to speak. Runs by pneumatic power, pumped by a small electric motor, which we supply to suit every kind of electric current.

Piano and Player  
Company**

890 Southern Boulevard

NEW YORK, N. Y.

### The very best.

It is the most musical, simplest, strongest, longest-wearing, and in every way the most satisfactory and profitable instrument ever made for supplying music to the music-loving public.

And it is a beautiful ornament anywhere you put it, and it blends perfectly with the talking machine business.

Why not make some money out of it yourself by selling it?

raphy. In 1870 several of the columns marching to relieve Paris tried to communicate with the inhabitants by using the River Seine as a conductor. Many experiments have been made since then, but hitherto wireless telephony has never seemed to be practicable outside a laboratory.

### ARCADES PAY IN BUFFALO.

Main Street Quite a Centre for These Specialties.

(Special to The Talking Machine World.)

Buffalo, N. Y., Oct. 6, 1906.

Anyone who has doubts regarding the Arcade as a paying proposition should take a glance along Main street, Buffalo, N. Y. About every form of penny amusement device, nickelodeans, and automobile and railway tours are represented, and they are all doing business, too. In a single block, and on one side of the street only, there are five of these amusement parlors, and that average per block for a half mile is the rule. Not even New York's Great White Way can compare with it for cheap amusement features. In conversing with the proprietor of one of the arcades, he said: "Where, in a city like New York, the arcades are distributed in all sections of the city, in Buffalo they are to be found chiefly centered in one section, although a few are naturally distributed in various districts of the town. The result is that everyone has to be on the lookout for up-to-date novelties if he wants to keep pace with his neighbor, and consequently the followers of nickel and penny amusements in this city have the best of everything to choose from in their favorite fields." To the question as to whether all the places were paying, he said: "Well, I'm getting mine, and judging from the fact that five new arcades open for every one that discontinues, I guess my competitors are getting a little, too."

Truly a rich field for the exponent of arcade devices, and one to be kept in touch with.

Among the greatest money makers in the automatic field are the nickel-in-the-slot pianos.

## To Talking Machine Dealers

The MUSIC TRADE REVIEW is the oldest publication in the music trade industry. It contains more than fifty pages devoted to the piano trade, musical merchandise news, music publishers' department and talking machine trade. A special technical department is a regular weekly feature of the publication. A vast amount of valuable information is contained in each issue. The REVIEW has won higher honors at the great expositions than have ever been won by any other publication in the world.

Grand Prix at the Paris Exposition,	1900
Diploma at Pan-American Exposition,	1901
Silver Medal Charleston Exposition,	1902
Gold Medal St. Louis Exposition,	1904
Gold Medal Lewis-Clark Exposition,	1905

Subscription in United States, Canada and Mexico, \$2.00 for 52 weeks. All other countries, \$4.00.

We publish the Tuner's Guide also—a cloth-bound, illustrated work of over one hundred pages. Sent postpaid to any part of the world upon receipt of one dollar.

**EDWARD LYMAN BILL**  
Publisher. 1 Madison Ave., New York

### HERE AND THERE IN THE TRADE.

The Card Printer is the latest and one of the most interesting slot machines produced. The workmanship is of the best and it is built for hard knocks—to stand the severe work that is placed upon a slot device that gets the money. The machine case shows the mechanism and every movement made of the machine while the operator is setting up the type and the machine is feeding, cutting and printing the cards. A person placing one cent in this machine can print five calling or business cards or in fact any notice desired. The cost of material for cards shows a profit of 600 per cent. Talking machine men and others in this trade should not fail to write this department for further particulars concerning this wonderful device. It would be an ornament in any store and certainly gets the coin.

The Valiquet Novelty Co., of Newark, N. J., are certainly keeping things moving. The Picture-Phone and Disko-Phone machines have met with universal success, and is keeping their large plant at 50-58 Columbia street (one of the largest and best equipped in this trade) as busy as it can be. Another new machine may shortly be expected from their hands. "The Talking Fortune Teller" and the trade can feel assured that it will in every way live up to the high standard of perfection for which their other product is noted.

The American Mutoscope and Biograph Co., of this city, have just closed a contract with S. Lubin, of Philadelphia, Pa., whereby his entire catalogue of films is open for use of mutoscope customers. This is a very important move for operators as it will give them access to the finest list of prize fight films in the world, besides many other great attractions. The type E machine is being adopted universally on account of the many new and valuable improvements incorporated.

A big amusement enterprise is now on foot in Allentown, Pa. J. S. Turner, well known in this section, is said to be the leading light. Just what their plans are is not known, but rumor has it that they are preparing to go into the Arcade business on a large scale.

D. Callahan, the well-known Arcade man of San Francisco, whose place was completely demolished during the earthquake, is now rebuilding on Fillmore street.

### NEW YORK VITAK CO. EXPANSION.

On account of the enormous demand for their moving picture machine, the New York Vitak Co. have doubled their factory force, and opened their main offices at 26 Cortlandt street. They now feel that they are in position to handle their greatly increasing business and fill all orders promptly. The Vitak is certainly a wonder. The pictures thrown by this machine are lifelike and clear, with all absence of a flicker often found in the most expensive machines. Talking machine dealers are finding this machine a splendid seller.

### EXHIBITORS AT THE MUSIC SHOW.

The Regal Piano & Player Co., 890 Southern Boulevard, New York, were in evidence at the recent Music Trade Show at Madison Square Garden, with a very handsome exhibit of their various styles of automatic pianos, which were much admired.

Roth & Engelhardt also made a very handsome exhibition of their Peerless piano in skeleton, showing the working of the instrument in detail. It was specially lighted up at night, and it came in for no small share of appreciation on the part of visitors.

Rosenberg & Carr, formerly of San Francisco, have just opened a new parlor on Stone street, Williamsburg, N. Y. It is one of the finest in this locality.

The Douglas Phonograph Co., New York, who are exclusive agents in America, received a new sample lot of needles recently from the German manufacturers. They now carry 15 styles.

### PRICE REDUCED

## Burnt Leather POST CARDS

Our Burnt Leather Post Cards are the quickest selling and most profitable side line ever offered the Talking Machine trade. TRIAL ORDER.—We will send you prepaid 100 cards (100 beautiful designs), with the name of your town stamped on each if desired, for \$3.10 cash. Retail everywhere at 10c. You make a clean profit of \$6.90.

## The Edison Advertising Focuses The Phonograph Buying Crowd Upon The Edison Store

It is not enough that with the help of Mr. Edison himself we make the best Phonograph that can be constructed.

It is not enough that you know that that is the best Phonograph.

It is necessary that the user, the Phonograph buyer, should know. Therefore we advertise so that the users, the people who buy Phonographs, your customers, will be able to discriminate.

That is what our advertising is for. You get the benefit if you want it.

The Edison trade will go by your store if you do not encourage it to come in. If yours is an Edison store then all the Edison advertising is focused on your store.

### "BAKED-ON"

THE TEA TRAY COMPANY of NEWARK, N. J., desires to interest its patrons and increase its already extensive business in all departments. To this end we invite you when in our vicinity to call and inspect our factory, covering several acres of ground in one of the largest manufacturing cities in the world, Newark, N. J. We began in a small way to manufacture Horns and other articles for Talking Machines, and were the first in the field in this particular branch of our business. The very great variety of standard articles that are now accepted and sold all over the world is a proof of our ability to originate and invent salable goods. The benefit of our work, we are assured, has greatly helped all users of Talking Machines, and has added to the profit of the purchasers. This is gratifying to us and has added greatly to our success, and encouraged us to continue our effort to constantly improve our very large and up-to-date manufacturing interest. We will soon place on the market other new and useful articles, and are making some improvements in those already so well known. We are sure that you will find it to your advantage and profit to carry our line of goods. Our prices are always carefully made and are in accord with the untiring effort to keep up and, if possible, improve the high standard of our goods.

A new catalogue is now in the hands of our printers, which will show some of the new patented designs that are certain to prove attractive and salable. Our object is to give these new articles to you, so that your salesmen may have something new to show their customers, and by this method increase your business among your own trade; as these new articles have considerable merit, we are confident that they will meet with success.

If you are interested kindly notify us, so that your name will be listed in our sales department and receive early attention that we may give you valuable information.

Our product is sold exclusively to the jobbing trade, and we refer all dealers to their jobber. Any dealer who is unable to obtain our goods from his regular jobber upon request will be referred to another in his territory who can supply him, or we will be glad to take up the subject direct with his regular jobber, as we are sure that we can convince him of the quality of our goods and the demand of the dealers for the same.

Yours with respect,

THE TEA TRAY COMPANY OF NEWARK, N. J.

# OUR MAIL BAG

for many years has brought out the fact beyond the question of a doubt that our friends and customers want us to put on the market

## A TALKING MACHINE. WE HAVE DECIDED TO DO SO

and now present for your consideration a machine with a new and improved method—a decided advance over all other known machines. It has been designed so that it will prolong the record life by sustaining with its own mechanism the weight of the diaphragm and arm: a mechanical feed device beautiful in its simplicity, ingenious, new, practical, feeds the arm across the record, and being absolutely independent thereof, all the record has to do is to play, sing, in a word *breathe* music: we have relieved the record of its hard work.

**It is no longer a common carrier of diaphragm and machine parts.**

## THE WORK OF THE CRANE

is done in this invention by other means.

It is self evident that this "record relief" enhances the durability of the record and improves its musical possibilities.

Requests for further information will receive prompt attention by the undersigned.

## IMPERIAL RECORDS A WORD OR TWO ABOUT RECORDS

The above announcement *in re* machines may be a little raw in style—we are new in machine talks—but when it comes to records, we warm right up to the subject. **In records you get us where we live.**

 **To All and Sundry: Lovers of Music, YOU** know the **IMPERIAL**—the brilliant musical disc that has delighted and entertained millions of people at home and abroad.

The name **Imperial** stamped on a record is merit enough for **YOU**.

**BUT** to those who have not yet heard this disc (there *must* be **some** people **SOMEWHERE** who have not), you should buy them.

### REASONS TWO among many

*First:* the beauty of the Imperial is in its sweetness of tone, and in natural reproduction.

*Second:* the lasting quality of the Imperial lies in the fact that it is made of the best material—the Imperial can be played many times, yes many, many times without deterioration—we prove this every day. **So can You.**

**"L. & C. Needles," too—BEST**

## GOODWIN WAXES REMINISCENT.

The Manager of Lyon & Healy's Talking Machine Department Chats of His Early Days in the Business and the Development of the Talking Machine and Concomitant Branches.

(Special to The Talking Machine World.)  
World Office, 195 Wabash avenue,  
Chicago, Ill., Nov. 10, 1906.

C. E. Goodwin, manager of the talking machine department at Lyon & Healy's, is a very busy man. He seldom has time to do more than fire the trade news of the day at you in crisp, short sentences. Consequently, when I struck him with a few minutes at his disposal and inclined to wax reminiscent, I made the most of my opportunity.

"The development of the talking machine industry in any large sense has really taken place in the last decade," remarked Mr. Goodwin. "Therefore, when I tell you that I got into the business in 1894, you can see that I can be ranked in the pioneer class so far as the selling end is concerned.

"I made my debut as a salesman for the Washington (D. C.) branch of the Columbia Phonograph Co. I still experience a job lot of thrills when I call to mind my first sale. The machine was one of the first Baby Grand graphophones put out by the Columbia people. It was a comparatively crude affair, with a small clock-work motor. You listened to the cylinder record through hearing tubes, and the price was \$100. It didn't run as well as the \$7.50 type of to-day. The purchaser, Rev. Alexander Mackay Smith, was not gifted with prophetic powers, however, and he was pleased beyond measure with his acquisition. He no doubt used it to the intense delight of his parishioners. Whether the additional popularity thus won had anything to do with it I cannot say, but the fact remains that the good man to-day occupies the important position of bishop coadjutor of the Episcopal diocese of Pennsylvania.

"I continued selling talkers in the Capitol City until 1897, when I went on the road for the Columbia's New York office under the direction of the late Merwin E. Lyle, one of the finest characters the talking machine business has ever known.

"My first road experience was really something terrific. Dealers were just beginning to take up the talking machine proposition, and traveling salesmen combined retailing with wholesaling on their journeys. I started in at Lowell and hustled for a week without making a sale of any kind. Late Saturday afternoon, however, I struck a Catholic priest, who showed some slight evidences of interest. I was desperate, and would not let him go. I sold him, but only by sacrificing my commission.

"Nowadays, when I feel like going after a new dealer with a sharp stick for cutting prices to make his first sale, I think of my own eagerness and what I did on that gloomy Saturday afternoon. I have since learned that it isn't 'a shame to take the money.'

"I am willing to take oath to the effect that more rain fell in the next fifteen days than has ever been known since. When I struck Lawrence I called on Lord & Co. One of the firm actually gave me the laugh when I mentioned my line. 'Couldn't sell a machine a year,' he said. 'We've got one under the counter that's dusty and out of order, and there's a restaurant keeper down the street who has a fine one he would sell you cheap.' Well, Lord & Co. have sold hundreds of machines since then, and I doubt if they are any prouder of the encouragement they gave me that day than I am of having sacrificed my commission to the priest at Lowell. I pegged on for another week without a sale, but in the meantime got a valuable clue from a druggist who had a

slot machine which was paying him 20 per cent. a month on his investment. Finally a clerk in a music store told me that the engineer of the electric railway power plant wanted to buy a talking machine. With a new light gleaming in my eyes I hurried to a car. At the power house I was met by a grimy individual who told me that Mr. McGinnis had just gone home. I had to walk a mile and climb a hill in the hot sun to find the house. When I got there I was met by a bulldog big enough to make a double Uncle Tom show take to its heels. McGinnis' wife made her appearance just in time to save me from total destruction. She gave me the information that her husband was not at home, and 'wouldn't be after buying any foolishness if he was.'

"I simply staggered from that door with my heavy outfit. On my way to the car line I

C. E. GOODWIN, OF LYON & HEALY, CHICAGO.

stopped at a drug store and gasped an order for vichy and ammonia. The druggist was eying my machine case and asked me what my line was. In 30 minutes I had taken his order for a \$60 slot machine, using for the first time my interest argument, and went back to the hotel a new man. For the next three or four months I averaged a machine a day. Then that fall the dealers began to sit up and take notice, and talkers began to come in extensively as a home proposition."

Mr. Goodwin traveled out of New York for a couple of years, and in 1899 came to Chicago to represent the Chicago branch of the Columbia Co., then under the management of George W. Lyle. One day he dropped into Lyon & Healy's to buy a carrying case for his sample horn. He got into conversation with C. N. Post, who was not very strongly disposed toward talking machines. This chat was followed by others, however, and the end of it was that Lyon & Healy established a talking machine department with Mr. Goodwin as manager. The rest of the story is quickly told. It can be summed up in the statement that the business of the department has grown from \$700 a month to half a million dollars a year in seven years.

The Schmelzer Arms Co., Kansas City, Mo., have sent out some very attractive circulars to the prominent people of that city, calling attention to their new concert rooms. Under the management of A. A. Trostle, this concern has built up a very satisfactory business at 710-720 Main street, with the Edison and Victor lines. They have three beautiful demonstrating rooms.

## "TALKER" INSTEAD OF ORCHESTRA.

A Happening in Connecticut Which Demonstrates the Musical Value of the Talking Machine—How Dealers Can Make Money.

An unique method of employing a talking machine in the place of an orchestra, was recently devised by a Connecticut man, which might prove a valuable idea to dealers in pushing the sale of their machines. The gentleman in question had invited a number of friends for a week-end party, and planned an elaborate dinner. An orchestra was engaged, but at the last minute failed to put in an appearance. One of his guests, who was the owner of a talking machine, suggested that they go to the nearest dealer and purchase one with an ample supply of grand opera records. In less than an hour a machine with a half hundred records was at the house, and placed in the musician's stand. As this had been banked with flowers so that the performers would be out of sight, the talking machine was hidden from view. It was in charge of the dealer, who was to manipulate it during the evening, and when the guests in the drawing room heard the opening strains of Strauss' "Invitation to the Waltz," they thought the orchestra had put in a tardy appearance. When they reached the dining room and learned the truth, they were both surprised and delighted, saying that it was the first time that they had ever listened to such a galaxy of vocal and instrumental stars at a banquet, and pronouncing it far better than an orchestra.

The dealer says he is looking for further engagements along the same line, and is going to notify the public that for a reasonable sum he will supply a complete outfit and his services for any occasion, believing it will be the means of making money and many sales. In the case above mentioned the orchestra would have cost considerably more than was paid for the talking machine records.

## TALKING MACHINES IN CANADA.

Discussion as to Which Firm First Handled Talking Machines as a Regular Line.

As the result of a recent argument in Canadian trade circles regarding the first concern to handle talking machines in the Dominion, that is, as a regular line, it would seem that the Nordheimer Piano & Music Co. have this distinction. The first order was placed with the National Gram-o-phone Co. for a number of Berliner machines, which line is still handled by the Nordheimer house. The first machine, a hand-power affair, submitted to the house was rejected, and it was not until the year following that a motor-operated machine was offered and was accepted.

At the present time the Nordheimer Piano & Music Co. are regular distributors for the Berliner and Victor lines.

## OLD PROVERBS RE-SET.

A dollar in the till is better than a dollar and a quarter in the hands of an uncertain debtor.

Honesty is the best policy, but with a good insurance policy on his store, the talking machine man can sleep sounder nights.

The ant may be all right for the sluggard, but the advertising man is better for the talking machine dealer who would succeed.

It is a long loan that has no returning. Keep your collections as close as possible.

The pitcher that goes often to the well is broken. So is a creditor who trusts too much.

A fool and his money are soon parted. This means that you must never let a smart traveling salesman load you with more goods than you want.

# Artistic Flower Horns

**A**SK your jobber if he carries them, if not write us, we will advise you of a jobber in your locality who does.

Remember "ARTISTIC FLOWER HORNS" are only made by us. They are the handsomest and most attractive line on the market to-day.

They are not cheap or gaudy looking.

They are made on the most approved acoustic lines.

They command their value everywhere.

## EDUCATES THE PEOPLE.

A Missouri Editor Who Appreciates the Value of the Talking Machine.

A good deal of trash has been published editorially by the daily papers throughout the country regarding the Sousa article on "Canned Music," in which he pictured the evils of the talking machine as a deterrent to real musical progress. The writers of these articles evidently have never heard the perfected talking machine of to-day, nor have they heard the wonderful records which are now being made in which the human voice is reproduced with that nuance and quality which is almost lifelike.

Apparently these editorial writers have never investigated, but consider there is a great phonographic peril because Bandmaster Sousa says so, and yet Sousa was glad to use this machine as a means of popularizing his music at one time, and assumes the present attitude from a purely selfish viewpoint. There are some exceptions, however, in the matter of the daily papers, and the following editorial in the St. Joseph, Mo., News and Press, was written by a broad-minded man, who at least is willing to see the other side:

"So far from being a menace, it has done a great deal of good in the way of educating the people to appreciate music. There are many people who cannot afford to attend grand opera who have yet enjoyed the work of the greatest opera singers through this invention of Mr. Edison. They have also had an opportunity to listen to the imposing strains of Sousa's band and become familiar with instrumental music. Then, there are the families who cannot afford a piano. For them the phonograph is a means of innocent diversion. It is true that there is a great deal of trashy music extant which is frequently heard emanating from the funnel of the talking machine, but because one man prefers "Waiting at the Church" is no reason why another may not enjoy "Tannhauser." To a certain extent the good or evil that a phonograph may do rests with the man who owns and operates it. He has the opportunity to familiarize himself with classical music, and if he does not choose to do so it cannot be helped. At any rate, it is no worse than hearing him torture a mouth-organ with "Suwanee River" or wring the wailing strain of "After the Ball" from an overworked accordeon."

## WHITNEY-CURRIER CO. CONCERTS.

(Special to The Talking Machine World.)

Toledo, O., Nov. 8, 1906.

Upon the completion of their new talking machine parlors, which were recently refitted and

newly equipped, the Whitney-Currier Co. gave a series of free afternoon talking machine concerts extending throughout the entire week, and which were attended by large crowds. The concerts were offered in the nature of a house warming and were highly successful in calling the attention of the Toledo public to the firm's exceptional facilities for filling their wants in talking machines, records and supplies expeditiously and satisfactorily.

## HER VOICE PHOTOGRAPHED.

Miss Hattie Williams, the Well Known Singer of "Experience" Has Made a Number of Records Which Have Been Sent by Charles Frohman to London for the Benefit of Miss Edna May—Value of Talker in This Role.

Charles Frohman intends to have Miss Edna May sing "My Irish Rosie" in London, and has sent a "record" of Miss Hattie Williams' rendition of the song as a model for Miss May. That's why Miss Williams went down the other day to have her voice photographed by the record-making people.

When she faced this new orchestra, arranged on wooden benches, like the audience at a country circus, the singer of "Experience" grew a little nervous. She remembered that they had played recently for grand opera artists.

"We'll leave out the brass the first time," said the conductor to his men.

"No; don't do that!" protested Miss Williams. "I feel as if I hadn't any brass."

But she faced the tin cornucopia as bravely as if she were not afraid it would explode, while the orchestra faced a larger receiver near her. At the end of three bars there was a sudden stop.

"Hermann," said the conductor, "you left out three notes there!"

Hermann emerged from the three-ply coil of brass pipes which encircled his neck, and into which he had been puffing, and indignantly produced his score to show that he was innocent. The three notes were inserted. The song was then sung through without further interruption. After it was finished the record was played over. Miss Williams listened to her voice in miniature.

"It's very much like the effect you get from watching the stage through reversed opera glasses," she said.

Then she turned to read over the score of Gilea's "Adriana Lecouvreur," which Mme. Homer had been singing into the records. "I'm glad it's over!" she said.

"It's just begun," said the musical director. "We'd like to have three more records, and select the best."

So Miss Williams did it all over again several times, observing certain changes in tempo and

dynamics to get all the material in the record. And she tried hard not to look at the queer instruments, lest they should queer her singing.

"A violin with the sounding board cut away and a small tin horn in its place is uncanny," said Miss Williams. "Everything here has horns, and they look like the——"

But the orchestra struck up and drowned the last word. When it was all over, Alf. Hayman, who had arranged the matter for Mr. Frohman, took Miss Williams down to her cab.

All the members of the orchestra followed Miss Williams out and started off for Philadelphia. And Herman, he of the three missing notes, looked after Miss Williams' cab.

"I tell you what," he said, "I like those chest voices. She made a better record than Mme. Rappold or Herr Knoté."

And nobody denied the statement.

## NOW SALES MANAGER FOR "3 IN ONE."

Charles E. Hunt, who for several years has been circulating among the jobbers of the country in the interests of the famous "3 in 1," has been appointed sales manager of the G. W. Cole Co., the manufacturers of "3 in 1."

Mr. Hunt's appointment as sales manager is a deserved recognition of his abilities and energies. Jobbers and dealers from Maine to Mexico know the genial Mr. "Oilright" Hunt. Even Canada has been covered by Mr. Hunt, so in assuming direction of "3 in 1" sales all over the "3 in 1" business is marvelous to even those in charge of its development. The demand for and the consumption of this oil spreads so rapidly that the "3 in 1" factory is taxed to keep up with the demand and enough surplus stock on hand to ship without delay. Up to date, however, the factory has been able to ship any reasonable quantities on even telegraphic instructions, and with the new additions and improvements now under way expect to keep apace of even Mr. Hunt's most sanguine expectations.

## PHONOGRAPH AIDS SPIRITUALISTS.

"How is the soul of a trance medium possessed of its body?" was the question which came up before the convention of the National Spiritualists' Association, which was held in the Y. M. C. A. auditorium, 153 LaSalle street, Chicago, Ill., week before last, when, for the first time in the history of the movement, a phonograph was used in the tests. According to the plan of operation all of the words supposed to be spoken by mediums and clairvoyants while they are under the control of spirits were recorded on phonographic records, and the instruments later repeated the sentences to the mediums after they were released from the spell.

# VICTOR SERVICE

## WHY WE CAN GIVE YOU THE BEST

We are the only Victor distributors in the East who devote an entire store to the Victor line. We have the space and facilities for carrying at all times as large and complete a stock of Victor machines and records as that carried by the factory.

We can guarantee to ship all orders the day they are received. Our shipping department is located in the very heart of the wholesale district of Boston with its numerous daily express collections covering every point in the United States; it employs a large and efficient force who give their entire time and attention to the filling of Victor orders.

We place all records in separate envelopes immediately upon receipt from the factory and deliver them in the same envelopes. Thus the retailer receives his records in the best shape to handle and in as perfect condition as when shipped from the factory.

## JOBBER and DEALERS in Disc Records

## DO YOU USE ENVELOPES?

Our envelopes are used by 75 per cent. of the largest jobbers.

Their superiority is proved by the numbers of duplicate orders we receive.

Ten different styles and sizes. Samples and prices on application.

## THE QUAKER CITY NEWS BUDGET.

Reasons Why October Business Was Backward—Jobbers Rushed, However, and Can't Get Stock Enough—Great Activity at Victor Plant—Penn Co. Bring Suit for Violation of Contract—Jobbers Say Development of Business Will be Great Along Commercial and Public Amusement Lines—Musical Echo Expansion—Snellenberg Opens Regular Department—Opera Records in Great Demand—The World Visits the Principal Dealers.

(Special to The Talking Machine World.)

Philadelphia, Pa., Nov. 8, 1906.

October business was more or less backward, retail dealers say; but they add that the past two weeks has seen a change for the better. Disagreeable weather, the election campaign and minor reasons were given to explain why trade was quiet during a part of October. Retailers seemed agreed that business was behind that of a year ago at a similar period. "I can't understand it," commented one dealer. "Everybody is working and trade generally seems very good."

The jobbers and wholesalers tell a different story. Almost all of them report October business to have been very good, and so far November trade is also brisk. The usual complaint, inability to get talking machines and records from manufacturers, is heard, and doubtless trade would be far more active in jobbing circles if jobbers could get goods with which to fill orders.

Inability to secure records and supplies so worked upon one jobber that he went into a poetic trance and sent the following effusion to one of the manufacturers:

"Everybody works but the factory,  
And they sit around all day,  
Always writing letters,  
'Expect to ship next day';  
Customers keep on calling,  
New stories we must tell;  
Everybody works at the factory,  
Yes, they do, like ———!"

The familiar story, "rushed night and day," quite aptly describes conditions at the plant of the Victor Talking Machine Co., Camden, N. J. All hands continue very busy and, so far as the company, with present facilities, can fill orders, it is doing so. Manufacturing facilities are being steadily enlarged, new buildings are being erected, and vigorous efforts are being made to meet the demands of the trade; which is all any one can do, it should be added.

The concrete pavements adjoining the Victor Co.'s plant on Cooper street have been finished, the grass plots are enclosed with neat iron fences, and the whole premises now look enticing and attractive. Work on the new office and laboratory building, opposite the main plant, was started the latter part of October, and already good headway has been made. Secretary A. C. Middleton, of the company, has abiding faith in reinforced concrete construction, and the "unit" system is being used in both the office building referred to and the new warehouse addition at Front and Linden streets.

At almost every place visited by The World's correspondent good words were spoken by jobbers and dealers of the horns and supplies made by the Hawthorne & Sheble Co., of this city. The horns are popular with the public and give the utmost satisfaction.

At the North Eastern Phonograph Co.'s store, Manager Silverman stated that business was improving. "We sold, we believe, the first Victor Victrola," said Mr. Silverman, "and could no doubt sell others if we could get them." The company have added to their stock of Zonophone, Victor and Edison records and machines, and are well prepared to meet fall and holiday demands.

Cheap talking machines are being used as premium gifts by a local spice and flavoring house. As the cheap instruments almost always lead the owners to purchase good talking machines, the work being done by the spice house is to be commended.

A. B. Butcher, retailer of talking machines, Broadway and Spruce street, Camden, N. J., visited New York the past month. He was accompanied by Mrs. Butcher, and they visited the Edison plant at Orange, N. J., and were shown

through the entire works. Mr. Butcher, while in New York, ordered a full line of machines and records for winter trade. He is vigorously pushing sales and building up a solid business.

Said David Keen, of the Keen Co., 132 North Eighth street: "Business is improving. We have just added a line of Columbia records; we carried a fair-sized stock, but have now enlarged it. Trade has been rather quiet, but is becoming better every day."

The amusement parlor at Ninth and Market streets is being altered and remodeled at a cost of \$4,000.

Dawson & Adams are having the building at 2618 Germantown avenue altered into an amusement parlor and will install slot machines, phonographs, etc.

The Penny Arcade at 127 North Eighth street, recently opened, has made a number of improvements and added additional phonographs and slot devices.

"Business is fair," reported the manager of the Eastern Phonograph Co., 143 N. Eighth street, owned by Futernik & Silverman. "We have put in a complete line of Victor talking machines and records. I look to see a good holiday trade—in fact, it ought to be a booming year."

The Keystone Phonograph and Camera Co., 148 North Eighth street, make a feature of handsome and attractive show window displays, and their present exhibit is very creditable. "Business is pretty fair," said Mr. Abrahams, "but it is not up to the same period a year ago." The company have added a line of Weymann musical instruments to their business, and will also handle pianos. A large stock of sheet music is also carried.

In the local courts the past month the Penn Phonograph Co. instituted suit against Ruane & Bayley as a firm, and John F. Ruane individually, for alleged violation of contract. Ruane & Bayley dissolved partnership about two months ago, and both now conduct retail talking machine stores.

Said a jobber: "Between you, me and the lamp post, do you know that I believe the talking machine business has about struck its level in Philadelphia? There's just about so much business to be done, you know, and it seems to me there are now enough jobbers and dealers to take care of it. Maybe there's too many, and if so it accounts for some of the quiet business stories you hear."

Said Benjamin Futernik, of the Philadelphia Phonograph Co., 156 North Eighth street: "We confine our business strictly to talking machine lines. Trade is going along all right, and we expect a good fall and holiday trade." Benj. Futernik is a pioneer in the business, being one of the first merchants who opened talking machine stores on Eighth street. "I suppose we made so much money when we first opened," remarked Mr. Futernik, "that others concluded it was a good field. Well, there's room for all, I guess, even if all of us do not acquire millions." The Philadelphia Co. carry complete lines of Victor, Edison and Columbia goods.

In a trade chat, one of the large jobbers made a few points as follows: "It seems to me that talking machine trade from now on will develop quite strongly along two lines—commercial and public amusement. The household trade ought to increase, of course. While not wanting to criticize the record manufacturers, it seems to me they should bring out less new pieces and go heavy on stock numbers for a while, in order to fill the demand. Dealers who sell on the installment plan at cash prices forget they are getting nothing for their tied-up money. A needleless talking machine would be a great comfort.

Daily experience proves that talking machines lead people to higher musical tastes and stimulates sales of many other musical instruments."

Getting inspiration from a street organ grinder, two Philadelphia lads mounted their "talker" on an express wagon, took to the street and were gathering in many pennies until a non-sympathetic policeman demanded their license. Will street talking machines join the piano and organ caravan?

"Boss!" said a colored man to one of the Musical Echo Co.'s sales clerks, "hav' ya got a record wid de 'de'd ma'ch ob Saul' on it?" "Yes, we have one." "Well, I wants hit. Dar's gwine for to be use foh hit if Sam Johnson doesn't quit foolin' wid my 'Liza!' And he paid for the record and disappeared.

"Our October business," reported the Wells Phonograph Co., jobbers, "was the best October business we have had since entering business. The outlook for trade is very good. We are featuring Tea Tray and H. & S. horns. The Searchlight horns are selling well. We have a very fine line of disc and cylinder record cabinets which we are exploiting carefully. Edison business, in particular, has been exceptionally big."

At H. A. Weymann & Son's, 923 Market street, Mr. Weymann said: "We have had very good business in our talking machine department, due to the fact that having the goods we have been enabled to fill orders and satisfy all demands. We have found that to get business we must have the goods on hand. Where formerly we lacked room we now have it and carry a large and complete stock of Edison and Victor goods." Mr. Weymann said trade in pianos, musical instruments, sheet music, etc., was also very satisfactory.

"Business has been improving and is better than it was," reported the Lewis Talking Machine Co., South Ninth street. "We have had good success in selling Petmecky needles—so much so that we had to take them from our display window. The outlook for business is promising, and beyond this there is little news to report."

"Business is gradually picking up," reported the Penn Phonograph Co., South Ninth street. "We now have the largest stock we ever carried; as you see we have carpenters at work on additional record racks. We occupy two large storerooms, basements, etc., and are in excellent shape to meet all trade demands." Salesman Wilson, of the Edison Co.'s forces, was a recent visitor.

At the main local office of the Columbia Phonograph Co. it was stated that business is going along in a steady, satisfactory way. The company's several retail branch stores in this city are putting out many machines and records, and the same thing is being done by the Camden, N. J., and Easton, Pa., branches.

Harry A. Matthews, C. C. Hildinger and Chas. W. Klag, of Trenton, N. J., have organized the Dream Amusement Co., and will operate an amusement parlor equipped with motion pictures, etc.

Said H. B. Rouillot, manager of the talking machine and piano player department of James Bellak's Sons: "We are doing very nicely, all things considered; of course, there's considerable competition to be met, but we are getting our share of trade." The Hardman and Harrington autotones and Hardman piano player are exploited, as well as music rolls for all players.

Said Manager Marschalk, of the Musical Echo Co., Chestnut street: "Trade with us is limited to our ability to get in goods. There's no trouble in selling—it is getting what we want that bothers us." An unusually large order was recently placed by the company with the Victor Co. The Musical Echo Co. have supplied Snellenberg's phonograph department with Victor goods. They have also supplied the wants of Fred W. Lindig, a retailer, at Louisburg, Pa. The concerts given in the company's concert hall continue to attract pleased audiences.

Inquiry shows that there has been a good demand for the Victor Co.'s records of Verdi's "Il Trovatore." One dealer alone has taken orders

## You don't get the full benefit

of our magazine advertising if you don't follow it up. You miss an opportunity that is full of profit.

After we get the business started it requires only half an effort on your part to reap the benefit. Why don't you do it?

You know what a force magazine advertising is in getting people interested and stirring up trade.

## Victor Talking Machines and Records

are advertised every month to more than half the population of the United States; the magazines containing our advertising go to 49,000,000 readers monthly.

One-half the people in your neighborhood are interested in the *Victor*! There's business for you. But do these people know that you sell the *Victor* and are willing to play it for them at any time?

Tell them through local newspaper advertising, circular work, etc. The money you put into it is well invested and gives you the accumulative value that comes in connection with our magazine advertising,

for twenty complete sets of the opera records, and the indications are that the innovation will be a pleasing success.

Snellenbergs, department storeists, have opened a regular talking machine department and will exploit Victor, Edison and Columbia lines. The department is said to be a favorite one with Jos. Snellenberg and will be kept up-to-date, of course. It is under the management of John McArthur, who, while young in years, is credited with much talking machine knowledge, as well as push and energy. It is understood that heretofore Snellenberg's sold phonographs and records under a consignment arrangement, but now they will conduct a regular talking machine department, buying all goods direct from wholesalers or manufacturers.

Strawbridge & Clothier's talking machine department reports good business. Extra effective advertising, no doubt, has contributed to that end as well as the pleasing care shown all patrons by the sales force.

Increasing sales are reported by the Western Talking Machine Co., 128 South Ninth street, of which F. R. Reinick is the capable manager.

That effectively dressed display windows increase sales is proved by C. E. Gabriel, manager of the Columbia Co.'s branch store at Camden, N. J. Mr. Gabriel's window exhibits are attractive and original.

Clarence Wright, a clever Camden, N. J., youth, who has been appointed assistant mail clerk by the Victor Co., is an accomplished pianist and violinist.

"It wouldn't do to put the records of some of the political candidates on a talking machine," sagely remarked the boss packer of the Wells Phonograph Co.

Manager Ford, of the Disk Talking Machine Co., 13 North Ninth street, has had quite busy times the past month on Zonophones and records. Being a popular-priced "talker" the Zonophone is a favorite with a large number of people.

Large fireproof steel safes are found alongside of talking machines at Harris Master's store,

239 Market street, and he enjoys good business in both lines.

### VOICE TO SOUND AT OWN BIER.

Minister Makes Talking Machine Record for Use at His Funeral.

If the wishes of Rev. Daniel Bassett Leach, of Bone Gap, Ill., are complied with at his death, the unusual event of a man delivering his own benediction will come to pass. Rev. Mr. Leach, who is 89 years old, has requested that the concluding ceremony of his funeral should be the rendering on a talking machine of a benediction composed by himself. He has been a Methodist minister for more than 70 years, or since he was 18 years of age, and has been noted for the length of his prayers. He has recently had placed on a talking machine record his favorite benediction, which he is wont to deliver in a stentorian voice that can be heard two blocks away. Rev. Mr. Leach, though enfeebled physically to the extent that he has to sit at the pulpit, still preaches occasionally. Forty years ago there was not a Methodist pulpit of southern Illinois but had been occupied by him. He is the oldest superannuated clergyman in the southern Illinois conference.

### INTERESTING CHAT WITH MR. SHEBLE.

(Special to The Talking Machine World.)

Philadelphia, Pa., Nov. 8, 1906.

In a recent interview with Mr. Sheble, of the Hawthorne & Sheble Manufacturing Co., he discussed the situation regarding the infringement of their patent rights in a number of horn cranes at present on the market. Mr. Sheble said: "We believe our company were pioneers in the manufacture of horn cranes, and during the years we have been working on them, many new and attractive features have suggested themselves. Our policy is to apply for letters patent as soon as a new idea is evolved by us, and consequently we have covered many features

not at present employed in our product. The patent office have been so far back in their work as to cause us an unusual amount of delay in the issuing of some of our patents, but I am pleased to state that all of our basic patents have been allowed, and some have recently been issued that were delayed in the Patent Office for several years. We believe our patents are broad enough in their scope to thoroughly protect our ideas, and we expect shortly to take such legal steps as may be necessary against infringing articles as will establish our rights."

### PHONOGRAPH DINNERS.

Did you ever hear of a phonograph dinner? They're giving them in Chicago now with soup and fish and roasts served to the accompaniment of "talker" music and with phonographic toasts all bottled up in the form of napkin rings and laid by the side of the plates of the diners. It is only one of the many ingenious things done by ingenious Chicagoans with their talking machines, which in late years have come to serve many purposes, from storage batteries for business letters to nursemaids, crooning songs of Sleepyland to tired babes at night.

### THE BERLINER GRAM-O-PHONE CO.

The Berliner Gram-o-phone Co., of Montreal, Can., have moved their Toronto branch from Queen street to handsome and larger quarters at 264 Yonge street, that city. The branch store known as the Toronto Gram-o-phone Co. is now under the management of N. E. Winton, a capable talking machine man, formerly with Johnson's, Ltd., who succeeded F. Johnson as manager of the Gram-o-phone Co.'s store. The latter has associated himself with Grinnell Bros., Detroit, Mich.

Charles H. Mulholland, who was with the Adams Dry Goods Co. in this city, is now connected with the Shepard Company, of Providence, R. I., where he is acting as buyer for the talking machine and several other departments.

## PRACTICAL SUGGESTIONS AND COMMENTS.

### DOING AWAY WITH "ASIDE" EFFECTS.

William F. Hunt, talking machine dealer of Wanatah, Ind., writes The World regarding the above subject in the following vein: "In my opinion the time is ripe to do away with many of the 'aside' effects recorded in the records. By this, I mean, for instance, the whistling, clapping of hands and shouting in minstrel records, etc. I think such effects rather detract than add to the attractiveness of the reproduction. The talking machine has reached the point of perfection where it quite ably takes the place of the actual performer, and one feels as if he were really in the presence of the living artist and not a machine when listening to one of its reproductions. Would it be natural for a vaudeville artist to spring the joke and then laugh at it himself? Not quite. Well, that is just what a talking machine is made to do. If many of these effects were eliminated from the records, I believe the few who are now prejudiced against the talking machine would learn to admire it. Some of the records are certainly too noisy to be enjoyed by any one, especially when they are often repeated by an over-enthusiastic neighbor, who has a better ear for noise than music. No one objects to good, wholesome music, but when it comes to plain noise, I as well as most others will call the limit. The above mentioned effects were not so objectionable, when the talking machine was in a crude state—when it produced sounds only faintly—but since it produces them with all its natural volume it is most raking on the nervous system. Another word in regard to unnecessary effects in records are the announcements. For instance, many are now using the talking machine in church services. Is it not rather out of place to advertise a record manufacturer during church services. 'Nuf said."

### CARING FOR THE EDISON PHONOGRAPH.

In answer to a number of questions on the above subject, propounded to the editor of the New Phonogram, the assistant superintendent of the National Phonograph Co. has prepared the following replies, hence their reproduction here:

"In regard to the parts that need oiling in the phonograph, they are those parts which are moving, as in any other machine—the bearings of the shafts, both on top of machine and in the motor; the back rod on which the diaphragm arm slides, and the main shaft screw on which the feed nut travels.

"As to how often it needs oiling, your own judgment should determine this. As long as there is a slight amount of oil in the bearings they need not have any more. The main spring is graphited here in the factory and this should last quite a long while; as long as the main spring unwinds evenly, without any jumping, it shows that it is properly lubricated.

"In regard to your record slowing up, or rather your mandrel slowing up in the center of almost every record, this would tend to denote that there is a bind in the travel of your diaphragm arm at this point. We would judge that the trouble might be in the feed nut or the thread of the main shaft. If you would let the arm down and feed it across, holding the finger very lightly on the feed nut spring, you could feel whether there was any roughness in the thread of the main shaft. Sometimes rust accumulates in these threads and makes considerable friction at that point, which would cause your trouble. There can be no other reason for slowing up at one point every time. We think if you examine this closely you will find the trouble.

"If the humming noise in your motor is appreciable when the cabinet is closed, then there is some part which is fastened to the motor frame that touches the top part of the machine. This motor frame is suspended between spiral springs to neutralize the vibrations in the same and not transmit them to the top plate of the machine. Possibly your starting lever, when thrown over to start the machine, touches the side or end of slot through which it comes. This

would cause the trouble you speak of. Or, the crank may be touching the thimble hole in the cabinet. If neither of these two parts are causing the trouble, we would suggest that while your machine is running you take hold of motor frame with the cabinet opened up, and twist it around a little on the springs and see if this overcomes the hum. If you find that it does, then one of the screws which goes through the springs probably touches in the hole of the motor frame where it passes through. These screws, which pass through the spiral springs and which screw into the top plate of machine, should not touch any part of the motor frame casting, for if they do they will transmit all the vibrations of the motor frame casting to the top part of the machine and cause the humming noise which you speak of.

### SOMETHING OF A LEGAL NATURE.

A prominent dealer writes The World as follows: "Certain manufacturers are infringing on a patent which I control, and I am contemplating sending out a circular to the trade, calling attention to this fact. A friend of mine, who presumes to have some legal knowledge, tells me that I have no right to do this, but I can warn them personally, but cannot warn their customers. What do you think of it?"

Really this is a matter outside of the province of the editor, who has not graduated from a law school, but we may say that it has been held by the courts many times that a circular forbidding persons to buy articles claimed to be infringements is not a libel calling for damages or injunction if made in good faith and the circulators' patent is valid or apparently so. Parties claiming rights on a patent may publish their own claims and warn others, and if they are acting in good faith will not be restrained. It must be borne in mind, however, that excessive and derogatory language must not be used beyond what is necessary to give the proper information. Any excessive and superfluous adverse comment against an existing patent becomes a libel for which the owner of the rival patent may have redress.

### NO SCARCITY OF REPAIRERS IN WICHITA.

Eberhardt & Hays, general music dealers, Wichita, Kan., write The Talking Machine World as follows: "We read with interest and no little surprise the article on page 6 of the October number of The Talking Machine World, under the heading of 'The Scarcity of Repairers,'

written by a 'subscriber' to The World from Wichita. In justice to ourselves we do not care to let this pass without comment. If the writer of this inquiry will call at our place of business, he will find a well equipped repair shop, under the supervision of workmen who are competent to do anything asked for in the way of repairing any and all up-to-date talking machines. We are in the talking machine business 'for keeps,' and can furnish anything in the way of repairs for any standard talking machine. We do sometimes get hold of a premium or mail order house machine that we or nobody else can get repairs for, because they were sold with the understanding on the part of the seller, at least that they were not to be repaired, but we do not stand back for any of the modern machines, and can repair or regulate them with a guarantee on our work that it will be entirely satisfactory. If the writer of the article referred to will call at our place of business in Wichita, we will be glad to show him that we know something about talking machines and will repair or regulate his machine to his entire satisfaction."

### BEST VOICES FOR RECORDS.

A Laboratory Expert Discants on the Making of Good Records.

A well-known talking machine expert connected with the manufacturing end of the business in chatting recently about record making said: "It is a curious fact, and one which I do not wish you to lose sight of, that the best voices do not always make the best records. A bass voice in a man and a contralto in a woman as a rule are more effective than a tenor and a soprano respectively. For this reason Schumann-Heink has a better effect than Melba, while Plancon is superior to Burgstaller. However, I think there is one exception, and that is Caruso. No voice rings out better or with more realistic effect than Caruso's, and one could almost believe it was the man himself who was singing and not the record. Throaty tones are fatal, and the man or woman who slugs from the back of the throat is no good for the talking machine. What is wanted is a clear, unaffected tone which will cut cleanly into the wax record and with a sharpness which while avoiding the shrill, is so distinct that every word and note comes back with the clearness of a bell."

George Ackerman, Scranton, Pa., proprietor of Phonograph Hall, has one of the largest and handsomest stores in eastern Pennsylvania.

## New England Dealers

will be interested to know that we have for six weeks past been preparing to supply their wants promptly when the Fall and Winter rush is on.

☛ We had on hand by October 1st a surplus stock of over twenty-five hundred Edison and Victor machines and over two hundred thousand Edison and Victor records. This surplus with the deliveries the factories will make us during the rush season will enable us to give dealers' orders the same attention as we would ordinarily during the Summer.

☛ Prompt and Full Shipments on day order is received.

☛ Send for our new list of "Live Ones" of the Edison Record List.

☛ If you are not already handling the Mega Flower Horns (plain and decorated) send for descriptive circulars and prices.

## EDISON'S GREAT ACHIEVEMENT.

A New Storage Battery Which Is to Revolutionize Industry and Transportation—The Originator of the Phonograph Adds Another Great Invention to His Credit.

Thomas A. Edison, the inventor of the phonograph, has accomplished a surprise for the world. He has worked out successfully the problem of cheap power. He promises to put on the market within six months a new storage battery which will enable every man to travel in his own private carriage at about the cost of car fare.

Without danger, without breakdowns, without cost almost, a carriage, once supplied with the new power, for \$200, will travel without repairs for fifteen years, for a hundred thousand miles, if necessary, says the wizard. He reiterates the declaration that he has invented a storage battery which will solve the problem of congested traffic in the big cities of the world as soon as he can manufacture enough of them. He is erecting two large factory buildings, now nearly completed, and is installing in them new machinery especially for the manufacture of a motor battery that will be as common a factor in the business life of the world as the telephone is now.

He says that he will be able to sell at the cost of \$10 a cell a storage battery that is almost indestructible. It will travel a hundred thousand miles before it is worn out. Twenty cells will be all that is needed for a runabout or brougham, and sixty cells will be enough for the largest and heaviest truck used. For \$200 one will be equipped with motive power that will need no renewal for fifteen years. "Now, it lies with rubber tire manufacturers to meet this commercial reduction of motive power," said Mr. Edison, gayly.

Mr. Edison, it seems, has had quite some trouble in providing the principal ingredient of the battery. Many chemicals were tried, but he considered he did not attain success until he experimented with cobalt; this being one of the rare metals, however, the matter of expense was something to be considered. Mr. Edison, therefore, set to work to find cobalt in sufficient quantities to warrant its use, and was most successful in discovering lots of it in Canada, in Wisconsin, in Oregon and in Kentucky. The next problem was to separate cobalt from the ores with which it is associated. This has been done at great expense, but within the past few months Mr. Edison has devised a plan in which to get cobalt out of the ore cheaply and within a ratio of cost already calculated for the price of each cell. He has succeeded in every respect in his experiments, according to an authority in the Times, and he now promises that a new battery will be on the market in the spring. This is not a haphazard prophecy, for he has had thousands of batteries working within the past three years so as to insure success.

According to Mr. Edison, "in fifteen years from now the horse will be a curiosity. We shall be paying 50 cents to look at him in side shows." The actual cost of recharging the new battery is a matter of a few cents per cell, the greatest achievement being in making a motive power of light weight, in compact shape, and, above all, endurable. Speed is not the purpose that Edison had in mind.

"I am a commercial inventor, strictly commercial," he said.

The popular phonograph has shown that; in fact, nearly everything Edison has ever done shows it.

A 3 per cent. quarterly dividend has just been paid to stockholders of the Texas Phonograph Co., which does a wholesale jobbing and distributing business in talking machines. It is said that nearly 300 dealers throughout Texas are supplied by this progressive Houston concern.

Everything points to a big winter trade in "tireless musicians" ("talkers").

## A BETTER SELLING PROPOSITION.

For the Dealer Is Found in Talking Machines and Supplies Than in Pianos According to Manager McConnell of Wurlitzers—Great Activity in Every Branch of This Great Business—Big Stock Kept in Hand.

(Special to The Talking Machine World.)  
Cincinnati, O., Nov. 7, 1906.

Something of an idea of the remarkable increase in the demand for talking machines throughout the entire country, but particularly through the Middle West, may be gathered by the expansion of the departments of the Rudolph Wurlitzer Co. agents in this city and vicinity for the Victor talking machines and Edison phonographs. This department was practically organized about three years ago, perhaps as an experiment, deponent sayeth not, and has now increased to a proportion of the firm's business that, considered with the piano business, averages up to almost as numerous an output, always comparing the relative difference in the price of the instruments. Mr. McConnell, who has charge of the talking machine department on the first floor, spoke of the ever increasing demand for talking machines. Much of this demand is ascribed to the new and valuable improvements made in the machines, which increases their tone and trueness to the human voice or musical instruments by doing away with the "scratch," as it is technically known. Mr. McConnell feels that the small dealer has a better selling proposition in talking machines than in the piano trade merely. He argues that to sell pianos successfully in any but the largest cities, a dealer must provide himself with several fine instruments as an initial expense, a demonstrator of no mean ability is required to prove the excellence of the piano tone and a considerable store of sheet music must be provided to fill out the programme. The first expense and the running expenses of selling the talking machines is considerably less, and these reach the taste of a greater number of people many of whom have no special skill in playing the piano, but who are still desirous of hearing good and lively music. The machines afford a greater variety of entertainment, such as band music, recitations, vocal selections and instrumental numbers. The difference in price of the pianos and the machines gives the latter a decided advantage in many a home where the question of the extra dollar is necessarily paramount.

For the Edison phonograph, Mr. McConnell says all salesmen have a special soft spot in their heart. Its educational features give it an additional and growing value. The splendid im-

provements of the Victor Victrola have made that instrument almost peerless in its reproductions of even the best qualities of voice of the great singers and artists. The great variety of entertainment provided by these instruments offers the small dealer so attractive a line that the business is steadily expanding. Mr. McConnell believes the talking machines are the instruments of the future for the great mass of the people.

The Wurlitzers keep in stock not less than 100,000 records, all of which are hermetically sealed in specially made envelopes the moment they leave the factory. This firm maintains an immense library on the third floor of their establishment, where records are kept in the most methodical and careful manner. A vast number is ordered each month for distribution.

## SOME STORE POINTS WORTH NOTING.

Just at this time of year arise three important questions to be settled by every merchant in the United States: (1) Proper fire protection. (2) Proper store lighting. (3) Suitable store fixtures.

The question of fire protection is the most important and should be looked to first. Good insurance is essential, and every store should be fitted up with a good reliable fire extinguishing system. The right kind are efficient and not very expensive. Such a system may save thousands of dollars and is always protection against fire.

Lighting is very important now, as the days are growing shorter and shorter, and the store that gets the business is the store that is well lighted. If you live in a town where there is no gas or electricity, or even if you do and want to save money, there are several safe, sure and efficient gasoline lighting systems on the market worth looking into.

Store fixtures are always an important consideration, but now that the fall openings are on, Thanksgiving next, and then Christmas, the merchant should be very careful to see that his fixtures are fitted to his store and the class of trade he caters to.

## ECHOES OF THE POLITICAL CAMPAIGN.

"The phonographs used in the New York stump speaking campaign ought to be lined with gutta percha to keep them from corroding."

This clipping is from the Columbus (O.) Times. Really! Judging from the speeches the records carried, a lining of asbestos would have proven more necessary to prevent the heated remarks from melting the wax.

## YOU HAVE WAITED FOR THIS!

AN ATTACHMENT FOR HOLDING SOFTERTONE AND MEDIUM TONE NEEDLES IN THE NEW SPRING CLAMP NEEDLE ARM OF THE VICTOR EXHIBITION SOUND BOX

Here it is attached to the sound box. The sound box is turned up and the attachment inserted with its flat side opposite the lever, as shown in illustration.

Here is the Needle Clamp Attachment separate.

Without this attachment it is impossible to use softer and medium tone needles on the spring clamp needle arm. It is perfectly simple, easily attached, holds like a vise and is made in two sizes—for softertone and for Medium tone needles. Order as NEEDLE CLAMP ATTACHMENT and specify which needle is to be used.

Price, 25 cents each

Special prices to jobbers and dealers

**The Softertone Needle** is growing in popularity every day. The loud tone needle, of course, is a necessity to the dealer for selling machines, but it is often too loud for home use. When a customer takes a machine home he finds the softertone needle a great relief. Instead of tiring it perpetuates the use of the machine. This means record sales.

**It Costs Less** One Softertone needle will play six records. Less time is used in changing needles, and there is less wear on the records. A record will last three times as long when the softertone needle is used. We did not accept this fact until satisfied by numerous tests. You owe it to yourself to make a test if in doubt.

## THE MYSTERY IS SOLVED!

Now We Know Where the Voices of Our Broadway Song Birds Have Gone—An Amusing Skit That May Interest Mr. Sousa.

The mystery is solved! At last we know where the voices of our Broadway song birds have gone.

It's a case of *cherchez la phonograph*.

Do you know, it's really something awful the way these horrible machines have just gone and ruined the vocal cords of our Broadway songsters.

John Philip Sousa says "A bas!" with the phonograph, when it comes to dishing up grand and otherwise opera by the turn of a crank, and

THE FAIR PRIMA DONNA WILL MAKE THE MOTIONS, WHILE THE MACHINE DOES THE REST.

I guess if John Philip says "A bas" it will be "A bas"—perhaps.

We're mightily obliged to the march king for throwing light on the subject. It explains a lot of things that have brought surprises to our ears within the walls of comic opera homes. Whatever may have been the crimes of the phonographs, they're going to get it paid back to them good and plenty.

Oh, phonographs, how many crimes will be committed in thy name!

If any of our lady singers want to explain their lack of vocal powers, all they will have to do will be trump up this phonograph business.

John Philip complains that the singing into phonographs is a desecration of art. "You have these infernal machines going night and day," says the indignant musician. "We will not have a vocal cord left. They will be eliminated by a process of evolution."

And to think the phonographs have got in their deadly work already. We know now where the fair Lillian and Adele and dainty Marguerite, Hattie and George M. Washington, Jr., and—but why enumerate—just put all the pets along Broadway—have been spending all their time. Why didn't they 'fess up and let us know they'd been "eliminating their vocal cords by a process of evolution?"

That sounds almost as imposing as a doctor's certificate, and it ought to go with an audience better than the "sudden cold" business. But why worry? Things won't be much worse in the realm of comic opera than they are now. If the

Sousa diagnosis is true, the time may come when the fair singer will stand behind the phonograph and make motions while the machine does the rest.

An eminent throat specialist, who has taken issue with Mr. Sousa, adds that, anyway, we go to the opera for other things besides hearing vocal cords stretched. We are quite sure of this in musical comedy. It didn't need the phonograph excitement to bring this point to the front.

After the recent panic in the ranks of a chorus by the discovery of a coryphee who could sing, we are prepared for anything. The same discovery, however, didn't extend to the prima donna, but what matter, so long as Paris gowns are still to be exploited or beauty unadorned still holds sway with the ladies of the ensemble?

The eminent specialist insists that the beautiful scenic effects that appeal to the eye make opera a success as well as singing, so I guess our fair singers needn't be afraid. When it comes to stage pictures they know a thing or two themselves.

There's one thing, with the passing of the real prima donna there would be no disappointment in store for the audience. You couldn't very well stand for an excuse of a phonograph taking cold. Even the prince of press agents wouldn't have the nerve to spring such a yarn as that.

We haven't heard any complaint from Nordica or Schumann-Heink or Eames about their voices being eliminated per the phonograph route, but, of course, they're used to rough and tear work. You can't expect the delicate exotic voices, reared in the hot air—we should say hothouse air—of the Great White Way to stand for such phonographic strain.

Our eminent specialist might go so far as to suggest a voiceless opera, since he is willing to admit we go to the opera as much to see as to hear. When we have voiceless choruses, in direct contradiction of the old Greek laws, why

JUDGING FROM RESULTS, MANY OF OUR BROADWAY FRIENDS MUST HAVE BEEN BUSY ELIMINATING THEIR VOCAL CHORDS.

not carry American progression a little further and dish up the voiceless opera for keeps? It would be just the same, only Government inspection would insist on the right labor being used. You wouldn't really notice the difference at all, says Margaret Rohe in the New York Telegraph. It's a great proposition. We're sure the copyright office and all the eminent specialists and John Philip Sousa don't feel half as excited about it as do the Rialtoites. The nerve of the phonograph, anyway! Just think of it.

There is one thing to be considered, too. In future it looks like we would never more have the old excuse of "Understudy will go on in place of Miss Tessie Bumnote, who is suffering from laryngitis."

It will be phonographitis for her. John Philip Sousa has at least invented a new disease.

The fact that the desire for talking machines is not confined to race or creed has been amply illustrated since the opening of the Knight-Campbell Music Co.'s department in Denver, Col. Their customers range from Frenchmen to Russian Jews and Chinese, and there are records in stock that appeal especially to every clan.

During the last week of October W. O. Crew, secretary and treasurer of the Elmira (N. Y.) Arms Co., toured the northern part of the State in his automobile.

## Do You Want to Make Money, Mr. Talking Machine Dealer?

Good, big money. The men who sent in an order for a sample line of our instruments were delighted with the results.

They found our instruments blended perfectly with the talking machine line, besides helping to make the store attractive. If you want to help out in the profits during the holiday season you can't go at it in a better way than with our specialties; your musical friends will come to you when they learn that you have the Durre violins, bows, strings, etc. They have a high standing.

We are judges of the excellence of all kinds of small goods, such as Accordeons, Mandolins, Guitars and Harmonicas, and carry a large stock, of which we offer at lesser prices, but which are superior to any on the market at the same price.

It will pay you to order a sample line at once. You will then see how profitable it is to devote a portion of your store to the exhibition and sale of small goods. Write for catalogue.

Make good money for the new year. It is easy with our help. We can tell you how and go with the business tide when it serves.

Saginaw, Mich., U. S. A.

# NEW TAPERING ARM ZON-O-PHONE

\$27.50, \$35.00, \$45.00, \$55.00

## THE NEW GRAND OPERA ZON-O-PHONE

The motor has triple spring, cabinet hinge top  $13\frac{1}{2} \times 13\frac{1}{2}$ , ten-inch turntable. We wish to call special attention to the new speed regulator; also the brake; as you will note when you shut off the instrument it doesn't stop with a jerk. The Grand Opera Machine is equipped with either regular horn or all brass morning-glory horn. Retails at \$55.00.

## THE CONCERT GRAND ZON-O-PHONE

The brake and speed regulator are the same as on the Grand Opera. The motor is exactly the same, except that it has two springs instead of three. The cabinet is different in design but is the same size and has the hinge top. It is equipped with the regular horn or the morning-glory horn—red, blue or green. Retails at \$45.00.

## UNIVERSAL TALKING MACHINE MFG. CO.

28 Warren Street, New York

**"TALKER" POSTAL CARDS.**

Have Not Won Any Large Degree of Favor at the Hands of the Trade or Public Although Somewhat Popular Abroad.

A little while ago great things were expected of the latest development in souvenir postal cards—those that talk their message to the receiver instead of conveying the written word—but they have not become as popular as expected.

These cards originated, like all other varieties of souvenir post cards, in Germany, but have up to the present obtained their widest vogue in France, though there are a few made and sold in England. The cards are about three times the thickness of the ordinary post card, this thickness being contributed by the disc in the center of the card on which the phonographic message is recorded. When a person wishes to send one of these remembrances home he goes to the office where the cards are sold, makes his little speech into the recording instrument, which is then transferred to the disc on the card. After the address is written on the other side the card is mailed and the recipient puts the card into a talking machine and hears the friend's voice. All this costs, in Paris, half a franc, or 10 cents.

The makers of "talkers" in New York are not particularly interested in this new device. They declare the combination of the paper on which the record is made and the sharp point of the needle used in transcribing the record is one that does not make for any lasting quality, and they have doubts as to whether in the ordinary course of mail transmission the record would not be made either partially or wholly illegible. The scheme has, they declare, no possible value commercially, hearing the same relation to a written message as an ordinary souvenir post card has to a work of art. That the spread of the pretty custom would increase the sale of talking machines does not appeal to them seriously. They believe the new cards could be turned out to sell at a profit for five cents, instead of the ten charged in France.

In England, although there are diminutive records of this kind on sale, they have not reached such a state that they can be sent through the mail without protection of some sort. There the phonograph men are particularly keen over the novelty, and declare it will be a matter of only a short time before the talking post cards will come into general use.

The Bureau of Manufactures at Washington, D. C., in one of its recent publications, stated that a Spanish firm desiring to purchase disc talking machines and records of every description manufactured in the United States would be glad to get the names and addresses of the largest dealers in New York, who are exporters of such specialties. While those interested can address the Bureau of Manufactures, stating that their letter is an answer to query No. 416, we may say that we have forwarded to this concern a copy of *The Talking Machine World*, which contains the advertisements of every live house in the United States.

The Columbia Phonograph Co., through their Chicago manager, A. D. Herriman, have leased the store at 118 West Third street, Davenport, Iowa, and will open a branch there.

**Would Make a Change****A Thoroughly Experienced**

man wants position to manage a large talking machine enterprise. Years of successful results is my record. Do you want it? Is it worth anything to you? If you want a perfect system in your whole-sale, retail, *instalment*, buying and selling departments, ask me for it. Correspondence strictly confidential.

ADDRESS D

Care of The Talking Machine World, New York City

**QUEER USES OF MACHINE.**

Spreading Anarchistic Doctrines in France—  
—How Discovered—Gave a Modest Violinist  
Courage to Bring His Talents Before Public.

Another of the queer uses a talking machine is put to was revealed some time ago during work by the French police on an Anarchist case. A raid had been made on the house of a suspected Anarchist, but to the surprise and disgust of the authorities nothing more incriminating than a talking machine, some blank wax cylinders, and one containing sound vibrations were found. The latter was reproduced in the hope that something incriminating might be exposed. But it was discovered to be only a reproduction of a stump speech, and the record had evidently been badly used, for here and there irritating lapses in the piece occurred.

These did not arouse any suspicion at first, but on the record being again reproduced some time later it led a wily official to investigate what exactly were the words lacking. Securing a printed copy of the speech, he compared the two together, making a note of the missing words. The result was successful beyond his fondest hopes. The missing words proved to be nothing other than an Anarchist message of great importance, and led up to further disclosures which convicted not only the suspected man, but several of his confederates.

Another curious story connected with a talking machine is told of a Scotch violinist, who has since become famous. At that time the violinist had no idea of his real skill with the instrument and only played for the benefit of his friends. One day, however, he was persuaded to play a selection of music into a graphophone, and when the selection was reproduced a minute or two later the violinist received a pleasant surprise. Queer as it may seem, he was amazed at the beauty of his own execution, and for the first time an ambition seized him to appear in public, which shortly afterwards he did with pronounced success.

**VICTOR PUBLICITY AND THE DEALERS.**

Thoroughly believing in widespread and persistent publicity as is illustrated by large spaces in the leading magazines, trade and daily papers, the Victor Talking Machine Co. are making earnest efforts to impress the value of advertising upon their dealers and have issued a pamphlet under the title of "How to Advertise," which is illustrated with sample advertisements, showing the good and had forms and with reading matter, giving a comprehensive idea of what really constitutes good publicity and why. As an added incentive to dealers to advertise the Victor liberally in their locality the company have offered a series of prizes for best advertisements and great results are anticipated.

**MADE NEW UNIVERSAL CO. JOBBERS.**

On the 1st H. W. Macminimen returned from a trip through New York and Pennsylvania, touching the large towns only, for the Universal Talking Machine Manufacturing Co. He made a number of new jobbers. Mac has been in the business upward of thirteen years, and says he knows the "game" as well as the man who made it. H. R. Breeder is the latest addition to the company's traveling staff, starting out November 5, making his trip through Pennsylvania, and later going into New England permanently.

**C. D. SHAW IN BUSINESS FOR HIMSELF.**

In the early days Cortland D. Shaw was manager of sales of the Victor Talking Machine Co., and subsequently in charge of their premium machine department before it was cut out. Now Mr. Shaw has become a dealer, having opened a handsome store at 1061 West 52d street, Philadelphia, Pa., a fine residential district of the city, and is carrying the Victor, Edison and Zonophone lines. He is doing a fine business.

## Are you prepared for the holiday rush?

The Christmas season is the time of all times when a dealer mustn't let his stock get behind. Customers can't wait indefinitely for goods you haven't in stock, and excuses and apologies don't go.

You should have everything in ship-shape for this holiday trade. It gives you more than an opportunity for present profit. It is the greatest chance in the world to cultivate new customers and an abundance of good will that means much for the future of your business.

The fact, however, still remains that no matter how careful you are in selecting goods, you're almost bound to fall short in some places and have to send a rush order to your jobber.

What if your jobber isn't equal to the emergency? Then you're in a pretty fix! You can't put the blame on the jobber—it's your fault for having such a jobber. The people look to you, not to the jobber.

You'll not find us wanting in any particular. Victor talking machines and records, trumpet horns, English needles, fibre cases and other accessories are here in large quantities and you can get whatever you want whenever you want it. All orders are shipped the same day they reach us.

Better send for a copy of our latest catalogue and keep it where you can easily refer to it.

## THE UNIVERSITY EXTENSION

By Means of the Talking Machine Is No Longer a Dream But a Fact—It Forms One of the Features of the New Correspondence School Opened by the University of Wisconsin.

(Special to The Talking Machine World.)

Madison, Wis., Nov. 7, 1906.

One of the most important features of the new correspondence school just opened by the University of Wisconsin will be the use of talking machines. The leading professors will read their lectures into the machine, and the records will be sent to students at different points. The innovation will be first tried with German, in order to test the feasibility of accurately reproducing the pronunciation of different sounds. The new move has occasioned considerable comment. For instance, the State Journal, in an editorial, makes the following remarks on this subject:

"University extension by phonograph. What limitless possibilities are suggested in this twentieth century idea. It is bringing the university home to the people with a vengeance. It is likely to Bostonize the entire State. No longer will it be necessary for the ambitious youth of limited means to come to Madison and spend four expensive years here. All he will have to do is to invest in a phonograph, send his rolls to the professor and when they return place them in his machine, light his pipe, lean back in his chair and listen to the melodious voice of the prof. No necessity of changing his jeans or taking off his felt boots. Education can go hand in hand with production at minimum cost of time and money. Instead of the family being obliged to listen to idle gossip or the rasping, metallic strains of "My Old Man," the dinner hour can be made uplifting and profitable with a lecture on organic chemistry or the sources of Browning's inspiration. And the beauty of it is that the lecture can be repeated and again repeated till the weighty truths are sunk in the

mind to stay. Even to the professor the plan must have its attractions. If he likes to hear himself talk here is a way by which he can be gratified to his heart's content. Then, too, the music of the junior prom, of student recitals, etc., can be brought home. The next logical step will be the vitascope with its supplementary moving pictures to present the scene to the eye also. The possibilities are limitless indeed."

## FREDERICKSON-KROH CO.'S BIG LINE.

(Special to The Talking Machine World.)

Oklahoma City, Okla., Nov. 10, 1906.

One of the largest stocks of talking machines brought into the Southwest was recently placed in the new parlors prepared especially for that department in the basement of the Frederickson-Kroh Music Co.'s store at 221 Main street, this city. The company are handling both the Edison and Victor lines, including the Gold Seal records reproducing the voices of the famous grand opera singers. A series of Saturday night talking machine concerts has been instituted and they are expected to go far toward popularizing the new branch of the business.

## ENTERPRISING BROCKTON DEALER.

L. R. Porter, the progressive talking machine dealer of Brockton, Mass., had a novel window display recently in the shape of the first Victor talking machine ever made, with the world-famous Victor dog looking down the horn. The exhibit was placed on a revolving platform and the remainder of the window filled with the latest Victor machines, to which were attached the legend, "Buy a Victor, but look out for the dog." As an added attraction Mr. Porter advertised to give a sheet of music free to every visitor to his store, and also held talking machine concerts.

Mr. Porter also handles the Edison line and claims to have in stock every record in the Edison catalogue.

## LOOKS LIKE PROGRESS IN DENVER.

A Splendid Business Worked by Malcolm B. Henry for the Columbia Phonograph Co.—Carries a Complete Stock.

(Special to The Talking Machine World.)

Denver, Col., Nov. 8, 1906.

The branch of the Columbia Phonograph Co. in this city, under the management of Malcolm B. Henry, is one of the most progressive in the West, and are selling goods faster than fresh shipments can be received. The stock at this store contains 30,000 records, 16,000 of them of the disc variety, and the balance, 14,000, "X P" or cylinder records. The stock of machines of all styles averages 100. The stock is said to be one of the most complete between Kansas City and Salt Lake.

An item of interest is that Mr. Hamilton, of this branch, took a \$100 disc machine on the recent trip of the International League of Press Clubs, and it was played almost constantly throughout the journey of 1,400 miles. So pleasing did its music prove that a member of one of the clubs at the end of the trip purchased the machine, together with four dozen records.

Mr. Henry, the manager of the store, was married on October 15 to Miss Myrtle McGowan, of Decatur, Ill. He is well known to the trade, having been previously connected with the Hawthorne-Sheble Mfg. Co. and the American Record Co. He is an energetic exponent of the talker, as is evidenced by his work since he became associated with the Columbia Phonograph Co. on July 1.

C. N. Hibbard, western manager of the commercial department of the National Phonograph Co., with headquarters in Chicago, spent several days in Des Moines, Ia., recently, where he demonstrated the use of the Edison commercial phonograph in the store of Hopkins, the company's agents in that place. Mr. Hibbard succeeded in interesting a number of business men in the new system.

the track, and destroy contact with the sound waves the result being a poor chattering reproduction, unpleasant and annoying to the listener, who condemns the record or the machine, never realizing that a dirty record is the real cause. A little *Recordite* will correct this trouble. The most dangerous enemy to the advancement of the talking machine business is a clogged record. *Recordite* will free it from this bad spot and increase your sales a big percentage.

No matter how good a machine may be, to work well it must be kept well cleaned and oiled. This is what *Recordite* does—it cleans, lubricates, preserves and polishes Disc Records, of all kinds. Every dealer should have a stock on hand especially now for the holiday trade. We want you to write, to day for our circular and *Special Introductory Offer*. Get your orders in now. *Recordite* is put up in an elegant package and will ornament the finest counter in the talking machine trade.

## TRADE NEWS FROM ST. LOUIS.

October Trade Very Active—T. P. Clancy With Columbia Co.—Fuhri Changes in Chicago—Thiebes-Stierlin's Fine Department—Other Items of News from Saintry City.

(Special to The Talking Machine World.)

St. Louis, Mo., Nov. 10, 1906.

Talking machine trade for the month of October was very active, and showed a nice improvement over that of September, and the demand for high priced machines was particularly good. The demand for records has been most excellent, and there are complaints of shortage in both machines and records. Trade is expected to establish a new record for the winter season.

Thomas P. Clancy, who has been manager of the talking machine department of the Conroy Piano Co. for the last several years, and one of the most popular and energetic men in the talking machine business, has accepted the local managership of the Columbia Phonograph Co., and will assume his new duties about Dec. 1.

W. C. Fuhri, who has charge of the Columbia Phonograph Co.'s interest in this territory and West, will move his headquarters to Chicago, but will have charge of all the Western territory. The departure of Mr. Fuhri from this city has caused many expressions of regret, as he has established a very excellent standing here as a high class business man, and one who does business on a very lofty basis. He will leave about Dec. 1.

Manager D. S. Ramsdell, of the St. Louis Talking Machine Co., states that trade is very good, but that they are handicapped in getting goods. They are having an excellent demand for their new \$200 Victrola machines.

The Thiebes-Stierlin Music Co. have just completed a fine talking machine department on their first floor, which is in charge of S. R. Brewer. It consists of four fine booths, handsomely equipped, and constructed strictly with all the modern arrangements. Mr. Brewer is to have an assistant at an early date.

The Val A. Reis Music Co. now have their talking machine department running nicely, and they report a good volume of activity.

Marks Silverstone, president of the Silverstone Talking Machine Co., reports a nice trade and that he is doing exceptionally well with the new Victrola of the Victor Talking Machine Co.

E. B. Walthall, manager of the talking machine department of the O. K. Houck Piano Co., reports trade good, and that he has sold a number of Victrolas that are yet to arrive.

The talking machine department of the H. A. Phipps Piano Co. is now complete, and they are pushing it with good results.

Mr. Brown, of the advertising department of the Victor Talking Machine Co. at Camden, N. J., was a recent visitor here.

## WORKING OUT THE PHONOGRAPH.

James Creelman, the well-known writer, in the course of an interesting article in Pearson's Magazine, on "The Cry for 'Brains,'" refers to Mr. Edison's connection with the development of the phonograph as follows: "One of Mr. Edison's assistants has recorded the fact that, in working out the phonograph, the inventor has spent from 15 to 20 hours a day, for six or seven months at a stretch, shouting the word 'spezia' against the wax cylinders, in his effort to have the sibilants distinctly reproduced. The intense and prolonged labor which has resulted in the new business man's phonograph can scarcely be realized. But it took immense capital and a widespread organization to place the million or more phonographs of all kinds now in use."

After establishing and selling out several talking machine concerns, Pat E. Powers now owns and manages the furniture department in one of the leading stores of Buffalo, N. Y. The traveling men passing through the city stop off and josh Pat on his change of base.

## CARUSO TELLS OF HIS SUCCESS.

One Man Gave Him \$3,000 for Two Songs—Got \$8,000 for Making Four Records.

The great success in Berlin of Caruso, who is so popular it took a squad of police to prevent the people from mobbing him, led the great tenor to give a very interesting sketch of his early life to the local press of that city.

"Up to eighteen years of age," Caruso said, "I was in doubt whether I had a tenor or a baritone voice. I started to sing in Italian churches when I was ten years old, and then at eighteen I tired of thinking over the problem of my voice, I began to take lessons, but I quit my first teacher very soon because he could not tell me anything about the quality of my voice. Another teacher found that my voice was so thin the other fellows in the school called it a glass voice, perhaps because it broke easily.

"While I was doing military service at Rieti I used to sing while shining the buttons of my uniform. Major Mogliati heard me and made me spend leisure hours for many months studying with a teacher he procured for me."

The great tenor says he is pleased now with his lot in life, and speaks freely of his success in America, where, when engaged by a millionaire named Smith to sing two songs, he got a check for \$3,000 and got \$8,000 from a talking machine firm for four songs, which because of a percentage on the sale have already brought him \$4,000 additional in one year.

It is said that Bonci, who is also engaged to sing in New York this winter with Hammerstein, has studied much more than Caruso, and had a harder time of it. He used to walk eight miles every day from Pano to Pesaro to attend the conservatory lessons, and he did this for over four years, no matter what the weather or the season.

The German Emperor, who was present with the Empress at a recent opera performance in which Caruso appeared, sent for the great tenor and after complimenting him on his voice and

acting, gave him a beautiful scarfpin of diamonds and rubies bearing the imperial initials in jewels. The management of the Berlin opera has engaged him for the next season. Caruso sings again with the Metropolitan opera forces this season.

## SWITKY'S NEW STORE.

Opens Handsome Establishment on 42d Street With Mrs. Switky in Charge.

Benj. Switky, the enterprising talking machine jobber, has equipped a third retail warehouse at 253 West 42d street, near Eighth avenue. In these new quarters there will be carried a full line of all talking machine supplies, and the various styles of Edison and Victor machines. In the front are two large show windows in which samples of the various lines are displayed in a very effective manner, and is due to the ingenuity of Mrs. Switky, who will have charge of this branch of the business. Mrs. Switky is thoroughly familiar with the talking machine business, a very clever saleswoman, and will demonstrate the fact that a woman can make a success in the talking machine field.

## A \$2,000,000 CORPORATION (?)

Among the incorporations filed with the Secretary of the State at Albany on Monday last was that of the Atlantic Phonograph Co., for the purpose of manufacturing and dealing in all kinds of musical merchandise. Capital, \$2,000,000. Incorporators: Joseph L. Adrian, Peter Mannebach and C. D. R. Adrian, all of New York, and Frank C. Hamilton, Syracuse, N. Y.

## START INSTALMENT DEPARTMENT.

An instalment department on a large scale has been installed by C. C. Mellor Co., Ltd., Pittsburgh, Pa., under the supervision of Ollie Oldhansen, the talking machine manager who is so popular with the traveling men. They have recently added the Zonophone line.

## THE TRADE IN ENGLAND.

**Business Uneven During the Past Month—Factories, However, Are Very Busy—Price Cutting Being Discouraged—Great Financial Showing by Gramophone Typewriter Ltd.—Henry Seymour, Ltd., Brings Out Novelty—Sterling Special Record Popular—Remarkable Zonophone Sales—Cromelin's Speech Noticed—Recent Business Changes—Interesting Suit—Great Beka Catalogue—Columbia Co.'s Grand Prize—Some Pathe Freres News—The Month's Happenings in Detail.**

(Special to The Talking Machine World.)

London, England, Nov. 6, 1906.

The last month has seen rather a lull in certain quarters, although it is satisfactory to observe that sales have maintained a good average generally. In some districts dealers complain that business is quiet in comparison to a few weeks ago, while others declare for increased sales. The factories are up to their eyes with orders, and the manufacturers are unable to meet the demand. In conversation with the head of one of the largest cylindrical record concerns, he said: "It is a fact that the condition to-day is far and away ahead of any previous season. The stupendous and ever-increasing shoals of orders are more than we can cope with. Our factory has been considerably enlarged, and is working every minute of the twenty-four hours, yet we cannot get in front of the demand." These words are synonymous to what other manufacturers state, so it is pretty evident there is an abnormal demand, which every dealer should secure a good share of. The labor market is still in a very unsettled state, but the country is more quiet than last month. Price-cutting is being vigorously discouraged on all sides, and altogether the talking machine industry is in a most satisfactory condition. Witness the report of the Gramophone and Typewriter, Ltd., for the year ending June 30, last. The trading result is a credit balance of £212,236. Add to this the amount brought forward from last report, £445,297, makes a grand total of £657,533. The increase is over £72,000 on the previous year. An interim dividend of 10 per cent. had already been paid on the ordinary shares, and it was now proposed to pay in addition a bonus of 10 per cent., leaving, to be car-

ried forward, £487,176. Since the company was started, they had paid altogether 90 per cent. to the original shareholders. There has been a considerable increase in the demand for the company's goods during the year, as compared with the previous year, and the directors report that such demand continues; the sales for the three months—July, August and September, 1906—being considerably in excess of the corresponding months of last year.

### Howell Bros. Great Business.

Howell Bros., the well-known factors of St. John street, Clerkenwell, report a splendid business state. At the time of my call they were busy unloading a large vanful of records. These I learned were a portion of a consignment of "Rex" records, issued by the late Lambert Co. Altogether, Mr. Howell has bought from 70,000 to 80,000, and dealers would do well to get into touch with the firm at once if they wish to secure a share of the bargains.

### How the Gramophone Sells.

Walking into the Regent street quarters of the Gramophone & Typewriter Co. the day after Caruso's appearance in Berlin, a gentleman, after listening to certain of the renowned artist's records, purchased £50 worth before he left.

### Another Unbreakable Record.

At the offices of Henry Seymour, Ltd., I saw some good specimens of what they claim to be an unwearable and unbreakable record. Unlike other attempts put upon the market, its surface is as smooth and as perfect as the genuine Edison wax records. It is made of an entirely new composition, which cannot be gouged into at present; suffice it to say that the principal ingredient is celluloid, but experiments are still being made to obtain a non-inflammable material. The tone of the record is ideal, while the surface noise is nil.

### The Sterling Special Record.

The Sterling special record has won for itself such a tremendous sale that the Russell Hunting Co. are a long way behind in the execution of their orders. Mr. Manson reports the huge factory capacity as inadequate, although working night and day. List No. 26 contains some fine selections, many of which, it is expected, will gain enormous popularity, particularly the descriptive record, entitled "Trafalgar." The Linguaphone language series of records are boom-

ing. The provincial factors are taking up and pushing the sales with marked success. I am asked to give denial to the rumor now current that this company have marketed a new cylinder machine. There is no truth in the report, outside the fact that a machine will eventually be manufactured and issued by the Russell Hunting Record Co., who have in hand the perfecting of an instrument that will be thoroughly reliable and a credit to the firm.

The Odeon and Fonotipia records are going well, and there is a notable increase in the sale of those selections, recorded under the supervision of Russell Hunting. The vast tone improvement and general power will surely win additional favor and demand for these discs.

### Will Stock Gramophone Goods.

A matter of considerable interest lies in the fact that the Edison Bell Co. have decided to stock gramophone goods. There is a good demand in the West, and the company have rightly set out to fulfil it.

### American Talking Machine Co. Catalogue.

The American Talking Machine Co. will shortly issue a new catalogue, which it is said will contain an illustration of every talking machine on the British market. The time taken in its preparation and the expense involved is sufficient justification of the company's claim that it will be absolutely the most comprehensive general catalogue of its kind.

### Remarkable Sales of Zonophone Records.

The remarkable sales achieved by the Zonophone records is a matter of comment throughout the trade, and the boom is still on. The company's representatives are busy "accepting" orders, which is rather reversing the usual method of salesmanship. Mr. Malyon, the assistant manager, gave some very interesting details respecting the popularity of his company's products. Said he: "In the first place we know the sale of our records will continue to show an increase week over week throughout the season. Why? Because we cater to the popular taste." "And that is, Mr. Malyon?" "Out of the many class of selections we list the majority are of a serio-comic nature, and therein lies the point of Zonophone popularity. Yes; our list of classical, sentimental and other class selections reach a good sale, and in our November list they are fairly represented, together with four Welsh titles. The number of ten-inch records sold is more than

## FROM OUR LONDON HEADQUARTERS—(Continued.)

three times that of the seven-inch, which goes to prove, in spite of the price difference, that the user appreciates best the record that will give most music."

**Lecture on Evolution of Gramophone.**

Under the auspices of the Polyglot Club, Harry Burgess entertained a large audience at the Holborn restaurant with gramophone reproductions, after first delivering a very interesting lecture on the history or evolution of the instrument. The Gramophone spoke and sang with absolute accuracy in English, French, German, Italian, Spanish and Russian. No flaw could be found in the reproduction of accent or intonation, the records being played with unimpeachable fidelity. Songs by Melba, Patti, Caruso and others were given, and were surrounded by an air of reality by the aid of limelight portraits of the artists, shown at the side of the instrument. The recital and lecture were both highly successful.

The suggestion has been made that the heads of the department of education might well give their serious consideration to making use of the Gramophone as a means of training the ear in the study of foreign languages. It is an excellent idea, and one that should be vigorously followed up by the company concerned.

**The General Phonograph Co.**

"Now, Mr. Latham, I would like you to inform The World readers of the latest events concerning the products of your company." "Yes? Well, now, the best news that occurs to me just at the moment is that we have now doubled the producing capacity of the factory, which is continuously at work night and day, turning out the White records as fast as possible. Even with our greater manufacturing facilities we cannot catch up on the orders in hand, but it will ease matters to some extent. The demand is a daily one, every post brings orders, and it is gratifying to observe that many orders are being placed by foreign and colonial dealers." My informant continued: "We are issuing many new show

cards of an original nature, both in respect to the wording and design. Letters of appreciation still reach us, and it is evident the public demand will be well maintained." A fine new list of record titles will be found in the company's advertisement.

**Trade Conditions in North Wales.**

The winter season has up to the present always been associated with the best talking machine sales, but the old order changeth in North Wales. A dealer located there has just written the General Phonograph Co. that summer is the best time for sales. He is evidently situated in a little out-of-the-way place that is practically deserted in the cold season.

**Cromelin's Speech Much Noticed.**

The complimentary dinner to Mr. Marconi in New York in celebration of his association with the Columbia Phonograph Co. and which furnished the occasion for some exceedingly interesting speeches, as noted in The World, have been much remarked here. The remarks of Mr. Cromelin, vice-president of the company, are particularly significant, forecasting, as they do, the probable future of the talking machine. The following quotation from Mr. Cromelin's speech has been specially noticed: "It is not disputed that a talking machine without a diaphragm or other medium than the air is actually possible and practicable. No needles, no friction, no noise. Be on the lookout for it, for it surely is coming. The future offers much more of a field for inventive effort and application than has been covered in the past. The surface has hardly been scratched. I have an abundant faith in the lasting quality and permanency of the talking machine enterprise. I have little faith in the permanency of the present forms of either machines or records, and I seriously believe that before the works of Marconi and his contemporaries become history, present-day talking machines and records will be looked upon as curious specimens in the evolution of the art, much

as we to-day consider the Edison tin-foil phonograph and the original Bell and Taintor treadle-graphophone."

**Unique Acknowledgment Card.**

A most unique acknowledgment of order card has been issued by the well-known and popular Charlie Howell. When on the continent our friend had his photo taken, showing, of course, the usual continental smile. This has been reproduced on the card together with a contrasting photo of his appearance when in London. One shows the man of business, the other the man of pleasure. The idea is amusing, but it is not without its value from a publicity point of view, as such little departures from the ordinary cut-and-dried business methods, tend to remind us that the firm are alive and are ready to handle another order.

**Singophone, Ltd., Succeed Bruce & Co.**

I am advised that the business hitherto carried on at 151 High Holborn under the name of David Bruce & Co. will in future be transacted by the newly registered company, Singophone, Ltd. With a capital of £5,000, the new concern will be in a position to push more vigorously the patents they control.

**Some Specially Fine Imperial Records.**

The November list of Imperial records (Cook's Athletic Co.) includes some very fine violin selections by Harold Eisenberg and Frederic Voelke. There is also listed some splendid duets by favorite singers and a French-Canadian song by F. A. Archambault. Henry Burr's "Teasing" and "Battle Cry of Freedom," which I had the pleasure of listening to, are both rendered in a clear and perfect manner, and there is a noticeable absence of all foreign noise. Messrs. Cook are working at high pressure, which says enough for splendid sales.

**The "Beka" International Record Catalogue.**

Undoubtedly the finest, most comprehensive and up-to-date record catalogue issued for some

## FROM OUR LONDON HEADQUARTERS—(Continued.)

time, is that emanating from the now famous Beka Record Co., of Berlin. The title, "International," will of itself convey to the mind some idea of the far-reaching associations this catalogue embraces. Original records have been made in all the principal European countries. The list of selections covers all tastes from classical to comic, and the whole are systematically tabulated and arranged, according to class and country, under their particular headings. I do not know how many—it would take a day or more to count—but the "titles" in this book must reach many thousands. Just think of the amount of time, trouble and expense involved in obtaining and recording all these selections, and the enormous quantities of patience required to compile such a unique catalogue as the one under review, and—well, I am rather inclined to the belief that some of us would have had enough "thinking" to last for the rest of our earthly term. And yet, there it all is, contained in this one book, which can be had by application to the company's offices in Berlin. As a last word or two, I would say that the general get-up is without a fault, the printing is good, on fine art paper, and the excellent, not to say very pertinent design on the front cover, speaks of a very clever brain among the Beka Record Co.'s members. An idea of the scope of the Beka records can be gleaned by a perusal of their advertisement on page 20 of this issue.

**Columbia Co. in Their New Quarters.**

During the past month the Columbia Phonograph Co., General, have taken up their abode in their new premises at 64-66 Oxford street, just above Tottenham Court Road, and the crowd of people always to be met at this busy point have watched, with undisguised interest, the transformation of the empty building into an attractive depot stocked with inviting goods. The advertising value of the new establishment has thus been early demonstrated. Meanwhile business has proceeded apace within. The staff have found themselves most comfortably housed, with every facility at hand for the efficient discharge of their respective duties. Every department, however, has not moved west, and, while headquarters are to be at Oxford street, the company will still utilize their city premises in Great Eastern street.

**Grand Prize for Columbia Exhibits.**

The adjudicators' awards at the Milan Exposition give grounds for congratulation to the Columbia Phonograph Co., General. The Columbia

exhibits have gained the grand prize, and the company have thus added another link to their unbroken chain of unrivaled exhibition successes. Needless to say, the Columbia people are very gratified with the triumph.

**Turning Out Disc Records.**

The Columbia Co.'s London factory is turning out disc records at a great rate. The new plant, including the necessary hydraulic presses and other costly and up-to-date machines, is quite completed, and the company are therefore thoroughly well equipped for big business. Like the "Symphonic" and "Lyric" gold moulded records, Columbia discs now come under the denomination "Made in England," and the nearness of the source of supply is a guarantee of prompt execution of orders.

**IMPORTANCE OF DRIVING BELT.**

**A Good Many Machines Spoiled by an Ill-Fitting Strap—Some Pertinent Pointers by Philip Neal, the Talking Machine Expert.**

(Special to The Talking Machine World.)

London, England, Nov. 3, 1906.

Philip Neale, the talking machine expert, contributes the following talk on "Driving Belts" to The World, which will doubtless interest its many readers throughout the world:

"A good many machines, and I may add some of the best, are completely spoiled by an ill-fitting strap, an uneven strap, a crooked pulley, etc. This is noticeable in records of a lady's voice. You are listening, say, to Mme. Narelle singing that beautiful song, "Silver Threads Among the Gold." You notice every few words a slight failing of her voice, the more educated you are to good singing the more you will notice it, and if you think your machine is the cause, where would you look for it, not to that innocent little piece of leather. You go at once to the motor; you fancy a wheel touches at each revolution, perhaps a faulty tooth, or the spring wants oiling; but should you happen to examine the strap you will find a bad join, a part of the strap thicker than the other, or uneven sides sometimes. If the strap is all right, you will find the little pulley which "takes up the slack" is not working freely; but whatever fault you find, that fault will be more or less noticeable in the singing, because it is directly connected with the cylinder.

You go to the phono. repairer, whether amateur or not. I will explain this little pulley.

You will notice that the outside, upon which the strap runs, is oval in shape. This is done to encourage the strap to keep to the middle and not run off, because the strap will always run to the largest part of the pulley. It also, if properly adjusted, will keep the strap running in its proper place on the cylinder and driving wheel. To remove oil from the strap, wash it in benzoline. To join a new or broken strap trim the ends and cement with mendine. Use a thin strap, especially for the Koh-i-nor type. Of course, there are other causes for flat notes in the singing, but they are more easily detected, i. e., the feed screw too tight, cylinder ditto, motion wheels uneven, feet nut not true on the thread, especially in the "Home" machine; but I will deal with these more fully in my next article, "Governors of All Machines" (illustrated), which I think will interest the Talking Machine World readers. I shall explain with illustrations how the governor of the Koh-i-nor, although, properly made, is put together wrong, always has been, and, I suppose, always will be. Take the "Gem," for instance. Why is the little pulley put on the down-hill side of the stop different to all other machines and decidedly wrong."

**PATHE FRERES ADVANCE.**

**This Distinguished House Issues New Goods—New Disc Record and Machine—A New Sound Amplifying Device.**

(Special to The Talking Machine World.)

London, England, Nov. 4, 1906.

Sometime back it was announced that the famous house of Pathé Frères, London, would soon place on the market entirely new goods. In the case of the forthcoming manufacture of disc records, we were promised certain improvements in the recording system that would practically cause a revolution in the trade. Then again many whispers were in the air of a special arrangement and other new departures in connection with their machines. We waited, and we were not disappointed. All promises have now been fulfilled, and to-day sees great advances, both in the new cylinder machines and tonal qualities of the records, while we have also a new departure in the shape of disc records and disc machines. Such is the general information, and in order to obtain detailed particulars I sought an interview with Mr. L. H. Courant, who courteously supplied news of much interest to The Talking Machine World. "Yes," said Mr. Cour-

**LATEST NOVELTIES**

The "Cordock" Concert Reproducer for Puck and similar type machines. Acknowledged by experts to be the finest reproducer on the market for small Phonographs, 50 per cent. louder than any other reproducer of its kind. For volume, clearness and distinctness of tone, it stands alone unequalled. Factors should write for sample and wholesale prices, to

**G. W. CORDOCK & CO.**

High Street, Scunthorpe, Linc's, England.

FROM OUR LONDON HEADQUARTERS—(Continued).

ant, "it is some time now since we took over the British interests, and although our new goods are but now ready, we have been very busy in the meanwhile, making a change here and an improvement there, until our whole organization has reached that pitch of excellence which enables us to offer a business service of the very best type." In answer to a question came the reply, "We have made arrangements to still further extend the cylinder record and machine departments, and so our facilities in this direction will be much appreciated by our phono customers; but as the trend of the times calls for flat records, and the demand is increasing each week, we decided to place both a disc record and machine upon the market. To deal with the record first, I may say it is based upon an entirely new principle of recording, whereby sweetness of tone rules all through. I myself can heartily confirm this latter statement, as each one of the records I heard were characterized by a richness of tone and complete absence of blasting or metallic sound. One peculiarity of this new recording system is that instead of commencing on the outside edge of the record each selection starts from the inner or center line. As for artists such talent as Miss Ada Crossley, Kirkby Lunn, Ben Davies, Delna Ancona, Caruso, Noté Alvaraz, etc., etc., and many others equally well known, help to provide records suitable to all tastes."

The new disc machine has a most handsome appearance, and is fitted with a specially strong motor and artistic flower horn. The sound-box is excellent, and is fitted with a sapphire pointed needle of the best quality. Details will be sent to all dealers who make application to the company (see advertisement in our columns). A new sound magnifying innovation of much interest was also shown to me. It consists of a patent device attached to a peculiarly constructed speaker fitted with a sapphire point only. Connected to the reproducer is a long tube through which air is pumped by a small electric motor. The air current forces the sound waves much more strongly against the diaphragm, the increased agitation of which provides a volume of sound great enough to be heard a quarter of a mile away; and with all this powerful volume the quality of the tone is just as pure and sweet, if not better in this particular, than with an ordinary reproducer; in fact, it is absolutely lifelike and fully comes up to what the manufacturers claim. I was informed that dealers would be placed upon most advantageous terms, and full particulars will be sent on receipt of card at the company's warehouse in Lambs Conduit street London, England.

## AN INTERESTING SUIT.

Edison Bell Co. on Suspended List—National Phonograph Co.'s Action—Judge's Extraordinary Remark on Trial of Suit.

(Special to The Talking Machine World.)

London, Eng., Nov. 7, 1906.

Described by counsel for the defense as a case containing the charms of novelty and ingenuity, was the action brought by the National Phonograph Co., Ltd., against the Edison Bell Consolidated Phonograph Co., Ltd., to recover damages for the loss of trade alleged to be due to the conduct of the defendants. It was stated that the Edison Bell Co. had been placed on the plaintiffs' blacklist, but despite this had obtained 700 of their phonographs. They were procured through the plaintiffs' agents, who acted either in ignorance or in deliberate breach of their agreements with the plaintiffs not to supply anyone on the "black" or "suspended" list. The defendants paid full trade prices for the machines, and it was not alleged that they had sold under price to the public. The grievance was that they had sold their own records with the machines, and that the plaintiffs accordingly lost a profit they would otherwise have made. It was said that the sale of records was the most profitable part of the business, and that the loss in connection with the 700 machines was £660. It was also claimed that the action of the defendants had been detrimental to the general sale of plaintiffs' machines, as people, thinking they could get them from the Edison Bell Co., would go there, and then probably buy one of the defendants' machines instead.

His Lordship, Mr. Justice Joyce, suggested that the falling off in business might be accounted for by the fact that "thousands of people may be getting tired of such nonsense."

The defendants denied that they had done anything wrong. Judgment was reserved, His Lordship remarking that it was a curious case.

## LATEST ENGLISH PATENTS.

Compiled for the Talking Machine World by an Expert in London—Will Give Americans an Idea of Developments on the Other Side.

(Special to The Talking Machine World.)

London, England, Nov. 6, 1906.

The following list has been compiled exclusively for The Talking Machine World by Cassell & Co., 90 Chancery Lane, to whom inquiries relating to all patents should be made:

No. 7472. Dated March 28, 1906. Complete

patent accepted October 4, 1906. Ferdinand von Madaler and Neophone, Ltd., "Improvements in and Apparatus for Sound Reproducing Machines."

The object of this invention is to provide means whereby Edison phonograph or hill and dale cut records may be reproduced by means of a needle or fine sapphire point fitted at the edge of the diaphragm to a connecting bar as in the case of the Berliner records.

As shown, the needle or pointed sapphire h is fitted by a screw l at the edge of a diaphragm to one extremity of the usual connecting bar communicating with the diaphragm. In order to accomplish the object of this invention, the face of the diaphragm is placed upwards with the needle or sapphire extending

from its edge from the lowest point of the diaphragm so that the common plane of the diaphragm and the needle is inclined at an angle of 45 degrees to the approaching track of the record when being reproduced. The diaphragm sound box e is then connected with the sound arm c by means of a short tube g provided with a plate k sliding into a grooved plate f screwed to the back of the diaphragm sound box.

No. 1531. Dated January 20, 1906. Complete patent accepted October 4, 1906. George Henry Young's "Improvements in Horns for Phonographs, Gramophones and the like."

The object of this invention is to so shape the horn that space within it equivalent to the human palate or the belly of the violin is provided in which the sounds produced may be properly developed and a closer reproduction of the original in regard to quality and timbre be attained.

As shown, a chamber A is formed between the

# An Unusual Opportunity For a Small Investment

**Buffalo Times**—"The one weakness of the telephone as a means of communication—that it keeps no record—has been eliminated."

**Washington Post**—"There is no scratching sound, the words coming from the machine as clearly as from a human throat."

**Cleveland Plain Dealer**—"A thoroughly practical piece of office equipment, for which the demand has already outrun the supply."

**Pittsburgh Gazette**—"Promises to make as many fortunes as were made by the Mergenthaler typesetting machine."

Had you invested only \$10 in Bell Telephone stock a few years ago you could sell your interests to-day for more than \$20,000. Such opportunities for fortune-making investments occur only once or twice in a lifetime, when some great practical discovery is made which like the telephone, is susceptible of a "basic patent," securing to its owners an absolute and legitimate monopoly.

Such an opportunity is now open to the first few investors whose quick intelligence will enable them to see the vast practical usefulness of the

## Telegraphophone

The general interest in this epoch-making invention has grown day by day until it is now the most earnestly discussed device in scientific and commercial circles throughout the world. This is because men realize that the practical usefulness of the TELEGRAPHPHONE will quickly make it a coveted thing

for every man who has a telephone,  
or owns a typewriter,  
or employs a stenographer,  
or enjoys amusement,  
or wishes to learn a foreign language,  
or is deprived of his eyesight,  
or writes letters,  
or sends telegrams.

The TELEGRAPHPHONE has a broader field and a greater future than the telephone, the telegraph, the typewriter, or the phonograph, because

It renders a telephone conversation as tangible and as safe as a written contract,—

It supplements greatly both the wire telegraph and the wireless,—

It supersedes the phonograph in the office and in the home,—

It is not only a wonderful saver of time, but also a great convenience, and insurance against error, both for the correspondent and the typewriter.

**LARGE CLAIMS?** Yes, but you will agree that these are modest claims when you have seen this perfected machine in operation and perceived its marvelous capabilities. Every one of these claims will be demonstrated to your entire satisfaction.

The U. S. Patent Office will tell you that practically all patents issued are based upon improvements or modifications of some already known scientific or mechanical device, but that the TELEGRAPHPHONE is one of those rare instances of a discovery susceptible of a "basic patent," because it embodies entirely new principles of applied science. It is an application of electro-magnetism by which sound waves, even those produced by the minutest whisper or respiration, are electrically projected into the mole-

cules of steel, there to remain and be reproduced at will. There have not been a dozen basic patents of importance issued in the last quarter of a century, and without a single exception such basic patents (legitimate monopolies) have made vast fortunes for early investors.

A limited portion of the treasury stock in the American Telegraphophone Company will be sold to the earliest applicants at \$10 per share. Each subscriber will be limited to a few shares, because the more investors we have, the more general will be the interest aroused in the Telegraphophone. **THERE ARE NO PREFERENCE SHARES AND NO BONDS—ALL SHARES ARE ALIKE AND EACH SHARE CARRIES WITH IT THE RIGHT TO VOTE**, so that with a single share you will have every right, privilege and protection possessed by any other stockholder, and being in at the birth of a great industrial business, you can not only watch it grow, but also assist in some measure in your own community, until the TELEGRAPHPHONE surpasses in magnitude, as it surely will, such vast interests as the Telephone, Air-brake, Phonograph, Sewing-machine, Kodak, and many other industries which originally started in a small way, but by real merit have achieved enormous power in the commercial world.

The net proceeds of the present limited sale will be devoted entirely to manufacturing and to enlarging and equipping the plant for the manufacture and sale of the TELEGRAPHPHONE. The instrument has met with an immediate demand of surprising proportions—orders having already been received for a number far in excess of the factory's utmost capacity of production for many months to come.

We invite your fullest investigation. If you cannot call to see the TELEGRAPHPHONE in operation,

### —THEN CUT OUT THIS BLANK AND MAIL IT TO US TO-DAY—

With your permission, we should like to mail you, entirely at our expense, an illustrated booklet describing the Telegraphophone, and pointing out some of the far-reaching influences which this unique invention is already beginning to exert upon scientific, social and commercial life. To avoid all chance of error or delay in forwarding this booklet to you, please write very plainly:

YOUR FIRST NAME SPELLED OUT:	MIDDLE INITIAL:	YOUR LAST NAME:
MR., MRS. OR TITLE: YOUR MAIL ADDRESS (P. O. BOX, OR STREET AND NUMBER)		
YOUR RESIDENCE (CITY AND STATE):		[K 651 B R]

Our object in the free distribution of these interesting booklets is primarily to inform the public of the practical capabilities of this remarkable discovery, and so by returning this blank, with the particulars asked above, you will be placing yourself under no obligation whatever to us. In the belief that you will wish to take advantage of a most unusual opportunity to make a small, safe and very profitable investment, we will mail with the booklet full information as to how you may secure a few shares of a limited issue of treasury stock, which is about to be made.

**STERLING DEBENTURE CORPORATION.**

apex of the horn and the mouth thereof. This chamber approximates in width to the ordinary horn, but rises greatly into a more or less semi-circular chamber above the normal horn, the chamber developing in returning curves upon the one side of the apex B and upon the other to the mouth D of the horn. Between the chamber and the actual mouth of the horn is a throat C of somewhat lesser area and beyond this throat the horn is expanded into an elliptical mouth D. The horn is preferably made of thin glass.

### MR. LONG NOT MR. MALYON IS MANAGER.

To the Editor Talking Machine World:

Dear Sir—I notice in your issue of September you mention my name as manager of the Zonophone Co. This is incorrect, as this post is filled by Mr. Long; will you kindly mention this in your next issue. Yours respectfully,

T. MALYON.

## A Victory Cash Register

is the main function to a successful business man.

To obtain one does not mean that you should support the monopolist's large selling force by paying an exorbitant price for a cash register. You need a machine that will account for the various business transactions and correctly register your "Cash Sales." A Victory, with a two years' guarantee, will do it. Send for Catalogue.

## CHRISTMAS TIME.

The Talking Machine Dealer Should Not Overlook Its Opportunities.

Are you preparing for Christmas, Mr. Dealer? There is a great deal to be done if you wish to profit by the elixir of good cheer with which the air is filled at Christmas time. It is customary at this season for the public to put on its "glad rags" and go shopping, gladness in its heart and a well-filled pocketbook in its inside pocket. And on what mission is it bent? Why the congested thoroughfares and the crowded stores? Christmas presents are being sought, and it is "up to you," Mr. Dealer, to share in the prosperity that comes of this holiday buying.

To do this you must get in touch with your customers, and convince them that talking machine records make appropriate Christmas gifts and that you have a large supply especially adapted to that purpose.

Then you should make an appeal to the general public residing in the neighborhood of your place of business, asking them to call and be convinced of the wonderful entertaining qualities of the talking machine. Announce a free concert by way of introduction; that will bring them to you; then demonstrate in the most minute detail the fact that the talking machine is positively the only instrument in existence which will give with absolute naturalness of tone every musical instrument, the voice of every well-known singer, the mighty blare of the great concert band, or the soft, delicate melody of the symphony orchestra.

The following is suggested for such an appeal, either in the form of a circular letter or an advertisement in a local paper:

Have you decided upon your Christmas gifts? Before you come to a definite conclusion regarding them, we beg to inform you that there is nothing you can select for your dear ones which will prove so satisfying during the long evenings this winter as a talking machine.

You will admit, we hope, that an instrument which will bring Sousa's band, the voices of our great Opera and Concert singers, the funny sayings of Minstrels and Vaudeville artists; in fact, all the mirth melody, and oratory of the theatre into your home, is worth careful consideration, to say the least.

Ah! you marvel! And well you may. But this statement is true, notwithstanding, and we will deem it a very great pleasure to demonstrate its truthfulness to your entire satisfaction if you will kindly afford us the opportunity.

If you would make your home a place of entertainment, better than Club or Theatre, and at a small fraction of the expense of either, you will buy a talking machine.

It is the only solution to the home enjoyment problem.

JOHN JONES,  
No. 23 Broad Street.

An advertisement such as the above will prove effective, and when your callers arrive upon their tour of investigation into the mysteries of the talking machine, in order that they may be duly impressed not only with your goods, but with yourself as well, you must have your store tastefully decorated as befits the occasion. Let the pictures of the talent which adorn your walls be festooned with holly, and the whole establishment aglow with the good cheer of Christmas tide. Then tell them the story of the talking machine from the start to the finish, illustrate its wonderful adaptability to the many fields of amusement, and they will be enrolled upon your book of customers ere they depart from under your hospitable roof.

Here's to you, Mr. Dealer;

I drink this toast to you:

May Christmas find you prosperous

With lots of work to do,

And when the New Year comes around,

May it bring to you so much trade

That you will bask in Fortune's smiles,

Your reputation made.

—HOWARD TAYLOR MIDDLETON.

The Columbia Phonograph Co. have established a department for the exhibition and sale of their commercial Phonographs at their retail store at 872 Broadway. This move has been made necessary on account of the large demand for these machines in the uptown business section of the city. This department will be in charge of H. M. Nicholson,

## A Business Builder

## The "MEGA"

Have your crank customer or critic try a "Mega" in his home.

Get his views on the fibre horn later. We'll rely upon his opinion as an argument why you should demonstrate the "Mega" for your general trade.

It will pay you well to add the "Mega" to your regular line of horns. This assertion is not a matter of biased opinion, but is a fact that is vouched for by many live dealers.

### TAKE OUR WORD FOR IT.

The "Mega" will sell more records than any other horn on the market to-day.

It will interest a prospective machine customer more quickly and make more machine sales than would be possible by using metal.

Your trade will get the best possible results from its equipment with the aid of the "Mega." This means that the user will be interested longer than is usually the case and naturally will result in additional record sales.

These are mutual benefits to dealer and jobber. They cannot be obtained by using metal as a medium.

There is not a dealer to-day who is not willing to increase his business. There is no one, we believe, but who would be willing to test to his own satisfaction a medium which would accomplish this result.

It's a pleasure to have the majority of your trade voluntarily express themselves well pleased and recommend a horn you have sold them.

This has been the uniform experience of all dealers who handle the "Mega."

The fact that some of your trade may have a large metal horn is not a handicap in pushing the "Mega." We have found it to be the case in the majority of instances that the owner of a machine is willing to increase his equipment if he can obtain better results. There is undoubtedly a large field for the "Mega" among the trade you have perhaps equipped with metal. This means you do not have to depend upon initial trade to demonstrate the "Mega."

Let us tell you more about our product in our literature. We shall be pleased to send it to you, if you are interested.

A Type, Style and Price for Every Requirement.

# THE Victorious Columbia

Honored At The Milan Exposition With The

## GRAND PRIZE

There is no better proof of the superiority of the Columbia Disc and Cylinder machines and Records than the fact that when brought into comparison with all other talking machines expert judgment instantly recognizes their superiority.

The award of the Grand Prize at the Milan Exposition is only another evidence of the absolute superiority of the COLUMBIA and follows the custom that whenever the Columbia goods are exhibited in direct competition with all other talking machine goods, they invariably come away with flying colors.

Milan is not only the musical centre of Europe but might justly be deemed the musical centre of the world. To sing at La Scala is the ambition of every musical artist. To be accepted by the critical Milanese music loving public is a voucher for ability accepted the world over.

These facts give a value to the award of the Milan Exposition which would not obtain under any ordinary circumstances. The Grand Prize gives the Columbia Graphophone and Records a supereminence which cannot be challenged or denied.

The medal pinned on the soldier's breast does not make him a bit braver than he ever was before. It only makes public recognition of virtues already existing. In the same way the award of the Grand Prize does not make the Columbia one bit better than it ever was. It always was the first and best talking machine in the world.

The Milan award is another public recognition of the superiority which always existed.

If you don't handle Columbia goods, you don't do yourself justice and you do an injustice to your trade. They are goods that sell better than any others, goods that make lasting friends and constant customers.

Our method of dealing assures you a good profit which is always uniform. When you put in Columbia goods you can count your profits as exactly and as surely as if they were already to your credit in the Bank.

## TIMELY TALKS ON TIMELY TOPICS.

"Dubbing" is now talked of in the trade as if no particular offense is committed in its practice. The World has had occasion to refer before to the production and sale of these illegitimate records. There is no defense for those engaged in the manufacture of these spurious goods. On moral grounds the "dubbers" have not a leg to stand upon, and presumptively they are equally culpable in a legal sense. It must be remembered that the only case on record—Victor Talking Machine Co. against Albert T. Armstrong (American Vitaphone Co.)—was carried only as far as the United States Circuit Court, who issued a preliminary injunction, and consequently it was never tried on the merits, because of the defendant's death. In granting the enjoining order Judge Lacombe's remarks are so pertinent as to almost foreshadow what his ultimate decision would have been were further argument heard to make the injunction permanent.

Significant, indeed, are these words. Therefore "dubbers" and their allies, who glibly contend the long arm of the law is unable to reach them in restraint of their nefarious business—for such it may be truly characterized—should give heed ere it is too late. That "dubbing" on a large scale is being considered, if not actually engaged in, the trade seems cognizant of, hence The World's warning. Companies who have expended large sums of money to secure "masters" of the world's great vocal artists will not stand idly by and humbly submit, without even a protest, not to mention a battle royal, against being robbed of valuable property acquired by their enterprise and foresight. Possibly the game so far has been too insignificant to waste powder upon; but in view of possible developments, of which those directly concerned are doubtless aware, what threatens to be a wholesale launching of spurious records may be summarily checked by legal process.

The "lawyers" in the trade who speak lightly of "dubbing," and doubtless believe the manufacture of "dubbed" records is without the pale of the law, should look upon Judge Lacombe's opinion in the foregoing suit, reported in full on page 11 of The Talking Machine World, March, 1905. The "dubbers" and their defenders or apologists, as you please, should "read, ponder and inwardly digest" when reaching that portion of the decision where the judge says: "The

novel and interesting question as to whether the defendants have no right to take the discs produced by the plaintiff as records of a piece of music specially executed and reproduce from them duplicates thereof \* \* \* need not now be discussed. \* \* \* Thus they save themselves the expense of securing an execution of the musical piece by singer or orchestra." It is needless to quote farther, as this is sufficient to indicate the animus of the judicial mind.

Some time ago quite some interest was aroused among the city's theatre-goers by a machine displayed in the vaudeville houses under the title of the Immensaphone. As both the program and announcer informed the audience, the contrivance was built and operated on the principle of the phonograph. It was. Its shape reminded one of a phonograph, and it had a brass horn from which issued instrumental and vocal music. There the resemblance ended. The whole contrivance was an immense "fake," although it fulfilled its mission in entertaining the audience for a quarter of an hour or more. It may be said right here that "home" immensaphones will not make their appearance on the market in the near future, as it has not been found profitable to send the case with a brass band and vocalists out to the consumer at nothing down and a dollar a month.

Much interest is attached to the suit of the Victor Talking Machine Co. against the Keen Co., reported on another page. It is evident the courts are not taking any backward step regarding the enforcement of the principle that a patentee can control the price of his invention under any and all conditions. The defendants were selling Victor records at a price, and contended they could not be enjoined; but they were, nevertheless, and it appears they must have been advised the case would go against them, for they withdrew their appeal and permitted the final decree and permanent injunction to be entered without opposition.

C. N. Andrews, of Syracuse, N. Y., president of the Eastern Talking Machine Jobbers' Association (and by the way, what has become of the organization?), is one of the wealthiest jobbers in the business. At one time he was heavily interested in stock operations, making a fortune, but now he is greatly interested in talking machine affairs, and has been very successful.

Mr. Andrews is a man of strong individuality and force of character, combined with a natural dignity of manner which carries great weight. In addition he has the faculty of making friends, and this combination is hard to beat in any condition of life.

At one time the traveling salesmen had formed an association for "mutual benefit and protection." They were to open headquarters and maintain a place for the "gentlemen of the grip," when in New York, to be perfectly at home. It was a splendid idea, but the practical working out of the scheme has been suffered to lapse for one reason or another.

While the great plant at Orange, N. J., known far and wide as the home of the Edison phonograph, has a diversified product—four separate manufacturing companies operating—85 per cent. of the output is talking machines.

Leading jobbers have requested the manufacturers of disc records to use envelopes for the standard line the same as is done with the high-priced goods. Those broaching this matter propose to have the associations take the matter up and thereby formulate an official request, as it were, for what is spoken of as a very desirable improvement. As it is a number of jobbers are "enveloping" their discs at their own expense, but they believe the manufacturers should do this so as to have a uniform and distinctive cover that the public would learn to look upon as a guarantee of genuineness, even if an additional charge were made.

The progress in talking machine developments are so rapid that one cannot leave the trade for even a comparatively brief time and expect to keep abreast of affairs. This comment was made by a prominent manufacturer, who in engaging the services of a superintendent known for his inventive genius, remarked: "Oh, yes, the gentleman is all right in a way, but he has not kept up with the procession. You see, he was abroad for awhile, and then on his return here became engaged in another line. Well, the consequence was that when he returned to this business so much advancement had been made that he almost seemed a back number. Not but what he has natural aptitude, and all that, still he is not quite in touch, and I tell you no one can afford to lose much time experimenting these days. You have got to be right up to the mark. This is true right through, from manufacturing to jobbing and retailing. Improvements are materializing almost daily, in one way or another, and one must keep in close touch with manufacturing methods and practices in order to produce the right goods."

A student of sound, who objected greatly to the metallic ring from the horn of his phonograph, recently discovered a new way of preventing it. He took a half a dozen wooden clips, such as are used to hold paper together, and put them on the edge of the horn. He found it had the desired effect, and recommends their use to all who desire to do away with the metallic tone.

Leeds & Catlin Co.'s new feed device machine is announced as being ready for the market. This old-established company—one of the first to manufacture records—have never made a machine, and this is their introductory in that line. The company are also nearly in a position to furnish round or cylinder records, their list containing selections that will attract attention.

A tall hall (grandfather's) clock, constructed of graphophones and records, is one of the novelties in the window of the uptown branch of the Columbia Phonograph Co., at 872 Broadway. The body of the clock, containing the mechanism, is made of one of the old-style square graphophones. The face is a 12-inch record, the word Graphophone taking the place of the figures, while across the face are the two words "on time." The supports are made of X P records and the base of disc records. A 7-inch disc record forms the pendulum and the weights are made of mandrills of the X P style machines.

# THE PETMECKY MULTI-TONE SELF SHARPENING Talking Machine Needle

Plays loud or soft and intermediate tones with the same needle.  
Sharpens itself. Each needle plays ten records.  
Saves wear on the records.  
Makes disc machines as smooth and scratchless as cylinder machines.  
Makes worn records play without scratch.  
Helps the sale of disc machines and records.  
The only needle that has a character.  
Pays dealers a better profit than any other needle.  
The price is restricted and profits are certain.

## WHAT DEALERS THINK OF PETMECKY NEEDLES:

**The A. Hospe Co. of Omaha, Neb. say:**—"We have tried the Petmecky needles thoroughly. Last week the writer played sixteen twelve inch red seal records with one needle and after the test the needle seemed worn but little."

**The Unique Talking Machine Co. of Houston, Texas, say:**—"We have sold quite a few of your needles and each sale brings others. As to our opinion: we use them on all our high priced records. Did we not consider them the best we would not use them on records worth from \$3 to \$5."

**H. A. Guyon of Red Bank, N. J., says:**—"I have done some investigating with your needles and have come to the conclusion that you have the real thing in needles. I would suggest that you retail them at 25c. per hundred. There is no use throwing a good thing away competing with the needles now on the market when none but yours will play a twelve inch record through distinctly."

**The Huff Music Co. of Bethlehem, Pa., say:**—"The sample needles received. We gave them immediate trial in the presence of a number of persons and the various loud and soft effects produced by the change of fronts is marvelous."

**Harry C. Lansell of Phila., Pa., says:**—"Philadelphia is the home of the Victor and all improvements in anything pertaining to the talkers must have decided merits. Your needle, however, needs no explanation. It speaks for itself."

**Write for free samples, descriptive circular and terms to dealers.**

## THE BUILDING UP OF A BUSINESS.

This Article Embodies the Varied Experiences of Several Successful Talking Machine Dealers Interviewed by the Writer Especially for The World.

The first question which must of necessity arise in the mind of the prospective talking machine dealer is where to locate. This can only be determined after a great deal of very careful investigation, for it is practically the key to the situation. If the location is good, the dealer may either succeed or fail according to his aptitude, but if the location is bad, even ability will not suffice, and the business will surely languish. It is imperative, therefore, that a good location be chosen, and in doing this there are two things to consider:

First, the store should be situated along a thoroughfare upon which people are constantly passing.

Second, the people who pass should, in the majority, be those who can afford the pleasure of a talking machine in their homes.

Then there should be something in the adornment of the show window to catch the eye of the beholder and hold it long enough for an image, hazy, perhaps, but nevertheless an image, to be stamped upon his memory and carried away with him in the form of an advertisement for the store from which it is taken.

By this time we will suppose that the site for the store has been chosen and the window decorated along the lines above described, and that the proprietor has a little time to devote to other matters. The first of these should be a catchy advertisement in a local paper. Every ward in our large cities, and every country town has its little advertising sheets distributed gratuitously, and therefore widely read. The rate charged advertisers is extremely moderate, and it will serve the needs of our friend remarkably well, for it will acquaint people with his existence, and the sooner he does that the better. It should be carefully worked up in a way that will attract attention, the following being an idea for such an advertisement:

Next time you stroll down Broad street,  
Stop in at twenty-three.  
We've something there to show you  
That you will want to see.  
We've opened up a brand new store;  
Come in and have a laugh.  
You'll simply have to, when you hear  
Our latest phonograph.  
JOHN JONES,  
Dealer in Talking Machines and Supplies,  
No. 23 Broad Street.  
We will treat you *all right all* the time.

This advertisement could be made even more attractive if accompanied by an illustration of a humorous character, for people will stop to look at a funny picture when they will allow print to pass them by unread.

How would this do?

The dealer will find that the very first insertion will bring him visitors galore, but they will come out of curiosity, and not to purchase. He should not be disheartened, however, but should treat them courteously, playing the part of genial host to the best of his ability. He must render

all selections asked for, and answer all questions, no matter how numerous, and while at first it may seem a thankless task, slowly, almost imperceptibly, there will be growing among his callers an interest in the talking machine which will eventually ripen into purchases.

We have now reached the point where the business should begin to show some returns, and from this time forward it is simply a question of hard work, viz.:

The local advertising should be kept up.

Monthly bulletins should be sent to patrons embodying, in addition to the list of new records, any little hints or ideas which may occur to him from time to time, and which he thinks will maintain the interest in him and his goods. In other words, he should prove himself a progressive dealer.

There is very little more to be said, for after the business is started, and started right, it will run smoothly and with an ever-increasing profit, provided the man at the helm has his eye open for bars and rocks, is optimistic, and steers under a full head of steam straight for the harbor of success.

HOWARD TAYLOR MIDDLETON.

Editor's Note.—There have been a number of editorialettes published in The World during the past few months dealing with hints to dealers which will be of assistance to the new recruit in the "talker" line at the outset of his career.

## A COLUMBIA ENTHUSIAST.

We present herewith an excellent portrait of Mervin E. Lyle, who came to this city on October 1 to take the position as assistant to J. W. Binder, chief of the executive office of the Commercial Graphophone, General, at 353 Broadway.

MERVIN E. LYLE.

Mr. Lyle is a son of the late Mervin E. Lyle, who was one of the founders of the Columbia business, and is a nephew of George W. Lyle, general manager of the Columbia Co. Mr. Lyle has made a splendid reputation for himself, and is a young man of very pleasing personality, and who will without doubt win for himself a host of friends in this city.

## REVIEW OF MARKET CONDITIONS.

With talking machine people trade has improved the past month. No great rush of business with dealers, but jobbers are in a more cheerful frame of mind, with manufacturers in the various branches swamped with orders. The large companies are doing their best to satisfy the demand for goods, but they are still woefully behind; in fact, it is not believed they will catch up on machines and records until after the first of the year.

It is needless to refer to the situation from the point of view of the "big four," as they are running capacity, increasing their factory forces and enlarging plants to cope not only with the present demand, but to provide for what they esti-

mate will be a still further development of the trade.

One of the marked features in machine sales is the astonishing orders placed for Victor Victrolas, the new hornless combination cabinet product of the Victor Talking Machine Co., who admit their inability to make deliveries as rapidly as might be wished, and possibly prayed for on the part of the jobber. The V. V. has certainly made a "ten strike," and imitations are being heard about in the open market.

## TALKING MACHINE GROWTH.

The Latest Figures Issued by the Census Bureau Are Interesting.

The Census Bureau have recently issued some figures on the development of the talking machine industry for the year 1904, as compared with 1900, the last census date. While the growth of the industry has been greatest within the past two years, yet these figures give an idea of the steady advance of this industry. In 1904 there were fourteen establishments engaged in the manufacture of talking machines with a total capital of \$8,740,618. In 1900 the number was 11, and the capital invested amounted to \$3,348,282. The number of salaried officials, clerks, etc., in 1904, was 537, whose salaries amounted to \$666,489, while in 1900 the number was 114, and their salaries amounted to \$119,145. The average number of wage earners in 1904 was 3,397, to whom was paid \$1,683,903 in wages. The wage earners in 1900 numbered 1,267, and the wages paid amounted to \$608,490. Miscellaneous expenses in 1904 amounted to \$1,653,762, and the cost of materials used to \$4,161,136. In 1900 these amounts were \$215,401 and \$827,520, respectively. The total value of the product in 1904 was \$10,237,075, while in 1900 it was only \$2,246,274.

## ORATORIA BY TALKING MACHINE.

In recent issues The World has referred to the production of opera through the medium of the talking machine and we have now to note another advance, namely, that on October 14 "The Messiah," Handel's immortal work, was given by means of the Gramophone to a large and enthusiastic audience at Halston Hall, Weybridge, England, and a week later another performance was given at Queens Hall. The chorus and solo work was admirably reproduced. This marks another artistic advance.

W. A. Mullen is now attached to the commercial system department of the National Phonograph Co., and assisted at the company's exhibit in the National Business Show, Madison Square Garden, New York, which closed November 3.

## COMMERCIAL GRAPHOPHONE WANTED.

WANTED—Commercial Graphophone, Spring motor or electric. "Wholesale," care of Talking Machine World, 1 Madison Avenue, New York.

## ATTENTION MANUFACTURERS!

Correspondence invited with manufacturers of automatic specialties and advertising novelties desiring Western representation. Boyd-Harrison Co., 6 and 8 Madison Street, Chicago.

## WANTED

Will pay cash for some Talk-o-Phones. Straight arm machines preferred. Must be cheap. Communicate at once with "Regular," care The Talking Machine World, 1 Madison Avenue, New York City.

## WANTED IMMEDIATELY—

A young and energetic manager for our wholesale and retail Edison and Victor Talking Machine Departments. Must be thoroughly experienced and reliable. Write at once, giving references and stating salary expected. E. H. Droop, care E. F. Droop & Sons Co., 925 Penna. Avenue, Washington, D. C.

# 4%—PAID EACH MONTH—4%

As sure as the dividends on Government bonds; six times as often and 25 times as much!

The amazing thing is the certainty of it. The more you look into it the more clearly you will see that the proposition is based on demonstrated facts.

We welcome the closest scrutiny. We urge you to dig to the bottom of every phase of this proposition before you invest. There is nothing to guess at. There is nothing to take for granted. But as surely as you do look into it, just so sure will you be that our statement of 4 per cent. each month—PAID EACH MONTH—is far below what the company will really do.

That is what surprises and delights the business men who look into this matter. The shrewder they are as investors, the better they understand what profits are now being made in certain absolutely legitimate lines, the more certain they are to take stock in

## THE MULTIPHONE, That Musical Marvel

### THE MULTIPHONE

is something new and novel. The music it makes is a revelation—rich, sweet and with a tone volume that is unapproached. There is nothing like it anywhere, nothing to compare with it, nothing to compete with it.

In construction it is a monument of simplicity. A large magazine wheel carries twenty-four phonographic records, any one of which may be reproduced at the will of the operator. A nickel starts it. It has an accurate register for recording the number of nickels taken. The power is from a spring motor. One winding is sufficient to reproduce 18 records. The public does the winding, so there is no expense for power.

In appearance striking and unique, it is the crowning triumph of music producing instruments. A massive and magnificent cabinet, standing six feet high and three feet wide, in general design like an old fashioned harpsichord, finished in antique bronze or built of genuine San Domingo solid mahogany.

The front and sides are of French beveled plate glass, exposing the mechanism to full view.

### SMALL CAPITAL

Here is a New York company (capital only \$100,000) that is doing business now, that is making money now, that is paying dividends (from its earnings) of 4 per cent. a month now.

Multiphones are being built as fast as facilities permit.

### COST AND RETURNS

\$100 will buy one share, paying \$4 monthly at least.

\$200 will buy two shares, paying \$8 monthly at least.

\$500 will buy five shares, paying \$20 monthly at least.

\$1,000 will buy ten shares, paying \$40 monthly at least.

THE MULTIPHONE.

### EARNING CAPACITY

The actual average earnings of seven instruments we have had in operation as a test for about one year have been at the rate per instrument of .....\$501.00

Per cent. for location privilege.....\$100.00

Cost of records, 2 1/2 per cent.

of intake..... 12.00

Cost of attention, repairs, &c. 25.00

137.50

Net profit for instrument per year..\$363.50

The operating profits are so large as to startle one accustomed to receive the rates usually paid for money invested.

The returns are immediate. There is no preliminary period of non-productiveness nor running expenses to absorb capital.

There is no uncertainty as to cost of production. It is definitely fixed.

Each Multiphone is valued at cost, \$250.00, and its proved net earnings are over one hundred per cent. per annum, fifty per cent. of which is paid to the investor and fifty per cent. to the company, who, by reason of this arrangement, give all services without emolument.

For every \$500 invested two additional instruments are completed and put to earning dividends.

### NO SALARIES

Practically every penny earned is available for dividends, for there are no salaries; there are no expenses; there are no leaks. You couldn't think out a cleaner, squarer, more attractive business. The patrons are pleased, the company is pleased, the public is pleased.

### LITTLE STOCK FOR SALE

Only a small amount of stock is for sale. Only a small amount will ever be for sale. Not a share of it has been sold under par—\$100. If you care to get in on the ground floor of the richest, juiciest business chance that ever came your way—look into this one. We don't want a cent from a blind-folded man—the further back you are from Missouri the better we will like it.

Checks, money orders or drafts should be made out to

**KAISER'S VOICE PRESERVED.**

Prof. Scripture, Who Has Undertaken the Systematic Collection and Preservation of the Voices of the Famous Men of the World, Was Able to Secure Some Very Excellent Records of Emperor William's Voice to be Filed at Harvard University and the National Museum at Washington.

Prof. E. W. Scripture has undertaken the systematic collection and preservation of "the voices of persons of historic, literary, or linguistic importance" by means of phonetic records. The first record actually taken by him for such a permanent archive in America was that of the German Emperor, and in the November Century the professor gives the result of his study of the Emperor's voice. He says: "Through the American Ambassador, Charlemagne Tower, I applied for a record of the voice of the German Emperor, for preservation in durable material in Harvard University, the National Museum at Washington and the Library of Congress at Washington. The record is to be kept as a historical document for posterity. The phonetic archives at the institutions mentioned are to include records from such persons as will presumably have permanent historical interest for America. The importance of the undertaking can be estimated by considering the present value of voice records by Demosthenes, Shakespeare or Emperor William the Great.

"The Emperor consented, and the apparatus was set up in the palace. I asked for four records, one for each of the institutions mentioned and one for my own scientific investigations. The Emperor, however, made only two records, designating one for Harvard University and the other for the other purposes. The two records were made by a phonograph with specially selected recorders on wax cylinders. Such cylinders are of no permanent value because they are often injured by mold, and sooner or later they always crack, owing to changes in temperature."

From each original "master record" a metal

matrix was made by coating it with graphite and then galvanoplasting it. The wax master record was then removed (being destroyed in the process), leaving a mold from which "positives"—that is, copies of the original—could be cast. Durable positives were cast in a hard shellac composition and in celluloid. Some casts were also made in wax, and new metal matrices were made from these. In this manner the following material was obtained: (1) A metal matrix and positive of record No. 1, deposited in the National Museum at Washington; (2) a similar set of record No. 1, deposited in the Congressional Library at Washington; (3) a similar set of record No. 2, deposited in Harvard University; (4) a complete set for both records (a metal matrix and positive of each), which I presented to the Emperor; and (5) a reserve set of both. These are the only records of the German Emperor's voice which exist at the present time. The Emperor declaimed the beginning of the speech made by him at the unveiling of the monument of Frederick the Great near Berlin, and also an original essay.

In explaining the purpose of the collection of which the Emperor's voice is the nucleus, the professor says: "We shall never know how Shakespeare intended Hamlet to deliver his address to the players. He had his own notions concerning his plays, and undoubtedly instructed his actors by precept, correction, and example; but the voice is lost, and all we have to-day are the mere printed words. In printers' ink and metal type we have nothing but the mummy of an author's thought. How much more to us would be Longfellow's Psalm of Life, spoken by his own voice than it can ever possibly be now! What would not the world give for records of the voices of Sophocles, Cicero, Charlemagne, Luther and Washington?"

**EDISON EXCHANGE PROPOSITION.**

The record exchange proposition in effect in this country from October 1 to 6 has been universally proclaimed by the trade to be the most satisfactory of any ever promulgated by this

company. The conditions imposed were all that could be expected. They were easily understood, and compared to the large number of shipments the friction and errors were of no consequence. The number of cut out, surplus and defective records returned by many dealers was surprisingly small for each. The aggregate, however, has given the specially created "exchange department" at Orange a most busy month. Probably two-thirds of our 9,000 dealers took advantage of the exchange proposition and made shipments to Orange. All of these arrived by freight within two weeks. With the arrival of the first shipment a score or more of trucks and wagons were put into commission. Yet at one time fourteen carloads stood on the siding awaiting the trucks and wagons. For a time the local freight officials were literally "up in the air." At the factory the "exchange department" worked like beavers, checking the cases, getting them opened, taking the records out of the cartons, inspecting them and filling in the necessary blanks. It is difficult to imagine in advance the magnitude of a task of this kind. It is practically over now, and since the trade is so well satisfied we are greatly pleased, says the Edison Phonograph Monthly.

An exchange proposition similar to the above was in effect in Canada from November 1 to 6. Its general conditions were the same as in the United States, excepting that the records were returned through R. S. Williams & Sons Co., Ltd., Toronto.

**AN ENTERPRISING KANSAS HOUSE.**

The J. F. Schmelzer & Sons Arms Co., Kansas City, Mo., have fitted up an elaborate talking machine department with three separate rooms for demonstrating purposes. They are showing Victor and Edison machines and have built up an extensive trade in these lines. A unique feature of these publicity campaigns is the sending out of invitations to selected list of Kansas City residents requesting that they call and look over the stock of records. The scheme has proven very successful, resulting in a number of sales.

# WE ARE JOBBERS EXCLUSIVELY

A distinction we wish to emphasize. Your orders, Mr. Dealer, have our first and only consideration and it's dollars to doughnuts we can give them better attention than if our interests were divided. Just bear in mind these few points: Orders are filled the day received; our goods are absolutely fresh, and have never passed through a retail department; and our immense stock, practically unlimited facilities and years of experience, enable us to give you the best possible service. If your record orders have not filled as completely as you would like, **try us.**

NEW YORK, NOV. 15, 1906.

**T**RADE for the past month has been excellent, and as a result of the energy displayed in the manufacturing department of the industry during the summer, there is no such shortage of stock as existed last year at this time, and while the manufacturers are far behind in their orders, the jobbers do not propose to be caught napping in the same way that they were last season. They have been getting in goods for months, so that the jobbing stocks throughout the country are in fair shape to keep up with the immediate demands made upon them by retailers. Jobbers who last year were practically denuded of stock at this time, are in splendid condition to take care of the needs of their trade with promptness, and judging from the large shipments which are being made there will be a great depletion in the jobbing stocks within the next two weeks.

**T**HERE is an increased demand for the more expensive products, and the real shortage to-day occurs in the higher priced goods. It would have seemed absurd to have predicted a few years ago that hundred-dollar talking machines could not be created fast enough to supply the demand, but such is the case to-day, and on the special products the manufacturers are rushed to the utmost and cannot keep up with their orders. The business over the country looks particularly bright, and our special reports, which cover nearly every important city in America, indicate that talking machine men are looking for an unusually brisk holiday trade. Surprisingly large shipments are being made to the Pacific Coast. The people in San Francisco are not to be daunted by a combination of earthquake and fire, and are clamoring for goods loudly and insistently, and all over the Pacific Coast talking machines are being sold in larger quantities than ever before. In the South, too, they are moving ahead more rapidly than last

year. In this section for a while the trade had been somewhat slow, but it is now showing considerable pace acceleration.

**T**HE Middle West is a splendid talking machine territory, and the dealers there are enjoying a trade of magnificent proportions. Our reports from abroad, too, indicate an excellent business condition, and the music and piano dealers throughout England are now being won over to the talking machine. As an illustration showing the importance of this trade in England we may say that the Gramophone & Typewriter Co., Ltd., of London, last year paid a dividend of 10 per cent., a bonus of 10 per cent., and has in hand, after substantial reductions have been made for depreciation, a sum amounting to about two and one-half million dollars. When concerns of such magnitude can be built up in London, it certainly shows that the talking machine has merits which invite the investment of large capital.

**T**HE commercial machine, too, is steadily winning its way into business popularity. At the recent business show at Madison Square Garden exhibits of the Columbia and Edison business talking machines have been in evidence, and they came in for a large share of attention from visitors, many of whom left orders to have these machines installed in their offices. The business product is as yet comparatively young, but its possibilities in this particular department are almost beyond estimate, and in a few years the commercial talking machine will be in evidence in business offices all over the world.

**W**E are in constant receipt of communications from advertisers who advise us of the excellent results which they are receiving through publicity in the columns of The Talking Machine World. This pleasing state of affairs is not surprising to us, because we know of the thousands of copies of this publication which go forth each month to all parts of the world. There is not a land where The World is not read, and hardly an island of the sea where it is not a welcome visitor each month. Foreign advertisers are beginning to learn that the circulation of this paper is enormous outside of the land over which Uncle Sam maintains law and order.

**A**TALKING MACHINE MAN, who has recently returned from India, writes: "I have been much surprised to find the position that your publication occupies in the Far East, where it is regarded as the greatest publication of its kind in the world. As far as I am able to learn, you have no competitors, and among the European manufacturers I hear nothing but the kindest words for your publication. They frankly say The World is the leader. I wish you all the success which you deserve, and that is a good deal, because you are doing much for the talking machine interests, not only in your United States, but in all other countries where talking machines are sold."

We have made for many months past a careful survey of the talking machine situation in foreign lands, and as a result we may say, without fear of contradiction, that we are sending more papers to the English-speaking countries throughout the world than any other talking machine publication, no matter where published. In Canada, India, Australia, New Zealand, South Africa and South America The

World is particularly strong, and while we are steadily gaining subscribers in Great Britain, we have not made the same advance there that we have in the British colonies, where The World is looked upon as the greatest exponent of the talking machine industry.

**H**ERE is a communication sent us under recent date by the Petmecky Co., Austin, Tex.: "It may interest you to know that we have had replies, and have secured business from our half-page advertisement in The Talking Machine World from all parts of the United States, several from Canada and Europe, and to-day have received one from Delhi, India. We are pleased with the results of the small amount spent with you for advertising, and believe that any one with talking machine goods to sell can get pleasing results if meritorious goods are advertised in your publication."

It is easy to see why Europeans regard this publication with so much favor, and why it is so greatly sought in other countries. A comparison of The World with other publications in its line will clearly emphasize its superiority. There is behind this newspaper institution a thorough and comprehensive newspaper organization which extends to all parts of the globe, and there is no other institution that is spending the money or using the energy to produce a talking machine publication.

It is gratifying to us to see how highly The World is regarded, because it started out with the view of serving the trade interests fairly and helping to build the industry. It is with pleasure that we receive such communications as the following from Australia:

"The last World was the best, and your paper, like wine, seems to improve with age. You don't know what a blessing it is in this country to get such a wide-awake, progressive paper, which contains the news of the world. I am glad to see your English department, because it shows that your progress is of the kind which does not halt on the frontier line of the various countries."

**N**OW that the November elections have been settled there is every good reason why general business should show steady betterment. The last part of October trade in some lines languished somewhat, and as we approach the holiday season it should show the best kind of improvement.

Talking machine dealers, however, should not figure that trade will come their way without effort on their part. A progressive policy should be inaugurated and maintained by every talking machine man in the world. We have been receiving recently some clever forms of advertising which have originated with dealers, and it is such work which brings the talking machine effectively and intelligently before the public, and will win good business for the dealer. It is useless to think that interest in talking machines can be maintained without effort. The leading manufacturers are doing their part in the columns of the magazines of wide distribution, and this work should be supplemented by local campaigns on the part of the dealers.

**T**HE talking machine is receiving considerable free advertising in the columns of the daily papers, owing to the wonderful advance which it has made, and the fact that it is being used in so many ways in our modern life.

## GOOD REPORTS FROM CLEVELAND TRADE.

Complaints Still Heard of Inability to Secure Goods—November Records Praised—Electric Theatres and Moving Picture Shows Springing Up Constantly—Interesting Chat With Mr. Arnold—May Co. Will Handle Full Columbia Line—Eclipse Musical Co. Improvements—Biograph Pictures to Augment Navy—Price Cutting in the Trade—The Month's News.

(Special to The Talking Machine World.)

Cleveland, O., Nov. 9, 1906.

Business generally among talking machine dealers has been fair for October, and as the season advances is perceptibly improving. Some complaint is heard of inability to procure goods from the manufacturers with that promptness desirable, owing to the large demand. This applies to the machines and accessories more recently placed on the market. The jobbers and dealers are all laying in ample stocks and making preparations for an extensive trade from now until the ushering in of the new year. The November records are accorded universal praise by both sellers and buyers, and are meeting with ready sales. They are so fetching it is simply impossible to resist purchasing.

\* \* \* \*

The electric theaters, moving picture shows, panoramic and other amusement places of a similar nature are springing up constantly in the populous districts of the city. Fortunes, big or little, according to the magnitude of the undertaking, are being developed in their wake. With the addition of every year's education, every year's commercial activity and the unveiling of larger industries, it requires less and less apparently to amuse the public. This is due, perhaps, to the fact that the mind that is highest in poise needs the least in the unusual to turn the current of his thoughts. His already overloaded brain will readily grasp at some inconsequential thing as a laxative.

A large number of these miniature theaters are scattered about the city. Two on Euclid avenue cost a snug sum to fit up, and the rentals are up in the thousands, but they, as well as the others, are doing a profitable business. It really has come to the stage in this city where the man who undertakes to supply the craving of the public for a few minutes' entertainment has a sure thing. The lottery stage has been passed. With reasonable management and a good location dividends are about as sure as taxes and death.

\* \* \* \*

W. J. Roberts, Jr., is doing a nice business, and securing an excellent class of trade. He anticipates a large volume of business during the next three months.

\* \* \* \*

I. R. B. Arnold, proprietor of the stereopticon exchange, No. 45 Sheriff street, has been in the

stereopticon business for a number of years, and is an adept in the business. Your representative called on him a few days ago and asked him in what relation the talking machine stood as an aid to the stereopticon. In a reminiscent mood he said:

"Abraham Lincoln lived less than fifty years ago, and, strange as it may seem to us, never saw an electric light, electric street car, phonograph or telephone. Every new invention creates a demand for others. The world to-day could not dispense with appliances and conveniences that fifty years ago were not known. Not the least useful among these inventions is the talking machine. As a companion to the stereopticon it has no equal. In open air and tent work I have seen people come several blocks to hear what they supposed to be a brass band. It helps to draw an audience and interests people before the entertainment begins, and during the programme there are many things it can do, not simply to 'fill in,' but in the performance of the programme itself. An entertainment is incomplete without a few illustrated songs.

"The talking machine is a very inexpensive member of the company. It runs up no board bill at the hotel, and does not require a railroad ticket as a passenger. As the pictures are projected on the screen it does the singing much better than some member of the company can do it. Especially in connection with battle scenes, its appropriate instrumental music adds much to the efficiency of the programme. The wide-awake exhibitor will find many ways of making his talking machine the most versatile and useful member of his company. I have given over seven thousand stereopticon entertainments during the last thirty years, and since the talking machine came into use have found it to be indispensable to a first-class stereopticon entertainment."

\* \* \* \*

It is the general belief that the talking machine is a medium promotive of pleasure and good feeling generally among those fortunate in the possession of one, or those who are the beneficiaries of its wonderful productions; but there are exceptions, and the disruption of a congregation in a nearby town has resulted from the giving of a picture show, accompanied by music from a talking machine. The resignation of the pastor and the starting of a new

church by the disaffected is the finale of the entertainment.

\* \* \* \*

The Columbia Phonograph Co. recently closed a deal with the May Co., of this city, involving several thousand dollars. The company will carry an entire line of Columbia goods, and do a jobbing and retail business. It is also their intention to carry the Columbia goods in their entire chain of stores at New York, Cleveland, St. Louis and Denver. Mr. Stauffer, the buyer and manager of this department here, says he found it necessary because of the demand for Columbia goods to put in their line. Mr. Stauffer is working on plans to enlarge the present space given to this department to five times its present size, and when completed claims it will be the finest in the State.

\* \* \*

The Eclipse Musical Co. have just completed several decided improvements in their demonstrating and retail departments, and now have a handsomely and conveniently arranged store. "In the past week," said T. H. Towell, manager, "we have sold several Victrolas, and have orders on file which we are unable to fill. Business generally is fairly good with us." The company have on exhibition a Victor Auxetophone, and hundreds who have called to examine and hear it pronounce it without exception the most wonderful musical instrument in existence. "It is a wonderful machine," said Mr. Towell, "and clearly demonstrates the strides the Victor Co. are making over their competitors. I predict a large sale for it, especially to that class of musically educated people whose homes will afford it ample space. We have several prospective Auxetophone purchasers."

\* \* \* \*

As an inducement to encourage young men to join the United States Navy, the naval vessel Wolverine shows biograph pictures, accompanied by a talking machine, of life aboard battleships, scenes of visits to foreign lands and other alluring pictures.

\* \* \* \*

Miss Ryan, in charge of the talking machine department of the Bailey Co., reported business very good, and demand improving. She stated they were selling a good many machines and lots of records, and that the November records were especially fine and selling well.

\* \* \*

A new picture show has been started and is in successful operation at No. 5809 St. Clair avenue.

\* \* \* \*

An old-timer—one of the first phonographs made by Mr. Edison—is on exhibition in the show window of W. G. Roberts, Jr. It was made in 1877, and judging from its looks, weighs 100 pounds. The machine came into the possession

For a Powerful Organ-like Tone the New

## M. Hohner "TRUMPET CALL" Harmonica

Surpasses any mouth-organ that has ever been placed on the market.

No. 220. This instrument which has lately been offered to the trade is endowed with a phenomenal amount of tone power. The reeds are directly connected with a wooden sound-box, into which the tone passes, and finds an outlet through five Brass Trumpet Horns which protrude from the box. No Harmonica of this kind has ever been shown to the trade before, nor is there any which increases the tone so wonderfully. In the hands of an expert player this instrument can be made to sound like a church organ. In producing this instrument the house of Hohner has again shown great results from its constant effort to bring the Harmonica on the level with a high-class musical instrument. The mouth-organ has 10 double holes, 40 reeds, brass plates and is full concert.

**M. HOHNER, 475 Broadway, NEW YORK**

**76 York Street, Toronto, Canada**

of Mr. Roberts about eight years ago, when he first engaged in the talking machine business. It attracts the earnest attention of crowds who stop to examine and discuss the progenitor of the talking machine.

At the store of W. H. Buescher & Son business was reported fairly good and improving. "The prospects are," said Mr. Buescher, "that there will be the usual volume of business this season. We have sold and delivered one Auxetophone, and have secured more orders to deliver as soon as we can get the machines. There is an excellent demand for machines, and the November records are selling rapidly."

Business was stated to be rather quiet at Flesheim & Smith's, though they are having an increasing demand and selling machines all the time. They handle the Zonophone principally, but also have a good trade in Edison phonographs.

Since installing a talking machine department the Smith & Nixon Piano Co. have been doing a very satisfactory business in this line. Mr. Ritter, in charge, said: "Trade is very encouraging. We handle the Victor and Edison machines with a complete line of records. We are getting the business into good working shape. Have sold a number of machines, and records are selling well."

The Columbia Phonograph Co. stated that business was better than it usually was in October. The company are putting in a series of booths for the different machines and records, which will greatly improve their facilities for demonstrating and more readily accommodate the increasing demand.

There seems to be considerable price cutting going on in Cleveland. It is alleged two concerns in the city are offering special inducements in the way of reduced prices on supplies, such as horns, stands, etc., in order to make a sale

of a machine. This price cutting seems to be on inexpensive machines; in fact, they are being offered as low as \$26, complete, including 12 records, machine and a large horn with support, showing the keenest kind of competition.

H. E. Jones, manager of the commercial graphophone department of the Columbia Phonograph Co., says he finds it difficult to cover all of the opportunities for business which present themselves. "The month of October," said he, "showed such an increase of business that we have been scarcely able to keep abreast of orders. During the month we sold outfits aggregating 23 commercial graphophones, with necessary supplies and equipment, to eleven of the most representative concerns in town. At present we have very promising trials in progress in the offices of six of the largest concerns in the city and vicinity, and more in immediate prospect."

Collister & Sayle sell Victor machines and records, and report business fair and demand increasing. They stated the November list of records was fine and selling well.

The Columbia Co. sold Twentieth Century graphophones to two new moving picture people this month. One to Spencer & Shaw, corner of Willson and Kinsmore street, and one to Korach & Loney, on Lorain avenue.

Mr. Evans, of the Ball-Fintze Co., Newark, O., was in the city a few days ago, calling on the trade. Mr. Evans was making the trip for Mr. Neff, whose business engagements elsewhere prevented him from coming.

Mr. Hugg, representative of the National Phonograph Co., was calling on dealers in the city October 18-19. He left with a good bundle of orders.

T. F. Murray, representing the Columbia Phonograph Co., of New York, was a recent visitor to the city. He was the recipient of hearty greetings from the talking machine men.

## OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., August 10, 1907.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past five weeks from the port of New York:

### OCTOBER 8.

By Antonio Scotti, Baritone.  
Sung in Italian, Orchestra accompaniment.
- B. 33—Balkon Scene, "Euch Lüften" ("Ye Breezes") "Lohengrin".....Wagner  
By Mme. Rappold, Soprano.  
Sung in German, Orchestra accompaniment.
- B. 34—Deserto Sulla Terra ("Alone in the World") "Il Trovatore".....Verdi  
By Romeo Bertl, Tenor.  
Sung in Italian, Orchestra accompaniment.
- B. 35—El mar sin playas, ("The Sea Without Shores").....Sancedo  
By Gustave Berl Resky, Baritone.  
Sung in Spanish, Orchestra accompaniment.
- B. 36—Lohengrin's Abschied, ("Lohengrin's Farewell") "Lohengrin".....Wagner  
By Andreas Dipple, Tenor.  
Sung in German, Orchestra accompaniment.
- B. 37—L'aria di Gilda, "Caro Nome" ("That Dear Name") "Rigolotto".....Verdi  
By Miss Bessie Abbott, Soprano.  
Sung in Italian, Orchestra accompaniment.
- B. 38—Siegmond's Liebeslied, (Siegmond's Love Song) "Walküre".....Wagner  
By Heinrich Knote, Tenor.  
Sung in German, Orchestra accompaniment.
- B. 39—L'air de Stephano, (Stephano's Air) "Romeo et Juliette".....Gounod  
By Mme. Jacohy, Contralto.  
Sung in French, Orchestra accompaniment.
- B. 40—"Deo miei bolienti Spiriti" ("Fervid nad Wild My Dream of Youth") "La Traviata".....Verdi  
By Florencio Constantino, Tenor.  
Sung in Italian, Orchestra accompaniment.

SATISFY CUSTOMERS.

Bad Plan to Send Records Not Ordered if You Desire to Cultivate Trade.

One of the most discouraging things to the owner of a good talking machine is the difficulty frequently experienced in certain quarters in obtaining the records desired. After spending possibly an hour or more picking out a list of desirable records from among the thousands of titles offered in the catalogue it is not pleasant to try the records sent as filling the order and find that a ragtime duet of obscure origin has been substituted for a quartette rendering of "Asleep in the Deep" or the "Arkansas Traveler" as a violin solo be sent, instead of an operatic selection. A reasonable man will insert several extra numbers in his order to allow for possible shortage in some of the records chosen, but if it is found impossible to fill even this supplementary list the customer should be so informed and not supplied with records that are of no use to him.

We know of one instance where a customer got only five records out of a list of over two dozen that he selected, and the balance of the list was filled in with records that were directly opposite in character to the ones desired. The result was that thereafter he sent to another city for his records, thus depriving his home dealer of considerable business.

It is more important to cultivate the customer and keep his business, even although only a few records are supplied at a time than to flood him with undesirable records once and stop his patronage. The best plan of all, however, is to carry as complete a line of records as possible and fill all the order. The increased outlay will mean a greatly increased profit.

Formerly an exclusive Edison jobber, W. D. Myers, Williamsport, Pa., has put in a disc line, handling the Zonophone goods on an extensive scale.

## FINAL DECREE IN KEEN CO. CASE.

Entered in Favor of the Victor Talking Machine Co. Last Week—Some of the Points Involved in This Interesting Suit.

(Special to The Talking Machine World.)

Philadelphia, Pa., Nov. 7, 1906.

The suit of the Victor Talking Machine Co., Camden, N. J., against the Keen Co., Victor distributors of this city, has attracted attention in the trade from the special nature of the controversy, which involved a phase of selling goods contrary to the protected price principle. The Victor Co. filed their bill of complaint June 21, 1906, and on the 28th following a motion was argued for a preliminary injunction before Judge McPherson, of the United States Circuit Court, Eastern District of Pennsylvania. The complainant alleged that the Keen Co. infringed claims 5 and 35 of their Berliner patent No. 534,543. The defendant contended that because patent No. 548,623 had been decided by Judge Hazel, United States Circuit Court, Southern District of New York, to be restricted to the particular material of which the record was composed, which defendant did not use, that, therefore, the complainants had no right to claim restrictions upon the sale of records.

The enjoining order was issued, and subsequently an appeal was taken to the United States Circuit Court of Appeals, Third Circuit, argument being heard October 22. Later the Keen Co. withdrew the appeal, and Judge McPherson thereupon made the injunction permanent, entering the subjoined decree on November 5:

"Ordered, adjudged and decreed, that the letters patent in suit, No. 534,543, issued February 19, 1895, to Emile Berliner for improvement in gramophone, are good and valid in law, and that the complainants herein, the Victor Talking Machine Co. and the United States Gramophone Co., are and have been the true, lawful and exclusive owners and licensees, respectively, of the said letters patent No. 534,543 at and since the times set forth in the said bill of complaint as alleged in the said bill of complaint, and of all rights and profits granted and secured thereby, together with all rights of action existing by reason of infringement of the said letters patent; that the said defendant herein, the Keen Co., have infringed upon said letters patent by selling or causing to be sold, complainants' sound records patented under the said patent No. 534,543, forming an essential element and part of claim 35

of the said patent, for use in accordance with the method claimed in claim 5, in violation of the terms and conditions of the license under which the said sound records manufactured by the complainants were licensed to be sold and used, and in violation of the reserved rights of the complainants in the said sound records, particularly by selling the said sound records to the public at a less price than the price at which the said sound records were licensed by the complainants to be sold or used, as set forth in the notice of license attached to each of the said infringing sound records, and as set forth and alleged in the bill of complaint.

"It is further ordered adjudged and decreed that a writ of injunction issue in this cause perpetually restraining the defendant, the Keen Co., its associates, attorneys, servants, agents and workmen, and each and every of them, from directly or indirectly, selling or causing to be sold or offering for sale, or advertising for sale, or in any way disposing of talking machine sound records of complainants' manufacture forming a part of claim 35 of said letters Patent No. 534,543, in suit, and constructed to be used as a part of the combination thereof, which claim reads as follows, namely: '35. In a sound reproducing apparatus consisting of a traveling tablet having a sound record formed thereon and a reproducing stylus shaped for engagement with said record and free to be vibrated and propelled by the same, substantially as described.'

"And from selling or causing to be sold, or offering for sale, or advertising for sale, or in any way disposing of talking machine records of complainants' manufacture which are intended for use, or intended to be used with apparatus or devices which embody the method of claim 5 of said letters patent, which claim reads as follows, namely: '5. The method of reproducing sounds from a record of the same which consists in vibrating a stylus and propelling the same along the record by and in accordance with the said record, substantially as described.' Or which are intended to be operated in accordance with said method claim 5, at a less price than the price at which the same have been licensed, are licensed, or shall be licensed by the complainants, in violation of the reserved rights of the complainants, or in violation of any of the terms or conditions under which the said records are, or have been, or shall be, sold by the complainants, or in violation of any rights of the complainants whatsoever in the premises."

## MUSICAL COPYRIGHT LEAGUE.

Organized With Paul H. Cromelin as President  
—To Take Action on Pending Bill.

On October 15 the American Musical Copyright League was organized at the Hotel Astor, New York, with Paul H. Cromelin, vice-president of the Columbia Phonograph Co., general, temporary president. The only other representative present from the talking machine trade was E. F. Leeds, president of the Leeds & Catlin Co., New York. At a subsequent meeting, on the 22d ult., the organization was perfected, Mr. Cromelin being duly elected president and Mr. Leeds a member of the executive committee. The league is a combination of talking machine and perforated music roll interests. Active steps will be taken to induce the Patents Committees, by whom the new copyright bill is being considered, to incorporate in the measure a clause exempting automatic reproductions of all kinds from its provisions. A third meeting was held at the same place November 5, when addresses were made by several lawyers who had made arguments before the joint sessions of the Patents Committees of the Senate and House in June opposing the measure.

## GET MUSIC BY TELEPHONE.

Directors of Company Backing New Electrical  
Contrivance Hear It Work.

Following years of experiment by Dr. Cahill, the dynamophone, or, as some call it, the electro-phonograph, took its initial step toward commercial practicability at Martin's the evening of November 9, when the members of the New York Electric Music Co. were entertained during a banquet by selections transmitted from the machine in the company's office, at Broadway and 39th street.

Apparatus for receiving the music consists of a phonograph horn attached to the telephone receiver. Musical sounds are electrically produced from a plant of two hundred dynamos, the operator playing on a complicated keyboard. There will be a concert each evening, and subscribers will be treated to classical music played by experts. The company plans to enlarge its plant in the future, so as to afford a variety of concerts, operatic, popular, religious and classical, with any of which the subscriber can be connected according to his taste. The tone qualities of the different orchestral instruments are splendidly simulated.

## ADDRESSES BY J. W. BINDER.

J. W. Binder, manager of the Columbia commercial department, addressed the classes in salesmanship in the Y. M. C. A. rooms of Brooklyn, on Thursday evening, Oct. 11; on Friday evening, Oct. 12, he spoke before classes in salesmanship at the Twenty-third Street Y. M. C. A., and on Saturday evening at Newark, N. J. The subject of these talks was salesmanship in general with special application to the selling of commercial graphophones.

The J. Raymond Smith Co., of 2126 Sutter street, San Francisco, Cal., have a very excellent talking machine department which is proving quite successful.

The Pennsylvania Railroad Co. are arranging to place powerful talking machines in their various stations for the purpose of announcing the arrival and departure of their trains.

The Ball-Fintze Co., Newark, O., recently made affidavit that they had in stock over 163,000 records. During the winter this concern will carry over 300,000.

The Western Talking Machine Co. have removed to 41-43 North Ninth street from 128 South Ninth street, Philadelphia, Pa., where larger quarters and better facilities are secured.

## THE SYRACUSE MULTO-RECORD RACK

A practical combination of "The Heise System" of Wire Record Racks combined with the Rapke Label System and neat pasteboard trays.

Most desirable where dealer desires to carry several records of one kind. Neat, compact, strong, durable. Admits of being fastened to wall, or back to back, or in any way designed to insure greatest economy in space.

This Size, Holding 240  
Trays, 3 Records to Tray \$15

Get Circular explaining details.

## AN AID TO THE PUBLIC SPEAKER.

How the Talking Machine May be Utilized in This Connection—A Pointer for Dealers.

The public speaker, whether he be recitationist or lecturer, will find the talking machine a valuable adjunct to his work. Let us consider first the recitationist, the man who entertains audiences throughout the rural districts where the orchestra, and even the piano, is not available. Unaccompanied and without incidental effects of any kind, his voice, no matter how mellow and magnetic in quality, loses a great deal of its charm, but with a soft orchestral melody as a background, it becomes a thing of

RECITATION WITH TALKER OBLIGATO.

power capable of controlling the feelings of its auditors at will.

For example, we will suppose he is reciting a poem such as "Echoes of the Past," which begins—

From a little shop in Paris  
With an ivy covered wall,  
Echoed the strains of a 'cello,  
Played by M'sieu DuVall.

Then it goes on to tell of the fast friendship which existed between the old Frenchman and his instrument, and ends in a pathetic manner as follows:

In his chair by the firelight  
Sat old M'sieu DuVall;  
By his side lay his 'cello broken;  
His hands had let it fall.

In the light from the fireplace,  
That wandered o'er his face,  
I knew a Heavenly messenger  
Had visited the place.

With a soft 'cello obligato, this poem is a thing of beauty, and without it the effect is crude and unfinished.

Of such great benefit is incidental music to the

recitationist that he has reached the point where he must have it in order that he may do justice to himself before an audience. He depends on it as much as the singer does his accompaniment, and when in some country town far removed from the facilities he craves, and is forced to work without them, his ability to entertain is reduced to a minimum.

Mr. Dealer, you have the remedy for this complaint always at hand, and you should send out circular letters at once to elocutionists in general, telling them what your machines will do for them in this line, and that they can all have the incidental effects which the theatre affords for the small fraction of the cost of one accompanist.

To the lecturer the talking machine is also invaluable. If he is lecturing on one of our greatest American poets, Longfellow, for instance, and has mentioned "The Bridge," as one of that great man's most noted and beloved creations, how fitting to have a talking machine at hand to sing in a masterly manner with orchestra accompaniment, the masterpiece above described.

It will pay you, Mr. Dealer, to get in touch with gentlemen of this profession, too.

HOWARD TAYLOR MIDDLETON.

## LANGUAGE INSTRUCTION BY 'PHONE.

In the talking machine parlors of the E. F. Droop & Sons Co., on Pennsylvania avenue, Washington, D. C., there was recently demonstrated in a very effective manner the advantages of the talking machine method of language instruction. The demonstration was in charge of Brian Dunne, of the department of languages of the International Correspondence Schools, Scranton, Pa., and aroused much interest. The predominating advantage of the phonograph method of language instruction is that the student is able to obtain the absolutely correct pronunciation of over 2,000 words in any language which are contained on the twenty-five records furnished with each separate course.

## NEWS FROM THE SOUTHLAND.

The Phillips & Crew Co., of Atlanta, Ga., have recently remodeled their building, and the talking machine department now occupies the entire second floor. Besides their prosperous retail business they are large jobbers and enjoy a trade extending along the South Atlantic seaboard. Mr. Ben Lee Crew, the general manager of the company, has the talking machine depart-

ment under his wing, and traveling men tell many stories of the warm reception he always extends to knights of the grip.

The Alexander-Elyea Co., of Atlanta, engaged in the talking machine business less than a year ago, but have already built up an excellent business. They are exclusive Victor jobbers. They recently placed a notable order for H. & S. supplies.

When the L. Grunewald Co., of New Orleans, get into their new building, which is being constructed just across the street from their former location, they will go into the talking machine business much more extensively than heretofore. Commodious quarters will be provided for the department, and several private rooms fitted up for demonstration purposes.

The National Automatic Fire Alarm Co., of New Orleans, rank among the largest of Southern jobbers. Their line consists of the Victor and Edison goods. Their retail department boasts of having sold two Auxetophones and five Victor-Victrolas in two weeks, besides taking orders for three more of the latter to be delivered as soon as the factory is able to ship them.

## NEEDLES AS AN EXCEPTION TO A RULE.

It is a common saying that "seeing is believing," but the Blackman Talking Machine Co. claim that this will not apply to their Playrite and Melotone needles, for with them it is a case of "hearing" to believe.

A neat little folder that they have issued has as a title "They play from start to finish, and work all the time." Mr. Blackman says that this reminds one of the newspaper conundrum of "black and white and read (red) all over." In coining his trade mark name, "Playrite," he also added "the name tells what they do." for the Blackman Co. claim that their Playrite needle plays a 12-inch record perfectly from start to finish, and their Melotone needle is furnished to fill the demand for a needle that will give a softer reproduction.

The needle question has been a very serious one, for the manufacturer has been making great improvements in the record, whereby a much harder surface is the result, and this has made necessary a needle that will stand wear and not become worn out when only half of the record has been played. They are so confident with the result of their Playrite needles that they are furnishing free sample packages to all dealers and jobbers upon request, and furnishing very attractive advertising matter for distribution.

## Popular Hebrew Records

Now have ready the most complete selection of Hebrew Records ever offered. These include all of the popular numbers, and are made by the most talented Hebrew artists.

## Dealers Have Found Them to be Remarkable Sellers

Their clearness has been commented on, and many unhesitatingly pronounce them the best records made.

It is our aim to have a complete stock at all times, and twenty new numbers will be ready on the 20th of November.

Under the new management of this business the closest attention is given to dealers who have a demand for this class of records, and every dealer can be assured of the most liberal treatment, and that his orders will be promptly filled.

A splendid opportunity for first-class dealers to increase their trade is here afforded.

Send for list of latest records. It will pay you.

## PITTSBURG REPORTS PROGRESS.

Business Very Prosperous—Powers & Henry's New Store—Enders Opens Up—Mitchell in Charge of Commercial Graphophone Department—Other News of Interest.

(Special to The Talking Machine World.)

Pittsburg, Pa., Nov. 12, 1906.

From inquiry at the many talking machine stores throughout the city there is no doubt but that the business is in a very prosperous condition. All classes of people are buying all kinds of machines. Selling machines on time has become a very notable feature of the business here, and one which has brought great prosperity to the several dealers. There is a very large class of people, honest working people who are earning good wages throughout Pittsburg and surrounding territory, who are making wages which enable them to indulge in the luxuries and pleasures of life, and they are not slow to take advantage of their opportunities. These people are without musical education in very many cases, and living somewhat remotely from places of amusement, take to the talking machines naturally as a source of entertainment and diversion. Hundreds of machines are being daily sold to these people, very generally on time payments. It necessitates upon the part of the dealers keeping up a regular collection department. These departments are capably and ably manned, and from inquiry it is learned that comparatively few losses are sustained from transactions of this kind.

The Columbia Phonograph Co., under the management of Elmer A. McMurtry, has taken a somewhat forward step in keeping open until 9 o'clock every evening and until 10.30 on Saturday. Mr. McMurtry reports that his innovation has been very profitable up to the present. Notwithstanding that the Columbia office is on Penn avenue and not in what would be termed strictly the center of transient traffic, a great many purchasers have found their way to the Columbia store at night, and have made in very many cases handsome purchases. The opportunity for careful investigation of the machines, and without rush and hurry hearing the records available, probably promotes many sales that would not be made throughout the day.

Powers & Henry Co. report excellent business in both of their stores. They have recently opened a store in the Arcade on Fifth avenue, which is also adding to the prosperity of this enterprising concern.

W. H. Enders, well known in New York in the

talking machine business, and more recently connected with the Powers & Henry Co., has opened an establishment at 126th street for renting films.

Powers & Henry Co. have on exhibition a Victor Auxetophone, the only one in Pittsburg up to the present time. It has aroused considerable interest and excited a great deal of wonder as to what will be the next advance step in the talking machine line.

The C. C. Mellor Co., Fifth avenue, have recently added to their stock a complete line of Columbia records, both cylinders and disc, and also a complete line of the disc graphophones. They report excellent business in all of their lines of talking machines.

R. L. Mitchell had recently been put in charge of the Pittsburg territory for the sale of commercial graphophones. Mr. Mitchell was formerly a newspaper man, and more recently a publisher of a trade newspaper in this city. He reports that the effect of the business show in New York is being felt in this city in many inquiries for the new commercial graphophone. Those who saw it pronounced it absolutely perfect, and many are now waiting the opportunity to give it a thorough trial in their own offices.

## GREAT INCREASE OF SALES

In West Virginia—Some Plain Words About Conditions—A New Snake Story.

(Special to The Talking Machine World.)

Wheeling, W. Va., Nov. 8, 1906.

When you ask the talking machine dealer, "How is business?" the invariable reply is, "Slower opening up this year than last." When a comparison of sales is made, then comes the revelation that the increase of this year's sales over last year is well worth considering. When one looks over the stocks of goods now carried by the retailers in this city, as in comparison with a year ago, then it's easy to figure out the cause of the feeling usually expressed. They merely overlook the fact that their big stock was put in so that the holiday business could be handled to the best advantage, and then have a surplus to help them carry on business without being solely at the mercy of the jobbers, who by that time will be handing out the old story of "I told you so" instead of their present promises to fill 98 to 100 per cent. of your record orders.

By the way, a new snake story was uncoiled here. A down-river West Virginian stalked into one of the prominent talking machine stores last week and asked to be shown "one of them

things what makes a noise." At the same time he offered the information that he bought and captured snakes, tamed them, then sold them for pets. He thinks the machine will be a great aid to him in the taming end of his business. If his experimenting meets with success the summer business in talkers should show a great increase. Mother will allow Mary to go out and pick blackberries if she promises to keep the phonograph playing all the time.

Both C. A. House and the F. W. Baumer Co. report good business in their talking machine departments. Bard Bros. keep pushing right along after business. The showing of machines and records made at their new Main street store would be a credit to a much larger city. They have just had the front of their building re-decorated; it makes a very striking appearance.

Manager Rogers, of the Columbia store, is well pleased with the business he is getting.

## LIPTON AND THE "TALKER."

Hears His Own Voice While Visiting the Columbia Phonograph Co.'s Plant Last Week.

Sir Thomas Lipton heard his own voice reproduced while a guest in the factory of the Columbia Phonograph Co.'s factory at Bridgeport, Conn., on Friday, November 9. The distinguished yachtsman was a guest in that city, and in the forenoon he was taken up to the plant of that company. On the way the auto that carried him broke down and the occupants were gently lowered to the street. Fortunately no one was hurt. Arriving at the factory Sir Thomas was instructed in the art of sound reproduction and allowed to see the record-making. John J. Fisher sang for record an original song, entitled "Tommy Lipton," to the air of "Tommy Atkins." This song had been sung for the first time at a banquet given in Sir Thomas' honor the previous night. The yachtsman then spoke for a record, his theme being "How I failed to lift the America's cup." He first treated the subject humorously, told stories to illustrate his points and succeeded in spinning an interesting yarn. He said that knowledge of the sailing conditions about Sandy Hook had something to do with his defeat, but he was careful to emphasize the statement that he had been beaten fairly each time. In terminating the speech he referred to the bright prospects for a fourth race, and that he pinned his faith in the fourth leaf of the shamrock, and was confident that Shamrock IV. would be the means of taking the cup across the Atlantic. It is hoped that Sir Thomas will allow the Columbia Co. to place this record on the market, as he has a host of admirers that would be proud to own one.

## PROTECTS "PENNY ARCADES."

Police Must Let Them Alone While Injunction Is Argued.

The question whether the "penny arcades" must obtain theatrical licenses is before Justice Mareau, of the Supreme Court. There are over forty such places in Manhattan and Brooklyn, and it has been held by the police that they must obtain licenses. Most of them have none and others are operating under showman's licenses, for which they pay \$25 a year. The police contend that they must obtain theatrical licenses, which cost \$500 a year.

Captain O'Brien has been making trouble for several of these places in Brooklyn, and Gustavas A. Rogers has obtained an injunction preventing the police from interfering while the question is before the courts.

Under the title "Powers & Henry, Agents for the Edison Phonograph Co.," some party or parties are sending out letters through Colorado for some purpose not apparently legitimate. The Powers & Henry Co. desire to warn the trade at large, particularly in the West, against communications of this kind, and they have placed the matter in the hands of the police. The letters are distinct forgeries.

## CROMELIN REPLIES TO SOUSA.

Declares Mechanical Music Is Not a Menace  
But a Blessing.

In The World recently reference was made to the article by John Philip Sousa in last month's Appleton's Magazine on "The Menace of Mechanical Music." In the current issue of Appleton's there appears a very interesting communication in reply to Sousa's article from the pen of Paul H. Cromelin, vice-president of the Columbia Phonograph Co., in which he says:

"I have read with much interest an article under this title in the September Appleton's, written by my distinguished friend, John Philip Sousa. Having been closely identified with the development of the talking machine, I was curious to learn how many and which of our cherished institutions were menaced by the great and growing use of these mechanical reproducers of music; and after having read the catalogue set forth in the above entitled article, I confess to having breathed a sigh of relief.

"But before taking up the details, I cannot refrain from calling to mind that the mechanical reproducer of musical and other sounds has received, in the article referred to, precisely the same greeting that has been accorded to the other really great products of mechanical genius. There are not lacking, in such cases, those who see in the new device some peril to the community, and who seek to excite opposition to it, though usually, if the opposition be probed, a selfish motive may be found. One of the distinguished instances was the cotton gin, which was regarded as so serious a "menace" to those who earned a livelihood by separating cotton fiber from its seed that the inventor was stoned by the infuriated representatives of the 'menaced' industry. Now, the annual output of about ten million bales of cotton is the answer to that historic wail of unfounded apprehension.

"There are those still living who can recall the outcry against the sewing machine, and the predictions that it would deprive the poor sewing girl of her scanty wage. But notwithstanding these predictions, plausible as they appeared to be, there are to-day a score of sewing women earning, and with comparative facility, good wages by the aid of the mechanical device, where there was then one securing a pittance by plying her needle.

"But, after all, what are the existing institutions which are menaced by the talking machines and automatic piano players?

"First, it is complained that the expression or rendition of music suffers, with a threat of deterioration of the public taste and appreciation in music.

"To this assertion, a general denial can be confidently entered. No one who reflects upon the matter for a single moment will deny that the average rendition of music by the amateurs in the homes of our land is far, far below that of the mechanical music reproducer of to-day. It is just because these devices bring into our homes renditions of music of a superior quality,

to which the vast majority of our people are total strangers, that they are meeting with such universal acceptance.

"But there is much more than this. The average amateur is generally limited to one instrument, and his or her proficiency admits only of the indifferent rendition of a small number of compositions, usually of elementary character and mediocre quality. The graphophone, on the contrary, brings into the home the widest range of musical renditions, vocal and instrumental, solo and concerted, rendered, it may be, by the greatest living artists. So far, therefore, from the musical taste and appreciation of the public being menaced from this cause, it is safe to say that nothing has yet been devised by the wit of man so calculated to promote these qualities.

"But let us hasten to the next of our menaced institutions. Our author assures us that the onward march of the mechanical music maker will cause the girls of our nation to desist from the effort to make mediocre piano players of themselves, and will also diminish the use of the banjo, mandolin and guitar. Assuming for a moment the correctness of this statement, which of our readers, on hearing it, will not cheer onward the march of the mechanical music maker, and wish that it may soon accomplish its wholesome mission? What a fearful waste of time and what needless suffering have been caused by the futile but persevering attempts to make all our Mary Janes "learn the piano." And to think that now a mighty reforming agency has appeared, which will abolish from our houses and flats the horrors of scales and exercises, and will confine these tedious performances to the musical colleges, or to those who really possess the gift of musical expression!

"But I deny that the progress of the mechanical music maker will diminish individual application to the art of musical rendition. On the contrary, one important result of the present-day musical sound records is to excite an interest in music in millions of homes which otherwise have absolutely no access to really artistic musical renditions, or even access to renditions of any sort of great musical compositions. To those gifted by nature with a singing voice the opportunity of listening repeatedly to the phrasing and expression of great artists is of incalculable benefit. Already the high-class in musical sound records have produced great educational results, affording to gifted persons in remote places and of slender means the extraordinary advantage of singing lessons from the greatest living artists, and a career of great utility is opened in this direction.

"The idea that any person having the natural ability and desire to sing, will permit a mechanical device to do his singing for him is laughably absurd. On the contrary, the mechanical reproduction of songs by correct methods will only stimulate him to sing the more and enable him to sing the better.

"Music and musical tone production has differed in the past from all other forms of art in that the pleasure which it afforded was but of a momentary and passing existence. We love the

pictures and paintings in our homes and in the great galleries, and delight in feasting our eyes upon the masterpieces which noted sculptors have produced. There is a certain sense of possession and security in the knowledge that, if we care to, we may cross to Dresden and linger as long as we will in silent contemplation, not to say awe approaching adoration, before Raphael's Sistine Madonna. A few steps into another room, and once again Hoffmann's wondrous masterpiece, Christ in the Temple, is ours to remain with and to behold in sweet meditation.

"But, oh! the memory of that night when Jean de Reske sang at the Metropolitan. Beautiful and sweet and blessed memory, but only a thing of memory now; and the recollections of the nightingale tones of Jenny Lind's remarkable voice! Ah, but a recollection now; a thing of the dead, dead past—gone, gone forever.

"But the talking machine will change all this, and future generations will rejoice and be able to enjoy forever the music of the great artists of to-day. Tamagno is gone, but the voice of the great Italian tenor remains and brings pleasure and instruction to thousands of homes. Our well beloved Joe Jefferson is no longer with us, but we have a precious legacy in Rip's quaint and pathetic meeting with his daughter 'Meenie,' after twenty years' sleep. The matchless and incomparable triple-tongue cornet tones of Jules Levy remain to delight and please us, although all that was mortal of the great artist lies buried in a country churchyard.

"Can we pay too great a tribute to the genius in the invention which makes it possible to bottle up this wine of music and song inexhaustible, and should we not offer up our thanks for 'The Blessing of Mechanical Music'?"

## CHANGES IN CANADA.

Monday C. H. Wilson, general sales manager of the National Phonograph Co., got back to New York from a week's trip over the border. The business of the company has expanded so rapidly in Canada that it has got beyond R. S. Williams & Sons Co., Ltd., of Toronto and Winnipeg, who were the sole Edison jobbers in the Dominion. Dealers being unable to obtain goods as quickly as desired add to facilitate shipments Mr. Wilson created the following additional jobbers: Peter Kelly, Montreal; C. Robitaille, Quebec, and W. H. Thorne & Co., St. Johns, N. B.

An immense Victor dog, as an illustrated sign, will be placed in front of Landay Bros.' new store, 440 Fifth avenue, New York. It is over five feet high, and in proportion throughout.

A. L. Irish, former president of the Talkophone Co., Toledo, O., is the executive head of the Atlantic Phonograph Co., a New York corporation, with a capital of \$2,000,000, with an office in New York City. J. L. Adrien is secretary and O. Clayton Reed his assistant. These were connected with talk-o-phone interests also.

## TALKING MACHINE AS A TEACHER.

Has Won an Important Place in the Musical World, According to N. J. Corey—Writes Most Illuminating Article for "The Etude."

Inventive ingenuity has accomplished so much during the past century, and the human mind has become so accustomed to a succession of marvels, that it now hardly takes notice when a new one is presented. Formerly people could scarcely believe when the various remarkable discoveries and inventions were successively announced, but now incredulity is fast becoming obsolete. Since the successful application of wireless telegraphy we are prepared to believe almost anything, even in the construction of a practicable airship, thus far the most unconquerable of problems. Who would have believed, a quarter of a century ago, that ultimately the sound of Adelina Patti's voice could be heard in every house in the land? Phonographic instruments were not unknown then, but only snarling travesties of the human voice were heard issuing from them, nothing that could for a moment attract the attention of a serious lover of good singing. Now the possibilities of the reproduction of sound have been so enormously perfected that even an expert connoisseur listening from an adjoining room to the voice of Caruso issuing from the horn of a talking machine, could be with difficulty persuaded that the great singer himself was not there.

Mechanical playing instruments have been in vogue for years, the music box having been a common means of amusement with our well-to-do grandparents, but it is only very recently that such instruments have begun to be taken seriously by professional musicians. Mechanical players for the piano and organ have become very popular. The best results are produced with the organ, its sustained and somewhat impassive tones lending themselves more readily to satisfactory effects.

To people who cannot play, yet are fond of music, a self-player attached to their pianos affords a great deal of pleasure. More than this, teachers of the history of music in many of the largest universities and conservatories are making use of self-playing instruments in order to make their students familiar with the standard orchestral works. Teachers, by making their classes familiar with these great works, prepare their minds to listen to them intelligently when interpreted by the great orchestras. Thus the self-playing instruments become a sort of preparatory school in musical listening. Unfortunately they have no individuality of interpretation, and thus far have been able to assume only a makeshift function, something to be made use of for the lack of a better; a valuable function, nevertheless, in a scheme for a musical education, for a teacher who is not a good piano player and sight reader.

The Victor talking machine, on the other hand, is no makeshift. The actual interpretation of the great singer or player is recorded and reproduced exactly as first made. It occupies a similar position in the realm of auditory that

the photographic camera does in visual phenomena. It is not correct to call it a mechanical instrument, for the sound produced is not mechanical. It is more properly an instrument for preserving sound.

Personally, I never took very kindly to any of the self-playing instruments, not even for the orchestral movements. Originally I felt similarly toward the phonographic instruments. The harsh, stridulous tones that I had heard issuing from them impressed me as inexpressibly disagreeable, so much so that when certain enthusiasts urged me to go in and hear the Caruso records, I declined, harboring at the same time a feeling of compassion for those who could enjoy such disagreeable imitations of singing. It was a year before I allowed myself to be persuaded to hear the records. It turned out to be nothing more than a repetition of the old story of the man who went to scoff. My astonishment was so great that I could hardly believe the evidence of my senses. But I was forced to confess that here was the first automatic reproducing device that I had ever heard that produced a thoroughly artistic result in the highest sense of the word. It could not be otherwise, for there were the voices of Sembrich, Eames, Plancon, Campanari and others, just as I heard them repeatedly; tonal quality and interpretation reproduced exactly.

Almost my first thought was: What a splendid opportunity for illustrative examples in teaching of musical history, an opportunity that had never before existed, even in the largest centers! I refer particularly to the history of the opera. Even in New York the number of operas that may be heard in a single season is comparatively limited, from a historical standpoint, and not every student can afford to attend all that may be given. But with the talking machine examples may be given from opera composers of all styles and periods.

Most conservatories have a course of study in the history of music, which may be copiously illustrated with instrumental selections, but very sparingly from the operatic repertoire. There may be good singers among the members of the conservatory faculty, but even with the four voices represented, soprano, alto, tenor and bass, comparatively few illustrations could be used, for each singer usually has but a few arias from the operas in his or her repertoire. From the long list of arias from the operas of Gluck, Mozart, Rossini, Bellini, Donizetti, Verdi, Meyerbeer, Weber, Wagner, Bizet, Gounod, Thomas, Saint-Saens, Massenet, Mascagni, Leoncavallo, Giordano, Puccini, etc., not enough could be given to make a comparative study possible. But in the course of study I have arranged for the Michigan Conservatory of Music, I make use of more than a hundred arias in illustration, as well as a few instrumental records.

A comprehensive musical education demands that the student not only learn about music, but that he hear the music itself, and as much of it and as often as possible. Opportunity for listening is the one great lack in the education of most students. The enterprise of the Victor Talking

Machine Co. in making a specialty of these arias from the grand operas of all schools and periods and sung by the greatest singers, makes it possible for schools and private studios, even in the most remote corners of the land, to install a course that will be invaluable to students. Singing teachers can now give demonstrations of the interpretations and vocal art of Patti, Sembrich, Plancon, Caruso, etc., in places where these artists can never be heard in person. In a course of lectures which I gave during the past summer at Chautauqua, New York, the talking machine was used in some of them, and audiences of from one to four thousand people heard with absorbed attention the records of the great singers. People from all parts of the country, who had never expected to have an opportunity to listen to so many great artists, heard Patti, Melba, Sembrich, Gadski, Eames, Schumann-Heink, Caruso, Plancon, Campanari, Scotti, etc. They heard ten arias sung by Tamagno, the greatest tenor of the past quarter century.

Two periods in musical history have heretofore been sealed books to music students, that of the Gregorian Chant and that of Palestrina. It is impossible to give any idea of the Gregorian music by means of an instrument, it is so inherently peculiar. But since the publication of a complete series of Gregorian records, made under the most authoritative auspices, the Sistine Chapel (the Pope's choir), the Augustinian Fathers and the Benedictines of St. Anselmo, pupils may now be made thoroughly familiar with what the music of this important period of musical history was. The same may be said of Palestrina. Great as is his music, enormous as was his influence upon musical composition, his music is practically obsolete, so far as opportunities for hearing it under ordinary circumstances are concerned. To play his music upon the organ even, gives but an extremely inadequate idea of it. Such involved a capella part writing needs the individual character of the various voices themselves to give its true effect. The records of this music, published by the Victor Co., were made by the Pope's choir, which lends additional interest to them.

As time goes on, and musical educators become more familiar with these fine records, I believe they will become eventually indispensable to the work of every conservatory course of instruction, for it is coming more and more to be recognized that hearing great music is more useful in developing a musical appreciation than hearing about it just as, in the study of English literature, students are now expected to read selections from the great writers, whereas formerly they only read their like and a criticism of their more important works.

The Hawthorne & Sheble Manufacturing Co., of Philadelphia, report having booked so many orders on their new line of "artistic flower horns" that their three factories will be taxed to their utmost capacity in order to turn them out. Evidently the dealers and jobbers generally are becoming alive to the fact that properly made horns of attractive design will bring their price.

## COMMERCIAL TALKING MACHINES AT THE BUSINESS SHOW.

The Handsome Exhibits Made by the Columbia Phonograph Co. and National Phonograph Co. Attracted Large Crowds and Splendid Missionary Work Was Accomplished.

The National Business Show, which has been one of the leading features at the Madison Square Garden, opening October 27, brought

Durand, the manager of the Commercial Department, he being ably assisted by M. E. Elliott, district manager for New York; N. R.

NATIONAL PHONOGRAPH EXHIBIT IN FOREGROUND.

the commercial talking machine into greater prominence than ever before, the displays of both of the leading companies being extremely

Compton, district manager for Philadelphia, Pa.; G. R. Harris, district manager for Boston, Mass., and William Wadams, manager of the installa-

THE COLUMBIA PHONOGRAPH CO.'S BOOTH.

attractive, and amazing the business men with their possibilities as time and labor savers.

The display of the Edison Business Phonograph, manufactured by the National Phonograph Co., occupied a prominent position in front of the main entrance, and at once arrested the attention of the visitor. One of the unique features of this large and beautifully arranged exhibit was one of the original phonographs built by Thomas A. Edison nearly thirty years ago, placed in juxtaposition to their latest models. Pretty and expert operators demonstrated how the typewriter could receive dictation, and crowds of interested people were always in evidence. The display was in charge of Nelson C.

tion department, New York. These gentlemen were kept busy from the time the show opened in the morning until late at night explaining the workings of the Edison commercial system, and they feel that the results achieved well paid them for their trouble and expense.

The exhibit of the Columbia Phonograph's Commercial Department in spaces 88 and 89 was always crowded with visitors, who at once became interested in the workings of their product. Their 1907 model, which was recently described in *The Review*, was the cynosure for all eyes, and its extreme simplicity and portability were commented on favorably. A force of handsome young ladies operating on a number of these machines showed them in actual operation, and many of the spectators dictated letters and messages which they quickly transcribed. The exhibit was in charge of J. W. Binder, manager of the General Commercial Department, and his assistant, Mervin E. Lyle. As expert demonstrators, there were present Walter H. Bedard, manager of the Commercial Graphophone Department, of Atlanta, Ga.; Richard Faulkner, manager of the Commercial Graphophone offices, Philadelphia, Pa.; William P. Hopkins, a member of the systematizing staff of Stephen T. Williams, of the New York Life Building, New York; H. M. Nicholson, manager of the New York uptown Commercial branch; John G. Williams, New York city salesman, and F. M. McClintic, who for a number of years held the world's championship for the most accurate and rapid transcript of the Associated Press matter received by telegraph.

In conjunction with these exhibits the Telegraphone, that remarkable invention whereby speech is accurately recorded on a fine wire by electricity, came in for its share of attention. The possibilities of this instrument have not as yet been fully developed, but from what the public was able to see, they were fully convinced of its great merits, and saw for it all of the great future prophesied by its promoters. They had two machines at work, one being intended for commercial purposes and the other as an attachment to a telephone. The exhibit was in charge of Willard M. Miner, who ably demonstrated the workings of the machines, and interested many in the matter of investment in the stock, so that the company might be still further exploited, and an adequate plant established.

Both the Edison and Columbia managers made some very good sales to representative concerns during the course of the show, and have several deals in abeyance, which, when they materialize, will do much toward bringing the commercial talking machine into greater prominence.

### HUMAN SIDE OF BUSINESS SHOW.

Interesting Contribution by the Observant J. W. Binder Who Discusses Men and Things.

There was much more to the Business Show in Madison Square Garden than machines, systems, signs and electric lights. Each of these was extremely important and extremely interesting, but by no means the "whole show." In an event of this kind one must look beyond the external for the true "motif." This will be found in the individuals constituting the ever-changing throng that filled the aisles of the big show place.

## THE NEW Imperial Records

RECORDED IN EUROPE

Are Meeting With  
Marked Success **\$1.00 and \$1.50 Each**

SEND TO-DAY FOR CATALOGUE

LEEDS & CATLIN COMPANY

New York

The machines and devices shown were interesting; the arrangement of the displays, the electric signs and the many methods used to catch and hold the attention of the spectator were interesting, but to the close observer, the human factor held the greatest element of interest. What the machines did was wonderful. Their effect upon the individuals who came to see them was much more so.

I spent the seven days of the show coming in contact with hundreds of these individuals, and out of the chaos of mental impressions left behind a few stand out.

Our exhibit—commercial graphophones—was a center of attraction. The idea of recording dictation upon a cylinder at any moment and as rapidly as one loves to talk, is still sufficiently novel to arrest the attention of even the most blasé. Hence they all come to us.

\* \* \* \*

This happened about 10 o'clock of the opening night.

There were just two of them—sweet young things who had some things still to learn.

"Oh! see that handsome man"—referring to Mr. Bedard, of Georgia—"talking into the speaking tube," piped one.

"Why, you know, Bess," answered her companion, "he's dictating letters. He talks them into the machine; they go over and wire to the girl over there, and she writes the letters."

"But why don't he dictate them to the girl at once, Bess?" queried the fair one.

I couldn't resist the temptation.

"Because," I said, as gently as possible, "his wife won't let him."

They passed on. \*

\* \* \* \*

"Might I listen to one of the machines?" Her voice was sweet and mellow as that of a full-throated robin.

"With much pleasure, madam."

"You know, my employer is talking of getting some of your machines, and I'd like to know just how they work."

"Glad to show you." This from the genial Hopkins, who was demonstrating. A letter was dictated, and she was allowed to listen to its reproduction.

"Why, that's fine," she said. "But where does the letter come out?"

It was explained to her that it was still necessary to use a typewriting machine before the letter could be written.

She breathed a sigh of relief as she moved up the aisle. Her job was safe.

\* \* \* \*

There were four of them, all prosperous business men. They came in and sat around a machine for a demonstration. Each dictated a letter, and when it came time to reproduce the last man's dictation, he listened to it and gravely remarked to his companions:

"Boys, not another highball for me to-night. I'm drunk now."

"Why, how can you tell?" queried the bunch. You can walk all right, and your talk is straight."

"That's a' right," he answered; "but you listen to the 't' in that word 'mister.' It ain't there in the machine. I'm drunk, a' right."

And he was.

\* \* \* \*

This boy was a smooth one. He came into the booth and asked if the machines would record dictation. There was a sixteen-foot sign staring him in the face which said that was what they were there for, but that made no difference.

He was given a demonstration and listened with much interest. It was, he said, the first time he had seen such a thing and it interested him greatly. He was going to look into it further. Would we kindly let him have a full set of literature?

As he was going out he turned to the machine once more and said: "Oh, I would just like to see how your speed regulator operates."

He was a decoy from a competitor's booth.

## DURAND CHATS OF BENEFITS

Which Were Derived by the Display of Commercial Phonographs at the Business Show.

"The recent Business Show in the Garden was an object lesson to the progressive business man in more ways than one," said Nelson C. Durand, manager of the commercial department of the National Phonograph Co. to The World after the close of the show; "but in the use of the phonograph as a necessary accessory to the office was the lesson strongly emphasized. Months of correspondence and talking could not convince business men of its utility like a practical demonstration given by an operator at our booth. When they realized the fact that they had an amanuensis constantly at hand, who never grew weary and made errors, and who would work overtime without a grumble, it became an easy matter to interest them. Then, too, we were able to show the stenographer how, instead of curtailing her salary, it would tend to make her more valuable. This we did by demonstrating the extra amount of work that could be produced in a given time without the labor on her part that would be required if she had to take notes instead of transcribing direct from dictation. In showing the saving we did not advance the argument that a purchaser of one of our outfits would save money on the salary, but by the added results. By doing this, we made friends with both sides. The old question of the phonograph injuring the hearing also was constantly coming up, and we were kept busy answering questions on that score. But by allowing those who advanced such theories to make a practical test with the modern ear pieces we convinced them that the phonograph would train the ear to more acute hearing than to the contrary. The show proved an ideal school for the training of our salesmen, and it was for this reason we had so many present from our out-of-town stores. One of the points developed by the show was the constantly increasing interest in time saving appliances, and employees who examined our

product did not ask 'how much labor will it save,' but 'how much of my time will I save in producing a given amount of work with my present force.' Of course, there was the omnipresent curiosity seeker, the man who knew it all and every other class that you will find in every show, but I do not think any exhibit aroused greater interest than the Edison phonograph."

## ENTERPRISING KNOXVILLE CONCERN.

The Knoxville Phonograph & Typewriter Co., of Knoxville, Tenn., have recently remodeled their establishment, and now have one of the finest stores in the South. E. J. Rogers, the proprietor, is a man of exceptional organizing ability, and travelers speak with admiration of the perfect system which prevails throughout the store. A visitor to the basement salesrooms receives a surprise. Instead of the usual blank walls he finds himself apparently gazing through windows upon moonlit gardens. The effect is produced by constructing recesses in the walls at intervals, creating a scenic background and placing electric lights out of sight, but so as to shed a gentle radiance over the "landscape." An extensive jobbing business is done in Edison, Victor and Columbia goods and American records. Mr. Rogers, it is understood, has recently embarked on the flower-strewn sea of matrimony.

## COLUMBIA STAFF CHANGES.

S. S. B. Campbell has resigned as manager of the New York office of the Columbia Phonograph Co., General, and will take a few months' vacation, going to Europe, and on his return will re-enter the company's service. J. H. Dorian, formerly of the executive offices, has been appointed manager of the New York office, and is in direct charge of all the Columbia stores in the States of New York and New Jersey. No changes have as yet been made in the Western or Chicago offices of the company, but a shift in management will be made on December 1, according to the statement given The Review by General Manager Lyle.

# The Highest Authorities say the I. C. S. Language System is of Sterling Worth—Are YOU Selling it?

The leading educators and authorities everywhere who have investigated the I. C. S. System of teaching foreign languages have pronounced it to be the most perfect in the world. Take the following endorsement from the German Embassy at Washington, for instance:

I have, with great interest, taken notice of the Language System, through the phonograph, as taught by the International Correspondence Schools, of Scranton, Pa. The pronunciation of German and the rendering of the German specimen recitations, in verse and prose, which the machine delivers, are absolutely irreproachable, and the method applied to the Grammar appears to me thorough and practical. I deem the system well adapted to further the acquisition of the German language according to its Grammar and pronunciation.

SCHELLER-STEINWARTZ,

Imperial Councillor of Legation,  
Secretary of the Imperial German  
Embassy at Washington, D. C.

I. C. S. LANGUAGE SYSTEM

WITH  
Thomas A. Edison  
PHONOGRAPH

This only goes to show that the language feature of the business is well worth YOUR investigation. Another thing that proves the same fact is that dealers who have tried it have greatly increased their business thereby. We have been telling you this for some time. Probably you have meant to look it up, but have forgotten to do so.

Why not sit down and write us a postal NOW

Box 918, SCRANTON, PA.

## WINTER OUTLOOK ENCOURAGING

In the Northwest—Our Correspondent in Minneapolis Makes Cheery Report.

(Special to The Talking Machine World.)

Minneapolis and St. Paul, Nov. 9, 1906.

The outlook for the fall trade seems to be very encouraging, to judge from the reports for October. Not only has the trade continued good in the cities, but all throughout this section the small dealers are sending in generous orders.

"We haven't a kick coming," said L. H. Lucker, of the Minnesota Phonograph Co. "We had a splendid retail trade during October, and good-sized orders were received from all our agencies. The prospects for a heavy trade in the country this fall seem very good. We sold three Victrola machines last month, and there are several prospects in sight."

The New England Furniture Co. have transferred their Victor department from the corner section they have been occupying to another portion of the store on First avenue, which has been fitted up in an attractive style. The October trade was reported better than a year ago, especially in the line of records.

The best indication of the growth of the talking machine trade of W. J. Dyer & Bro. is the fact that they have had to enlarge the space which had been devoted to it on the ground floor, when the building was remodeled this summer. Sales during October were reported good in both Victor and Edison goods, while the demand for records is much larger than last year.

The Columbia Phonograph Co.'s branches in both towns report a better month in October than in September, and that the indications point to much greater activity from now on to the holidays, the sales tending toward the better grade.

At T. C. Hough's three stores there were indications of a good trade, and Mr. Hough reported himself as being highly satisfied with the results from the sale of Edison goods.

There were rumors afloat Saturday that Donaldson's talking machine department would be closed soon. This, however, has not been verified as yet. If the department has not proven a successful one, it must have been due to the fact that nearly all makes of instruments were carried, and the selling energy was not directed to one in particular.

Butler Bros., the large catalogue house of Chicago, will soon enter the field, their big warehouse being erected here nearing completion. It is understood they will handle the American goods.

## TRADE NOTES FROM TEXAS.

This State Proving One of the Most Profitable for Talking Machine Men—Month's Happenings in Detail.

(Special to The Talking Machine World.)

Houston, Tex., Nov. 10, 1906.

Probably few men in the trade realize the immense proportions the talking machine business has assumed in this state in the last five years. Whether you visit the homes of our populous cities, the cotton plantations of the central and southern portions, or the ranches of the extreme West and the "Panhandle" you find talking machines everywhere. You find them sold in many little hamlets of two or three hundred population, but which form the base of supplies for a large expanse of territory.

One of the largest jobbers in this section of the country is the Texas Phonograph Co., of this city. On September 19 last President E. H. Holleman was able to declare a dividend of 14 per cent. on the company's stock. They recently added another building, furnishing them needed additional space for both the wholesale and retail branches of their business. They are large Edison jobbers, and keep a man constantly on the road.

Thomas Goggan & Bros., the great piano and organ and musical instrument house, with headquarters at Galveston and branches at Houston, Austin, San Antonio, Dallas and Waco, handle

talking machines at all their stores and do an important jobbing business from Galveston. They are exclusive Victor jobbers. William Goggan has this department of the business under his personal supervision. He recently said that when they added talking machines a year or so ago they were somewhat doubtful whether the business could be made to pay or not. He is no longer skeptical.

The H. C. Rees Optical Co., of San Antonio, Edison jobbers, report a brisk trade. They placed unusually large orders for fall shipment.

The Louis Book & Stationery Co., San Antonio, are stirring things up in that city in a retail way. They have recently opened another store and are handling Columbia, Victor and Edison goods at both stores. They are aggressive advertisers. They have recently been working the newspaper premium scheme on Columbia goods with marked success.

The Southern Talking Machine Co., of Dallas, have a large store, and sell nothing but talking machines, moving picture machines and stereopticons. During the recent State Fair at Dallas, which lasted three weeks, the company did the business of its life.

Cummings & Shepherd, of Fort Worth, Tex., sell large quantities of talking machines besides pianos and a general line of musical instruments. They are Edison jobbers. They recently shelved one entire side of their store for their retail record stock.

The Waco Talking Machine Co. is a new company recently incorporated. They are handling the Victor and Edison at retail, and have taken on the American records as jobbers. They have a nice store and are doing a good business.

At Austin the Petmecky Co. have an excellent trade on the Edison, Victor and Columbia goods, and are jobbers of American records. The company have sprung into national trade prominence as the inventors and manufacturers of the Petmecky needles, which are being handled by jobbers and dealers everywhere with signal success.

(Special to The Talking Machine World.)

Chicago, Ill., Nov. 10, 1906.

Possibly your readers would like to know something about the only Chinese talking machine dealer in Chicago. Sim Law is his name, and he is an intelligent, progressive man. He speaks excellent English, is an aggressive advertiser and energetic hustler for business. He is a subscriber to The Talking Machine World, another point in his favor.

Sim Law has been handling "lo-sing-kehe," the Chinese verbal chow-chow for talking machines, for five years. Pronounce the word quickly with a hurry-up on the "kehe" and you will get within hailing distance of the orthodox Chink way of doing it. He has a flat on the second floor of 295 South Clark street, in the heart of the Chinese district. Here are to be found Sim, his Chinese wife, a really attractive woman, and two little almond-eyed babies. The front room does double duty as a parlor and talking machine salesroom. One end of the room has been alcoved and here he has fitted up shelving for his record stock. He has constantly on hand something like three thousand Chinese

records about equally divided between disc and cylinder. Sam is always glad to demonstrate records, using \$100 machines for the purpose, and when he's absent his wife takes care of the customers. When he gets in an attractive lot of new records he gives a concert, sending out invitations to all his customers and those he thinks he can interest.

But his local trade forms only a small part of his business. He does a large mail order business, especially on records. His advertisement appears in every issue of the Chinese World, a daily published in Los Angeles, and which circulates all over the country. He also advertises in a Chinese magazine published in Shanghai, and which has a large subscription list among the subjects of the Flowery Kingdom in this country. He furthermore sends out a great many circulars, printed in Chinese, of course, together with the Chinese catalogues issued by the Victor, Edison and Columbia companies.

The Chinese are far more liberal record buyers than the Americans, according to Sim Law. Most of the records are in series of ten or twelve records, covering an entire opera or play. Consequently to buy one naturally leads to the purchase of all of the series.

He has many customers who have anywhere from three or four hundred to a thousand records, and some of them have both disc and cylinder machines in order to get everything good that is issued. Just the other day he sold a man a \$10 machine and fifty records. Pretty fair outfit for so cheap a machine. The average Chinaman, however, will buy a \$30 or \$40 machine, and a good many will not be satisfied with anything less than a \$100 talker. Mr. Law also says that the Chinese are great buyers of accessories. When they get a machine they want

everything pertaining to it—carrying cases, record cabinets, etc.

Our Chinese dealer is an enthusiast regarding the expanding market for Chinese records, and is constantly trying to induce the companies to enlarge their list. Naturally he has an advantage over the American dealers, as a Chinaman can trust a Chinaman to make selections for him and substitute intelligently. Few American dealers carry anything like a stock of Chinese records, and if they did, a mail order business would be out of the question. To them all Chink records are a monotonous combination of high squeak and irritating "tom-tom" and nothing more.

Joseph W. Mill has been made manager of the Elgin store of the Columbia Phonograph Co. He has been working as an instalment solicitor for the Chicago office, and displayed abilities which won for him promotion. He has inaugurated an aggressive advertising campaign.

Recent visitors who were at Babson Brothers were B. H. Sanford, Sheboygan Falls, Wis., and C. E. Nicodemus, Forreston, Ill., both enthusiastic Edison dealers.

T. H. Dunk, at one time in charge of the instalment department of the Talking Machine Co. before they went out of the retail business, has gone to Detroit, Mich., to take charge of the sales department of the Puritan Mfg. Co., makers of slot machines.

C. W. Noyes, secretary of the Hawthorne-Sheble Mfg. Co., and western representative of the American Record Co., returned the last of October from a month's trip through the South. He visited St. Louis, Cincinnati, Atlanta, Knoxville, Memphis, Nashville, New Orleans, Birmingham, Montgomery, all the principal Texas cities, and stopped at Mis-

## BABSON BROTHERS,

WHOLESALE

Edison Phonographs

AND RECORDS.

We desire to announce to the trade that we have secured the old quarters of the National Phonograph Co., at 304 Wabash Ave., Chicago, and G. M. NISBETT as Manager of our wholesale business.

*Complete Stock and Prompt Shipments.*

304 Wabash Avenue,

CHICAGO, ILL.

souri river points on his return. He had an excellent trip and came home with a big bunch of orders for American records and H. & S. supplies. He found the South in excellent condition, the jobbers all having a good trade and prepared for a big fall and holiday demand. Their only complaint is that they are unable to get all the goods they want.

The office of the Western Talking Machine Co. at 185 Dearborn street, has the appearance of a flower garden, owing to the display of flower horns. They have just received a fine sample line of record cabinets. Messrs. Dillbahr & Feinberg, the proprietors, are direct factory agents for everything in the way of talking machines and supplies. They also seem bent upon springing innovations on the trade. They have established a talking machine and record exchange, and jobbers are invited to list with them their surplus stock of machines, records and supplies, which they are willing to dispose of. These special offerings appear in a monthly bulletin sent out by the Western Talking Machine & Supply Co. The current bulletin lists thousands of records and machines at attractive prices. B. Feinberg returned recently from a trip among the jobbers of the Northwest, Missouri River points and St. Louis with a fine bunch of orders. He leaves in a few days for a trip which will include Ohio, Indiana, Michigan and West Virginia. The firm are having a big demand for the Daughty horn crane, adjustable and self-locking, made by the New Jersey Sheet Metal Co.

A. W. White, who is to be the manager of the new Columbia branch at Duluth, left for his new field of labors Nov. 2, accompanied by C. F. Baer, assistant manager of the Chicago office and who went along to help him get started. The Duluth store will be at 18 Third Ave. North, in the heart of the business district, and will be opened about Nov. 15. A jobbing as well as a retail business will be done from the Duluth establishment, and a large stock will be carried. An aggressive campaign will also be inaugurated on the commercial dictation graphophone. Mr. White has been head assistant in the credit department of the Chicago Columbia headquarters, and is a well posted all 'round man.

George W. Lyle, general manager of the Columbia Phonograph Co., spent Thursday and Friday at the Chicago office, leaving Friday evening for New York. W. C. Fuhri, manager of the St. Louis office, was also a visitor.

Richard Topham, recognized as a top-notch talking machine salesman, has returned from a trip through his territory—Illinois, Wisconsin and Iowa—in the interests of the Columbia Co. It was one of the best trips he has ever made, and resulted in the establishment of a number of new Columbia agents. Mr. Topham, by the way, now has a new invention in the way of an appliance for talking machines on its way through the patent office. Particulars are withheld for the present, but the new device will soon be placed on the market about the first of the year.

John Hofreiter, who sings in one of the principal Polish Catholic churches of the city, recently returned from the East, where he made twenty-five records, mostly of Polish folk songs, at the Columbia laboratory. A. V. Morrissey, wholesale city salesman for the Columbia Co., "discovered" Hofreiter, who also sings under the nom de plume of Rokcansky, and is proud of the fact.

Robert R. Smallfield, proprietor of the Smallfield Music House, Davenport, Ia., was a recent Chicago visitor. In a chat with The World he said:

"I want to advise every young man in the country who has recently started in business for himself or contemplates doing so in the near future to carry talking machines. It's the best means in the world to get a foothold in the piano business. It brings in the ready cash during the struggle period, and gets you an acquaintance you could form in no other way. When I tell you that in the three years I have been in business I have sold enough machines to put one in every tenth home in Scott County, Iowa, and

Rock Island County, Ill. (embracing the cities of Rock Island and Moline) you can form an idea of what an aid this branch of my business has been. I am about to move into a new store double the size of the old one, and half of it will be devoted to the talking machine department."

The Rudolph Wurlitzer Co., of Cincinnati, through Edward H. Uhl, its Chicago manager, has filed suit against Frederick Sheppy, trading as the Crescent Talking Machine Co., alleging infringement of the patents owned by the Wurlitzer Co., on tone regulators. Both parties to the suit claim priority of introduction of their devices, and the matter will have to be fought out in the courts. The case is set for hearing the first Monday in December.

Mr. Hawthorne, of the Hawthorne-Sheble Manufacturing Co., was in Chicago early in the month on a visit to their secretary and Western representative, C. W. Noyes.

L. L. Leeds, manager of sales of Leeds & Catlin Co., was a recent visitor on his way to the Coast. He said that business was very satisfactory, and that the Imperial opera records were receiving a warm reception by the trade.

Henry C. Brown, manager of the advertising department of the Victor Talking Machine Co., was in Chicago last month on a general trip through the Central West, familiarizing himself with Victor jobbers and dealers, and general conditions in this territory.

Lyon & Healy are now making their own disc record cabinets, and a large amount of space in their big factory fronting Union Park is devoted to that purpose.

J. Blumberg, Western manager for the Regina Co., is well pleased with the success which has attended the introduction of the new improved automatic Reginalphone in the West. This is certainly one of the most practical coin-controlled talking machines on the market. It occupies much less space than the ordinary instrument, holds six cylinder records, and has a novel and extremely valuable feature in the self-changing tune device. Mr. Blumberg also reports an excellent demand for the Sublimina piano and the other well-known products of the company.

C. W. Long, the new manager of the talking machine department of the Cable Company, is

## Chicago Horn Support

### FOR EDISON PHONOGRAPHS

FRONT VIEW—SUPPORT INVISIBLE

The simplest, neatest and most practical Horn Support on the market. Has many advantages over other devices of this kind. Is adjustable to different size horns, holding the largest size bell horn perfectly without tipping the machine.

This support is so constructed that it comes directly under the machine and practically out of sight, leaving the top of machine perfectly clear. This support is quickly attached and detached, and folds up into a package 1 3/4 inches by 2 1/4 inches by 15 inches in length, allowing same to be packed inside of machine case. Handsomely finished in heavy nickel plate.

Ask your jobber to send you a sample. Retail price \$1.50 each.

**THE CABLE COMPANY**  
Talking Machine Department  
**CHICAGO**

rounding out his first month in a manner which betrays the resourceful talking machine man experienced in both the wholesale and retail branches of the trade. The company are going after the dealers' business in a strong way, and are now in a position to ship orders not only completely, but within twenty-four hours of the time of receipt. Two or three travelers will be put on the road as soon as the proper men can be found. Mr. Shepherdson, a well-known man in Chicago and formerly assistant to E. C. Plume when the latter had charge of the retail department here, has been secured by Mr. Long to take charge of the instalment department.

Babson Bros. are making big success of the wholesale business—something not to be wondered at, considering the personality and equipment of the members of the firm and of G. M. Nisbett, wholesale manager. They carry an immense stock of Edison goods and a general line of supplies, and are making a strong specialty of quick shipments with a minimum percentage of "outs."

Frederick Sheppy, of the Crescent Talking Machine Co., won the pennant for selling the first Auxetophone in Chicago. He had to fairly beg it of Manager Geissler, of the Talking Machine Co. Sheppy sold it to the proprietor of a cafe down on Cottage Grove avenue, who was a bitter skeptic until he heard the machine. There's a big future before the Auxetophone in Chicago, Mr. Sheppy says, as soon as the Victor Co. are able to make deliveries. It will meet a long-felt want in many places where musicians are now employed at a cost of many times the price of an Auxetophone.

W. E. Fitch, formerly credit man for the Talking Machine Co., is now with Babson Bros., wholesale, looking after the credits and acting as Manager Nisbett's chief assistant.

John McDonald, a well-known piano dealer of Kansas City, Kan., and U. L. Means, who have stores at Sterling and Winfield, same State, have consolidated their interests under the name of the McDonald-Means Piano Co., with headquarters at Kansas City, Kan., but continuing all three stores. They will add talking machines in a retail way now, and expect to become jobbers after the first of the year.

The Crescent Talking Machine Co. report a steadily increasing trade on the Crescent tone regulator. They are not only handled extensively by jobbers in this country, but shipments have been made to Europe, Java, the Hawaiian Islands and other sections of the footstool.

Kreiling & Co., 855 North 40th avenue, Chicago, manufacture the "Tiz-it" all-metal horn connection for Edison phonographs and Columbia cylinder graphophones, having the new style lyre-shaped reproducer. The manufacturers claim that the device increases the volume of tone and makes it clearer and eliminates "blasting," while the usual soft rubber connection deadens the sound. Furthermore, the device prevents wear on the feed screw and nut, as it offers no resistance or strain laterally while the reproducer travels over the record, as when using rubber connection. Kreiling & Co. also make a speed pointer for cylinder machines which is very simple and practical.

The Chicago Case Manufacturing Co. are having the largest fall trade in their history on their line of carrying cases and record cases. Their line is remarkably complete, and the company enjoys a high reputation for quality of product.

Lyon & Healy have just issued a new illustrated and descriptive price list of "Victor and Edison supplies." Horns of different makes, cranes, carrying cases, record cases and needles are among the lines covered. Special attention is, of course, paid to the Lyon & Healy Soft-tone attachments and needles, and to the firm's special brand of Damascus needles. The firm also state that in a circular letter that they have several of each number of the Edison catalogue, except three, and expect to have those in by the time the circular reaches the trade.

Cal. Stewart, whose laughing stories have been famous to talking machine lovers since

105-107-109 Madison Street,  
CHICAGO, ILL.

1897, has been in Chicago for the past three weeks, making the circuit of the outlying theaters with the Man's Broken Promise Co. He has a role built on the Uncle Josh order, and has been permitted to introduce some of his original monologues and specialties. In spite of the fact that he becomes a bit pensive when he thinks of the imitators who have broken into his peculiar field, he is the same jolly optimistic Cal. of yore. On Tuesday and Friday mornings of last week he gave a demonstration of record making at the Columbia headquarters at 88 Wabash avenue. He shot some of his standard numbers, laugh and all, into the recorder, and they were reproduced with great effect through the Twentieth Century graphophone. Before he left New York he made a new batch of Uncle Josh records at the Columbia laboratory. They include Uncle Josh's visit to the dentist, his experience with labor unions (a splendid piece of satire), the wooden wedding of Uncle Josh and Aunt Nancy, the descriptive reading for the quartette in "The Meeting of the Hen Roost Club," and a number of others. Mr. Stewart is now making records exclusively for the Columbia Co.

Joel Mossberg, who has made a number of successful records of Swedish folk songs and Swedish renditions of standard songs for the Victor Co., is a Chicagoan. He has done considerable work in light opera, is the basso of the Sixth Presbyterian Church choir, and teaches.

The big factory of the Salter Manufacturing Co., 102-108 North Oakley avenue, is busily engaged taking care of the large demand for their excellent line of record and music cabinets. The new styles, No. 705 disc and No. 710 cylinder record cabinets, are experiencing something very like a boom.

Manager A. D. Geissler, of the Talking Machine Co., reports that October sales for Victor talking machines and records exceeded the business of any month since the inception of the house. The latest member of the Talking Machine Co. force to set the wedding bells tingling is Virginius W. Moody, city sales manager, who was married the other day to Miss Ethel M. Hannah, of Dallas, Tex., at the home of the bride's parents in that city.

The Chicago Stand Co., 266 Wabash avenue, Chicago, have added a number of important firms to their list of jobbers of the Chicago Horn Support for Edison machines the past month. The device has some very distinctive points of merit, and the demand for it is growing at a rapid rate.

C. L. Hibbard, who has been district manager of the business phonograph department of the National Phonograph Co., has been promoted to the position of Western manager, a new position created with the inauguration of the broader

policy adopted by the company relative to the distribution of their commercial machines. Mr. Hibbard has just returned from a visit to headquarters, bringing his new honors with him. While in the East Mr. Hibbard will, of course, make his headquarters in Chicago, as in the past, but will travel to some extent, establishing agencies for the business phonograph. Edwin C. Barnes, who has heretofore been a member of the Chicago selling force, has been made district manager.

L. L. Lewis, manager of the language department, is proud of some of the students he has on the list. Burton Holmes, the famous lecturer, has studied German through the International Correspondence Schools' course, and is now taking Spanish through the same medium.

### THE BOYD-HARRISON CO.

Have Just Opened Up in the Automatic Musical Instrument Field and Promise to be an Influential Factor in the Trade.

(Special to The Talking Machine World.)

World Office, 195 Wabash avenue,  
Chicago, Ill., Nov. 10, 1906.

A new concern which promises to be a strong factor in the automatic musical instrument field is the Boyd-Harrison Co., which has just been organized, and will apply for articles of incorporation in a few days. The principals are both men of experience in the talking machine and coin-controlled fields.

W. T. Boyd founded the business of the Indiana Talking Machine Co., and was its president. Later he became widely known to the trade of the country as a member of the traveling force of the Zouphone Co., and has recently been in charge of the automatic department of the Chicago house of the Rudolph Wurlitzer Co. J. W. Harrison was at one time connected with the Columbia Co. in Chicago, and was afterward manager of their Indianapolis store for two years. Returning to Chicago he took charge of the automatic electric piano department of the Cable Company, and when the talking machine department was established assumed charge of it in addition to his other duties.

The Boyd-Harrison Co. will make leaders of the Standard and Favorite electric pianos, but will also handle other automatic specialties, together with premium goods and advertising novelties. Their thorough knowledge of the coin-controlled proposition will enable them to give dealers valuable advice as to the best methods of handling this branch of their business. The company have established offices and salesrooms in the Willoughby Building, Nos. 6 and 8 Madison street, corner of Michigan avenue.

### NISBETT ENTHUSIASTIC.

Wholesale Manager of Babson Bros. Has Splendid Record in Talking Machine Field—Interesting Chat Regarding His Experiences.

(Special to The Talking Machine World.)

World Office, 195 Wabash Ave.,  
Chicago, Ill., Nov. 10, 1906.

The talking machine has no more enthusiastic exponent than George M. Nisbett, wholesale manager for Babson Bros., of this city. He has been a material factor in the development of the business in the West, and has seen its growth from the fake class, where it was once placed by gen-

GEORGE M. NISBETT.

eral opinion, into the musical instrument art class. Like all men who are thoroughly conversant with present-day tendencies, Mr. Nisbett believes that the industry is only in the beginning of its larger development.

When Mr. Nisbett first became connected with the business in 1895, the talker was still largely a mail order proposition, and he started in with Montgomery, Ward & Co. His ability soon manifested itself, and it was not long before he was practically the head of the department. He had the title assistant manager and buyer, but in reality was the whole thing, as the nominal head had a number of other departments to look after. The intelligence and energy with which the department was conducted attracted attention, and in 1900 he became a member of the force of the National Phonograph Co., traveling

# CRESCENT TONE REGULATOR

No. 1 for VICTOR and ZONOPHONE Disc Machines,

No. 2 for EDISON and COLUMBIA Cylinder Machines,

can be attached in ONE minute. Simple in construction. Very neat appearance, DOES NOT WEAR ON THE RECORDS; the volume of sound can be regulated WHILE THE MACHINE IS PLAYING; it does away with the annoyance of having to stop the machine and change the needle in order to get a variation in the volume of sound. With the CRESCENT TONE REGULATOR the change is instantaneous. You can also give expression to the music. The sale on this little Regulator has been phenomenal and we are now selling the largest Jobbers in the country. It is one of the best selling accessories in the talking machine line. This device is the invention of Mr. Frederick Sheppy, formerly mechanical expert with Lyon & Healy, of Chicago, and application for patent has been made by him and is now pending.

We are the sole licensees for the manufacture of the "Crescent Tone Regulator" and will protect our customers in the sale of same.

Retail price is \$1.00.

If you do not handle the Crescent send for sample and discounts.

**CRESCENT TALKING MACHINE CO.**

3749 COTTAGE GROVE AVENUE - - - CHICAGO, ILL.

in the West and reporting to New York. In reality he started the Chicago office, as within five months it became necessary to have headquarters in Chicago, where a stock of machines and records could be carried to fill emergency orders from jobbers. When the National opened general Western offices in Chicago, Mr. Nisbett was made assistant manager, and in 1904 was promoted to the Western managership, which he retained until the company closed its offices here on June 1 of the present year. Babson Bros., who were preparing to go into the wholesale business as exclusive Edison jobbers on a large scale, were quick to snap up Mr. Nisbett and with him the old Edison offices and warerooms at 304 Wabash avenue.

During his career in the talking machine business Mr. Nisbett has done an immense amount of traveling throughout the West, and he has a fellow feeling for talking machine travelers, and, indeed, for road salesmen in general.

"I often wonder if employers as a rule realize what the men on the road have to contend with, and how little time the conscientious man has to himself," said Mr. Nisbett the other day.

"If you economize your time to the best advantage you must get up at all hours of the night to make trains; must frequently get out long before the breakfast hour at home in order to catch a dealer before the rush of the day begins, and often you find it impossible to get his attention during the day at all, and must make an appointment at night. Then no matter how late the hour, the report to the house must be made out; you get only a few hours' sleep—

sometimes none at all—before the jump to the next town.

"Not so very long ago I had an experience in a Northern Wisconsin town, which is quite typical. The conditions were not conducive to comfort. The thermometer was 18 degrees above and there was no heat in the hotel, as the boilers had been ripped out for repairs. I called on my dealer, and when I opened up found my concert machine had been smashed. Consequently I couldn't demonstrate records. The dealer suggested a way out, but it meant that I would have to wait four hours until the store closed. At six o'clock I met him, and he saw about as frozen a mortal as you would want to find. We went to a saloon where there was a phonograph slot machine. We were preceded by a tall, ungainly lumberman, who made a dash for the machine and dropped in his nickel. The result pleased him so that he actually played the record a dozen times in all, spending sixty cents in the operation. We stood by reciting soul stirring poems to ourselves. Of course, we could say nothing, as the man was making money for the house. Well, we finally got hold of the machine and I demonstrated my records. It all ended satisfactorily, as the man gave me an excellent order.

"Just to show the way the business is developing from the dealer's standpoint, I have exclusive talking machine dealers come in here every day who first added talkers as a side line and finally found it advisable to drop their original business altogether and devote their entire time and energy to 'canued music,' as Mr. Sousa has so courteously termed it."

## HENRY J. HAGEN'S GREAT TRIP.

Visited South America to Secure Records of Creole and Spanish Songs—Got Some Fine Operatic Records in Italy—Instrumentals by Leading Orchestras—Interesting Chat With This Expert Record Maker.

While Henry J. Hagen, who recently returned from a record-making tour to South America and Italy, was unusually successful, he secured a number of unique examples in voice reproduction upon which the Universal Talking Machine Manufacturing Co. may well plume themselves. Chatting informally with The World of his trip in New York the other day, Mr. Hagen, who is nothing if not modest in his manner, said:

"I was two months in Buenos Ayres, going by the way of Hamburg from New York, and my main purpose was to obtain records of the creole of Spanish songs, and many excellent reproductions were secured, remarkably few being lost. I also got some Italian operatic records, but the expense was too great, as the singers, when in South America, generally demand ridiculous fees—several times higher than when at home in Italy—therefore I had to cut them out. Then their status in the profession is exaggerated beyond all reason. For example, a tenor lyric (Henry always speaks by the card) who would stand second rate in Buenos Ayres, would be, without question, about sixth on his native heath.

Inventors and Sole Manufacturers

855 North 40th Ave., CHICAGO

"In Milano," continued Mr. Hagen, with a distinct flavor of sunny Italy in his voice, "I was very successful. Besides recording a large number of selections and choruses from all the principal operas, I obtained the full score of 'Rigoletto,' 'Aida,' 'Cavalleria Rusticana,' 'Faust' and 'La Boheme.' Up to this time the disc records of but one complete opera, that of 'Il Trovatore,' is known in this country, being put out by the Victor Talking Machine Co. So you see, it was no small undertaking to record the full musical scene of these operas. In addition I have a large collection of instrumentals from the best known orchestras and band organizations in the whole of Italy. Of course, some singers, who are bound up in contracts, were unattainable, many of them having signed exclusively with the Fonotopia Co., owned and controlled by G. Ricordi & Co., the famous music publishers. This reminds me that not a few beautiful operas not yet heard in the United States are perfectly familiar to the people of the South American countries, and made so through the talking machine.

"Am I glad to get back? Well, I should think so. People at home have no conception what the sight of the American flag is in a foreign port to the wanderer from his own fireside. It just makes your patriotic feelings boil over, and you feel like hurrahing every few minutes.

"I met Henry B. Babson, the president of the company, in Milano, and he afterward went to Paris with E. Long, the manager of our export department, you know. Mr. Babson is no stranger in Europe. He has been over a number of times. You remember when he was in China and made that big coup on records? That was the time he came back by the way of the Trans-Siberian Railroad, going through Russia. This Siberian road run the trains only during the day, and at night everybody gets out and stops at the station, where the accommodations are far from palatial. Then the next morning the journey is resumed. South America is a great country, almost twenty-five years behind us, but is the coming part of the world."

### EMERALD ISLE HAPPENINGS.

**Auxetophone Attracts Great Crowds at Public Concert—Present Season Destined to Excel Any in Volume of Business—Edison Machines to Make Announcements at Railway Station—Columbia Graphophone Used Instead of Band at International Foot-ball Match—Sterling Records Popular.**

(Special to The Talking Machine World.)

Belfast, Ireland, Nov. 3, 1906.

The Auxetophone still continues to attract large crowds to the Saturday evening concerts at Ulster Hall, this city; the perfect rendition of all classes of records by this "world's wonder," especially of songs by the great prima donnas Mesdames Melba and Patti, and the famous tenors, Caruso, Tamagno and Scotti, has begotten a love for "talkers" hitherto unexperienced by the wealthier section of music lovers. While the people wend their way homeward from the hall they become transfixed opposite the Edison factor's premises, to which they are drawn by the two powerful American Cooper-Hewitt Mercury vapor electric lamps used by the proprietor (Osborne) for lighting his store, and particularly by the fascinating musical programme of popular "pantomime hits," rendered by the Columbia Twentieth Century sound-magnifying graphophone. No instrument can compare with the machine referred to for out-of-door concerts; hundreds have confessed that they have hurried from adjoining streets in the expectation of hearing a military band pass the City Hall, only to discover as an agreeable surprise, however, that they had been listening to a band piece on the graphophone.

"Sterling" records (one shilling) seem to be growing more popular every day. It is most interesting to watch from year to year the stock racks and shelves of an up-to-date dealer or factor, the quantities he holds of various records clearly indicating the popularity of the different brands.

Although T. Edens Osborne has been selling gramophones since autumn of 1898, he reports that this season has been absolutely phenomenal so far as the output of gramophone and zono-phone products is concerned. The Gramophone Company's yearly balance sheet has just been published, and the figures are highly gratifying; all the company's dealers in British Isles are delighted at results of the year's trading; there is probably no firm of talking machine manufacturers who are in closer touch with their dealers than the Gramophone Company; this is traceable to a widespread appreciation of their business methods, their prompt attention to orders, the courtesy displayed in their correspondence, and the kindly interest manifested by their manager, S. W. Dixon, in all dealers who loyally respect the price-maintenance agreements.

The Columbia S. M. graphophone proved an excellent substitute for a band at the international football match (Ireland versus England), contested at Cliftonville, Belfast, a couple of weeks ago. Ireland was defeated.

A talking machine enthusiast recently confessed she was so much enamored of her gramophone that she removed a partition wall and "threw two rooms into one," on account of the instrument being too loud. She could not conceal her feelings of remorse when told that the same result could have been achieved by placing a silk handkerchief in the trumpet.

One of the ticket checkers at a local railroad depot recently complained of hoarseness occasioned by having to shout so frequently, "All tickets please"; he has just arranged to make a record on an Edison Standard of these words, repeated again and again for two and one-half minutes, and hopes the railway company's manager will permit him to use the phonograph at the ticket barrier as a substitute for his own vocal efforts.

Odeon double-sided disc records are growing in demand; a large percentage of them sound loudly, clearly and sweetly on the auxetophone.

## TRADE NOTES FROM BOSTON.

**Business Continues Satisfactory—Some Difficulty in Getting Certain Goods—Language Study at Eastern Talking Machine Co.'s Store—Read & Read's New Store—Columbia's for Skating Rinks.**

(Special to the Talking Machine World.)

Boston, Mass., Nov. 9, 1906.

All the talking machine stores might well put out the sign, "Standing Room Only," business is so good this month. Both the jobbers and the retailers make the same report, and a glimpse of the number of customers on the floor proves it to be true. The chief trouble is, as it always has been, the inability to get goods from the factories, and especially now the Victor-Victrola is the thing most demanded. It can't be had for love or money.

"Crowded for room" is the cry at the Oliver Ditson store, where Manager F. W. Winkleman is pushing the Victor goods. "We could sell twenty-five Victrolas this month if we could only get them," he says. The Victor goods are the kingpins here, and Mr. Winkleman has formulated a system whereby each record is put into an envelope as soon as it is received from the factory, and remains in it until it reaches the customer's home. This saves all danger of its being scratched or marred, especially during shipment.

At the Winchell Co.'s Summer street store a number of interior changes have been made. The business office has been transferred to the balcony, leaving more room for the display of goods. This company has recently secured the agency for the entire Regina line, and will be virtually the New England headquarters of this firm. A fine business is done here on the Zonophone and on the Victor and Edison records and machines.

At Houghton & Duttons, Manager Howe reports a phenomenal business, especially during

the last three weeks when he says that he has done more business than in the three months previous. He has put in the Victor line and reports a great sale on the Edison records. A change is being made in the method of keeping records, the tray system being installed.

At the Columbia Phonograph Co., Manager Blakeborough has made a change in the location of his office, which is a marked improvement in the general appearance of the store. He reports business as particularly good, and the number of customers in the store at the time the writer called was ample verification. Mr. Blakeborough is enthusiastic over the extended use of the Columbia phonographs in the various skating rinks of the New England States, in place of orchestras. He showed the writer a number of letters from skating rink managers, indorsing the phonograph as a medium for enlivening the rink and furnishing music for skaters. The fact that it is much cheaper than an orchestra is a great factor; in fact, one rink manager, who is also the manager of an orchestra, has displaced his own musicians by an instrument. Mr. Morse, of the wholesale department of the Columbia Co., has been in Boston this week, looking over affairs at the local warerooms.

A demonstration of the advantages of the talking machine in the study of foreign languages is to be made at the Eastern Talking Machine Co.'s store this week. Victor-Victrolas are a minus quantity here also, although a large number have been ordered. General Manager Taft declares that he has never known of the time when business was generally so good as at present, and he predicts that the talking machine is to be one of the greatest factors in commercial progress.

A unique idea in window advertising was adopted recently by the Columbia Phonograph Co. The lower half of the window was covered with a white cloth, in which a peek-hole was cut, and over this was painted the words, "For Men Only." It was a sight to witness the crowd of men—almost a continuous line—who took turns

in looking through this peek-hole, only to find confronting them, inside the window, a sign which read: "November Records For Sale Here Now." It made a hit along the street.

The firm of Read & Read are preparing to remove to their new store on Essex street, opposite the big Siegel store, within a week. This will be a big improvement, as it is on the ground floor and is nice and light. Business here has increased greatly in the last month.

## CURIOUS AUXETEPHONE EXPERIMENT.

A curious experiment was tried with an auxetophone in a New York wareroom recently. It is well known that when the bellows are not in operation, the tones die away and become very faint. A duet record was placed on the revolving table, and by shutting off the power at the proper moment, the effect of great distance between the singers was produced. Some of the hearers could not believe until proof was forthcoming that such was not the case, and some seemed to prefer the effect to the proper way in which the record should have been reproduced. A perfect echo effect was accomplished by using a record on which a line was repeated wholly or in part.

"Il Trovatore," Verdi's great opera, complete in twenty records, is among the latest offerings of the Victor Talking Machine Co. The records were made by the entire company of La Scala Theatre, Milan, Italy, and contain the entire opera from opening chorus to last act and finale. The new set of records has been advertised extensively and direct to the consumer, the retail price being \$21.60 per set.

J. R. Challen, inventor of the whisperphone attachment to the telephone, and an old-timer in the talking machine business, was in New York recently visiting the trade. Mr. Challen is now manager of the Philadelphia branch of Collier's Weekly.

## INCREASE YOUR RECORD BUSINESS

### THE TRAY SYSTEM FILLS THE LONG-FELT WANT

Every dealer will readily see the advantages obtained by using this System of carrying records in stock. It is concise and appeals at once to the prospective customer. Every dealer using this System speaks in the highest terms of its convenience and selling power.

By actual experience sells as many records as a first-class salesman. Makes a more attractive looking stock than can be obtained by any other method.

*Sold to the trade in complete outfits, consisting of 1350 Trays and Labels for every Edison record listed in the Domestic catalogue.*

## VICTOR CO. ANNOUNCEMENT

Regarding the Recent Decision of the Court of Appeals in the Case of the Victor Talking Machine Co. Against the Talk-o-Phone Co.

Under date of October 31, the Victor Talking Machine Co., Camden, N. J., write The Talking Machine World as follows:

"We are sending herewith copy of letter sent to our various distributors, also a copy of the announcement as it appears in the coming issue of 'The Voice of the Victor.' As you will note, this letter of announcement refers to the recent decision of the Court of Appeals in the cases of the Victor Talking Machine Co. against the Leeds & Catlin Co. and the Talk-o-Phone Co."

The letter is subjoined, to wit:

"We desire to advise you that we have received a communication from our counsel, Horace Pettit, Esq., notifying us that the United States Circuit Court of Appeals, of New York, in our suits against the Talk-o-Phone Co. and against the Leeds & Catlin Co., on October 12, 1906, affirmed the decision of the court below granting preliminary injunction against each of the defendants in the above entitled cases, again sustaining our fundamental Berliner patent No. 534,543, for the combination of our disc talking machines and records, and method of operating the same, and restraining the defendants from manufacturing and selling disc records and machines in infringement of the said patent.

"You will recall that this patent had been previously sustained in our suit against the American Graphophone Co. by the United States Circuit Court of Appeals, and that the defendants in the present suits made unavailing strenuous efforts to have the patent declared invalid. We expect to at once proceed to enforce our rights by preliminary injunction against all infringers, including all manufacturers of infringing machines and records who have not taken a license from us, and dealers in such infringing goods. We have previously notified you that the Universal Talking Machine Manufacturing Co. and the American Graphophone Co. had each taken out licenses."

The announcement referred to in the company's letter above, reads as follows:

"The cases of the Victor Talking Machine Co. against the Leeds & Catlin Co. and against the Talk-o-Phone Co., on appeal from the court below granting preliminary injunction, were argued before the United States Circuit Court of Appeals of New York on October 11, 1906. Louis Hicks argued the cases on behalf of the defend-

ants, while Horace Pettit represented the Victor Co. Upon adjournment, the Court of Appeals went into consultation, and after considering the elaborate briefs filed on both sides, Judge Wallace delivered an opinion at the opening of the court on the morning of October 12, in favor of the Victor Co., affirming the decision of Judge Townsend in the court below, on all points. Counsel on behalf of the Leeds & Catlin Co. and the Talk-o-Phone Co. argued every conceivable defence, but the court, however, decided in favor of the Victor Co., affirming the lower court. In conformity with the decision of the Court of Appeals, of October 12, 1906, a decree has been entered in each of the cases, and preliminary injunction issued in conformity with the order of the Court of Appeals against each of the defendants."

Regarding the appearance of the Leeds & Catlin Co. as defendants in the above case, the company have repeatedly informed The World that their connection therewith was indirect entirely. That in the course of a business transaction they had accepted some machines from the Talk-o-Phone Co. in settlement of a debt, and were in nowise involved, excepting in this way. Therefore whenever The World has had occasion to report the above litigation as it passed from court to court, this explanation has been duly made in justice to the attitude of the Leeds & Catlin Co.

## JOHNSTON'S, LTD., MAKE ASSIGNMENT.

Johnston's, Ltd., talking machine dealers, of 191 Yonge street, Toronto, Canada, have assigned to W. L. Martin & Co. The liabilities are \$18,000, with assets nominally the same, consisting of stock about \$10,000 and book debts \$8,000. Tenders for the purchase of the stock are now being advertised for.

## HEXT CO. HAVE VICTOR AGENCY.

The Hext Music Co., Denver, Colo., have taken the Victor agency in addition to those for the Edison and Columbia lines which they previously carried and have arranged their store in such a way that each line is given a separate room for exhibition and testing purposes.

## ROUSH BUYS OUT E. G. HAYS.

The talking machine department of E. G. Hays & Co., Pittsburg, Pa., has been purchased by the Standard Talking Machine Co. Victor, Edison and Columbia lines are handled.

The Duplex Phonograph Co., Kalamazoo, Mich., have increased their capital stock from \$30,000 to \$100,000.

## STEWART

You can handle banjos easily and add to your income. Talking machine men will find them big sellers.

**THE BAUER CO.,** 1410 North Sixth Street, Philadelphia, Pa.

## Some Facts Worth Considering

**T**HE talking machine man frequently asks, "How can I increase my business?" The answer is easy. Place on a side line which takes but little space, which is attractive, and a standard in its particular line. Take the **Black Diamond Strings**, for instance. Steel and wound. New process. They are the finest manufactured. They are used by all of the prominent artists, and you will have a trade coming your way when it is known that you handle the "Black Diamond." Music dealers all over America, and all over the world for that matter, know full well the value of this product.

### EXPANSION ON PACIFIC COAST.

Business Is Very Satisfactory in San Francisco  
—Jobbers and Dealers Doing Good Work.

(Special to The Talking Machine World.)

San Francisco, Cal., Nov. 4, 1906.

The talking machine section of the city has spread beyond the confines of Fillmore street and Van Ness avenue, and encroached upon Golden Gate avenue, which connects the two thoroughfares. The new stores in this locality are brilliantly illuminated at night, and business on that street is developing rapidly. Peter Bacigalupi & Sons have their big wholesale store on Golden Gate avenue, between Laguna and Buchanan streets, and have doubled the business in both Edison and Victor goods in the last six months, and Heydenfeldt & Co., located on the same avenue, near Fillmore street, have also enjoyed a large and constantly increasing trade in the Edison and Victor lines, and also in Zon-O-Phones.

Sherman, Clay & Co., Clark Wise & Co., the Bartlett Music Co., and, in fact, all the larger concerns, are exploiting their talking machine departments on a broad scale, often devoting to it fully half of their regular advertising space. So successful has been the "talker" business with Clark, Wise & Co. that they have arranged to enlarge the department given over to this branch of the business, which is under the capable management of Richard Wise.

Byron Mauzy, who devotes his attention especially to the Victor, has plenty to keep him busy, and when he occupies his new building, will give over a large portion to that department.

The Columbia Phonograph Co., on McAllister street, are continually opening new accounts, both in and out of town, and have succeeded in placing some very large opening stocks that will mean more business in the future.

All in all, the talking machine situation in San Francisco would be hard to improve upon, and the end is not in sight, everyone handling machines and records finding that the difficulty lies in obtaining sufficient goods and a place to store them, rather than in finding purchasers.

Now that election is over, let us settle down to work.

### EDISON COMMERCIAL SYSTEMS.

Business Will be Placed in the Hands of Jobbers and Dealers Qualified to Handle It.

In its last issue The World announced the willingness of the National Phonograph Co. to place its commercial system in the hands of Edison jobbers and dealers qualified to handle the business, otherwise appointments will be made among other local firms. In calling the attention of the trade to this preference the company have since declared the following features are important: First, representatives must purchase the proper number of outfits for writing their correspondence, and for demonstration, at the special discount of 20 per cent; second, branch offices of the commercial department will send any goods to customers they may require, either for outright purchase or for trial, and assume the account so that representatives need not carry any stock; third, representatives must provide salesmen and a mechanic for repairs—the branch office of the commercial department will supply all of the repair parts; fourth, the commercial department branch office will bill the goods direct to the customer and the National Phonograph Co. will be responsible for the collection of account; fifth, on all goods installed by representatives a commission of 20 per cent, will be allowed when the customer has paid for the goods to the National Phonograph Co.

### A NEW TRAY FOR CYLINDER RECORDS.

J. Newcomb Blackman, proprietor of the Blackman Talking Machine Co., has been experimenting for several months in an effort to provide improved systems for dealers in carrying a stock of records. One of Mr. Blackman's recent improvements is a folding tray for cylinder records, which is shipped perfectly flat, but in a few seconds can be folded into a strong tray to hold records.

The Blackman Co.'s advertisement in this issue illustrates this improved tray, and it will be interesting for the dealer to know that with record label it costs less than 1 cent for the popular sizes. If the dealer will consider the handsome appearance that a stock of records presents, as well as the fact that he can immediately place his hand on any record called for,

he will realize the investment is a very economical one.

Most out-of-town dealers have hesitated about using the label and tray system because the transportation on the old style trays was so great and, in most cases, almost equal to the cost of same. This objection has been overcome, however, by the improved folding tray, which, being shipped flat, makes the cost of transportation very small and saves the dealer about one-half on the cost of the trays. Sample trays are being mailed to all dealers and jobbers upon request, and the idea has met with great favor among the trade.

### PARDELL DIAPHRAGMS IN DEMAND.

(Special to The Talking Machine World.)

New Haven, Conn., Nov. 9, 1906.

The Pardee-Ellenberger Co., of this city, are meeting with very general success with their Pardell diaphragm. Orders are coming in from jobbers and dealers all over the country, and the diaphragm has met with very gratifying results wherever it has been used.

This company claim to be the only Edison jobbers in New England whose business is exclusively devoted to wholesaling. The growth of the business has been rapid, and last spring they purchased a large building in the wholesale district of the city, allowing them ample space for a great stock of machines, records and supplies generally. One of the firm recently stated that they began as early as last June to stock up for the winter trade, and on account of their practically unlimited quarters were enabled to anticipate any reasonable demand that might be made upon them this year. They report that business has been far ahead of any previous year and the prospects for the next few months are very bright.

A. J. Pommer, president of the A. J. Pommer Music Co., of Sacramento, Cal., has recently been spending several days with the Hawthorne & Sheble Manufacturing Co., of Philadelphia, arranging for some heavy Coast shipments.

J. F. (Doc.) O'Neill is now traveling his old territory—West and Southwest—for the Victor Talking Machine Co., Camden, N. J., and is making good, of course.

## Phonograph Record Cabinets with Hornholder Attachment

PATENTED

Always in place when needed. Out of sight and folded inside of Cabinet when not in use. Larger one opens automatically and has drawer bottoms that turn on center pivot. Practical and indispensable. Prices reasonable.

## LIST FOR JANUARY, 1907.

Of New Edison Gold Moulded Records—  
Records Listed Below Will be Shipped in  
Time to Reach All Jobbers Before December  
27th, But They Must Not be Placed on Sale  
by Jobbers or be Reshipped to Dealers Before  
8 A. M. on December 27th.

Edison Gold Moulded Records are made only in Stand-  
ard Size. Both Standard and Concert Records may be  
ordered from this list. Order by number, not title. If  
Concert Records are wanted, give the number and  
letter C.

- 9434 The Mouse and the Clock (Whitney). Listen  
to the mouse. Edison Concert Band  
9435 Just Because (Burleigh). Harry Anthony  
9436 Gwendolyn (Hein). Comic song hit from  
Marie Cahill's "Marrying Mary". Ada Jones  
9437 Believe Me, If All Those Endearing Young  
Charms (Stevenson-Benzler). Albert Benzler  
9438 When the Flowers Bloom in Springtime (Von  
Tilzer). Harry MacDonough  
9439 Tramp! Tramp! Tramp! (Root). Male Duet  
9440 I'm Getting Ready for My Mother-in-law  
(Norworth). Harlan and Stanley  
9441 Colonial Guard March (Bonk). A catchy  
military march. Edison Military Band  
9442 Moses Andrew Jackson, Good-bye (Snyder)  
Arthur Collins  
9443 It Is Well with My Soul (Bliss). Sacred  
quartet by mixed voices. Edison Mixed Quartet  
9444 Seems to Me I've Always Loved You (Ball)  
Irving Gillette  
9445 Hermosillo (Schuh). A characteristic Mex-  
ican dance. Edison Symphony Orchestra  
9446 Why Can't a Girl Be a Soldier? (Halle).  
W. H. Thompson  
9447 Arrah Wanna (Morse). Irish-Indian matri-  
monial venture. Collins and Harlan  
9448 Spring-Tide Revels (Harper).  
Mrs. Alice Shaw and Twiu Daughters  
9449 Ballet Music from William Tell (Rossini)  
Edison Concert Band  
9450 The Bird on Nellie's Hat (Solman). A new  
comic song. Helen Trix  
9451 When Tommy Atkins Marries Dolly Gray  
(Cobb and Edwards). Billy Murray  
9452 I Love the Last One Best of All (Hein).  
Frank C. Stanley  
9453 March—"Jose" (Blum). Xylophone solo.  
Albert Benzler  
9454 Bonnie Jean (Snyder). Byron G. Harlan  
9455 Jealous Julie (Original).  
Ada Jones and Len Spencer  
9456 When Daddy Sings the Little Ones to Sleep  
(Vogel). Edison Male Quartet  
9457 On the Rocky Road to Dublin (Ephraim).  
Irish intermezzo. Edison Military Band

## GRAPHOPHONE IN KANSAS POLITICS.

(Special to The Talking Machine World.)

Topeka, Kan., Nov. 7, 1906.

The use of the graphophone in politics was  
tried during the campaign just closed in Miami  
County with success. Alpheus Lane, chairman  
of the Republican county central committee, was  
responsible for the use of the talking machine.  
He has been using them in country school-  
houses with great success.

## WOMEN BOTTLE CANARIES' SONGS.

A club of women on the south side of Chicago  
recently gave a unique entertainment for its  
members. A dozen of the women caught the  
voices of their canaries on the wax records and  
on a given afternoon assembled and ran all the  
records through a machine. Then there was a  
vote as to which canary should have the prize,  
a package of birdseed, for the sweetest song.  
Later others of the women had their pet dogs  
bark and after trying these records separately  
set half a dozen machines going at once, making  
a tremendous racket.

## TALKING MACHINE AT FUNERAL.

At a funeral recently held of an old resident  
of Beulah, Col., the talking machine was used  
at the services, the favorite hymns of the de-  
ceased being interpreted by the machine. The  
scene was a most impressive one, and all who  
were present were most affected.

## LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)  
Washington, D. C., Nov. 8, 1906.

PHONOGRAPH. William W. Rosenfield, New York. Patent No. 831,895.

This invention relates to automatic return mechanism for phonographs, and is an improvement on previous patents by same inventor.

In the drawings, Fig. 1 is a plan view of a phonograph provided with an automatic return

mechanism embodying the invention. Fig. 2 is an elevation of the return mechanism and parts of the phonograph with the feed shaft and the auxiliary or return feed shaft broken away so as to more clearly show other parts. Fig. 3 is a section on line x x of Fig. 1 looking toward the left. Fig. 4 is a detail view, partly in section, of parts which will be hereinafter described.

SOUND-REPRODUCING DISC RECORD. Joseph H. Milans, Washington, D. C. Patent No. 832,403.

This invention relates to improvements in sound-reproducing disc records, and has for its primary object to overcome the disadvantages inherent in the hit-and-miss idea involved in the manual application of opaque discs of the character designated to a centering pin or equivalent device carried by the rotating platform or record support now universally employed in talking machine structures and the like.

The present invention has been devised, and in its generic sense the improvements reside in the provision of instrumentalities facilitating the manual application of a normally free sound-reproducing disc record, the main body of which is opaque, to the centering device or devices on the rotary platform or disc support, it being noted that by the term "normally free" the inventor intends to differentiate discs applied and removed by the hands of the operator in contradistinction to such discs as are used in magazine machines and the like and shifted by the mechanism thereof from an inactive to an active position, or vice versa.

More specifically, the invention comprehends a disc having an opaque body portion and a centrally disposed sight opening or window, which may be in the nature of an open space or transparent disc, or both, through which the centering pin or device may be clearly seen by the operator from above the record, said transparent disc or open space, or both, as the case may be, im-

mediately surrounding an opening or openings formed to correspond with and receive the centering device or devices on the record support or platform, a highly important advantage gained by the formation of a disc record of this type, due to the provision enabling relatively constant observation of the centering device from above the record, being that said devices may be of non-circular or angular contour or separated and the receiving portions of the disc formed complementary thereto, whereby when they are brought into operative relation a positive drive of the record may be effected as compared with the friction-drive in machines now on the market, thus doing away with felt or other frictional engaging surfaces usually carried upon the upper face of the record supporting frame or platform.

To more readily impart a clear and full understanding of the invention, there are illustrated in the accompanying drawings, forming part hereof, a number of embodiments of the invention, and the novel details in the construction

and arrangement of the several parts thereof will be apparent upon an inspection of said drawings in connection with the detailed description hereinafter contained.

In the drawings, Fig. 1 is a perspective view, somewhat fragmentary, of an ordinary graphophone, showing the manner of applying one of the improved discs thereto, the body of the disc being opaque and the centering portion thereof transparent and apertured, the centering pin on the platform adapted to enter the aperture showing through said transparent portion. Fig. 2 is a face view of the disc record of Fig. 1. Fig. 3

is a central transverse sectional view through Fig. 2. Fig. 4 is a face view of a record constituting another embodiment of the invention, and this particular form, for the purposes of the present application, the preferred embodiment of the invention is styled. Fig. 5 is a central transverse sectional view through Fig. 4. Figs. 6 and 7 are views similar to Figs. 4 and 5, of a third embodiment of the invention. Figs. 8 and 9 and Figs. 10 and 11 are similar views of still further embodiments of the invention, and Figs. 12, 13, 14 and 15 are detail sectional views illustrative of different ways of securing the transparent discs or windows to the opaque record discs.

AMPLIFYING HORN FOR TALKING MACHINES. Wilburn N. Dennison, Camden, N. J., assignor to Victor Talking Machine Co., same place. Patent No. 832,896.

This invention relates to amplifying horns for talking machines, and more especially to means for detachably mounting the horn upon the machine and for connecting sections of the horn in a readily detachable manner.

In the accompanying drawings, which illustrate one embodiment of the invention, Fig. 1 is a side elevation of the essential parts of a talking machine, having an improved amplifying horn in use in connection therewith, and Fig. 2 a

bottom plan view of the amplifying horn detached from the machine.

PRODUCTION OF PHONOGRAPHIC SOUND RECORDS. William F. Nehr, Newark, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 834,485.

This invention relates to apparatus for use in the molding of phonographic sound records, and more particularly to apparatus for carrying out a molding process described and claimed in United States letters patent No. 683,615, dated October 1, 1901, to Miller and Aylsworth, wherein a tubular mold is caused to descend into a bath of molten material, which fills the same and congeals upon its interior in a coating or layer which adheres to the same while the mold is lifted out of the bath, after which the record may be finished upon its interior surface and removed from the mold by radial contraction or shrinkage.

Heretofore in producing records according to this process it has not been possible to mold the upper end of the record to the shape desired in the finished article, the practice being to form a rough end which must afterward be removed in any suitable manner, as by a cutter or trimmer of any suitable description.

This invention has for its object the provision of means whereby such upper end may be molded into a form suitable for the finished article—that is, a surface which will present a smooth

# 1907 Price List For EDISON AND VICTOR SUPPLY PARTS

IS NOW READY

Have You Received Yours?

## EDISONIA CO., Newark, N. J.

and polished appearance and which will be free from depressions, elevations, discolorations and all forms of roughness or irregularity. With this end in view a large number of experiments

have been made to obtain a mold-cap which when placed upon a tubular coreless mold will be capable of molding the upper end of the sound record in the manner referred to for an indefinite number of operations. From these experiments it has been determined that the mold-cap should have a concave surface, the outer edge of which during the molding operation adjoins and forms a

continuation of the bore of the mold. Preferably the body of the mold should extend above at least the lower part of said concave surface, so that when the cap is removed from the mold the molded end of the record or that portion which forms the end after the reaming operation will be protected by the mold against accidental injury during the handling

of the same prior to the removal of the finished article from the mold. It has also been determined that the said concave surface may be of such form as to entrap a portion of the air contained in the bore of the mold as the same descends into the molten material, in which case the air is permitted to escape through airholes extending through the body of the mold-cap. It has also obtained good results by providing a

second groove concentric with the first groove and separated therefrom by a partition which tapers to a comparatively sharp edge. I have also discovered that the concave surface should be perfectly smooth and highly polished and preferably nickel-plated, and also that the mold-cap should be kept cool during the molding operation, as by providing the same with a water jacket.

Reference is hereby made to the accompanying drawings, in which Fig. 1 is a vertical section showing a mold supported in a mold carrier and surrounded by a water jacket in the usual manner and provided with a cap constructed in accordance with the invention. Fig. 2 is an elevation, on an enlarged scale, of the mold-cap shown in Fig. 1. Fig. 3 is a bottom plan view of Fig. 2, and Fig. 4 is a top plan view of the same.

**SPEED INDICATOR.** Edmond Hugh Riordan, Idaho City, Idaho. Patent No. 834,079.

The invention relates to talking machines, and its object is to provide a new and improved speed indicator arranged to enable the user of the machine to quickly and conveniently adjust the speed of the motor and consequently that of the record, to insure playing of the record piece in proper time. A practical embodiment of the invention is represented in the accompanying drawings. Fig. 1 is a perspective view of the improvement as applied to a Victor talking machine, and Fig. 2 is a sectional side elevation of the same.

**GRAMOPHONE.** Joseph Sanders, Washington, D. C. Patent No. 834,326.

This invention has reference to improvements in gramophones of the type wherein a tapering amplifying horn or a section thereof is mounted to swing over a record tablet only in a plane parallel thereto, and the object of the invention is to produce a means for mounting the sound-box whereby it may be carried by said tapering horn or horn section and have freedom of movement in a plane at right angles to the plane of movement of the said horn.

The invention consists in providing a quadrantal neck for the sound-box, which neck is pivotally yoked to the taper section, so as to move in a curved path past the smaller or free end of said horn section to bring the stylus of the sound-box in engagement with a sound record groove or to bring the sound-box over onto the horn section in position for the insertion or

removal of a stylus. To insure a sound-proof joint between the quadrantal neck or sound-box carrier and the tapering horn section, the meeting faces are curved on an arc the center of

which is the pivot of the yoke joining the sound-box carrier to the horn section. Fig. 1 is a side elevation of a portion of a taper horn section and the quadrantal neck or sound-box carrier with the sound-box and a disc record tablet shown in dotted lines. Fig. 2 is a plan view of the structure shown in Fig. 1 with the sound-box shown in full lines and the record disc omitted. Fig. 3 is a section on the line x-x of Fig. 1, and Fig. 4 is a section on the line y-y of Fig. 2.

**PHONOGRAPH.** Ernst Sollors, Cologne, Germany. Patent No. 832,703.

The present invention relates to an adjusting device for phonographs. In phonographs, especially such as are employed for purposes of dictation, a great drawback is found to be in that when the phonograph is started or stopped the machine is not immediately connected or disconnected. The phonograph will, moreover, invariably at the moment of the disconnecting make a little further forward motion, and in like manner when it is started again there will be necessary a certain movement of the phonograph before it again possesses the speed at which the sounds through the trumpet are clearly audible. Obviously this is a very disagreeable occurrence in the reproduction of dictated matter, because by stopping and starting some words are invariably lost. By means of the stopping and starting device forming the subject of this application this drawback is overcome, inasmuch as the phonograph, when the machine is stopped, automatically moves a little backward, so that when it is started again the sounds which would otherwise be lost become audible, and under certain circumstances also the last words previously heard are repeated.

The device is preferably so arranged that the

controlling lever of the driving motor of the phonograph at the moment of stoppage releases a catch acting upon the controlling device, whereupon this latter starts the second motor or reverses the original driving motor. Moreover, the stopping of the controlling device is effected either by the automatic engagement of the catch or by the running down of the controlling device itself.

Any suitable mechanism may be employed as a controlling device, and as the simplest thereof may be mentioned a clockwork mechanism which puts the second motor in operation during the working period or reverses the driving motor or drives itself directly by mechanical means. The clockwork must be arranged automatically to put itself out of gear after a given time and to stop the second motor or the reversed motor.

Reference is had to the accompanying drawings, in which a suitable device of this kind is illustrated, by way of example, in Fig. 1 in front elevation, and in Figs. 2 and 3 in side elevation.

**JACOT Music Box Co.**  
 39 Union Sq., New York

Edwin H. Molley, Morton, Pa. Patent No. 834,629.

One of the difficulties which has been met in preserving the clearness and distinctness as well as the natural tone or "timbre" of sounds transmitted by vibratory diaphragms has been due to the fact that, owing to the construction of the diaphragm, it assumes a more or less curved or arched position while vibrating under the action of the sound waves, which results in the deflection of the sound waves and their consequent interference with one another.

If the diaphragm, or that portion of it which is effective in the transmission of the sound waves, vibrates in the plane of its surface, or without curvature in the diameter of its plane, the waves will not be deflected, but will be transmitted in direct lines. While this result can and possibly has been obtained in diaphragms of special construction where the central vibratory portion has been connected with the clamping edge or outer support by separate connecting springs, such constructions are unsatisfactory not only because of their complicated and expensive construction, but also because the openings afforded

by those spring connections permit a portion of the sound waves to pass through without acting on the diaphragm. Not only are such sound waves lost, but the openings permit air currents to pass through, which affect the sound waves transmitted by the vibrations of the diaphragm.

It is the object of this invention to provide a diaphragm composed of a single integral sheet without openings or attenuated portions in which the central part may vibrate under the action of the sound waves without appreciable curvature in the lines of its diameter or plane of its surface.

The diaphragm is formed of a thin sheet of strong resilient material, having its central portion united with the clamping edge by an integral, continuous and unattenuated spring portion of substantial width, so that the central portion is strengthened or stayed against curvature and the radial movements necessary to permit the vibrations are taken up in the integral uniting spring portion.

The diaphragm may be used in any instrument for transmitting sound waves, such as the reproducing and recording heads of phonographs, graphophones and gramophones, and the sound boards and tympana of musical instruments.

In the drawings, Fig. 1 is a plan view of a diaphragm embodying the invention. Fig. 2 is a transverse section of the same.

TALKING MACHINE. John C. English, Camden, N. J., assignor to Victor Talking Machine Co., same place. Patent No. 834,511.

The object of this invention is to provide such a construction in connection with talking machines or other similar sound recording and reproducing machines that the sound-box will at all times in traversing the grooves of the record be held accurately in such a position that the plane of the stylus or needle will be substantially tangent to the direction of rotation of a turn table, and, therefore, tangent to the turns of the record groove.

Heretofore in talking machines the arm which supports the reproducing mechanism has usually been pivoted upon a vertical pivot, which causes the sound-box to swing in the arc of a circle about said pivot, and as the proper line on which the sound-box and needle should move in traversing a record of the disc type is a radius or straight line toward the center of the record it is evident that the stylus of the sound-box or reproducer in such former constructions would be in a plane tangent to the record grooves at

only one point in its movement across the record. This relation between the stylus or needle and the record grooves seems to interfere somewhat with an accurate reproduction of the sounds recorded on the record, especially at the beginning and ending of the record, because the stylus bar was not actuated in a direction exactly at right angles to the place of the diaphragm.

This invention has substantially overcome this difficulty, and by its use the stylus is forced to move in substantially a straight line across the

face of the record, said straight line being a radius, while at the same time the plane of the needle or stylus, as well as the sound-box diaphragm, are substantially in planes tangent to the record groove on the radius referred to.

Briefly, this invention comprises an arm for supporting the reproducing mechanism which is composed of two parts joined or pivoted together, the sound-box also being pivoted in relation to the parts of said supporting arm, and also means for connecting the sound-box with a fixed point, so that said sound-box is held accurately and firmly in its correct position while traversing the entire width of the record. Fig. 1 is a side elevation of a talking machine, showing the improved device in use in connection therewith. Fig. 2 is a plan view of the same. Fig. 3 is a longitudinal sectional view of the supporting arm detached from the other parts of the machine and showing the manner of joining the sections of said arm. Fig. 4 is a detailed plan view of the same, and Fig. 5 is a sectional view showing the manner of forming the joint between the sound-box and the supporting arm.

### VARIED MUSICAL TASTES.

Illustrated in the Orders Sent in for Records.

The great variety of musical taste shown by the public is well illustrated by a glance through the orders sent in to any one of the big com-

panies. Some want religious airs not heard since the time of the Crusaders. Others send in for a ragtime tune that, if it ever was heard in public, sank into obscurity years ago and no monument erected to it. A sample order was that received by the National Phonograph Co. for a record to be made of "Down Went McGinty," that relic of bygone days that has almost become a classic. In replying to the above the company said: "It is impossible to say what our recording department may do in the future. 'Down Went McGinty' is, however, looked upon as a 'has been,' and, unless, like roller-skating, its popularity is revived, it is not likely that we will ever make a record of it." And still they come.

### CABLE COMPANY'S BIG BUSINESS.

The Cable Company's branch in Richmond, Va., is doing a phenomenal business with the Victor machines and records, often being handicapped from the fact that new shipments cannot be received rapidly enough to fill out the depleted stocks. The extent of the business may be judged from the fact that it was found necessary recently to send in a rush order for \$6,000 worth of Victor goods, and the inability of the factory to fill it completely at such short notice caused untold inconvenience. J. G. Corley, the manager of that store, is to be congratulated upon the trade he has succeeded in building up in Richmond and vicinity, and which is continually being increased.

### THE UNIQUE TALKING MACHINE CO.

(Special to The Talking Machine World.)

Houston, Tex., Nov. 7, 1906.

The Unique Talking Machine Co., of this city, are a large and continually growing concern, who claim to carry the largest line of both cylinder and disc records of any house in Texas on the shelves at the local store. They have recently opened a branch in Galveston, the original equipment of which was 16,000 disc records and 100 machines. They are now arranging for the installation of an extensive Columbia line in that city. With that record as a beginning the future of the new branch with such a concern back of it seems to be of the brightest.

John Rawlings, Scranton, Pa., who has one of the best equipped sporting goods stores in the State, to which the talking machine department is a good second, has removed from 225 Penn avenue to one of the best sections of Wyoming avenue. Mr. Rawlings will open a talking machine and sporting goods store in Carbonale, Pa.

## You're Not the Only Dealer Who

doesn't sell "3-in-One"—but you will be, pretty soon, if you don't hurry. Are you sure you know just how good "3-in-One" is? If not, simply write us for FREE sample bottle—then try it. Then you'll know what "3-in-One" really is—the greatest oil on earth for talking machines. Then you'll sell it, as other smart dealers do—and net 50 and 100 per cent. profit—without bursting a blood vessel making sales.

"3-in-One" sells itself. The name is a household word—the oil is a household need. "3-in-One" has been lubricating, cleaning, polishing and preventing rust from Maine to California for 12 years. "3-in-One" has stood the test of time—the tests of hundreds of thousands of users. Then why labor to sell unknown, untried oils in its stead? *Cui bono?* Think it over, Mr. Dealer.

Your jobber is waiting for your trial order for "3-in-One." Will he get it? When?

## TRADE CONDITIONS REVIEWED.

**Tremendous Growth of the Arcade Business Throughout the Country—Money Being Made Rapidly—Many Advantageous Locations Yet Uncovered—Sheet Music Proving Quite a Feature—Some Side Features That Are Proving Profitable—Decorative Effects Most Essential to Win Public Notice and Appreciation—Some Valuable Pointers on Equipping Establishments.**

Wherever one travels throughout the country one cannot help being impressed with the advance made in the arcade business. Someone has said that the way to become a millionaire is to discover a popular demand and then meet it at a popular price. One of the characteristics of the American people is a fondness for music. They eagerly seek it everywhere. It is a feature in theatres, churches, public meetings, fairs, battles, halls, parades, and on all occasions where people come together. Music inspires and thrills. It banishes care and lends new strength and courage to the weary. The so-called "penny vaudevilles" now being so extensively operated, are uniformly successful because they are the poor people's theatres. If they have but a cent to spend for entertainment here they can get the most for their money. If they wish to spend a greater number of pennies they will find ample opportunities for doing so.

Because the business is built on the smallest coin of the country is no reason why it should be small. On the contrary, it has most emphatically proved capable of astonishing results. Few people can buy \$5 seats at the opera, but a greater number can buy \$1 seats. Yet where one person can pay \$1 for a few hours' entertainment a thousand can afford 10 cents, and few people patronize a "penny vaudeville" without spending at least 10 cents, and it is surprisingly easy to spend 25.

All the large cities are now well represented; but there are thousands of advantageous locations as yet uncovered. Of course, the larger the city the larger the crowds that throng the thoroughfares, but a city of ten to twelve thousand will support at least one arcade and do so well, providing the manager is one who looks after details closely and pays enough attention to publicity. Attractive bill posters of various pictures and songs on the machines are great instigators of trade. A complete show, run on a series of machines side by side, connected by a sign featuring the exhibit, is a good scheme. For example, "The Broadway Quartet" on machine No. 1, we'll have, say a song; No. 2, a clog dance; No. 3, musical specialties, etc., etc.

Sheet music is now considered almost necessary in the large arcades, and justly so, for the returns from this department have always proved highly satisfactory. Another idea is a fish pond, which can easily be erected, and by placing floats on the water, each one numbered on the top with a loop or eye, the idea being to fish for one of these floats, which when caught, the number is called and a prize given according to the number attached; where this is impractical, a grab bag can be installed at a penny or nickel a grab. This idea has always proved a great one, especially among children. Some parlors have a regular printing department, where cards of all kinds can be secured at various prices, according to the class of work. Where the room can be used for this it has brought fairly good returns, but especially in small places. We would recommend the regular card printing slot machine, which, though it

only prints one style letter, pays better for the amount of the investment, and needs no attendant to do the work.

Nickelodians or moving theatres are now the rage. These, like the arcades, have grown to full bloom almost in a night. Places are now being opened that occupy entire buildings, especially constructed for their use, and rival in size and beauty some of our best vaudeville theatres. Increased admission fees from five to ten, fifteen, and even twenty cents are now growing common. The inside layout is similar to regular show houses with orchestra and balcony seats, musicians to play between scenes, etc. Some even carry the vaudeville idea to its extent and stage a number of various acts by well-known performers, for, say, forty minutes, while others are continuous performances.

Of course, to carry such a place on a paying basis a great deal of attention must be paid to publicity. The outside decorations must necessarily be showy and attractive; a white marble granite or plaster front, with a profusion of electric lights proves very effective. And during mild weather, providing your outside lobby is large enough, a fountain on which changing colored lights are thrown makes an attraction no crowd can resist. Bill posting must not be neglected, and a judicious amount of printers' ink distributed among the local papers helps to keep things moving. In such of the large places where regular theatrical performances are given, slot machines holding candy or opera glasses ought to be attached to the back of the seats. The giving of souvenirs to ladies once a week is a good plan and will make a hit. Programs printed on the back of some attractive picture in the form of a post card—something the people will retain—is a good idea, and in that way your name is unconsciously kept before them.

## ENTIRE PLAYER REPRODUCED

**Through the Medium of the Talking Machine and Moving Picture Machine—Will be Taken Throughout the Country.**

Entire plays given through the medium of a talking machine and moving pictures is the latest development in the march of the "talker," and affords an interesting addition to the list of wonderful things continually occurring in trade connection with these machines. It will be remembered that Charles Frohman had records made of the songs in "The Little Cherub" as they were sung in England, which style he considered correct, and had them reproduced for the benefit of the American company, but in the case of "Nurse Marjorie" the talker has played an even more important part.

A special performance of the third act of "Nurse Marjorie" was given at the Liberty Theatre, New York, recently and after it was photographed by a moving picture machine, the actors repeated their lines into a talking machine.

The pictures will be taken on tours, and as they are displayed the voices of the actors will be heard issuing from the talker, the lines fitting perfectly into their proper places in the pictures and thereby affording a finished performance. The idea on a smaller scale was successfully carried out during the recent campaign for governor of New York State, when speeches were reproduced from talking machines and made to correspond with the movements depicted in moving pictures of the candidate shown at the same time.

## MOTION PICTURE MACHINES

**Are Now Utilized in Every Feasible Domain of Effort—The Perfection of the Machine Is Such That Scientific Men and Savants Are Spending Much of Their Time Following Up This Wonderful Phase of Photography.**

According to Dwight L. Elmendorf, the well-known lecturer, the American public does not take the cinematograph, biograph, or motion pictures seriously, partly because of the trash which ordinarily is presented, and again because of the numerous "fakes" made to represent some real event. In Europe the attitude toward this wonderful phase of photography is entirely different, and in many instances genuine and scientific advance has been made, and this is to such an extent that scientific men and savants are spending much of their time in this fascinating pursuit.

Frequently royalty has turned to the taking of motion pictures as a pastime. The Emperor of Germany is an enthusiast; also the Sultan, who has films taken under his supervision, and has attached to his traveling court an English man as "hioscope attache." He is employed continually by the Sultan to entertain the women of the harem by showing them motion pictures of various parts of the world. The Shah of Persia is also devoted to this fascinating branch of photography.

The fact that the queen mother of the reigning King of Italy owns a bioscope will no doubt appear strange to Americans, yet it is true that in Europe many wealthy people devote a great deal of time to taking "animated" pictures.

Now that the ordinary camera has become almost universal, why should not those who can afford expensive pastimes indulge in this exceedingly attractive form of camera work and catch hits of motion here and there while on their travels to be reproduced at home for the benefit of their friends who cannot travel?

There are indeed few who have not come in contact with motion pictures as a form of amusement in one way or another. And yet this is the least important side of the subject. Enormous strides have been made in the last three years by business, manufacturing, and educational interests toward putting the hioscope to many practical uses. One illustration must suffice to show its uses to the manufacture and to schools.

There is one company in the United States manufacturing mining machinery which has made a complete bioscope record of its work. The series begins with moving pictures of mining the ore; then the transportation of the ore to the furnace, where the process of converting the ore into steel is shown; then to the works, where the steel is made into different parts.

The next series shows the manner of assembling these parts, and ends with a completed piece of machinery. The third series is devoted to the transportation of the machinery to the mine where it is to be used, and ends with the product in actual operation. The value of these films to the manufacturer is in demonstrating their machinery to prospective buyers.

Many manufacturers are employing the biograph for similar purposes, as it gives a clearer idea of their products than would be possible by ordinary photographs and catalogues. In colleges and engineering schools it is also employed to good advantage. The value to the student is apparent. He may have a good technical idea of this or any other piece of machinery; perhaps he could, with ease, demonstrate how and why the engine works, but the chances are he would be in a sorry plight were he told to assemble some huge piece of machinery. Once having seen it in actual operation by means of a

motion picture, however, he receives the next best information—practical experience.

The scientific application of bioscopic records is unlimited. In microscopy remarkable motion pictures have been made illustrating the "unseen world," the life and habits of animals and insects, indelibly fixed upon films for future study and reference. The life history of ants and bees is beautifully illustrated by this animated photographic method. It has also been employed in eclipses, in records of surgical operations, while it is unnecessary to say that one of its most interesting applications is that of recording human life and action. In this respect Mr. Elmendorff has employed it most successfully in his lectures, to which it imparts a tremendous life and vigor that mere words could never do.

It is interesting to note that Monsieur A. Giebert, of the French Department of Correction, was in this country recently studying methods of capital punishment, France desiring to find some more humane method of putting criminals out of existence than by the guillotine. He secured many important points through the biograph. Prominent manufacturers of films in speaking the other day of the tremendous demand for moving pictures, said:

"Among all the nations of the world the Japanese are among our best customers. They are intensely keen in regard to everything that shows the interior workings of American establishments, the factory, the hotel, the store, the municipal and governmental buildings. We sent a portrayal of the Postoffice Department and that vied in popularity with the Westinghouse factories. We have even received orders for a packing house series from another country, but that is still in abeyance."

#### VENEZUELA'S TARIFF ON MACHINES.

(Special to The Talking Machine World.)

Washington, D. C., Nov. 6, 1906

Consul E. H. Plumacher, of Maracaibo, has sent to the Department of Commerce and Labor the following extract from a recent Venezuela Customs Decree which will be found of interest to manufacturers of automatic contrivances:

"Automatic scales to weigh a person by throwing into the slot a piece of money, generally a nickel, or 0.12½ bolivars, and all such kind of machines, shall be placed in the fourth class (0.75 bolivars per kilogram), but other automatic scales or machines which produce music or return the money as a game of hazard shall be placed in the fifth class of the national tariff (1.25 bolivars per kilogram)."

5242.—Popular Classic Waltzes.—1, Le Fete des Fleurs, Valse Elegante, Elsa Fleming; 2, Amoureuse,

Valse Tres Lente, R. Berger; 3, Rose Mousse, Valse Lente, August Bosc; 4, Valse Bleu, Alfred Margis.

5243.—1, Love Is King, waltz, C. Blake; 2, Antionette, march and two-step, Scott Joplin; 3, The Lion and the Mouse, waltz, Theo. Bendix; 4, Red Domino, march and two-step, S. R. Henry; 5, Margurite, waltz, R. C. Reimer.

5244.—1, When Tommy Atkins Marries Dolly Gray, song, Cobb and Edwards; 2, Abraham Jefferson Washington Lee (You Ain't Goin' to Pick No Fuss Out of Me), song, Sterling and Von Tilzer; 3, He Handed Me a Lemon, song, Bob Cole; 4, Campmeetin' Time, coon song, Williams and Van Alstyne; 5, Don't Go 'Way, Nobody, song, Cahill and P. A. G. T.

5245.—1, When Her Beauty Begins to Fade, waltz, Theo. Morse; 2, Gee, but This is a Lonesome Town, song, Billy Gaston; 3, When the Flowers Bloom in Springtime, Molly Dear, waltz, H. Von Tilzer; 4, The Bullfrog and the Coon, song, Feist and Nathan; 5, Waltz Me Around Again, Willie, 'Round, 'Round, 'Round, song, Cobb and Shields.

5246.—1, Not Because Your Hair Is Curly, song, Bob Adams; 2, Little Willie Brown, song, from "The Little Cherub," Chas. Collins; 3, I Thought My Troubles Were Over, but They'd Scarce Begun, song, from "In Abyssinia," Gray and Jones; 4, Selina, song, Reimers and Koehler; 5, Good-bye, Jennie Jones, song, L. B. O'Connor.

#### CAILLE BROS. CO.'S BIG LINE.

One of the most complete lines of slot machines in this industry is that carried by the Caille Bros. Co., of Detroit, Mich. Their specialties are known by every user of automatic machines for their money-making features, and are highly esteemed. Members of the trade desiring to branch out into a larger sphere of activity would do well to keep this firm in mind when contemplating anything of that kind.

#### NEW YORK VITAK CO.'S AGENTS.

The New York Vitak Co. have appointed the Pardee-Ellenberger Co., of New Haven, Conn., distributors for New England for the Vitak Moving Picture Machine and Films, and have given them the exclusive sale of these goods for that territory.

Report states that the Hawthorne & Sheble Manufacturing Co., of Philadelphia, have perfected a new illustrated song machine that embodies many new and valuable features. If such is a fact, we presume details will shortly follow, as the progressive concern's reputation for pushing is a well-known fact.

## To Talking Machine Dealers

The MUSIC TRADE REVIEW is the oldest publication in the music trade industry. It contains more than fifty pages devoted to the piano trade, musical merchandise news, music publishers' department and talking machine trade. A special technical department is a regular weekly feature of the publication. A vast amount of valuable information is contained in each issue. The REVIEW has won higher honors at the great expositions than have ever been won by any other publication in the world.

Grand Prix at the Paris Exposition, 1900  
Diploma at Pan-American Exposition, 1901  
Silver Medal Charleston Exposition, 1902  
Gold Medal St. Louis Exposition, 1904  
Gold Medal Lewis-Clark Exposition, 1905

Subscription in United States, Canada and Mexico, \$2.00 for 52 weeks. All other countries, \$4.00.

We publish the Tuner's Guide also—a cloth-bound, illustrated work of over one hundred pages. Sent postpaid to any part of the world upon receipt of one dollar.

# Do You wish to make big money during the Holi- days?

The Regal Player

Have you ever figured how much nickels that keep on growing amount to? Perhaps you have.

But do you know how easily people will put nickels into a slot to hear good music like that of the

## Regal Automatic Piano

and what a goodly sum those nickels amount to in a week? Perhaps you do.

But here's another point. It isn't only what the Regal Player *takes* in; but what it *brings* in—the extra nickels, dimes and dollars that people are sure to spend while they stay in the place to listen to the music. That's what counts.

---

**The Regal  
Piano and Player  
Company**

890 Southern Boulevard

NEW YORK, N. Y.

Do you know, Mr. Talking Machine Dealer, that the Agency for the Regal will make you good money? You can easily handle Players with Talking Machines.

Arcades and places of public resort can be easily reached with the Regal.

Do you know the value of the Regal Agency to you?

Have you thought the subject over?

If not, it would pay you to think of it right now.

Many wise men are making money by having the REGAL AUTOMATIC PIANO to take in and bring in money for them every day. We believe if you knew how much profit there is in it you would want one, too.

### Genuine.

It is a genuine piano-player; gives the finest kind of music, loud or soft; every selection you want—popular or classic. Requires no attention; looks after itself, so to speak. Runs by pneumatic power, pumped by a small electric motor, which we supply to suit every kind of electric current.

### The very best.

It is the most musical, simplest, strongest, longest-wearing, and in every way the most satisfactory and profitable instrument ever made for supplying music to the music-loving public:

And it is a beautiful ornament anywhere you put it, and it blends perfectly with the talking machine business.

Why not make some money out of it yourself by selling it?

## HERE AND THERE IN THE TRADE.

Some of the Latest Novelties and Improvements Which Are Destined to Win More Than Ordinary Notice This Fall.

The counting of coin by hand is one of the most brain-racking, annoying and expensive items of the entire financial system. Men for ages who have been in the habit of handling large amounts, such as bankers, merchants, etc., have had this worry them every day of their life. The arcade man has now placed himself in their ranks, and is up against a stiff proposition when he comes to count his day's receipts. The habit in vogue has generally been that of weighing the coin in bulk. But this, even with the most accurate scales, has proved far from satisfactory. It remained for a man by the name of Johnson to perfect a coin counter whose accurate results have made him famous. The Johnson coin counter counts automatically any denomination of coins, or counts and wraps as rapidly as five experts could do by hand; mistakes are impossible. There is a separate head or counter for each denomination of coin, and the change from one size to another can be made instantly. Arcade men will find it a great help to them in their business.

The "multiphone" is one of the musical marvels of the age. In construction it is remarkably simple. A large magazine wheel carries twenty-four cylinder records, any one of which may be reproduced at the will of the operator. A nickel starts it. It has an accurate register for recording the number of nickels taken. The power is from a spring motor. One winding is sufficient to reproduce eighteen records. The public does the winding, so there is no expense for power. In appearance the "multiphone" is striking and unique. It is a massive cabinet, standing six feet high and three feet wide, and in general design is like an old-fashioned harpsichord, finished in antique bronze or built of San Domingo mahogany. The front and sides are French beveled plate glass, exposing the mechanism to full view. Wherever people gather or pass in numbers is the natural location for the "multiphone." In railroad stations, in ferry houses, in hotels or restaurants, in theatre lobbies, it serves the double purpose of pleasing the

eye and delighting the ear. Is it therefore any wonder that the call for these instruments, whose average yearly intake passes the \$500 mark, promises to make a new record in the business world? The machine is controlled by the Multiphone Operating Co., a New York corporation having a capital stock of \$100,000.

Another new machine which has made a remarkable record for itself since its appearance a short while ago is an automatic penny or nickel drink machine. One of its beauties is that any drink can be sold. The large five-gallon bottles which hold the liquid can be easily changed and refilled. During the summer months cider has proved the most popular beverage. This can be bought wholesale at 35 cents or less for five gallons. There are 112 glasses to that amount. One of these machines, which was placed in an arcade in Syracuse, averaged a sale of thirty gallons a day during the hot weather. This was sold at one cent a glass, so that the big profit made is apparent. The company manufacturing these machines are not selling them, but are placing them in various locations on a percentage basis. They can be used anywhere—in arcades, cafes, talking machine stores, etc.

A new and very interesting invention has just been perfected by Chas. H. Kayser, of West Orange, N. J. It consists of a motion picture machine outfit for home entertainment. The machine is very small, about the size of a cigar box, and so simple in construction that a child can operate it and show as perfect moving pictures as are shown with the regular machines used in theatres; of course, on a smaller scale, about five feet square, large enough for the home. The inventor claims he can by his system sell pictures for about three cents per foot, and in this way bring moving pictures within the reach of anybody with moderate means. The pictures are made on a fireproof paper, instead of the inflammable celluloid, now the only available material for moving pictures. Mr. Kayser has constructed another machine on the coin-in-slot principle, enabling from one to five persons at the same time to view the moving pictures, provided a coin is deposited. This machine works automatically and will be a mint for dealers.

The New York Vitak Co. are having all they

can possibly do to fill the orders that have piled in on them from their advertising campaign carried on in this paper, and if their advertisement does not appear in this issue it is not because they are not satisfied, but because they are behind in filling orders. There has been a general call for this company to turn out a higher class machine to retail at between \$25 and \$35, and from what we hear this company are bending their energies to fill this demand. Watch for something interesting to appear in their December announcement.

## A NEW ELEMENT REVEALED.

The Combination of the Talking Machine and Vitascope Is Destined to Become a Force in Political Campaigning.

In the fact that the manager of a London music hall is planning to amuse his patrons by letting them hear and see Mr. Hearst in the very act of delivering one of his speeches, that aspiring statesman's political servitors will probably find conclusive proof of their own wisdom in making this marvel possible by calling the talking machine and the vitascope into play as campaign auxiliaries. The idea was, indeed, an ingenious one, though so simple, now it has been done, the wonder is that it hasn't been done before, but there ought to be a warning in its ready acceptance as a means of filling out the programme of an evening's entertainment in a place so far away from the scene of battle.

If London takes interest in a speech so scientifically preserved and illustrated, the chances are that those whom it interests here will also have more attention for the method of presentation than for the matter presented, says the New York Times. Such a "number" would be watched attentively by anybody while it remained a novelty, but it is hardly possible that it would inspire thought on any political question, and not even imaginable that it would change a vote or strengthen a determination. The old confidence in oratory as the best way to "reach the public" is waning fast. It would not yet be safe to abandon the plan, but the real work of every campaign is probably done now through the newspapers, which have voices that carry vastly further than those of any candidate or waged spellbinder.

## The Edison Phonograph Advertising Brings Customers with Money to Your Door.

THE advertising brings the customers. But you must do the rest. The only way to sell an Edison Phonograph is to sell it. Believe in it, show it, talk about it, let it talk to the man who wants a Phonograph. You cannot get any benefit from Edison advertising unless you have the Phonograph.

We can do but two things, we can make the Phonograph and we can make the customers want it. Don't let the customers get to your store before the Edison does. If you do, our advertising, so far as your store is concerned, is wasted.

*The attention of agents and dealers generally is particularly called to the excellence of the Imperial 10-inch Disc Record. This record is a masterpiece and cannot be equalled by any disc on the market.*

THE IMPERIAL produces cash results, and cash results are what we, in the record business, are after. The Imperial "makes good" every time. The customer is satisfied and comes back, not "at you" but "to you," and buys again. The Imperial is like coffee—it must be found in every household—and it is the clearest, loudest and best record ever made. It lasts, too, and can be had in all the latest songs and hits.

With the Imperial on your shelves you can turn money over rapidly and often. The margin of profit in handling these goods is large. But why say more? If you have the record you know all about it. If not, send for samples. They speak for themselves.

## Announcement

With reference to a circular which has been recently sent to the trade, claiming that all flower horns infringe certain patents referred to, we desire to reassure our customers by saying that these statements are without proper foundation and no one should allow himself to be intimidated by them. The patents referred to are not so broad and comprehensive as it is sought to make them appear, but are really narrow and limited in their scope and cover only restricted features, which we do not use in our horns. We have thoroughly investigated the matter and take pleasure in assuring our patrons that none of the numerous styles and kinds of horns manufactured by us, infringes in any possible way any rights under said patents or any other patents.

We would furthermore call attention to the fact that our reputation as pioneers in the horn industry and our standing as manufacturers, are based upon the principle of depending upon our own energy and industry, and of advancing and developing the art in which we have worked. We have made many improvements in horns and in the manufacture of horns since we first entered the business, and we have taken out patents continuously on all the developments which we have made, so that we now hold a long list of patents fully protecting all our products. These patents, together with our long experience and familiarity with the horn industry, enable us to assure all our customers that they may buy our product with the fullest confidence. When purchasing horns see that you get those bearing our trade mark

we sell is a guarantee of high quality. We do not aim to produce an article merely for the show it makes, but for the service it gives. Our horns are beautifully hand painted in an endless variety of striking and exquisite floral designs, and the colors are then "Baked-on." This gives our horns a permanency of color that simply cannot fade, crack or flake off. These two features in our horns, good looks and honest wear, are the primary causes of our success.

## **A Few Facts Concerning Horn Cranes**

- ¶ We were the originators of the Horn Crane.
- ¶ The patent records alone will prove that much.
- ¶ The first application for a patent on Horn Cranes was made by us, on February 1, 1902.
- ¶ Like many other good things, our Horn Crane soon had many imitators. But, in all these, the embryonic seed born in the original was naturally lacking.
- ¶ That's why we always have and always shall continue to supply Horn Cranes, "born of ripe experience," to an intelligent and progressive trade.

## CHEERFULNESS IN BUSINESS.

The Talking Machine Industry Demands an Optimistic View of Life from Its Followers.

Every talking machine dealer should be an optimist, or at least act the part in the presence of customers. It will pay him in many ways; first, because a good humor is contagious and once his patron's mood becomes a jovial one, he is ready to listen and enjoy. Then the dealer should let him hear one of Billy Golden's laughs. If that does not fetch him, one of Arthur Collins' coon songs will, and before he returns to his normal condition of seriousness, he will have purchased several records surely.

And it is all so easy, Mr. Dealer. Get into the habit of laughing. When you see a joke in the paper while on the car en route to your store in the morning, laugh at it. There is bound to be a little humor in it, and that laugh will put

## HOLIDAY DISPLAY.

The Importance of Decorating and Properly Arranging the Stock on Display—Competence and Originality Will Always Win Out—Some Pointers for the Holidays.

Now that the holiday period is with us, the wide-awake talking machine dealer will find the time opportune for giving a little extra attention to his showroom arrangement and advertising. There is a peculiar and undefinable "something" in the air at this season that makes almost everyone willing to part with money without the use of force, and while this spirit of giving is in them it's up to the dealer to get his share.

The stock rearranged and set off with a liberal supply of evergreens festooned 'round about will take on a surprisingly inviting appearance. In the window one or two handsome machines and an assortment of records and accessories should be cleverly arranged and decorated with evergreen, ribbons, appropriate mottoes and several of the numerous recognized tokens of holiday cheer.

When the aforementioned matters are arranged it is time to produce business-getting advertisements. Take liberal space in the local papers, calling attention to your special arrangements for handling the rush, and talk like you really expected a crush that would fill the sidewalk, just to show your confidence in what you have to offer. Then dwell upon your special decorations and invite visitors to look them over. When the preceding details have been mentioned, call attention to the singular appropriateness of a good talking machine as a gift, and the easy terms at which one may be obtained.

The reader will be drawn by curiosity to visit the store and look at the decorations and the holiday goods, and be induced to inquire regarding prices and terms. With a good salesman at hand a sale may be readily closed on a satisfactory basis.

A musical instrument of any kind appeals to the average giver from the fact that its usefulness is not merely temporary, the styles do not change in a year or two, or even in ten years, and it is always a source of pleasure not only to the owner but also to friends.

A "talker" does not cost as much as many pieces of jewelry, and does not have to be kept from view in a safe deposit vault to prevent it from being stolen. There are many other advantages connected with such a gift that should interest the holiday shopper and make him a customer.

Take advantage of the season to boom your business in a way that will make the people in your vicinity remember you during the rest of the year when they desire articles in your line. It is an opportunity that occurs only once a year and should not be allowed to slide by.

## "TALKERS" IN ART CASES.

The Next Development May be Along This Line—Machines to Conform With Music Rooms of Wealthy People.

Talking machine manufacturers are united in the opinion that with the recent introduction of machines costing several hundred dollars each, the trade has reached a point where the next advancement will be in the direction of machines and cabinets made to special order, just as art pianos are made.

Where a talking machine and the necessary fixtures fill a prominent place in a room it is but natural for the possessor to desire them to harmonize with the rest of the furnishings, and the easiest way to accomplish this end is by having the talker and cabinet made to order in the finish and style desired.

As a development, it will not find the large companies unprepared, for the making of the regular line of elaborate outfits has acquainted them with what is wanted in the fine work.

## REVIEW OF NEW YORK TRADE.

Marked Improvement in the Retail Situation—Society Has Taken Up the Talking Machine—Songs in Foreign Tongues Are Favorites.

The retail talking machine trade in New York which has not been normally brisk for several weeks, has at last awakened and is now in winter trim. The various dealers say that the demand is for the best class of instruments, and that the price now averages \$50 for all kinds. The dealers along Fifth avenue naturally carry only the most expensive machines and records, to meet the wants of the class of patrons that frequent that thoroughfare. Society has taken up the talking machine, and there are several dealers who do practically nothing else but what is known as a carriage trade; that is, customers who come in their carriages.

In other parts of the city, both the disc and cylinder machines, have their devotees, and with plenty of money in view, their patrons select the best machines that they carry, and a good supply of records. Much of this business is done on the instalment basis, but it is a rare thing that a payment is defaulted, and a machine sent back. The dealers also say that they have lost but comparatively few through dishonest patrons. One dealer says that he believes the good influence of the music compels honesty.

While the topical songs are ready sellers, there is a steady demand for religious and patriotic music. The various nations which form our cosmopolitan population are insistent in their demand for songs in their native tongue, and whenever records are made in their language they meet with a ready sale. The east side dealers look for an excellent winter trade, and say that the talking machine is becoming more popular every day, and it is an extremely poor family that does not feel that it can afford to purchase one of some description.

## COLD STOPS ROCK'S ECHO.

Cliff Does Not Repeat Sound When Thermometer Is Low.

Advices from Dawson City, Alaska, tell of a phonograph rock cliff which exists some forty miles up the Yukon River. A correspondent in the northern city gives the following account of its weird echoes: "At first the echo is a mere whisper, and then it reverberates louder and louder until it reaches the full volume of the human voice, yet it always repeats from the same place and not from different distances like the ordinary echo. The most mysterious thing in connection with the rock is that when the thermometer registers 40 or more degs. below zero there is no echo, or, as the Indians say, the echo freezes. In the spring, when the snow melts and the ice gets out of the rivers the echo thaws out. Then can be heard the voice of the traveler, the deep, long, dismal howl of the wolf and the whistling of the winds of the previous winter."

## CHATTANOOGA CO. INCORPORATES.

An application for charter for the Chattanooga (Tenn.) Phonograph Co. was filed last week by Frank H. Atlee, W. G. H. Thomas, John L. Atlee, Jr., Geo. H. Patten and L. M. Thomas, with a capital stock of \$10,000. This company will, according to its charter, buy and sell phonographs and other musical instruments, and will commence business right away.

"HE HOLDS IT IN FRONT OF HIM."

you in condition to conquer gracefully the trials of the day.

When a rural gentleman from the country calls and says he wants to buy a "funnygraff," laugh at him. He won't mind in the least, but will think you "an uncommon pleasant feller," and then when you demonstrate one machine after another from the hundred-dollar Concert Grand down to the ten-dollar Gem, and he still fails to arrive at a decision, do not become discouraged, but put on some very funny records, the funniest you have in stock, and watch Hiram double up with mirth. Soon with the tears of laughter thick upon his "specs" he will probably say, "By Gosh! that machine's so durn funny, it'll most tickle Mandy to death. I'll take it, Bub, an' them funny record tunes, too."

See, Mr. Dealer, you've made a sale, and your merry mood did it. That laughter is contagious is proven by the fact that Hiram chuckles all the way home, just thinking about you and the records he heard in your store, and when he alights from his spring wagon and removes the purchases he has made in the city, he finds the talking machine among them. He holds it in front of him, and once more the flood of merriment sweeps over him. But that is only a rivulet of the mighty stream of uproarious mirth that will resound through the farmhouse when the family gather in the evening for the concert.

It pays to cultivate the art of laughing, and no one can resist the jolly fellow who is always smiling and courteous. He gets the customers while Mr. Grouch wonders why business is so dull. As you want to be one of the jolly fellows with a big business, Mr. Dealer, this little story is at your service.

## JOBBERE ELECT OFFICERS.

The Eastern Talking Machine Jobbers' Association Adopt Constitution and By-Laws and Select Important Board of Officers—Most of the Leading Members of the Trade Now in the Association—Some Interesting Addresses Made—All Working for Better Trade Conditions Throughout Eastern Territory.

At the meeting of the Eastern Talking Machine Jobbers' Association, held at the Hotel Breslin, New York, last summer, it was decided to incorporate the association. The dull season and the fact that many jobbers were away delayed final action, and practically nothing was done, until a meeting of the committee, authorized to handle the incorporation of the association, was held in the salesrooms of the Blackman Talking Machine Co., New York City, Friday evening, November 16. The committee then decided to merge the old association into an incorporated body, and arranged for another meeting, November 23, in the same place.

This was the first annual assembling of the new association, and as such an election of officers was held, to hold office until the third Monday of next July, as follows: President, W. D. Andrews, Syracuse, N. Y.; vice-president, J. Newcomb Blackman, of the Blackman Talking Machine Co., New York; treasurer, S. B. Davega, New York City; secretary, A. H. Jacot, of the Jacot Music Box Co., New York City. These officers represented re-elections with the exception of Mr. Jacot, who succeeded J. B. Kelsey. The board of directors included the above officers and W. A. Pardee, of Pardee-Ellenberger Co., of New Haven, Conn.

A constitution and by-laws, to conform with the certificate of incorporation, were adopted, as well as important resolutions, dealing with trade matters in general. Several applications for membership were received and accepted. Printed copies of the resolutions will be sent to the members as soon as possible, as well as such jobbers not members, but who are in the territory covered by the association, and whose applications would be desirable. The meeting was well attended, and addresses by W. D. Andrews, J. N. Blackman and others proved that the interest in the organization was increasing rather than otherwise, and that the membership would steadily receive further additions. The matter of credits came in for particular discussion, and a simple, but very effective plan of making reports was made a part of the constitution and by-laws. The necessary blanks for reporting were forwarded on the fourth of this month to all members.

The next meeting will be held during the week of the Automobile Show at Madison Square

Garden, New York, January 12 to 19, the place and exact date to be announced later. This time was decided on, as it is likely that a large number of out-of-town jobbers will attend the show, and therefore a meeting of the association besides.

Vice-President Blackman, in speaking of the association, said: "The dispatch with which matters were handled proved that there will be no occasion hereafter for trade papers to inquire what has become of the Eastern Talking Machine Jobbers' Association. We never had a more satisfactory meeting, as far as getting right down to business is concerned, and the general opinion was that we had at last conquered the credit question in a way that would bring immediate results. Since this meeting I have personally secured three new members, and have no doubt that others will follow as soon as they realize the benefits to be derived. The information regarding credits will be valuable for use by members during the holiday time, when accounts run very high. The association now has 39 members, and by referring to the list appended it will be seen that they include some of the best known houses:

"American Phonograph Co., Gloversville, N. Y.; American Talking Machine Co., Brooklyn, N. Y.; W. D. Andrews, Syracuse, N. Y.; G. C. Aschbach, Allentown, Pa.; Theodore F. Bentel Co., Pittsburg, Pa.; Bettini Phonograph Co., New York; Blackman Talking Machine Co., New York; J. F. Blackman & Son, New York; Sol Bloom, New York; Frank E. Bolway, Oswego, N. Y.; Boston Cycle & Sundry Co., Boston, Mass.; S. B. Davega, New York; I. Davega, Jr., New York; Douglas Phonograph Co., New York; Eastern Talking Machine Co., Boston, Mass.; Eclipse Phonograph Co., Hoboken, N. J.; Edisonia Co., Newark, N. J.; Flint & Brickett Co., Springfield, Mass.; Forsyth & Davis, Kingston, N. Y.; J. A. Foster Co., Providence, R. I.; William Harrison, Utica, N. Y.; Jacot Music Box Co., New York; James H. O'Dea, Paterson, N. J.; Pardee-Ellenberger Co., New Haven, Conn.; Penn Phonograph Co., Philadelphia, Pa.; Powers & Henry Co., Pittsburg, Pa.; Victor H. Rapke, New York; Stanley & Pearsall, New York; Benjamin Switky, New York; Talking Machine Co., Rochester, N. Y.; Victor Distributing & Export Co., New York; John Wanamaker, New York; Thomas Wardell, Lowell, Mass.; Alfred Weiss, New York; William Werner, Easton, Pa.; Western Talking Machine Co., Philadelphia, Pa.; Musical Echo Co., Philadelphia, Pa.; H. A. Weymann & Son, Philadelphia, Pa.; Wells Phonograph Co., Philadelphia, Pa."

## ELECTION RETURNS BY GRAPHOPHONE.

Talking machines vs. the megaphone received

a practical demonstration election night at the Free Press office, Detroit, Mich. Hundreds of persons stood in Lafayette avenue and heard the returns called out from the horn of the big Columbia graphophone that was stationed in a window on the second floor.

As fast as the returns—both city, county, State and national—were received, new records were made and the Columbia did the rest. Every one was able to hear every word, and the way the cheers went up for the various favorites showed that there was no question about the vast audience being able to understand everything.

It is the first time the talking machine has been used in Detroit to entertain such a large crowd, and the experiment was most successful.

## UTILIZING STORE WINDOWS.

A Splendid Form of Advertising That Is Open to Every Talking Machine Dealer and Which Brings Big Profits to the Man Employing It.

The advance made in the art of window trimming in the past few years is as noticeable as that made in advertising. Any retailer who recalls the windows of ten years ago can't help but mark the contrast that greets his eye to-day. At that time the displays presented a conglomerate mass of everything in general, and not much of anything in particular. The passer-by had the same sight to gaze upon day after day, and no doubt wondered why people showed such poor taste.

But to-day it is another story. The idea of utilizing this valuable space has been grasped by every live dealer. Glance in these same windows and you see something. You see, back of the exhibit, the idea standing out bold and strong. The chances are that the moment you look it will flash into your mind how that display reminds you of the excellent ad. that appeared the day before, describing the very articles you saw in the window.

A display to attract attention must possess sufficient originality to at once arrest the eye with an unique arrangement so harmonious and beautiful as to be truly artistic, as a publicity expert very properly says. The most cultured admire a fine exhibit. The most ignorant are influenced by it. The great mass of shoppers are swayed by it. Dollars and cents are hypnotized by it, and the merchant who is wise always remembers this.

Arthur C. Erisman, manager of the Columbia Phonograph Co.'s store in Toledo, O., is one of the hustling and successful talking machine men in that section of the country. He has the knack of capturing high-class trade, and has built up a splendid following in his city.

# VICTOR SERVICE

WHY WE CAN GIVE YOU THE BEST

We are the only Victor distributors in the East who devote an entire store to the Victor line. We have the space and facilities for carrying at all times as large and complete a stock of Victor machines and records as that carried by the factory.

We can guarantee to ship all orders the day they are received. Our shipping department is located in the very heart of the wholesale district of Boston with its numerous daily express collections covering every point in the United States; it employs a large and efficient force who give their entire time and attention to the filling of Victor orders.

We place all records in separate envelopes immediately upon receipt from the factory and deliver them in the same envelopes. Thus the retailer receives his records in the best shape to handle and in as perfect condition as when shipped from the factory.

JOBBERE and DEALERS in  
**Disc Records**

**DO YOU USE  
ENVELOPES?**

Our envelopes are used by 75 per cent. of the largest jobbers.

Their superiority is proved by the numbers of duplicate orders we receive.

Ten different styles and sizes. Samples and prices on application.

## THE QUAKER CITY NEWS BUDGET.

Jobbers and Retailers Conservative in Their Reports of Business—Musical Echo Co.'s Good Report—Interesting Chat With Horace Sheble—To Introduce a Combined Talking and Moving Picture Machine After the First of the New Year—Cost of Brass Ascends—An Australian Visitor—Bauer Co.'s New Quarters—College Songs Favorites—Old Operas Wanted—Victor Advance—Phonograph Parties—Records of Christmas Carols and Songs in Demand—Talking Machine as a Barometer—Penn Co.'s Display—Good Business With Wells Co.—The News of the Month Set Before Our Readers Briefly But Interestingly.

(Special to The Talking Machine World.)

Philadelphia, Pa., Dec. 10, 1906.

Talking machine jobbers and retailers are conservative, as a rule, in their reports concerning business. From fair to fairly good is the general opinion expressed as to November trade. At present writing holiday trade is just commencing, and it is expected to be very good, although many frankly say they hardly expect it to be up to last year's high-water mark. Said one large retailer: "When the holiday business comes it will come with a rush—this year. That's my opinion of it. In the aggregate it will be quite satisfactory, but not what we would like it to be."

The Musical Echo Co., Chestnut street, have the good fortune to be very busy, and sales continue good on all lines. The talking machine concerts given in the company's fine music hall have much to do with the good trade enjoyed, backed up by good salesmanship and pushitiveness.

Steady business is reported by the main branch office of the Columbia Co., Chestnut street. Trade, they say, has shown no spurts, but has kept at a good, steady pace, which, all things considered, is satisfactory. The several retail branches are going along on about the same plan.

In a trade chat with The World Horace Sheble, secretary of the Hawthorne & Sheble Co., Jefferson and Howard streets, said: "Our company is 'snowed under' with business. We have more business than ever before by fully 100 per cent. In the past four months we have turned out three times as many goods as we did the corresponding time a year ago. Trade as we find it is in a very healthy state, and we are very sanguine of the outlook. Busy in the factories? Yes, indeed. We have more hands employed now than ever before. We have two plants in Philadelphia and one at Bridgeport, Conn., and all are running at full capacity. Mr. Hawthorne, who is at Bridgeport, will return permanently to Philadelphia some time during the coming month. There is need of additional executive management. We have been so busy we haven't wanted additional salesmen. We will be glad to catch up with orders before planning to take on additional salesmen. Have we anything new? Yes; a new illustrated song machine—a machine which will play and have moving picture accompaniment. We expect to get it out after the first of the new year. It is a question whether we will sell the machines or operate them under our management. We have not decided the matter yet. There is no machine on the market that will accomplish what our machine will. It is fully covered by patents, and will add to the attractiveness of amusement arcades and similar places. Our new line of artistic flower horns we put on the market, believing the time had come when a better grade of goods were wanted. Sales of the horns have increased to that extent that we are now selling numerically as many flower horns—high-grade goods—as we do of the cheap goods. We do everything connected with horn manufacturing. We are employing 600 people. All metals have advanced in price. As an instance: I recently placed a contract for brass, and it cost us \$8,000 more than the same contract cost us last year. We recently received orders for over 25,000 assorted horns from a domestic firm, and another for 5,000 horns from a firm in England. We are at present turning out an average of 1,700 finished horns per day, and they retail at from one to twenty-five dollars. The principal demand to-day is for the flower type horn. The buyers seem to prefer nickel-plated ones. We have one of the largest nickel-

plating plants in the East, and are running four dynamos in order to produce sufficient electrical current. Horns being quite bulky goods, we average from three to five carload shipments per day. No; we have no trouble in getting cars. We have recently purchased and installed a large amount of additional machinery, and will install more when we can get it. On some of the machinery ordered the best delivery we could get was one year. During the past sixty days we have installed forty machines, consisting of lathes, drills, planers and automatic screw cutting machines."

Frank Albert, of J. Albert & Son, Sydney, Australia, was a visitor the past month to the Hawthorne & Sheble Co. headquarters. Albert & Son are large Edison jobbers and dealers, and carry a large stock of the H. & S. Co. goods. Another visitor was F. M. Prescott, representative of the International Record Co., at Berlin, Germany. He reported that trade in Germany was very good.

The Bauer Co., manufacturers of Stewart banjos, banjo drums and Bauer mandolins and guitars, largely handled by talking machine dealers, recently removed to 726, 728 and 730 Girard avenue, in the Germania Theater Building. Said President E. Bauer, of the company: "We took a lease here November 21, and have just moved in. The quarters are more central, have good light and conveniences. No; we hardly required more room, as our business has got down to a regular level water mark. Trade is going along steadily. We are having good business on our banjo drum. We closed a large contract with a Melbourne, Australia, firm the past week. The demand for our other lines is very good, and the trade outlook is quite satisfactory."

"College songs take well in this neighborhood," said a West Philadelphia retailer. "I have numerous calls for records having favorite college songs on them. You see, I'm near the University of Pennsylvania, with its hundreds of students, and, as a rule, every mother's son of 'em likes music in some shape or another. Many of them are excellent performers on various musical instruments. They have their glee, mandolin and other clubs, and generally go in for music and singing. They show a partiality for talking machines, and in their quarters, during proper hours, many of the students have high old times listening to new and old songs, glees and other phonograph pieces. I can't say the records the students buy are excessively classical; in fact, they usually go in for something fast and devilish—but that's natural, you know. Youth will be joyful and merry, and I don't blame them for enjoying themselves after their long hours of study."

"Business is picking up," reported the Philadelphia Phonograph Co., North Eighth street. "If the record manufacturers will only get up records of popular operas like 'Erminie,' I believe they would sell better than 'Il Trovatore.' The latter is favored by lovers of music of a classical order, but does not take with the general run of people."

In a trade chat Manager Brown, of the advertising department of the Victor Talking Machine Co., Camden, N. J., said: "We are growing. Business in 'talkers' and accessories is booming all over the country. We are thousands behind in orders, but are doing everything we can to keep distributors supplied. Our innovation, the complete opera of 'Il Trovatore' on twenty records has been a great success. Our advertising is being increased, not diminished. We have taken one of the big electric signs at Broadway and 37th street, New York City. It is between

the Manhattan and Metropolitan theaters, and will be seen by countless people daily. We arranged to have it lit up December 9. It can be seen as far down as 26th street. The new addition to the Front and Linden streets (Camden) plant is almost completed, and we expect to occupy it in about 50 days. Work on the new laboratory and office building, opposite the main plant, is progressing. Forms for concrete are up to the first floor. We are away behind on orders for both Victrolas and Auxetophones, but are vigorously trying to supply distributors. We have just issued our new catalogue of machines, horns and accessories supplied by the Victor Co. The general outlook is excellent for business and holiday trade promises to be exceptionally brisk. C. G. Childs, manager of the laboratory, has been busy since the arrival of great operatic stars recording Red Seal records. The export department reports a big increase of business."

President Eldridge R. Johnson, of the Victor Co., is at the main plant, and will probably remain in Camden all winter. He is well pleased with the business situation. Vice-President Leon F. Douglas is reported happy in California, where he is enjoying a vacation. George D. Ornstein, manager of the sales department, took on several additional salesmen the past month, and all hands are very busy. Improvements of various kinds have been made in and about the large Victor plant, all with a view to expediting work and getting out orders.

A phonograph party was a novelty enjoyed by a number of North Philadelphia young persons the past month. Only young men and women owning phonographs were invited, and each guest brought a "talker" and fireworks. Tunes were played without titles being made known, and a dozen "just out" records were given as a prize to the one correctly naming the largest number of pieces played. The "booby" prize was a new needle. A midnight supper ended the party, which was voted to be enjoyable in every way. The idea bids fair to spread, and phonograph parties may yet become numerous.

Fred Thielmann, 1721 Columbia avenue, is pushing sales of Edison talking machines and records with success. He is having a good pre-holiday demand for medium-priced talkers, and has sufficient stock on hand to meet almost any demand.

At 1036 Spring Garden street, F. B. Elkinton, Jr., is making good show window and store displays of Edison, Victor and Columbia goods. Trade is reported satisfactory and holiday business gives promise of being usually good.

Jonas Shaw, retail dealer in phonographs, Camden, N. J., has purchased the property at 2611 Westfield avenue, where he has been located for a number of years. He will make a number of improvements in order to keep up with increasing business. It is quite likely he will increase his stock of talking machine goods.

"We are fairly busy," reported the Keystone Phonograph Co., North Eighth street. We anticipate a good holiday trade, are sticking to one price, and exploiting goods by making attractive window displays."

The Eastern Phonograph Co., North Eighth street, reports seasonable good business. A line of handsome record cabinets has been added.

"You could tell it was near Christmas," said a Ninth street jobber, "by the number of Christmas carol and song records being called for. To the extent that holidays create a good demand for special pieces appropriate to the occasion, they are a good thing, and help us to dispose of lots of records that otherwise might remain in stock almost indefinitely. The manufacturers have fortunately thoughtfully provided song and music records for almost every holiday and occasion, so that we are enabled to fill almost every demand—even from faddists and cranks; in fact, we can get up special records when wanted. We have a singer come and warble or play the tune wanted on a recorder, and there you are—special tunes made while you wait! I feel sorry for certain unknown persons who, this coming Christmas, will listen to an original Christmas carol composed by a well-meaning youth, who labors under the delusion he is both poet and musician."

## They'd rather have a Victor than the money

That's the way customers who buy a *Victor* feel about it. They look upon the money as well-spent and are more than satisfied with the *Victor* and the store that sold it to them.

They get their full measure of fun and enjoyment out of it and keep on buying new *Victor* records all the time.

Think what such customers are worth to you—what great opportunities are before you in the sale of

## Victor Talking Machines and Records

It's more than a matter of dollars and cents. Your business constantly grows larger and goods will keep on piling up.

What are you doing to get your full share of this desirable business? To get in touch with those of the 56,000,000 magazine readers, reached monthly by our advertising, who live in your immediate neighborhood?

Local newspaper advertising, circulars, window displays, are the biggest kind of helps and are profitably used by any number of dealers.

It's surely worth the effort on your part and you can be certain it will bring results.

### Victor Talking Machine Company Camden, N. J.

 P.S.—A host of other dealers find this plan profitable and it should also be a good thing for you: Place standing orders for the new records with your distributor, and push this feature. (Keeps your customers calling at least monthly—they look for them). Artistic Monthly Supplements furnished free for this purpose.

He was here t'other day, and recorded his 'inspiration.' If he comes again the hands say they will go on strike. But, as I view it, we must take the bitter with the sweet. That young man 'paid his way,' and so I'm satisfied."

W. P. P. Bradley, representing the International Record Co., Auburn, N. Y., is here for two or three days. Dependent on locality, he says trade is fair to very good. In the West business is quite brisk.

"We can sell rag-time records to colored persons," remarked an Eighth street dealer; "but Orangemen won't buy 'Wearin' o' the Green.' To quite an extent we can tell the nationality of a customer by the records he purchases. When there's opera in town we know it, as a rule, on account of the demand for selections from it. The talking machine is quite a barometer of many things of current event."

The Keen Co., Eighth and Cherry streets, have sublet part of their large store to a retail cigar dealer. The company reports that trade picked up very well the past month and is now much better than it was. They have had a good call for the Victor "Il Trovatore" records. They have just added a large stock of International Record Co.'s records.

At the Wells Phonograph Co.'s office, North Ninth street, a representative said: "Holiday business is just starting, and it is too early to say what it will be. Our November business was good—in excess of that a year ago at the same period. We could have sold a lot of Victrolas if we could have got them. Of course our mainstay is Edison business, and we have in a most complete stock of records to meet any demand."

Among recent trade visitors were: T. O. Esibel, retail dealer, Bridgeton, N. J.; George Arnold, retailer, Glassboro, N. J.; J. P. Jones, retailer, Sunbury, Pa.; B. Brown, Coatesville, Pa.; Fred T. Sheeter, Clearfield, Pa. Almost all of them gave cheerful reports of trade conditions.

The Western Talking Machine Co. have removed from South Ninth street to 41 North Ninth street, where they occupy basement, first

and second floors of a good sized building. Manager Rynick said they had far better facilities and far more room. Trade keeps up quite well, and the outlook is cheerful.

S. Ford has retired from the Disk Talking Machine Co., and is now salesman with Lyman & Co., musical instruments. The Disk Co. is undergoing a change of ownership. S. S. B. Campbell and William L. Zeigler, both of whom were formerly with the Columbia Co., are now managing the Disk Co., and later on may have something to say. Mr. Zeigler stated business was improving, and the prospects good for holiday business.

"Trade is moving along very nicely, both in our wholesale and retail departments," said Manager Lewis, of the Lewis Talking Machine Co. "The main trouble we have is to get the goods we want, not to sell them. We are entirely out of \$45 machines." Edward Smullen, salesman with the company, is now a happy Benedict.

At the Penn Phonograph Co.'s large warerooms on South Ninth street, the offices have been moved back in order to display a large number of record cabinets made by the Herzog Art Furniture Co., of Saginaw, Mich. Business the company reported to be fairly good, with bright outlook for brisk holiday trade. Five sound-proof booths, 8 by 12 feet, permit salesmen to give excellent demonstrations.

The fact that there is a strong undercurrent of feeling in jobbing circles against manufacturers who, through concerns they are charged with owning or controlling, are selling to jobbers' customers should be noted. One large jobber the past month lost a large order to a concern which, he states, he found to be owned virtually by the manufacturing concern of whom he had bought his goods. "There is trouble ahead," seems to be the general impression of more than one jobber, "unless manufacturers religiously protect the interests of legitimate jobbers."

The Georgia Phonograph Co. is the title of a new firm of Columbia jobbers and retailers who have opened up in Columbus, Ga.

## HOW EDISON CONCEIVED THE IDEA.

Of Reproducing the Human Voice Through a Mechanism Called the Phonograph.

In conversation the other day a friend of Thomas A. Edison volunteered the information that it was his belief that the wizard conceived the idea of the now popular phonograph from a mountain echo. Said this friend: "Mr. Edison was driving one day in the West Orange Mountains when a friend, who was with him, shouted to a farmer and inquired something about the locality. Mr. Edison leaned back in the carriage as the words of his companion were reverberated from hill to hill. Mr. Edison spoke at once and said, 'Why not reproduce the voice?' and that led to experiments. Speaking of Edison's wonderful faculty of invention, a graduate of an Eastern university recently said, 'Edison has that peculiar and extra quality of mind which enables him to so embody the conceptions of practical use, and he has the power to embody these conceptions in such a way that they can be reproduced by the hand of man. Together with this quality of the imagination, Edison has that manual dexterity which enables him to put his ideas into such concrete form that a man not possessing any of the extraordinary gifts of Edison practically can apply these ideas and utilize them not only for amusement and business as the phonograph is used, but also for the advancement of the human race, as in the case of the phonograph.'"

The Colonial Government having experienced considerable difficulty in obtaining laborers for work on the Queensland plantations, hit upon an original plan which has proven very successful. Native laborers at present employed were induced to speak into a talking machine their satisfaction with their treatment and the wages. The records thus made were sent to the Pacific Islands and reproduced for the benefit of the natives, with the result that many were induced to go to Queensland.

Place your orders promptly if you wish shipment before the Holidays.

## AMERICAN TALKING MACHINE COMPANY

586 FULTON STREET,

BROOKLYN—N. Y. CITY

Largest Talking Machine House in the City

## GOOD REPORTS FROM ST. LOUIS.

Manager Clancy Assumes Duties at Columbia Co.—De Wolf Hopper Mr. Ramsdell's Guest—Hearst Buys Records—Thiebes-Stierlin's New Talker Department—Koerber-Brenner's Big Trade—Trade Situation Analyzed.

(Special to The Talking Machine World.)

St. Louis, Mo., Dec. 8, 1906.

The talking machine trade in every department is in a most excellent condition, and all are having a difficult time in getting goods. The record demand is especially good, and there is a heavy call for the best grade of machines.

T. P. Clancy assumed his new duties as local manager of the Columbia Phonograph Co., on Monday, November 19. W. C. Fuhri left on Saturday, November 24, to assume his new duties as superintendent of the Western territory, with headquarters in Chicago. This concern reports trade very good.

D. S. Ramsdell, manager of the St. Louis Talking Machine Co., reports trade at its best, with no signs of cessation. He states that their only trouble is in getting goods. This concern sold their first Auxetophone recently to a prominent local citizen.

One day recently Mr. Ramsdell had as a guest the famous actor, De Wolf Hopper, who was playing an engagement here. After hearing a few records he expressed his great pleasure and made arrangements for a Victor No. 6, to be used at a theatrical party supper, which he gave later in the week. A feature of the affair was the record, "Casey at the Bat," which is Mr. Hopper's own personal production, which was played several times, much to the pleasure and gratification of Mr. Hopper and his guests.

W. R. Hearst, recently a candidate for Governor of the State of New York, spent a day here on his way to Mexico. While here he purchased over \$100 worth of records from Mr. Ramsdell.

Eugene Ketterer, a bright and progressive young man, who has been with the Conroy Piano Co., has been appointed manager of their talking machine department to succeed T. T. Clancy, resigned. He reports trade very good, and ahead of last year.

The Western Talking Machine Co., it is stated, have retired from business here. Their stock was purchased by the Silverstone Talking Machine Co.

The Silverstone Talking Machine Co. have added another room to their store, which gives them 100 by 20 feet more space.

The Thiebes-Stierlin Music Co. opened up their new talking machine rooms on the first floor of their building on Monday, November 25. As stated, this department is in charge of S. R. Brewer, and it is thoroughly modern in its arrangement, and is being greatly admired.

The Koerber-Brenner Music Co. report a very heavy talking machine trade, and are having considerable trouble in getting goods.

Mr. Wilson, sales manager of the National Phonograph Co., was a recent visitor here.

## RECORDS SUITED FOR HOLIDAYS.

Heyward Cleveland, the manager of the retail branch of the Columbia Phonograph Co., at 872 Broadway, has issued a list of music especially adapted for the holiday season. It comprises a full line of selections of carols and choruses, recitations, Yule-tide songs and tunes, old-fashioned dances, and songs of old, comprising in all thirty-seven different selections. The list is printed in colors on a small four-page folder, and is intended by him for local distribution. In making the selection, such records as are found in both cylinder and disc catalogues were chosen, so that the possessor of either style of machine could reap the benefit. During Thanksgiving week Mr. Cleveland gave another exhibition of his ability as a window dresser, decorating one of the show windows with "jack-o-lanterns" made of genuine pumpkins, lighted from within by electric lights, and a party of young people dancing the minuet. Both of these called attention to the list of dancing records put forth by the Co-

lumbia Co., and which would take the place of an orchestra for the Thanksgiving Eve festivities. The window attracted a great amount of attention and greatly assisted in the sales of graphophones and records.

## TERRIBLE MYSTERY SOLVED.

A Happening at the Martha Washington Hotel—Foreigner's Voice Heard Where Women Only Hold Fort.

A scandal was averted in the Martha Washington Hotel a week or so ago, according to the New York correspondent of the Chicago Tribune, by the efficient sleuthing of the house detective. The hour was late and all the elderly spinsters' slumbers were untroubled, when a strange sound was heard, a man's voice above the parlor floor—at 12 o'clock. Curl papers and kimonos were the costume most in vogue among the whispering group that gathered in the hallway. They listened, and once again a man's voice disturbed the conventional halls of the hotel.

"Je vais faire des emplettes ce matin," observed the intruder. "Je vais, tu vas, il va," he added in a clear tone.

It couldn't be the watchman or the clerk. It clearly was a stranger, a foreigner. A bunch of curl papers and kimonos detached themselves from the shuddering group and marched down to the office.

"Where's the head bell girl," demanded their owner.

"She has gone home, madam," said the clerk. "What can I do for you?"

"There is a man—a creature—a foreigner, upstairs."

Kimonos and curl papers withdrew discreetly into the shadows at the approach of the house detective. The latter approached the door of the bedroom and listened.

"Je connais le fils du jardinier," asserted the incriminating masculine voice. "I know the son of the gardener," it added, obligingly.

The house detective thundered at the door.

"What is it?" asked a startled feminine voice.

"There is a man in your room."

The door flew open and revealed the indignant face of the occupant.

"Man, indeed. I'd have you know that I'm studying French out of a phonograph, and if those old—"

There was a soft murmur of curl papers receding, and the hall was clear.

## ONE ON CAL. STEWART.

Cal. Stewart, of Uncle Josh fame, bears a strong facial resemblance to the once great exponent of the free coinage of silver, William Jennings Bryan, and the following story is told illustrative of that fact. Not so very long ago, when he was making a tour through the West, he went out on the rear platform of the last car while it was making a brief stop in one of the towns en route. He noticed that a large number of people hastily gathered around the car, and imagined that his fame had been conveyed to them through the multitude of records reproducing his melodious voice. After letting them take a good look at him, he retired to the inside of the car. In a few minutes the porter came in and said: "Is you Mistah Bryan? Dem folkses outside wants you to make dem a speech." Rumor has it that "Uncle Josh" was so upset that he could not get off a funny speech for two whole hours, and any one who is familiar with him will appreciate what that means.

## TALKERS FOR VIENNA CONSERVATOIRE.

The Gesellschaft der Musikfreunde, who are the governors of the Vienna Conservatoire, have decided to establish a collection of talking machine records for the use of that institution, thereby following the example of the British Museum and other well-known educational authorities. It is intended to preserve records made by all pupils when leaving who have gained prizes at the Conservatoire, and in addition many records by distinguished ex-students have been secured.

# Listen!

to the voice of the greatest and most perfect language teacher in the world. He says—I would like to tell my friends, the phonograph dealers, how I can help them, how I can increase their business from 10 to 30 per cent.—and just stop and think what this means to YOU. Why there is a dealer out West who is doing a business of \$15,000 a year on his I. C. S. Language Outfits exclusive of his amusement records, outfits, etc. This shows the possibilities that exist in the

## TALKING MACHINE AND TELEPHONE.

Here Is an Up-to-Date Method of Keeping in Touch With Your Customers, Mr. Dealer.

One cannot peruse a daily paper or magazine nowadays without his gaze falling upon an article on the talking machine and its constantly increasing popularity. The following, which is taken from the Philadelphia Record, emphasizes this fact:

"Sunday is not a busy day for the telephone girls, especially in the central part of the city, so, to fill in the time they have invented an amusement. When calls are infrequent the hello girls will ring up some friend who has a phonograph and get it on the wire. This is quite easy and consists of merely placing the transmitter before the big horn of the phonograph. Sometimes a dozen girls will be listening to the phonograph at the same time. The private

HEARING THE LATEST RECORDS.

branch operators in the newspaper offices and those business houses which keep their 'phones open on Sunday morning are also in on the fun. On a very dull Sunday morning there are frequently 25 hearers in all parts of the city of a phonograph that is playing far uptown."

Is there not a great opportunity here for the display of inventive genius? Could not an instrument be invented which when attached to the receiver of a telephone would throw the sound out into the room with great volume and clearness even though the phonograph was far away? Think for a moment what this would mean to you, Mr. Dealer. When your new list of records arrived, your operatic selections, for instance, and there was one which you thought might appeal particularly to a certain customer, you could call him up on the 'phone and let him hear it in the comfort of his own fireside, and in all probability get his order for others at the same time. A man is never more approachable than when, after a good dinner, he is ensconced in the luxurious depths of an easy chair, basking in the aroma of a highly-flavored Havana. Let us picture the scene:

His telephone is at his elbow, and when you ring him up, he picks up the receiver joyfully with the remark, "I'll bet that's Jones, the talking machine man. Hello! Is that you, Jones? Got some more records in, have you? All right, put one on; I'll be glad to hear it."

Then follows a telephonic phonographic rendition of a comic song which tickles him mightily, and he expresses his appreciation as follows: "Say, Jones, old man, that's a corker! Got any more like it? What! lots of 'em? You have? Well, say! I'm in a talking machine humor tonight; send a boy up with your whole list, will you? You will? All right, thanks. Good-bye."

Even the present development of the telephone admits of this method of keeping in touch with your customers, and it will pay you to give it a trial. I only make this suggestion after numerous experiments which have proven the scheme entirely practical. Only the other evening a

friend of mine gave a phonograph concert in his home at which selections were rendered by several talking machines in different parts of the city, and the effect was novel to say the least.

As above stated, a talking machine concert by telephone is possible at the present time, but if an amplifying device could be thought of to attach to the receiver and magnify the volume, it would mean a huge fortune to the inventor, and you, Mr. Dealer, should work your brain overtime and endeavor to win this fortune. No one is more closely in touch with both telephone and talking machine than yourself, and the idea may come to you "all in a bunch," who knows?

HOWARD TAYLOR MIDDLETON.

## PIANO DEALERS AWAKENING

To the Fact That the Talking Machine Proposition Is a Profitable One and Are Therefore Taking the Advice of Friends in Adding Talking Machines as a Side Line.

That the music trade have finally and fully awakened to the fact that the talking machine proposition is profitable and entirely creditable, the experience of those who have added this department is of value to the "doubting Thomases" who still linger on the fence. For example, the following is related of one of the shrewdest and most successful piano dealers, who had held off from taking on talking machines for special reasons:

"You see," said the music dealer, "my next-door neighbor was in the talking machine line, and I noticed he was doing a fine business. We had agreed that if he refrained from handling sheet music I would keep my hands off his line. All well and good. After a while, however, the neighbor commenced selling sheet music, and then I immediately put in a talking machine department, and it paid from the start; in fact, this department alone pays the rent of my store, with something over. Then, besides, not a few customers have become interested in pianos and small goods, and this is an additional profit—one possibly that I would never have had but for the talking machine. To sum it up, a music dealer who does not put in talking machines is a chump with a big "C."—Music Trade Review.

## A HANDSOME CATALOGUE.

The Ball-Fintze Co., Newark, Ohio, have just issued a very complete catalogue devoted entirely to talking machines and accessories. It comprises some seventy-two pages, the illustrations embracing everything from needles to elab-

orate machines and cabinets. Carrying cases, record racks, cranes, numerous styles of horns and tools of all kinds are also included. The book itself is convenient in size, nicely bound, and is very artistic typographically.

## TO PHONOGRAPH NOISE NUISANCE.

Proof of What We Suffer to be Obtained by Mrs. Rice's Society.

Mrs. Isaac L. Rice, of Riverside Drive, through whose efforts unnecessary tooting by craft in the waters hereabouts has been suppressed, is organizing a society to quell the strident voices and noises of the town, particularly in the neighborhood of hospitals. The blowing of horns by vendors; the jangling of the junk cart bells, the discords of the hand organs and the German bands and the cries of the sellers of vegetables, ice and coal will be tackled, and the board of health will be asked to banish all of them. Mrs. Rice says that the bedlam of sounds around the hospitals has been responsible for the deaths of patients of sensitive temperament who had undergone operations and needed absolute quiet to get sleep.

Many eminent men and women are members of the new society, and the applications for membership are coming in fast. Mrs. Rice will not give out the names of the members until December 15, when the organization will be completed. One of the members, who is connected with a big phonograph manufacturing concern, is working on a specially sensitized record that will be used in phonographs put in the wards of hospitals to gather in the sounds that float in from surrounding streets. The phonographs will not be put into the hospitals until after the organization of the society, and at its meetings the members may hear what sort of things the hospital patients have to hear. It is not unlikely that certain parts of the records may be expurgated, especially those that are taken in near the gas house district. The sounds are to be reproduced in the volume they have when they strike the ears of patients.

Owing to the prevalence of rabies among the dogs of Hartford, Conn., the authorities ordered every dog muzzled, unmuzzled dogs to be shot wherever seen by policemen. Sedgwick & Casey, Victor dealers, took advantage of the situation to decorate the plaster Victor dog in their window, with a muzzle, a heavy collar and a strong chain. The effect tickled the crowds who stopped to look in the window, and they couldn't help seeing the portions of the line that was displayed.

## YOU HAVE WAITED FOR THIS!

AN ATTACHMENT FOR HOLDING SOFTERTONE AND MEDIUM TONE NEEDLES IN THE NEW SPRING CLAMP NEEDLE ARM OF THE VICTOR EXHIBITION SOUND BOX

Here it is attached to the sound box. The sound box is turned up and the attachment inserted with its flat side opposite the lever, as shown in illustration.

Here is the Needle Clamp Attachment separate.

Without this attachment it is impossible to use softer and medium tone needles on the spring clamp needle arm. It is perfectly simple, easily attached, holds like a vise and is made in two sizes—for softertone and for Medium tone needles. Order as NEEDLE CLAMP ATTACHMENT and specify which needle is to be used.

Price, 25 cents each

Special prices to jobbers and dealers

**The Softertone Needle** is growing in popularity every day. The loud tone needle, of course, is a necessity to the dealer for selling machines, but it is often too loud for home use. When a customer takes a machine home he finds the softertone needle a great relief. Instead of tiring it perpetuates the use of the machine. This means record sales.

**It Costs Less** One Softertone needle will play six records. Less time is used in changing needles, and there is less wear on the records. A record will last three times as long when the softertone needle is used. We did not accept this fact until satisfied by numerous tests. You owe it to yourself to make a test if in doubt.

FOR SALE BY LYON & HEALY, CHICAGO

## SHALL BUSINESS BE RESTRICTED?

Some Pertinent Comments by Traveling Men Regarding the Danger of the Talking Machine Business Being Overdone.

One of the wholesale representatives of a large New York jobbing house fears that the talking machine business may be overdone through too many small dealers getting in the field. He has recently returned from a trip through New York state, and in regard to the subject said to The World: "Many of the towns I struck were practically at a standstill in the talking machine business. The trouble was that nearly every store had dabbled into the business to a greater or lesser extent, and barber shops, hardware, dry goods, drug and nearly every other kind of a store was advertising them for sale. The result was there was a glutted market and miserable assortments of records and no chance of placing new orders. I believe that restrictions should be placed on dealers, and that they should be in proportion to the number of inhabitants in any town or city. Too many dealers has a tendency to kill any article, particularly the talking machine. The stocks of records are invariably small, and many of those handling machines regard them as a toy, and the sale of which is only an incident or accident in their business, and are perfectly willing that the purchaser should buy records wherever possible. These conditions do not exist to such a great extent in the large towns and cities, but in places of ten thousand and under. I think that the matter of territorial rights could be taken up by the talking machine trade to advantage."

## TALKING MACHINES IN INDIA.

India is a great country for talking machines, and thousands of them are in use there. The native who can command the price wants a talking machine, and the records he delights in are those which reproduce the native songs. The American machine leads, and there is room for more.

## To Talking Machine Dealers

The MUSIC TRADE REVIEW is the oldest publication in the music trade industry. It contains more than fifty pages devoted to the piano trade, musical merchandise news, music publishers' department and talking machine trade. A special technical department is a regular weekly feature of the publication. A vast amount of valuable information is contained in each issue. The REVIEW has won higher honors at the great expositions than have ever been won by any other publication in the world.

Grand Prix at the Paris Exposition,	1900

## TALKERS AND SENTIMENT.

According to a Leading Dealer the Talking Machine Is Associated With Some of the Most Sentimental Happenings of the Day, Thus Helping to Keep Alive the Most Beautiful Side of Humanity—Interesting Chat.

Except when a phonograph is turning out some such pathetic melody as "A Message from Home, Sweet Home," one rarely thinks of that instrument in connection with real sentiment, and yet it has a use of this kind that is growing rapidly all over the world. "It has become a common thing," remarked a man in the business, "for elderly persons to come into my store, have records made, and take these records off with them to their safe deposit box to be given to their children after death. It is pathetic to hear a man of middle age speaking into a phonograph the speech he wishes his children to remember him by. Sometimes he has the speech prepared in writing; again he may have simply a few notes from which he elaborates his little address. As a rule, these remarks are brief moral lectures, and are usually beautiful, since they are so simple and so sincere."

Fathers of families are not the only ones who put the talking machine to such sentimental usage nowadays. It is not an uncommon thing to have a mother accompanied by a child go into a shop where such things are sold to have a record made of some childish speech that will be sent to the little one's father, who is a long distance from his family. Only the other day the newspapers printed a story of a woman in Denver who is dying of a lingering illness talking into a phonograph every day that her husband might have a record of her voice after death came to her. Now and again one hears of sweethearts using the talking machine for the same purpose—a case in point being that of an elderly bachelor of this city, who begged the woman he is in love with, but who would not marry him, to talk into his phonograph that he might always be able to hear the sound of her voice. The capabilities of the machine were doubly illustrated in this particular instance, since the woman spoke for the record in French.

A still more striking illustration of the sentimental uses to which the machine has been put has been furnished to one firm that manufactures these machines in a Connecticut city. There are many Hungarians in the town, and of late the superintendent of the factory has been surprised by several of these Hungarians going into his office and asking to have speeches in their native tongue recorded on the machines he makes. Inquiry showed that these foreigners had discovered that there were phonographs in their native towns, and they were sending the records home to be reproduced as a surprise for their parents and friends. Naturally, these little speeches were of a particularly affectionate nature.

That the use of the talking machine in this particular manner is growing rapidly is shown by the increase in the sales of blank records, and also of the numbers of persons who go into the shops where the machines are sold to not only have speeches recorded, but also to have messages reproduced. There is never any charge made for this work beyond the original cost of the blank records, since such accommodations are recognized as being a good advertisement for the machines themselves.

"Laugh and grow fat" is an old saying, but laugh and grow prosperous is the new version made possible by the "talker." When you have tried over your laughing records, have you ever noticed the similarity of the tones—all made by the same man. George Johnson, a negro with a most infectious laugh, has made his living for several years by making entire laughing records and parts of records where humor was unconfinied. He is paid from \$1 up for his "songs" and he has been known to sing over fifty songs in one day and come up smiling at the end.

## A good start for the New Year

Make up your mind that you are going to give your customers the best kind of service during the coming year—better than they can possibly get elsewhere—and don't let your jobber stand in your way.

If your jobber isn't prompt in filling your orders, it's out of the question for you to give prompt attention to the wants of your customers—so long as you hold on to that jobber. Better jack him up and get on with a new one right at the beginning of the year.

You ought to get in touch with a jobber who appreciates your business and shows it by looking after your interests. Long waits for goods, with numerous promises, will then be a thing of the past, your business will run along easier and you'll be on a better footing with your customers.

We can give you the kind of service that will be the greatest help to you. An unequalled assortment of fibre cases, English needles, trumpet horns and other accessories, besides a complete line of Victor talking machines and records; and shipment always made the same day the order is received.

Why not write for a copy of our latest catalogue and see if there isn't something we can do for you right now?

**The Victor Distributing and Export Company**

77 Chambers Street

New York

Does your office boy sometimes forget to note a telephone call received during your absence, or is he ever unable to give you a verbatim report of what was said?

Then you need a telegraphphone.

Do you ever give or receive an order, or transact business of any kind over a 'phone, and sometimes get into misunderstandings as to just what was said or was not said?

## Then you need a Telegraphphone

It will be but a short time before you discover that you cannot get along without an instrument which will automatically record every message which comes or goes through your 'phone, to be reproduced whenever and as often as you may choose, in the very tones and inflections of each speaker.

Even when no one is in attendance in your office, "Central" will say to the one who calls you up: "The gentleman is out, but talk your message into the 'phone; his telegraphphone will repeat it to him as soon as he comes in."

Don't you want to know all about this wonderful yet simple invention?

With your permission, we should like to mail you, postpaid, a complimentary copy of our illustrated *Telegraphphone* booklet describing this unique invention, which is already beginning to exert such far-reaching influence upon the scientific, social and commercial life. *To avoid all chance of error in mailing this booklet, please write very plainly:*

Your first name spelled out:	Middle initial:	Your last name:
Mr., Mrs. or Title:	Your mail address (P. O. box, or street and number):	
Your residence (City and State):		K651GO

Our object in the free distribution of these interesting booklets is primarily to inform the public of the practical capabilities of this remarkable discovery, and so by returning this blank, with the particulars asked above, you will be placing yourself under no obligations whatever to us. But in the belief that you will wish to take advantage of a most unusual opportunity to make a small, safe and very profitable investment, we shall mail with the booklet full information as to how you may secure a few shares of a limited issue of treasury stock, which is about to be made.

Cut out this blank  
and mail to us

**Sterling Debenture Corporation**

61 Pine Street, NEW YORK CITY

**Buffalo Times**—"The one weakness of the telephone as a means of communication—that it keeps no record—has been eliminated."

**Washington Post**—"There is no scratching sound, the words coming from the machine as clearly as from the human throat."

**Cleveland Plain Dealer**—"A thoroughly practical piece of office equipment, for which the demand has already outrun the supply."

**Pittsburg Gazette**—"Promises to make as many fortunes as were made by the Mergenthaler typesetting machine."

## GREAT PROSPERITY PREVAILS

In the Talking Machine Trade in Baltimore—Demand Is for High-Priced Machines—Victors in Big Demand at Eisenbrandt's—Other News from the Monumental City.

(Special to The Talking Machine World.)

Baltimore, Md., December 10, 1906.

The talking machine business in this locality is experiencing unprecedented prosperity, and the many agents for the various machines in this city universally proclaim that trade far exceeds their fondest expectations, and that the demand for the machines has almost doubled during the past year.

It is not the cheap machine that is most in demand, which is exceedingly gratifying, but the high-priced talking machine that seems to be wanted by the public, and the day of the sale of the cheap instruments seems to be numbered.

George A. Gustin, agent for the Columbia Phonograph Co., 231 North Howard street, stated that the business is unusually good, and that the demand for the Columbia phonograph has increased remarkably during the past few months, and that before the month has passed they will be able to report the greatest business in the history of the company in this city.

William Wigley, who carries a full line of the Victor talking machines and the Zonophone, claims that business is fine, and far better than he expected it to be, and that the recent dull times in the piano trade has not in the least affected the talking machine business.

"I am selling just about twice as many Victors this year as I did last year," stated Mr. Eisenbrandt, of the firm of H. R. Eisenbrandt Sons, "and they are all mostly high-priced machines; in fact, the demand for the machine and all automatic instruments is rather phenomenal."

The firm of Cohen & Hughes, who carry a line of the Victor talking machine, are very optimistic over the talking machine business, and one of their salesmen ventured to state that the business they are now doing far exceeds their expectations.

## MAY USE GRAPHOPHONE.

The Grand Jury Thinks Seriously of Introducing New Method of Taking Evidence.

The ancient traditions of the grand jury room sustained a shock the other day at St. Joseph, Mo., when George F. Standke, the manager of the Columbia Phonograph Co., appeared before that body to demonstrate the use of the graphophone in the taking of evidence.

Standke placed his machine on the table, next to the big blank book in which it is now the practice to transcribe the evidence of witnesses in long hand, by means of pen and ink, and it was observed that the pens were of the modern steel-tipped variety and not quills, as currently reported. The patriarchs of the jury gathered about the machine, surveying it with the complacency of a red Indian contemplating a mechanical toy.

The demonstrator put the mouthpiece to his lips, touched a spring that started some little wheels to whirring, and, speaking in a loud voice, said: "This is a practical demonstration of the graphophone before the grand jury of Buchanan County, Missouri, with a view to securing a recommendation of the device to the county court, and a request that the court purchase such a machine for the taking of evidence before the grand jury. The advantages of the machine are accuracy, speed and secrecy."

It was observed that a tool with a tiny chisel-shaped point had been plowing a thin shaving of wax from a cylinder, the shaving about the size of a No. 40 thread. The operator then changed this tool for another one, put it back at the starting point, held the mouthpiece in the direction of the jury like a megaphone, and again touched the spring. Then came a voice, like an echo of Standke's words: "This is a practical demonstration," etc. Some of the jurors looked sur-

prised, others pleased, and others again bewildered.

Some objections were imposed by Foreman John E. Lonsdale.

"That machine," he said, "would take the testimony of a witness all right, but how about the questions of the jurors? First I ask a question, then Mr. Noland asks one, then Mr. Hull, then Mr. Andriano—the questions coming from every point around the table, first here, then there—how would the machine catch those questions?"

"Well," said the demonstrator, "I would suggest that you appoint some member of the jury to operate the machine, as you would now appoint one of your own number to write the record. Let him speak both the questions and answers into the machine."

"A good many of our witnesses are Polaks," said Joseph Andriano. "Will the machine record the Polish language?"

"Yes; Chinese, for that matter," was the answer.

After some other questions, relating to the manner of transferring the records to typewriting, which were answered, the demonstration closed; Mr. Standke bowed himself out; the scribe of the jury dipped his pen in the ink, and the inquisitorial body resumed the broken thread of its investigations.

It is possible that the grand jury may recommend to the county court that a graphophone be purchased by the county.

## THE PROGRESS OF MUSIC

Has Really Been by Mechanical Means, Although Some Slurs Have Been Bestowed on Modern Media of Interpretation.

A great deal has been said recently concerning the effect of mechanical music upon people and upon the quality of music itself. Some great musicians believe that the piano player, talking machine and other mechanical instruments that have been devised for the reproduction of music, are going to be the ruin of musical taste and of development of musical genius. But once in a

while we are enabled to see the other side of the question, and recognize the tremendous impetus which mechanical or self-playing media have given to musical appreciation. Some good reasons for this view are given by Collier's in a recent issue:

Although we speak loosely of sweet sounds as musical, music proper exists in nature not at all. It belongs utterly to art. When Lorenzo said to Jessica: "There's not the smallest orb which thou behold'st but in his motion like an angel sings," he spoke beautifully, but in metaphor. Music is the most artificial of the arts, and therefore to some minds, like that of Pater, the purest, since form and meaning are identical. It has also been generally accepted as the most religious. Beethoven exclaimed: "I know that God is nearer to me in my music than to others." And Luther said: "Next to theology I give to music the highest place and honor; and we see how David and all the saints have wrought their godly thoughts into verse, rhyme and song." It seems rather strange, therefore, that this art, being the most ethereal, should be the one which promises to be most mechanically produced. Its progress has been dependent upon mechanical invention, until the orchestra reached its present state, and now every effort of inventive science is turned on the elimination of the human player. Whether or not this effort shall succeed entirely in giving the very best, it is certain to result in giving music of considerable quality a larger place in the lives of millions, and therefore it ought to be one of the most spiritually valuable directions of modern scientific progress.

G. Marconi, the inventor of the wireless telegraph, and a member of the experimental staff of the Columbia Phonograph Co., will shortly return to America with his bride, an Irish lady of title. Owing to the activity recently displayed by various parties in the wireless telegraph field in America, Mr. Marconi deemed it advisable to visit this country and assure himself that his interests were safe and that his patents were not being infringed upon.

## Hawthorne & Sheble Mfg. Co.

PHILADELPHIA, PENNA.

## PRESCOTT'S INTERESTING VIEWS.

The President of the International Talking Machine Co. Says There Are No Trade Restrictions in Europe—Disc Prices Abroad—The World's Business Divided—Talent Better Paid in Europe Than Here—New Copyright Bill Will Help Europeans—Royalty in Europe Not Felt.

Not only is F. M. Prescott, president and general manager of the International Talking Machine Co., Berlin, Germany, one of the most conspicuous men of the talking machine business in any quarter of the globe, but he is also an interesting and impressive conversationalist on trade topics. Shortly after his arrival in New York from abroad, on the "Friedrich der Grosse," of the North German Lloyd line, direct from Bremen, his first trip home in five years, "to eat his Thanksgiving turkey and see his friends," as he expressed it, he chatted informally with The World as follows:

"We are working under no restrictions in Europe; that is to say, there are no fundamental patents, only constructive patents. All you

F. M. PRESCOTT.

need is a knowledge of the process of manufacturing, with sufficient capital, and then you can go ahead entirely free to produce and dispose of your output. The only important cylinder records on the Continent are those of Edison, the Columbia and Pathé Frères in France, the local makers having long since ceased to exist. This, however, is not true of Great Britain, where the cylinder business is fully equal, if not more important than the disc business, the Russell Hunting Co., Ltd., the Edison Bell, Ltd., being the principal local manufacturers. Fully seven-eighths of the product are discs. There are about 20 manufacturers of disc records in Germany alone, but the large majority are small concerns, and not heavily capitalized, and the quality of work is inferior. We get much better prices than are obtained in the United States. For example, four sizes are made, 7 inch, that sells for 60 cents; 10 inch, for \$1.20; 12 inch, for \$1.80; 14 inch, for \$2.40, as turned out by the Gramophone & Typewriter, Ltd., and our company, on which there is a uniform trade discount of 33 1-3 per cent. for domestic sales, and 40 per cent. for export.

"The trade in the United States is not what I consider commercially profitable, in view of the prices prevailing, unless the turnover is tremendous. That is to say, it has got down to the level of a staple line, in which the margin has been cut to the bone—down to hard pau. Were it not for the Berliner patent my company would manufacture its goods here and get the same prices we command in any part of the globe, strictly on quality and repertoire.

"You know," continued Mr. Prescott, with earnestness, "the world, in so far as the sale of their product is concerned," has been divided between the Gramophone & Typewriter, Ltd., of London, England, and the Victor Talking Ma-

chine Co., Camden, N. J., the latter controlling South, Central and North America, and that part of Asia not included in the British colonies. The Edison, Columbia and Zonophone are also well-known in these countries. We, however, operate everywhere, and with a catalogue of 14,000 titles do a splendid business at our prices. I have always believed that there will always be a sale for records at a good price, hence our aim of high quality. Now, we have been in business only three years, and a catalogue of this size is no small accumulation, when it is considered that the European Gramophone catalogue represents 23,000 selections—a fair comparison. You see, the catalogue must be fully developed for each country in which you do business in order to command sales.

"The 'talent' here is not nearly so well paid as with us. For instance, the prices of the recording laboratories in America range from \$2, the lowest, to the average of \$5, sometimes reaching \$10. On the other hand, our figures are nearer \$20 to \$25, and not infrequently running up to \$200 per song, and that not for the so-called celebrity artists, either. In Egypt I paid an Arab 40,000 francs (\$8,000) to sing 40 songs—\$200 apiece. We sell quantities of records in Egypt, Arabia, Turkey and Asiatic territory. The religious feeling is extremely strong in these countries, and the Moslems are zealous worshippers, so that records of extracts from the Koran, and of their hymns and holy pieces sell freely. Sheet music is unknown in these countries, hence the talking machine is therefore regarded with much favor.

"The matter of copyright is bothering us little, if any. Our company has already arranged with the leading publishers in Europe, some of which are exclusive arrangements, and the rest only the right to use the same as any other parties. We are also fully protected on all the Italian classical music owned by the house of G. Recordi, of Milan, Italy. This house is strongly identified with the Societe Italiana de Fonotopia, Milan, which is a sister company of our Odeon Co., in Berlin, and which Fonotopia Company control the Recordi rights for the world.

"In the event of the passage of the new copyright bill in the United States we would, to a certain extent, have rights on the European classical music in the United States, which the local companies here have not yet acquired. Besides the copyright feature, we have also tied up with contracts for a long term of years, or either for their natural life, many of the best artists of Europe who sing in Covent Garden, London; Grand Opera, Paris; The Scala, in Milan, and Royal Operas in Berlin, Vienna and other European capitals.

"The copyright royalty is already in effect in Europe, being in France and Italy. The manufacturing companies do not feel this, as it is small, usually 5 per cent. on the list price, which amounts to about 3 cents per record, which has been added to the retail price, so that the public really pay for it. Suits are now before the courts in Belgium, Hungary, Austria, Germany and Spain, and we expect favorable decisions in all of these countries within two or three years, if not before. A talking machine record is certainly a form of music, no matter how it may be argued to the contrary. Berliner acknowledged this in the selection of the Greek word 'gramophone,' written 'sound.' The reproductions of sound appertain to the ear, and this in turn effects the feelings or soul, if you please. I believe Europe is further advanced in many respects in the talking machine line. This is because there is not so much patent restriction, and the competition is much freer to develop and make improvements than in this country."

Mr. Prescott left for Europe on December 1 by the steamship "Patricia," of the Hamburg-American line.

Siegel-Cooper Co., the New York department store, who handle the Victor talking machines, advertised the line quite extensively just before Thanksgiving, and adopted a seasonable conceit in the form of a turkey gazing into a horn.

NEW YORK, DEC. 15, 1906

WITH the present issue, The World rounds out two years of existence—busy years, too, they have been, for this trade newspaper institution and the industry which it represents. Both have grown at a phenomenal rate. And what a marvelous expansion there has been of the talking machine trade the past few years! It has developed from modest beginnings to an industry which contains institutions whose annual sales run well up in the millions, and there are those who believe with The World that the industry is still in an undeveloped state, almost that of infancy; that its future will be more brilliant than its past.

THE progress in talking machine development has been so rapid, that one who does not keep thoroughly posted with its steady onward march will be at once amazed to note its expansion month by month. One well-known member of the trade remarked recently that even a comparative brief absence from the trade prohibited one from keeping in touch with its marvelous development. This is true, and the up-to-date business man, whether manufacturing, jobbing, or retailing, must keep in the closest touch with every branch of the industry in which his interests lie.

WE have received communications that would run into the thousands, almost, from admirers in various parts of the earth congratulating The World upon its admittedly fair policy and the encouragement which it has given to the talking machine industry everywhere. Such kindly words are stimulating. It has been our aim to make each issue of The World better than its predecessor, and to keep thoroughly in touch with the times. In these days when express trains are tearing across the continent at the rate of a mile a minute, when the motor enthusiast is constantly taking his life in his hands in an effort to clip a second or two off the speed records, and when the captains of industry are vie-

ing with each other to see which can get the most done in twenty-four hours, the newspaper, whether devoted to the public, or to a special trade, must needs keep pace with the times. Indeed, among all lines of commercial activity the press may be said to lead in the maximum of accomplishments in a minimum space of time.

WE cannot complete the two years of our existence without expressing our appreciation to our many advertisers and subscribers in all lands for the generous assistance which they have given us, all of which has helped to make this journal a power for good in the talking machine trade. It shall be our aim at the beginning of the new year to make improvements wherever possible in the paper, so that we may wield a greater influence for trade weal than ever before. A trade newspaper has no right to exist unless it is helpful and is an educational force to an industry, and The World has endeavored to live up to its early declaration of principle, and to work fearlessly and independently along lines which must tend towards the broadening of the entire trade.

THE year 1906 has been in every respect a record breaker, and just now the holiday trade is at its height. Jobbers have profited by the experience of a year ago, and during the summer months prepared for an active fall trade by getting in all the stock possible for early fall distribution. As a result fewer sales have been lost by reason of lack of stock. As we view the talking machine field it must be admitted that the industry is in better shape than ever before, and that a most successful year will be closed for all departments of the trade. The great factories have been rushing to their utmost capacity with day and night shifts to take care of the jobbers' orders, and they have been fairly successful in so doing, although at this time of writing, the aggregate of orders which are unfilled would amount to hundreds of thousands of machines. The demand for the medium and high grade machines has been unprecedented, and during this month probably more of the high priced creations will be sold than any previous month since the industry was established.

THERE seems to be no dearth of legal complications in the industry, and it might be expected, too, that in a new trade where there are so many creative minds at work that there would be at once a clashing of interests and ideas. There are a number of important matters which have not been adjusted as yet in the courts, and probably the new year will mark many new cases which must materialize. It is said upon excellent authority that there will be some new talking machine creations which will not infringe upon present day inventions, and that these new factors will rightfully claim a good share of trade attention.

IT would not be surprising to see remarkable changes in the talking machine within the very near future. Many of the inventors have worked along lines in which they have sought to produce results with old theories without encountering legal obstacles which should prevent their manufacture. Some, however, have gone entirely out of the generally accepted theories and have blazed the way along new paths, and from information which is supplied us it would seem that before the new year is well advanced there will be some new factors in the talking machine field which will tend toward

its broadening and its further progress. The reproduction of sound in various forms is attracting the most inventive minds of the country, and it is reasonable to expect that surprising developments will be the result of this application of gray matter to the solution of a problem.

THE industry has developed so rapidly that there is to-day really a dearth of expert salesmen who have an accurate knowledge of the needs of the selling department of the business. It is not every one who can sell talking machines and accessories. To begin with, a man must know something about the machine, its possibilities, in order to interest trade which may be somewhat skeptical and may possess the old-time prejudice against talking machines which dates from former years when crude creations were in vogue. The sale of talking machines must be treated just as carefully as any other branch of trade. Salesrooms must be attractive, and should be in the charge of competent, trained men and, as we have stated before, the industry has expanded so rapidly that it has not produced experts in sufficient quantity to meet the present day demand.

SOME of the music dealers who have taken on talking machines have treated them indifferently—have placed the departments in the hands of men who know nothing about the educational qualities of the machine, or possessed no knowledge of how to exhibit them properly, and as a result many of these departments have not paid. To obtain any measure of success to-day it is necessary to have an objective point in view, and to work energetically and confidently toward it. You cannot accomplish a definite object with a makeshift plan, and no matter what line a man is selling, a great deal depends upon the personal feeling which his customer has for him and for his knowledge of the goods which he offers for sale.

SOME lines of merchandise naturally impose restrictions on the man who sells them. In disposing of certain classes of goods he is deprived of many selling helps and pointers commonly employed by other salesmen. One of the surest tests of the man's ability is to find the greatest number of talking points in proportion to the number of restrictions which his line placed upon it. Another equally sure test is the use he is making of such talking points when he has discovered them. Now the talking machine of to-day possesses many excellent talking points which, if thoroughly understood by a salesman and shown off to excellent advantage, will be sure to impress a customer. To-day there are many talking machine outfits sold at retail from \$100 to \$300, and to successfully close such sales requires the exercising of some ability, therefore a salesman should inject the same enthusiasm into the talking machine business that he would into any other trade where he hopes to win increased remuneration.

BUSINESS to pay to-day must be run along systematic and correct lines, else the merchants will be sure to meet with disappointments. With the good times so general, and so many people who have the money to buy talking machines, there is every reason why the business should continue to expand, but the demand for talking machines will not come unless every one interested does his part fully in creating and accentuating interest in the talking machine.

### RECORDS OF NOTABLE MEN.

Academy of Science in Vienna and Leading Institutions in the Country Doing Splendid Work for Future Generations.

Reference has been made in The Talking Machine World on several occasions to the splendid work which the Academy of Science in Vienna is accomplishing in securing records of notable men and fast dying dialects for the use of posterity. The record office of the Academy has again been enriched with records of five expeditions which supply interesting material for the study of philological science.

Professor Dr. J. Schatz gathered in North Tyrol and Voralberg specimens of German dialects on 41 cylinders. Dr. Poch had taken with him a phonograph of the record office to New Guinea, and had sent back 32 excellent records, which contained the language and music of the natives, especially of the Monumbo tribe. Particularly interesting are the war songs with drum accompaniment, and the drum signals with which the tribes are in communication from village to village. Dr. Felix Exner recorded in India old Sanscrit songs and brought 68 unapproachable records of same. Franz Scheirl, who specialized in Pinzgau dialects, supplied 32 cylinders to the record office.

In addition to these, Field-Marshal Lieutenant Frerherr von und zu Eisenstein placed at the disposal of the record office cylinders made in connection with his trip to South America. These were made with an Edison phonograph. As well as the language and dialect records mentioned above, a quantity of records of the voices of celebrated personalities have been lately acquired. The recording of the voices of famous individuals is being carried on systematically.

The record office expects shortly the return of an expedition from Australia, and this spring a machine and a supply of blanks is being sent to Greenland, where Dr. R. Trebitsch and Dr. von Eissler will make records for the record office.

That the talking machine is also recognized as an instrument of scientific value in this country is demonstrated in the action taken recently by directors of the Smithsonian Institution of Washington, of Harvard University, and of Yale. At the Smithsonian they are making a collection of talking machine records of the various dialects of our Western Indian tribes to reserve them against the time when the Indian tongues shall have disappeared from human speech. The Smithsonian people began this work as far back as the time of the Buffalo Fair, when they had all of the Indians at the fair speak into the machines for records. As an evidence of their appreciation of the fact that they were to go through some important ceremony, the Indians arrayed themselves in full war paint and all their other toggerly, and the wildness of their appearance created a mild panic for a moment in the building where the records were made.

Harvard and Yale are using their collections of these records in connection with the departments of ethnology and philology, the chief feature of the Harvard collection at present being a record of a speech by Emperor William.

### IT PAYS TO "PLUG ALONG."

A Lesson Which Is Worth the Attention of Ambitious Talking Machine Men.

Jim Smith opened a little talking machine store on a small street in Smithville. He had no clerk, did his own buying and selling, kept his own books, delivered the purchases after shutting up time, had the place open early in the morning, kept it neat and clean, and worked like a horse.

A traveling salesman, who had sold him his first bill of goods, came around at the end of six months, and sang out, "Well, Jim, how goes it?"

"Just a-plugging along," said Jim.

The next year Jim had a clerk. He had taken down a partition, and was using a back room for his larger stock of goods. He was only taking

thirty days' time on his goods, instead of ninety. When the breezy salesman blew in and cheerily called out, "How are you doing, old man?" Jim managed to say:

"Just a-plugging along."

Three years later, Mr. Smith had his sign over a larger store on Main street. He had two clerks—a girl to look after the cash and the books, and a boy and wagon for the delivery of goods. He arose as early and worked as hard as ever. Paid cash for his purchases, and took advantage of the discounts. But he was the same quiet, persistent fellow as at first, and the salesman who had sold him the first bill of goods was mighty glad to keep his trade. When he came in he would say, "Well, Smith, how are you to-day?"

And Mr. Smith, without raising his voice, would answer:

"Just plugging along."

Smith to-day owns a big retail and jobbing talking machine store, and sends out his own traveling men. He is rich, respected, and one of the leading men of his place. And when any man says to him, "Smith, old fellow, you have been mighty successful. How in the world did you hit it at your age?" he never raises his voice, but says in the same old tone:

"Just plugging along."

### BIG INCREASE IN BUSINESS.

The Hawthorne & Sheble Manufacturing Co., of Philadelphia, claim their increase in business during the past few months has been simply phenomenal. They attribute these conditions to several causes. First, healthy condition of the talking machine trade; second, prosperity of the entire country; third, the progressive and up-to-date line of talking machine supplies they are manufacturing.

The preferential tariff on talking machine records from England to Australasia is now only 20 per cent. ad valorem, whereas other countries have to pay an impost of 30 per cent.

Holiday Trade Inaugurated Under Cheering Auspices—Looks Like the Biggest December Trade Ever Done by Local Jobbers and Dealers—A Progressive Dealer Is Con. Hogan—Victor Talking Machine to be Handled by Hillman—Topham Resigns from Columbia Co.—Will Engage in Business on His Own Account—Cable Organization Being Perfected—Fuhri Takes Charge of Columbia Headquarters—Some Further Changes—Thompson Resigns from Rothschilds—Salter Mfg. Co. Have Big Demand for Cabinets—Abercrombie's Success—Progress of the Chicago Case Co.—Lyon & Healy's Language Department—Wurlitzer Co.'s Holiday Trade—Big Orders for Babson Bros.—Other News.

(Special to The Talking Machine World.)

Chicago, Ill., Dec. 10, 1906.

The holiday trade is on with a rush, and from all indications on State street and Wabash avenue, the talking machine is receiving even more than the ordinary amount of attention. All the departments are doing an excellent business, and this promises to be the biggest December the local retailers have done. All the principal concerns are using unusual space in the dailies extolling the merits of the talking and singing machine, as one advertiser aptly puts it, for holiday gifts. The jobbers are having a splendid trade. October was rather below expectations, but the November business was remarkable, and at the present time wire orders are numerous and urgent, indicating a brisk business in the country as well as the large cities. As a rule, there seems to be little trouble in filling record orders promptly, but there is a shortage on some types of machines. Altogether supply conditions seem to be considerably better than last year.

Con. Hogan, of Ashland, Wis., and one of the largest retail dealers of that State, was met at Babson Bros. last week. Mr. Hogan has worked up a large business under unusual difficulties as he is absolutely blind. He is a standing reproach to the discontented as in spite of his affliction he simply radiates good cheer and optimism. He is an enthusiastic reader of The Talking Machine World, by proxy, and keeps thoroughly posted regarding the developments in the talking machine business in the larger future of which he is a strong believer.

The talking machine department of Hillman's, under the management of Mr. Israel, is going to make a strong feature of the Victor in the future.

Virginius Moody, city sales manager for the Talking Machine Co., swung the deal, and secured an initial order of very ample proportions.

Richard Topham has resigned as traveling representative for the Columbia Co., with whom he has been connected for five years, and will engage in business on his own account, selling machines and supplies direct to the dealers. He is now completing his lines, and will shortly open an office and salesroom in the loop district. He expects to have his new device of his own invention for cylinder machines ready for the market early in the year. He ranks among the "old-timers" in the trade, as he first began selling talking machines in 1898. He is by the way the son of James S. Topham, the veteran case maker of Washington, D. C.

C. W. Long, manager of the talking machine department of the Cable Company, is rapidly getting his organization perfected. James R. Milne, who enjoys the reputation of being one of the crackerjack salesmen of the trade, has joined the forces of the talking machine depart-

ment, and is now on a trip through the Northwest. E. O. Zerkle, now with the Robert Johns Co., goes with the same company January 1. J. G. Shepherdson has taken hold of the installment department, and is pushing his end energetically. The offices of the department have been moved to the wholesale quarters on the third floor of 250 Wabash, occupying ample space fronting on Wabash avenue. Here are to be found Mr. Larue, whose especial care is the wholesale department, and Mr. Shepherdson, installments, while Mr. Long has a private office to himself. The company recently advertised in the dailies, offering prizes consisting of Columbia outfits, to school children sending in the largest lists of owners of talking machines, and as a result they have a valuable directory of thousands of record buyers.

Harry Tilt, traveling out of Pittsburg for the Hawthorne-Sheble Manufacturing Co., in the interests of the jobbers of that city, will spend the holidays at his home in this city.

W. C. Fuhri, for the past nine years in charge of the St. Louis office of the Columbia Phonograph Co., arrived in Chicago on November 26 to assume the duties of district superintendent. He has charge of all the territory formerly covered by both the Chicago and St. Louis offices. H. L. Willson, who was promoted from assistant manager to manager of the Chicago office when Mr. Dorian went East, left on the 20th for New York to assume an important position in the executive office. C. F. Baer has been promoted from assistant manager to manager of the Chicago office. November was one of the largest months in point of sales the Chicago office has ever known.

A. S. Thompson, buyer and manager of the talking machine department of Rothschild & Co.,

## PROMPT SHIPMENT

We are exclusive distributors of  
**Edison Phonographs and Records**

Largest Edison stock in the West.  
250,000 records now on hand.  
Orders filled the day received.

## BABSON BROTHERS

G. M. NISBETT, Manager.

304 Wabash Avenue,

CHICAGO, ILL.

has tendered his resignation, effective January 1. Mr. Thompson went with the house and organized the talking machine department eight years ago. He certainly deserves great credit, as he had developed the talking machine department to its present large dimension, while having the entire charge of the toy, sporting goods and camera departments. He was the originator, at least in Chicago, of the dollar-down dollar-a-week plan. He has not yet concluded arrangements for the future, but has several propositions under consideration. His successor at Rothschild's has not yet been appointed.

The Salter Manufacturing Co., this city, are very busy shipping record cabinets, their new styles recently introduced having met with instant favor with the trade. They have so increased their capacity as to enable them to prepare for the holiday rush, and are able to ship promptly from stocks any of the excellent styles of disc and cylinder cabinets in their catalogue.

Frederick Sheppy has returned from a trip to points in Michigan and Canada which resulted in some good orders for Crescent tone regulators.

November proved the heaviest month the Talking Machine Co. has experienced since Manager Geissler took charge a year ago.

C. B. Abercrombie 7106 South Chicago, is a jeweler, who has worked up a remarkable talking machine business. He makes a point of carrying every record in the Edison catalogue. He makes big horns his long suit, and it is said that his sales of 56-inch horns in a retail way would do credit to many a jobber.

G. A. Jenks is a new addition to the retail force at the Columbia's main store at 88 Wabash. He came here from Davenport, Iowa, where he managed the talking machine department for his brother-in-law, R. F. Smallfield, since the inception of the latter's business.

C. E. Goodwin, manager of the talking machine department of Lyon & Healy, returned last week from a trip to the Victor factory, which he found decidedly busy.

R. M. Brown, manager of the Kimball piano

store, 9119 Commercial avenue, South Chicago, has added Edison talking machines.

The Chicago Case Co. have been having a notable business on their extensive line of machine horn and record cases. The many changes made in the cabinets of some models of machine has made it somewhat difficult to carry out their idea of carrying cases in stock for every machine made, but they have managed remarkably well under the circumstances and their enterprise in keeping pace with the times has won them many new friends in the trade.

Kreiling & Co. are experiencing a steadily increasing demand for the "Tiz-it" all metal ball and socket horn connection for cylinder machines. They have recently made a number of shipments to Europe.

The language department at Lyon & Healy's is not experiencing the dullness which one would suppose would be its lot during the holiday season. Manager Lewis is laying stress on the advantage of a holiday gift which is an educator as well as an entertainer. He has placed 350 language outfits since he established the department.

At the Rudolph Wurlitzer Co., both the wholesale and retail talking machine departments were found busily engaged in caring for the holiday trade. The magnificent new store furnishes them with facilities for handling business in marked contrast to those of a year ago. The company have established a phonographic language department. Mr. Mestraud, traveling representative of the language department of the International Correspondence Schools, has been demonstrating the system to visitors at the store for the past two weeks.

Manager George M. Nisbett, of Babson Bros., wholesale, 304 Wabash, was just entering the 119th order received in the day's mails when The World representative called. The firm's jobbing business is exceeding all expectations entertained for it when it was inaugurated a few months ago. They carry an enormous stock of Edison records and are making quick shipment.

Lyon & Healy are sending to the trade a list of 250 records, which their stock book shows to

be the largest sellers. It is referred to as of particular value to beginners making up an order for the first time, and who naturally wish to avoid "dead stock."

### CHICAGO'S AUTOMATIC TRADE.

Skelly Mfg. Co. Replace Victor Novelty Works  
—Boyd-Harrison Co. Build Up Profitable Trade—Moving Picture Machines Profitable Side Line—Chandler Fine Display—Regina Sublima a Big Hit and Big Seller.

(Special to The Talking Machine World.)

World Office, 195 Wabash avenue,

Chicago, Ill., Dec. 10, 1906.

When the Victor Novelty Works, 81 South Jefferson street, incorporated and commenced business a few years ago they made nothing but vending machines. Recently, as the trade is well aware, they have put a high-grade coin controlled talking machine on the market, and they are now conducting this branch of their business under the name of the Skelly Manufacturing Co., in order to avoid any confusion of name with that of the Victor Talking Machine Co. They have given their machine the name of the Concert-o-phone—a decidedly descriptive name, as it is equipped with the Columbia Twentieth Century graphophone reproducer, securing a loud, clear tone, carrying to every corner of the largest room, although the volume of tone can be reduced at will by means of a good tone regulator.

The Boyd-Harrison Co., 6 and 8 Madison street, are having an excellent trade on the Standard and Favorite electric pianos. Not only are they placing a number of machines locally, but they are doing a nice wholesale business with dealers as well.

A number of Western talking machine dealers find moving picture machines a profitable side line. A visiting dealer said: "We frequently received inquiries from parties desiring to give moving picture exhibitions on the road, but hesitated to go into the business, fearing that they were not equipped with the requisite knowledge and facilities to handle it. This is not the

case, however, as the instructions for operating issued by the manufacturers are very complete. We have sold a dozen outfits in the last six weeks, and find it a very satisfactory line to handle."

A. V. Chandler, city representative for the National Phonograph Co., is exhibiting with a great deal of pride the two latest styles of the Edison slot machines at his office on the sixth floor of 304 Wabash avenue. One, the Eclipse, is a direct current machine, and the other, the Windsor, is run by a battery. They are equipped with improved motors, and are housed in handsome Marx Wagner cabinets.

The Mills Novelty Co. have purchased the Wonderland automatic parlor at 177 West Madison street, from W. W. Freeman, the former proprietor.

J. Blumberg, Western manager for the Regina Co., is having a remarkable demand for the Regina Sublima piano. The smaller styles, Nos. 303 and 304, are making a decided hit with slot machine operators desiring to operate a large number of instruments on account of their lesser size and weight. The automatic Reginaphone (coin-operated talking machine) is another favorite with automatic parlor proprietors on account of the small space occupied and the number of selections at the disposal of the customer.

### HAS THE TALKING MACHINE A FUTURE?

BY C. W. NOYES, CHICAGO.

It is very hard for the general public to conceive the future possibilities of the talking machine business. The business has been considered somewhat of a fad, something that would assume a large proportion to-day and be unheard of to-morrow. From the writer's point of view this is a sad mistake, and the necessity of making a staple business of talking machines is of importance. The business depends, of course, entirely upon the fact that the American public are great lovers of music; therefore the business in itself may be classed as that of a luxury, and the talking machine, in being classed as a luxury, would enter the same field as the automobile or the private yacht or the country home, or we might have said several years ago, the bicycle.

Let us stop to consider for a moment the difference between the bicycle as an entertainer and the talking machine. In order to enjoy a spin on the bicycle it becomes necessary to change one's clothes, oil the wheel, pump the tires and work the pedals; therefore the pleasure of riding was counteracted by a certain amount of exertion. This exertion became tiresome after a while and finally became obnoxious, with the result that the bicycle was left for the junk pile. This is undoubtedly the reason that the bicycle lost its prestige so quickly.

It is an undisputed fact that the American public is continually looking for the greatest pleasure to be had from the least effort. This is brought about by the up-to-date methods of the present generation, whereby the first thing to be considered is the amount of labor necessary to gain the desired end.

The talking machine is an instrument that requires absolutely no effort upon the part of the user. No matter how tired the business man or the housewife may be at the end of the day, no exertion is required to start the talking machine and produce the music that soothes and pleases. For this reason, if for none other, the talking machine is here to stay, and the business is bound to increase as the machine becomes more generally popular.

Pianos have been on the market for the past two hundred years, and more pianos are sold than ever before. Is it not a fact that people desire the greatest amount of pleasure with the least exertion; to prove this statement, consider the number of self-playing pianos that are being sold to-day.

It may be possible that the talking machine will some day be unheard of, but it is the writer's opinion that if such is the case it will be after the time that Gabriel finally blows his trumpet, and who knows but what he may use a talking machine for this purpose.

## SUCCESS OF ARTHUR D. GEISSLER.

Manager of the Talking Machine Co. One of the Bright Young Men of the Trade Who is Quickly Making His Mark.

(Special to The Talking Machine World.)  
World Office, 195 Wabash avenue,

Chicago, Ill., Dec. 8, 1906.

Arthur D. Geissler is certainly a marked illustration of the fact that a college education is not a hindrance but a positive help to a man in business, providing the man is all right. It is little more than four years since Mr. Geissler left his Alma Mater, the Leland Stanford University of California, and entered the talking machine business, yet in that short time he has

ARTHUR D. GEISSLER.

scored a degree of success and reached a position in the trade which would do credit to one boasting much longer business experience.

It was the most natural thing in the world for him to make a choice of vocations as he comes from a talking machine family. His father, L. F. Geissler, now general manager of the Victor Co., was in reality the originator of the talking machine business on the Pacific Coast, while his uncle, Ed. Geissler, is vice-president of the George K. Birkel Co., music dealers, of Los Angeles, one of the largest retail talking machine concerns on the Coast.

Arthur Geissler started his career in the talking machine trade as city wholesale representative of Sherman, Clay & Co.'s talking machine department, and the results of his efforts speak volumes for his hustling ability and also indicate

the scale on which the talking machine business is conducted in the Far West.

He opened up some of the biggest Victor accounts on the Coast, among them such firms as Clark Wise & Co., John Bruener Furniture Co. and Kragens Furniture Co., each of whom placed an initial order for \$5,000 worth of goods as retailers, mind you, not jobbers.

When his father went East in the fall of 1905 to assume the general management of the Victor Co., Mr. Geissler went with him and joined the Victor forces. He visited all the large Eastern distributors with his usual success. Probably his most important work in the East was the installation of the talking machine department of the M. Steinert & Sons Co., of Boston. He conducted the introductory series of concerts at the Boston store, and also aided in installing and developing the departments in the company's 36 branch stores throughout New England.

Mr. Geissler came to Chicago and assumed the management of the old-time jobbing house of the Talking Machine Co. in February of this year. That he has met with success is evidenced by the fact that although, with his coming, all other lines but the Victor were dropped and the large retail business formerly conducted by the company was discontinued, the business this year has shown a notable increase over that of 1905. Mr. Geissler, by the way, is the originator of the custom now pursued by all large distributors of placing all disc records into protective envelopes on their receipt from the factory, and carrying and shipping them to the trade in that manner.

Mr. Geissler was quick to enter into the social and club life of the city of his adoption. He is a member of the Athletic Club and is again displaying the physical prowess which made him a member of the Leland Stanford football and baseball teams, and afterward captain of the All-California football team. He is a member of the club's water polo team, and is its champion plunger for distance.

## COMMERCIAL GRAPHOPHONE GROWTH

Interesting Chat With J. W. Binder Who Says That the Commercial Graphophone Business Is Increasing 33 1-3 Per Cent. a Month.

(Special to The Talking Machine World.)

World Office 195 Wabash avenue,  
Chicago, Ill., Dec. 3, 1906.

"How is the commercial graphophone business?" echoed J. W. Binder, the manager of the Columbia Co.'s, General, commercial department, in answer to The World man's question.

"Well, you can draw your own conclusions when I tell you that the business is increasing at the rate of 33 1-3 per cent. a month. If you can show me any other branch of the talking ma-

chine industry where similar conditions obtain, I would be very glad to have you do so.

"The reason? Well, really, now, modesty forbids me to tell the principal reason; but one of the real and most potent reasons lies in the fact that the business world is feeling the need of a machine to expedite and facilitate the recording of thought. This the commercial graphophone in its present perfected form certainly does. Hence we do business. It's just like the case of the man from Arkansas who has an aversion to doctors, and believed that the best panacea for all physical ills was a drink of whisky. One day he had the misfortune to break his leg, and he straightway had recourse to his sovereign remedy. When he sobered up two days later his leg was still broken, and he sent for a doctor who helped him out. Perhaps the simile is not exactly true, because the limb of the business world is not broken with work, but it is certainly badly 'bent,' as Bert Williams would say. We supply the remedy, hence they are beginning to 'send' for us. See?"

"What am I doing in Chicago?"

"Well, now, old man, I am intensely interested in Psychic phenomena with special reference to the abstraction of the oversoul, but still, you may infer that my visit has to do with the extension of the use of the commercial graphophone. Then, I have many old and dear friends here, whom it is a pleasure to visit in spite of the fact that some of them are parsons and others perfect Fuhris."

## THE YOUNG MEN'S OPPORTUNITY.

BY C. W. LONG, CHICAGO.

[It is a well known fact that notwithstanding the wonderful development of the talking machine industry, the supply of thoroughly posted competent men in all branches of the business is less than the demand. C. W. Long, who recently assumed charge of the talking machine department of the Cable Company, Chicago, has something to say on the subject which will no doubt be read with the keenest interest by all ambitious young men.]

"There are many games of interest to those who participate in them and to their friends that command universal attention. Yesterday it was baseball, to-day it is football, to-morrow it will be something else. But the greatest game of them all, and one that we play year in and year out, is business. On some sides we hear grumbling that opportunities for the advancement of young men are not so great as they were fifty years ago, but if that same young man would stop long enough to survey the field he would find that there is room on the firing line for more successes in proportion to the increased population than his grandfather ever had. The

# DO YOU KNOW YOU CAN SELL A TALKING MACHINE MUCH EASIER IF EQUIPPED WITH A Crescent Tone Regulator?

It perfectly regulates the volume of sound and does not wear the record or injure the delicate vibrating portions of the sound-box.  
The volume of sound can be regulated without stopping the machine and changing the needle.  
The Crescent is exceedingly simple in construction and can be attached in one minute.  
Made in two styles:

- No. 1. for Victor and Zonophone Disc Machines.
- No. 2. for Edison and Columbia Cylinder Machines.

**CRESCENT TALKING MACHINE CO.**

3749 COTTAGE GROVE AVENUE - - - CHICAGO, ILL.

growth of various industries within the last few years has been marvelous. None of them have made this growth without an increase of talented working forces. On every side you see striking examples of young men holding important stations in this great game of business simply because they have entered into the game with a proper spirit.

"There is no more striking example of opportunities than that displayed in the talking machine business. Only six or seven years back talking machines were a fad to some, a marvel to others and an interesting toy to many. It was predicted that the life of talking machines would be short. Two or three years ago we were told that the industry was gradually dying, yet to-day it is ten times greater than it ever was and I assuredly believe it is still in its infancy. The prediction that every home in the United States will sooner or later contain a talking machine is to be an absolutely assured fact. The rapid strides made in perfecting the product have now placed it on a par with all the high-class musical instruments. It fills its pacific place at the fireside, as it interests every member of the family. It is possible to arrange a concert at home now of the world's greatest artists: Tamango, Caruso, Patti, Melba and many others too numerous to mention. A concert, that if arranged with the living artists themselves, it would be impossible to find an auditorium large enough to accommodate the crowds that would gather to hear them. Aside from its use in this field, there are a thousand and one other ways: it is being used to teach music, to teach languages, for the preservation of historical events and voices of celebrities. One cannot peruse the pages of The Talking

C. W. LONG.

Machine World from month to month without finding almost in every issue a new use or purpose to which it is placed. It is easy to see that each new avenue of usefulness found for the talking machine means an increased demand for men to develop the business.

"Not only has the growth been so great as to absolutely overtax the manufacturers, but it is

impossible to get sufficient employees in the various branches to properly conduct the business. I know of no field to-day that offers rapid advancement and inducements for capable young men equal to this one."

### FIFTEEN YEARS OF PROGRESS.

The Splendid Work of the International Correspondence Schools Emphasized at the 15th Anniversary of This Institution.

The International Correspondence Schools at Scranton, Pa., well known in the talking machine trade through their system of teaching foreign languages by means of the phonograph, celebrated their fifteenth anniversary recently, and the important position which this institution has won was recognized by the leading men present as well as by the interesting speeches delivered on this occasion. Governor Pennypacker, of Pennsylvania, was present, as well as Charles Emery Smith, formerly Postmaster General and now editor of the Philadelphia Press. These, however, were only two of a small army of notabilities in attendance, representing practically every line of effort in the industrial, educational and commercial worlds.

In the fifteen years that have elapsed since President Foster established the correspondence instruction system this institution has brought light, happiness and advancement to more than a quarter of a million of ambitious Americans who now occupy positions of trust throughout the country. This does not include several hundred thousands of others who have advanced their positions by means of the language courses, thus fitting for honorable and lucrative employment many who would have remained in the "rut" were it not for this university extension scheme, for such it may be termed.

The value of the work of the International Correspondence Schools is well measured by the fact that its graduates in civil, mining and electrical engineering, as architects, as mine managers, as chemists, more than hold their own with the graduates of the best technical schools.

At the celebration of the fifteenth anniversary there were over one thousand guests, and at the grand banquet eight hundred covers were laid at the Armory. Among those present were: Dr. Homer Greene, who acted as toastmaster; and among the more notable speakers were Bishop Hoban, Bishop Talbot, John Mitchell, Elbert Hubbard, General O. F. Williams, Colonel H. L. Scott, Lieutenant Commander H. B. Wilson, ex-Congressman Connell, Congressman Dale, Judge Edwards and President Foster.

The address of President Foster at the exercises was most illuminating and convincing. It showed the great possibilities of education by correspondence as well as the splendid work accomplished by the International Correspondence Schools. Mr. Foster's system has brought the university to the student, without removing the home influence so necessary to the upbuilding of character.

### UNIQUE CHRISTMAS GIFT.

A unique Christmas gift was bestowed upon a young man in business in the Philippines. The family purchased a talking machine, all talked into it themselves and induced everyone to do so in whom the young man had an interest, as well as many who were connected with his university. College and class songs were sung for it, jokes repeated and familiar sayings given a new lease of life; nothing was forgotten to make it the embodiment of home to the wayfarer in a far land, to whom it was dispatched that it might reach him at his solitary Christmas time.

The business of the Home Talking Machine Co., Dayton, Ohio, has been purchased by E. R. Austin, and in future will be conducted under the name of the E. R. Austin Music Co. The company have put in a line of pianos and removed to larger quarters at the corner of Fourth and Jefferson streets.

## See That Ball?

### The New ALL-METAL-BALL-AND-SOCKET-SWIVEL-JOINT Horn Connection

Increases tone volume and quality. Stops blasting. Also makes better home-made records. Soft rubber connection deadens the sound. "TIZ-IT" makes it louder and clearer. It consists of ball and socket. Ball swivels freely in all directions. Made of brass, nickel-plated and polished. For Edison Phonograph and Columbia Graphophone.

Retails at 50 cents. Regular discount to dealers.

## REVIEW OF TRADE IN ENGLAND.

**Business of Unusual Magnitude Reported—C. H. Miller Honored by Associates—Infringement Litigation—Some Recent Catalogues—American Songs Abroad—New Machine at Barnett-Samuels—Interesting Letter from the Wilds of Africa—Busy Times With National Phonograph Co.—Fonotipia Co. Honored by Queen of Italy—Interesting Chat on Price Cutting—Marconi in the Public Eye—The New Columbia Building a Magnificent Structure—The News of the Month in Detail.**

(Special to The Talking Machine World.)

World Office, 69 Basinghall street,  
London, E. C., Dec. 5, 1906.

At this time of the year the spirit of friendship is much in evidence, and it is meet that we should wish each other all happiness, a jolly Christmas and prosperity during the coming new year. I am no exception to the rule, and would therefore, before proceeding further, like to wish all who read these lines the usual hearty greetings, associated with this our festive season. My thoughts would stray on, but I had better chain them down to stern business in case I should forget to note that Brown has just borrowed a few shillings, probably in order to pay a deposit on the life of an innocent bird he fancied for his Christmas dinner. But enough of such harrowing details of humanity. I would tell you of the wonderful strides the talking machine industry has made in the United Kingdom. Of course you would say "good business is only to be expected at this time of the year." Just so; but when I say the volume of trade is now more than treble that of even this time last season, you will gather therefrom some idea of the vast progress we have made in public favor during so short a time. In London the aggregate sales are astonishing, and still more so in the provinces. It is easily seen that the general public appreciate more fully the musical capabilities of the talking machine, and this condition has been brought about not a little through the educating influence of the forceful and attractive advertising put out in the daily newspapers by some of our most prominent concerns. Everywhere one may go, to manufacturers, factors and dealers, with all the prevailing state of trade is of unusual magnitude. There is one thing,

however, that somewhat mars this splendid outlook, and that I should mention it, is but in the interest of the parties most concerned. I refer to the continued indifference of the majority of dealers to adopt for themselves pushful and original methods of attracting custom. Taking individual retailers one finds they do a fair business jogging along in a stick-in-the-mud groove, but at this time especially were they to make more endeavor to seek instead of waiting for custom, I am confident the result would surprise more than a few. Although more cylinder records are sold than flat, from all reports and observation, the latter is gaining influence so fast, that they will soon run ahead of the cylinder trade, having regard also to the fact that disc machines are much more in demand than hitherto.

### Pallas Co. Registered.

The Pallas Co. was recently registered with a capital of £1,000 in £1 shares to carry on the business of manufacturers of phonographs, etc. There was no initial public issue, and no articles of association. Registered office is at 10 Ironmonger lane, London. The manager stated in a recent interview that they are engaged in perfecting a few details of their machine, which will be ready shortly.

### "Here's a State of Things."

The state of trade may be gathered from a little incident that occurred when last I called upon the American Talking Machine Co. There was a rush of air and Mr. Nottingham was upon me. Gasping out that he was too busy to stop for the usual chat, he vanished, leaving me to ponder over the consequences of large bank balances.

### C. H. Miller Leaves for the States.

C. H. Miller, of the Columbia Phonograph Co., said farewell to his associates and sailed for America November 10. Mr. Miller is going to the dry climate of the far Southwestern States of America to live an open-air life for six months, as he found the climate of London was undermining his health. Five years ago he entered the employ of the Columbia Co. in their London establishment, and by his talent and industry quickly made his way to a position of trust and responsibility. When the retail branch in the West End was opened up he was placed in charge, and under his capable management it showed constantly increasing sales. He was

largely instrumental in securing the order from Sir Tollemache-Sinclair for the graphophones and records for over 300 British hospitals and asylums, and arranged all the details of the presentation of the outfits to the institutions. Although resident in London for six or seven years, Mr. Miller was one of the few Americans who had never crossed the Atlantic, having arrived in England via the Pacific, Australia and the Suez Canal. When he reaches Chicago for his Christmas turkey he will have circumnavigated the globe. As a souvenir of his long association with them, his fellow employes presented Mr. Miller with a handsome solid leather kit bag, with every traveling requisite. Marion Dorian, assistant general manager, made the presentation in a graceful speech, to which Mr. Miller modestly replied, after which there were farewells and best wishes from all for his complete restoration to health.

### David Bruce & Co. Bring Suit.

On the 27th of October last a writ was issued in the Chancery Division of His Majesty's High Court of Justice by David Bruce & Co., Ltd., the assignees of Gardner's patent, against the "Gramophone & Typewriter, Ltd.," to restrain them, the defendants in the action, from infringing Gardner's patent and for damages for infringement of such patent. The patent referred to covers the application of screw attachment to the diaphragm of sound boxes for the purpose of regulating sound waves.

### A Circular from Edison Bell Co.

The Edison Bell Co. have sent the following letter to their factors: "Dear Sirs—We are not satisfied with the amount of business done in our British-made phonographs, and are determined that the public must be reached more effectually than heretofore. With this object we intend to adopt other than the present selling methods. As this measure is considered imperative and is not directed against the interests of our factors, we give them the opportunity of returning all E. B. Gems they may wish to return out of their stocks within seven days of this date, and we will allow the full price charged, and defray the cost of carriage back to us. Will you please advise us if you have any Gems to return, and oblige, etc. (Signed) J. Hough, manager." In this connection the Edison Bell Co. have written me as follows: "With regard to our machines,

## FROM OUR LONDON HEADQUARTERS—(Continued).

we are making a special appeal direct to the trade, and have every belief that the change in our policy will be productive of a very considerable increased trade in the phonographs made by this company. We are having a very large demand for our new extra-long records, a demand to such an extent that it was entirely unexpected. The first parcel of 12 titles had a wonderful run upon them, and we are even now a large number of orders in arrear. We have just got out another parcel of 24, composed of very popular titles, including Christmas records, which, no doubt, will bring a lot of orders from all over the country.

**Decision Not Yet Announced.**

No judicial decision has yet been given in respect to the recent action between the National Phonograph Co. and the Edison Bell Consolidated Phonograph Co., Ltd., reported in our last issue, in which the Judge refrained from giving a decision at the time.

**Lyonaphone Co.'s New Catalogue.**

The Lyonaphone Talking Machine Co. have just issued a neat little catalogue of the Zonophone and Sterling Hebrew records. The list is tabulated in a manner easy for reference, and is a most useful adjunct to any dealer's business. Mention should be made of this firm's sound box. It is their own make, and they claim it to be one of the best upon the market. Styled the Lyonaphone Opera Sound Box, it is worthy of its name, as a recent test proved beyond a doubt. In tonal qualities it is all they claim for it, and dealers should write to Messrs. A. Lyou & Co., 75 City road, London, for further information.

**Williams & Walker's Songs in England.**

Who is it that does not remember "In Dahomey"? In London and the province the theatrical company of American negro comedians who presented that musical oddity met with unqualified success. The names of their principals, Williams and Walker, were familiar to all ac-

quainted with the entertainment world, and every small boy on the street was whistling "I'm a Jonah Man," one of the hits of the piece. Both these comedians are under exclusive contract with the Columbia Phonograph Co. to make Columbia cylinder and disc records. In the Columbia December supplement the song, "Nobody," is announced, sung by Bert Williams, with orchestra accompaniment, No. 33,011 in Symphonic and No. 3,423 in 10-inch disc. "Nobody" is a song from Williams and Walker's new production, "In Abyssinia." The humor is quaint, and Williams' style in rendering the song is absolutely inimitable.

**Some Musical Robbers.**

The premises of the Singaphone Co. (Ltd.), of High Holborn, were recently broken into, but no material loss seems to have resulted therefrom. The affair created unusual interest as the prisoners had apparently been indulging their musical taste by playing over a few records.

**Barnett Samuel's Best Sellers.**

"Its the machine of the season," said Messrs. Barnett Samuels, when I called upon them. This remark was made with reference to the Excelsior phonograph which that well-known firm are now making a special feature of—made in an extra solid oak case and driven by gearing the feed screw, the motor is nearly silent while running, so that perfect regulation and even running is assured. This machine retails at 32s. 6d., and strongly appeals to dealers, owing to the large margin of profit which it allows. It has already met with a phenomenal sale, which is most gratifying to Messrs. Barnett Samuels. Another feature about this special line is that it runs two records at a wind, and can be rewound while running. The Edison Gem is also a splendid seller, owing to its reliability and attractive appearance, not to mention its popular price. The "Gem" is received well, not only by dealers (who find the sale most profitable), but by the public, who seem to have taken a particular liking to it.

Another popular line is the cylinder La Belle machine, which has a feed screw and retails at the low figure of 1 guinea. The firm claim this line to be one of the most reliable machines of its kind on the market. Messrs. Barnett Samuels are sole agents for the Dulcephone—made in three sizes, and retails from 32s. 6d. up to 6 guineas.

Their new catalogue is well gotten up, and is profusely illustrated with all kinds of machines and accessories, etc., suitable for disc and cylinder machines. One item which merits a few remarks is a specially fine needle, which is exclusively made in England for this company. They are packed up in artistic metal boxes, containing 200 in each. Messrs. Barnett Samuels are sending post free a sample box to any dealer that cares to test them. The price of same is such that will allow a good profit.

**Arranging Christmas Windows.**

Enterprising dealers may now be seen busily engaged in arranging their Christmas window show. Many original dressings are to be observed in London districts, and much public attention—and certainly "trade"—is thereby secured.

**The Graphophone in Africa.**

A most interesting letter has recently been received from the wilds of Africa by the Columbia Phonograph Co. The writer, Mr. Pontell-Weatherly, F.R.G.S., well known as explorer and big game hunter, has some good things to say about the graphophone which invariably accompanies him on his journeyings. After describing the sensation it created on board ship on the voyage out, he goes on to speak of its reception during his progress through Africa: "At Biera it was played nightly for a week at the earnest request of the townspeople. At Tete it was kept going morning, noon and night for the month I was there. The Europeans at the Nirsate Gold Mines, five days north from here, have written over and over again, 'Do come up and bring your graphophone.' As to the natives about here

**The General Phonograph Company**  
Limited

26 EUSTON BUILDINGS, EUSTON ROAD, LONDON, N. W., ENGLAND

## FROM OUR LONDON HEADQUARTERS—Continued.

—they crowd in from all parts on the chance of hearing it—it is called the Wo bi—their nearest approach to Woah, Bill!—a song they all love. It does me good to hear the black crowds, all eyes and teeth, roaring with laughter when they get over their first shock and fright at hearing a human voice issuing from a box. All the way up the Zambesi from Chinde to Tete and 150 miles northwest of Tete, to where I am now, near the Suangwa, it has drawn crowds, and been instrumental in helping me very materially to recruit carriers."

**The "Perfecta" Means Perfect.**

"The sale is enormous, and the price is small, so it is well understood why and wherefore they go," so said Messrs. Laudel Phillips, who have the sole agency, and they claim that this human phonograph has caused a complete revolution in the talking machine industry, and that at a distance of some yards you can actually hear the artists taking breath, so perfect is the "Perfecta" in action.

**Tremendous Sales of Beka Records.**

In a talk with Mr. Ruhl, sole British agent for the Beka record, I elicited the fact that such huge sales had never been known before. We are sending them out at the extraordinary speed of thousands per week," said Mr. Ruhl, "and if this unprecedented demand on our resources proves to be continuous we shall be absolutely compelled to arrange for more commodious premises. The entirely unsolicited testimonials that we are constantly receiving is convincing us more and more of the reputation these records are making for themselves. Moreover, their reception has amply recompensed us for the time and trouble that we have taken in placing thoroughly good selections on the market. Messrs. Carl Lindstrom's talking machines are generally recognized as thoroughly sound and reliable productions, so much so, that Mr. Ruhl says sales are enormous and their popularity is evident."

**Murdock & Co.'s New Disc Record.**

Messrs. Murdock & Co., the well-known factors of Farrington road, are just now experiencing a very busy time. In the course of a chat, Mr. Fulton said that the demand for records is unprecedented in the history of the firm. Particular mention should be made of the new disc record, the "Favorite," of which Murdock & Co. have recently taken up the sale. Mr. Fulton reports the "Favorite" as being a favorite all-round, and the Zonophone and Beka also. There is a huge call for both, and the great and only difficulty is the inability of the manufacturers

to keep ahead of the demand. "Generally speaking, disc records are becoming more and more popular," said Mr. Fulton. "Our present sales are quadruple those of last season, and by next year we shall no doubt require to double our space for stock." The "Tournaphone" marketed by Messrs. Murdock, is a really good machine, and is finding much favor with the public. Judging from the present satisfactory state of business, my informant was of opinion that this Christmas will turn out the best ever felt in the talking machine industry.

**Manufacturers Experience Busy Times.**

Manufacturers everywhere seem to be having a very nice time of it. They cannot turn the goods out fast enough, orders being overdue in dispatching, and in consequence the telephone bell, messengers and stenographers are in constant demand. This hustling spirit seemed to pervade the air and suggest good news to come, as I crossed the threshold of Messrs. Pathé Frère's premises. L. H. Courant had many good things to tell me of, most particularly respecting their new disc record and machine. He spoke: "The splendid reception accorded to our new goods is most gratifying to all, and will encourage us in our desire to obtain and increase our list of first-class artists. We already include in our repertoire a large number of selections from most of the best operatic singers, which records we sell at the exceptional price of 3s. Our whole list contains over 20,000 different selections, and we are adding to this as fast as necessary, having regard to quality and popular taste. We are working at high pressure on the Christmas records, and other orders keep us going without cessation, but, thanks to our huge factory capacity, we are confident of fulfilling all demands."

**Prominent Advertisers in General Press.**

Among prominent advertisers in the general press, it may be noted that the "Columbia" and "National" companies are the most persistent, which fact is of itself sufficient proof that the old proverb "a penny saved is a penny earned" is not true in advertising; it is "a penny well spent that earns others." The advertisements are well written, and the striking display speaks of an experienced publicity man behind the scenes. It is this sort of advertising that will do more to introduce and popularize the talking machine among the masses than all other forms of publicity. Only the best media are chosen, and thus the best results follow. Much credit is due to the advertising managers of both firms, i. e., James Van Allen Shields, of the Columbia, and

C. E. Maryon, of the National, who are responsible for this excellent work.

**United States Tariff Deplored.**

Mr. Sterling, of the Russell Hunting Co., seriously deplores the prohibitive tariff in the States, and says that if America would only be good enough to adopt the preferential system he would at once open a new department to deal with the numerous orders, that would most accurately be the outcome of the large quantity of American inquiries, that the company are so continuously receiving.

Mr. Sterling estimates that out of over 150,000 records turned out each week by his firm, every single one is sold—each order that comes in is for seldom less than 500 of a series, and taking the Alexandra Prince concertina record alone, about 4,000 are sold weekly—hundreds of American inquiries are made for this concertina record, which only proves the popularity of same, and makes one wish that there were a few more such records on the market. Another big seller is the Scott Skinner records, which consist of over 200 violin solos. This Scotch artist has made a reputation for himself, not merely as an executant, but as a composer, and the 200 different violin solos are all his own compositions.

The Russell Hunting Co. have a fine selection for the Christmas trade. Carols, marches and minstrel records, to any amount, so that, however great the rush is, every one will be pretty sure to obtain whatever they want. Every department is working overtime, orders are coming in by every post, and this Christmas is expected to eclipse all others, as far as trade is concerned for the above company.

**General Phonograph Co. Prosperity.**

"We are doing splendid business," said Mr. Latham, of the General Phonograph Co. The "White" record is a fine seller, and what is more gratifying still, they give the utmost satisfaction to all concerned. Both dealers and public alike appreciate the recent tonal improvement adopted, and we are constantly receiving letters of satisfaction, some even asserting that it is undoubtedly the finest shilling record on the market. Asked as to the general condition of business, Mr. Latham pointed to a rack containing 200,000 records, and said that if they liked they could send them all out to-morrow night, and still be full up with orders. It is owing to this heavy demand for ordinary stuff that the General Phonograph Co. are not issuing a large Christmas supplement, but in their November

issue some grand selections will be found, such as "We Parted on the Shore," by Harry Lauder, and "Wire In, My Lads," by Arthur Guilbert. These and a dozen others are going well.

Mr. Latham informs me that the firm are working day and night, the orders are increasing all the time, and all the energies of the firm are required to cope with the rush.

**Gramophonitis.**

E. B. C. unfortunately has neighbors who own a cheap machine. As a result, E. B. C. is sad, for he relieves himself of the following pathetic lines in the column of our contemporary, *The Daily Chronicle*:

What's wearing me to skin and bone?  
My neighbor's grinding gramophone.  
Why do I hold my head and groan?  
I'm tortured by that gramophone.  
The whirring noise, the dreary drone,  
The terrible, ear-splitting tone,  
The screeching of that gramophone.  
What is the crime I can't condone?  
The starting of that gramophone.  
What ails your Darby, Dearest Joan?  
An "itis" after gramophone.  
When I am dead, write on the stone:  
"Gone where there is no gramophone,"  
For him no penance shall atone,  
The wretch who works that gramophone.

**National Phonograph Co. News.**

The National Phonograph Co. also report business as exceptionally strong. This pleasant condition is attributed partly to the systematic advertising campaign which they have instituted in the best class daily and weekly publications. The Edison Phonograph monthly (the national company house organ) has met with much favor among dealers who appreciate suggestions and hints helpful to their business.

In a chat with C. E. Maryon, who formerly worked in the States with Mr. Edison, and now controls the advertising department of the National Phonograph Co., I was told that this year's business had completely eclipsed that of last year, and although a few pessimists had remarked that the talking machine industry was on the wane, he (Mr. Maryon) felt confident that no business offered more possibilities and possessed brighter prospects.

A most enticing list of records for the new year has been compiled, comprising some very gay tunes, to the number of ten, and good results are anticipated. A comic song sung by a new artist, Fred Owen, is expected to create a great sale, owing to the pretty and easy melody, combined with the refined and amusing words, not to mention that this is the first record Fred Owen has made for the Edison Co. Records have also been made by Miss Florrie Lord, Victoria Monks, Peter Dawson and many others, so that whatever the musical taste may be the National

Phonograph Co., as their new list will show, have thought of all.

**The Sterling Recorder.**

The "Sterling Recorder" is the title of a neat house organ issued by the Russell Hunting Record Co., who, in their introduction, or, as they say, "The reason for it," is all-sufficient. With four distinct lines of records—Sterling, Odeon, Fonotipia and Linguaphone—the ordinary channels of communication between the company and their huge army of dealers, was too limited, hence the "Sterling Recorder." It is well printed, and the contents, apart from the news devoted to the company's products, comprise many interesting features and good advice to dealers. Any dealer handling the goods of the Russell Hunting Co. can receive a copy each month on application to the company at 81 City road, London.

**Using Commercial Talking Machines.**

The Clement Talbot Motor Co., one of the best known motor houses in the world, and the British-American Tobacco Co., one of the principal firms in the tobacco trade, are among the latest firms who have adopted the "Columbia" office graphophone for handling their correspondence.

**Royal Appointment to Queen Margherita.**

The Fonotipia Co. have just had the honor of receiving the royal appointment to H. M. the Dowager Queen Margherita of Savoy, and have been granted the right to use the royal coat of arms. The high honor bestowed upon the Fonotipia Co. is but evidence of the general excellence of their goods, and needless to say, such a signal mark of favor has caused much satisfaction and is highly appreciated by the directors.

**Will Take Back Old Records.**

Messrs. Sterling & Hunting announce that they are prepared to take back old, worn-out or broken "Odeon" and "Fonotipia" records at the following liberal scale of allowance:

"Odeon" standard size, 10d. each; "Odeon" concert size, 1s. 8d. each; "Odeon" opera size (12 inch), 2s. 10d. each; "Odeon" grand opera (13¾ size), 3s. 4d. each; "Fonotipia" 10¾-inch records, 1s. each; "Fonotipia" 12-inch records, 1s. 8d. each; "Fonotipia" 13¾-inch records, 1s. 8d. each. As the company point out, these allowances are considerably more than the actual value of the old material, but the offer is made in order to encourage their dealers to push the sale of "Odeon" and "Fonotipia" records.

**Phonetic Documents on File.**

Phonetic documents are the latest additions to our national museum collections. Instead of the cold, dead records of parchment, paper and ink, we are to have the living word as it is issued

from the lips of king, preacher, singer or artist preserved by the phonograph record for future generations to listen to.

**How Bad Men Are Influenced.**

Gramophones, like other musical instruments, speak to us in a musical sense only, but if they could tell the story of their purchase it is certain we should possess means of romance and adventure, undreamed of in relation to talking machines. An extraordinary instance of this was related in a London police court recently. It was stated that the prisoner, after stealing money went into the shop next day and bought a gramophone from the very assistant from whom he stole the money, and paid for it with about half the sum he had stolen from him.

**Marconi's Latest Invention.**

Signor Marconi is evidently gifted with a brain of almost limitless inventive capacity. Out of the many inventions associated with him, wireless telegraphy stands out most prominently, but from this he turned his skill toward improving sound reproduction and recording in connection with the Columbia Phonograph Co. Pending the development of his ideas in that direction, Signor Marconi is reported to be at work on still another device, by which, through the medium of electricity, two typewriters are connected with each other, the writing of one being automatically reproduced by the other in any desired place. Details are not available, but the usefulness of such an invention will be generally recognized.

**Views on Price Cutting.**

The Russell Hunting Record Co., Ltd., are strong advocates of price maintenance. "Cutting," they consider an iniquitous and dangerous practice. These are short, to-the-point views, which, in these times of unfair competition, will be more than appreciated by legitimate dealers. An example is given in the Sterling Recorder. A retail dealer thinks he will get a splendid advertisement and greatly increased trade if he cuts a halfpenny off the price of some well-known article. He does so, but pretty soon his competitors cut to the same level on the same or perhaps a different article. Dealer No. 1 finds his advantage gone, so he cuts still lower, a move followed by No. 2, and the rest. The public take an interest in the conflict, and No. 1 to maintain as he thinks, his lead cuts again, and still his competitors follow. In self-defence No. 1 cuts again on the same line, or maybe on another, No. 2 follows and so the game goes on; in time, becoming so unhealthy, as to cause one or the other to shut up shop. In two trades Price Maintenance Associations have been formed by agreement between manu-

facturers and retailers so that the latter finds a living profit assured him. So successful have been these associations that proprietary articles which are not "protected" are only served when actually asked for, other lines being pushed instead. The Russell Hunting Co. have taken up no uncertain stand against cutting the prices of their goods, which are sold on the firm understanding that fixed prices shall not be cut, and an intimation to uphold this policy, if necessary by legal proceedings. A few delinquents have already been brought to book, several injunctions having been obtained to enforce the one-price policy in many districts. This is indeed commendable action, and were all manufacturers to follow suit, this nefarious practice would practically soon cease to exist. The Russell Hunting Co. are prepared to promptly act upon information from members of the trade who believe that it is being resorted to either secretly or openly in any neighborhood.

**"Finest Talking Machine Ever Built."**

At the Columbia Co.'s new premises in Oxford street, there is just now a window display which is attracting a good deal of attention, so much, indeed, that it is frequently difficult to get along the pavement for the interested crowd at the front. The exhibit is a most elaborately constructed Columbia graphophone appropriate-

**THE NEW COLUMBIA BUILDING.**

Description of This Palatial Establishment Which Is Handsomely Equipped—Head-quarters of the European General Manager.

(Special to The Talking Machine World.)

World Office, 69 Basinghall street,  
London, E. C., Eng., Dec. 3, 1906.

One of the finest buildings in this city devoted exclusively to talking machines is that just occupied by the Columbia Phonograph Co. at 64-66 Oxford Street West. Its location is most desirable, as this part of Oxford street is crowded almost the entire day with shoppers and sight-seers, while in the evening the theatre and concertgoers pass the building in thousands. The imposing front catches the eye long before the building is reached, and the attractive window display makes it impossible for anyone to pass without giving it due notice.

The building, which is of stone, consists of five stories and basement and is finished throughout in the most thorough manner, the entire woodwork being of solid mahogany, French polished. The ground floor and basement are given over to the sales department, where are also located the offices of the local manager, his clerical staff and salesmen. The commercial grapho-

THE NEW COLUMBIA BUILDING, LONDON.

MAIN FLOOR NEW COLUMBIA BUILDING.

ly described on the window card as "the finest talking machine ever built." The instrument is of the same general character as one which was made by the Columbia people for the Emperor of Japan. The horn and certain parts are plated with 18-carat gold. The cabinet, in this case, is set off with an artistically carved thistle device at once suggestive of Bonnie Scotland, and on one side is a solid gold plate, by Messrs. Tiffany, bearing an inscription which explains the significance of the Scottish emblem and gratifies curiosity as to who is to become the happy recipient of this extraordinary fine instrument. This reads, "Presented to Sir J. G. Tollemache Sinclair, Bart., by the Columbia Phonograph Co., General," and one at once understands that this is the graceful means the Columbia people have selected for commemorating their association with the genial Scottish baronet in his recent munificent scheme of distributing gramophones to the various hospitals and charitable homes throughout the country. Sir Tollemache, who is himself an enthusiastic gramophonist, will, we are sure, think very highly of this beautiful memento.

Aside from the altitudinous prices paid opera stars for making records, domestic "talent" receive remuneration which the average person might consider adequate. That is to say, the best known tenors have a yearly income of six or seven thousand dollars, and the others not far behind.

phone display occupies a conspicuous position on this floor.

Access to the upper floors is obtained by means of elevator and stairway. On the first floor up are to be found the offices of Frank Dorian, the European general manager, and a portion of his staff, as well as the office of the European auditor. On the other floors are located the correspondence, advertising and business graphophone departments, each arranged

with due regard to accessibility and efficiency of operation.

The lighting and ventilation of the building are most admirable, nothing being overlooked in this connection. The structure is lighted throughout with electricity, and the equipment is in sympathy with the general scheme of architecture.

The Columbia building is the newest one on Oxford street, and, as can be seen from the cuts herewith, has a handsome frontage and is as high as the regulations permit. The fact that the show window projects somewhat beyond the building line gives a splendid opportunity for window display. In the interior view herewith, a portion of the counting house is shown, also Mr. Bradt's office. In the foreground is a special machine designed for presentation to Sir Tollemache Sinclair, referred to elsewhere in the

## GEN. BOOTH AND THE COLUMBIA CO.

The Famous Salvation Army Leader to Make Records Exclusively for This Company.

(Special to The Talking Machine World.)

World Office, 69 Basinghall St.,

London, E. C., Dec. 6, 1906.

The Columbia Phonograph Co. have just closed an exclusive contract with General William Booth of the Salvation Army, whereby that famous leader will make records for the Columbia Co. He has already made some very successful ones in both disc and cylinder. It goes without saying that General Booth's records will be in great demand by his followers, who now number millions all over the world. This connection is a very important and valuable one for the Columbia Co.

## NEWS FROM THE EMERALD ISLE.

**Nomenclature of the Auxetophone Altered—To be Known in Great Britain as the Auxeto-Gramophone—Handel's "Messiah" on Talker Attracts Big Crowds—Edison Business Phonographs for Belfast Technical Institute.**

(Special to The Talking Machine World.)

Belfast, Ireland, Dec. 3, 1906.

The nomenclature of the Auxetophone has been altered; it will henceforth be known in the British Isles as the "Auxeto-Gramophone." The local interest in this marvelous machine remains unabated; indeed, a fresh stimulus was imparted to it on November 27, when the "greatest of all oratorios," Handel's Messiah, was rendered from twenty-five gramophone records in the large public hall of the Y. M. C. A. headquarters, this city. The appreciation of the audience was evidenced not only by the applause which greeted each selection, but by the "dead" silence which was creditably preserved during the performance. The clearness, enunciation, pitch, tone, expression, "timbre" and quality of the voices of Miss Perceval Allen (soprano), Madame Dews (contralto), John Harrison (tenor), and Charles Knowles (bass) were reproduced so naturally as to astound those present. Flattering opinions of the Auxetophone were freely exchanged and found their echo in the laudatory notices which appeared in the Belfast papers the following day, in one of which, the Belfast Evening Telegraph, an exhaustive article occupying half a column faithfully records the sensations of its clever writer—evidently a musical expert—whilst listening to the instrument. The Auxetophone concerts on Saturday evenings at Ulster Hall still continue to draw huge audiences. The public is indebted to Mr. Osborne for these delightful musical events.

Edison products are being purchased with avidity in this city. Sterlings are very popular; Whites are good sellers, but the manufacturers seem unable to cope with the demand. Pathé and Columbia records are moving steadily. The "boom" for Gramophone and Zonophone goods remains undiminished.

The popular principal of the Belfast Technical Institute, Francis C. Forth, A. R. C. Sc. I., in order to successfully cope with his onerous labors, has installed in his typewriting department three Edison business phonographs, to which he dictates all his correspondence, thus effecting a considerable saving of time. Mr. Forth is a gentleman who is thoroughly up to date, an excellent organizer and a business man of no mean order, who merits the respect and esteem entertained for him by all sections of our citizens.

Quite a fund of merriment has resulted from T. Edens Osborne having mailed his clientele and

and friends artistic post cards representing "His Master's Breath," a mirth-provoking picture of a dog with a "knowing" expression in the act of smelling a funnel placed in a jar containing Irish whiskey. Evidently the owner of the dog is not a believer in aqua pura, "Adam's ale" being probably considered unpalatable without the addition of Ireland's national beverage!

## RECORDS AS CHRISTMAS PRESENTS.

American Soldiers in Our Foreign Possessions Anxious to Procure Them—A Good Idea.

Our soldiers quartered in the various island possessions are oftentimes at a loss for something whereby to pass their leisure time profitably if possible. In order to relieve the monotony of the situation, kindly disposed persons have been in the habit of sending numbers of books and current magazines, and in a letter of thanks for same, one of the soldiers suggested that records for both disc and cylinder machines be sent to the various posts. As there are many Victor, Edison and Columbia machines owned by the different companies in the army the contribution of records for use on these machines would do much to bring cheer to the boys in their lonely camps.

The suggestion is a good one. Talking machine records cost much less than a book, even a cheap edition, and certain styles can be had for the price of an ordinary monthly magazine. Where a book is usually read only once by a man and only one can enjoy it at a time without necessitating some one reading aloud, a record could afford simultaneous pleasure to an entire company or even a battalion if desired, and may be enjoyed times without number, either for the selection itself or for the dance music it offers.

Talking machine owners who have records in good condition of which they have become tired can show kindness of heart with very little expense by sending them to the authorized depots from whence they will be dispatched in bulk. The Globe, 5 Dey street, New York, will receive such items if marked "For the soldiers," and see that they are forwarded.

In these days of perfected talking machine records it is only the deaf and dumb man who need not fear having his speech preserved in record form, and even he is in danger of having his sign language reproduced by the moving picture machine. To make a verbal contract nowadays binds one just the same as a written one if a "talker" is near, much to the dismay of certain unscrupulous persons.

## HENRY J. HAGEN ASSUMES CHARGE

Of the Recording Laboratory of the Universal Talking Machine Mfg. Co.

Nov. 26 Henry J. Hagen assumed the management of the recording laboratory of the Universal Talking Machine Mfg. Co., a promotion most deserving. It will be remembered that Mr. Hagen recently returned from a record-making trip to Europe and South America, and in referring to the business possibilities of the latter continent quoted the speech made by Secretary of State Root when in Buenos Ayres—namely, that during the past twenty-five years the United States had enjoyed unexampled prosperity, and he predicted that for the next quarter of a century South America would have its turn and be blessed with equally prosperous conditions. This prophecy, Mr. Hagen believes, will be realized to the letter, for, as he says, "The Argentines are right up to the minute, and it is an elegant country."

## FABER'S TRITE REMARKS.

H. C. Faber, the busy Victor man in Colfax, W. Va., has recently issued some clever advertising matter for local use. He has also favored us with the following effusion which will quickly convince the reader that Mr. Faber's bump of humor is far from being a dent. Besides complimenting the publication, he airs some sensible views of the Sousa episode:

"In reading The World from 'kiver to kiver,' I take particular notice that you are not in the business alone for your benefit, but to benefit its readers and to give extra good hints on more than one point. I have gathered a few hints myself from its columns, and do not hesitate to blow my horn about it either, with no affront at all to the venerable Jon Fillup Soozy. Here is a Sousalette—crowds of 'hayseeds' and others are going over to Pittsburg this week to hear the great bandmaster. If it had not been for the talking machine this crowd would not have gone two miles to hear him, his exploits on the talking machine having advertised him as no other advertising could have done. The Victor machine seems to have a good lead in this vicinity, and this shows that the people are getting civilized and want the best that money can buy."

It appears that S. S. B. Campbell, recently manager of the New York office of the Columbia Phonograph Co., General, has not gone to Europe, but is in Philadelphia, connected in business with E. G. Gibson, the expert and inventor of the "Exhibition" sound-box.

## FLOWER HORNS THAT SELL AT SIGHT

If you are a jobber, write us; we will send you a free sample. All we ask is that you compare it with any others on the market as to construction, color and decorations.

**NEW YORK VITAK COMPANY**

will put on the market their

**NEW MODEL**

**Motion Picture**

**Machine**

This machine will be made of the best materials that can be procured, and will be so constructed that any length film can be used of the Vitak size, from 5 feet to 200 feet (32 pictures to the foot).

It can be used for home or private entertainments, throwing a picture from 6 to 8 feet in width. The lenses and finish will be of the best, and will be equipped with a light that will produce about 3,000 candle power on the film.

We have had so many requests for a machine of this type that we decided to build one as soon as possible. These machines will be absolutely guaranteed in every particular, and will sell to the consumer for **about \$30.00 or \$35.00.**

We are desirous of hearing from those who wish to handle this model machine, and we will endeavor to have such parties view and examine it at the earliest possible date.

## TIMELY TALKS ON TIMELY TOPICS.

Considering the tremendous growth of the talking machine trade during the past year, business in quarters where it was exceedingly lively last fall has suffered a slump. To be sure, the manufacturers of machines, records and prime essentials have no reason to complain, because their plants have been urged to producing the limit of capacity, even with the enlargements and increased facilities. The experienced jobber, expressing an individual opinion, declares that the inability of the factories to supply goods when most needed, eventually served as a wet blanket on the public's enthusiasm, trade fell away in consequence, and has never been recovered. Others are of the opinion there are too many dealers, which means a dividing up of sales and the development of a spirit of rivalry so fierce as to render impotent the wholesomeness of fair competition. In the aggregate the volume of business has measurably increased, but the elements of distribution are not on so satisfactory a basis, it appears, as they were at this time last year. The current month, however, is up to the mark, and it is predicted business will continue brisk and active until late in the spring.

With the new year both the Victor and Columbia companies are expecting to put on the market a grade of entirely new records for which great things are expected. Those who have had the privilege of an advance hearing are as enthusiastic as the experts relative to their salability, not to mention the marked improvement in reproductive qualities.

Both of the jobbers' associations—Central States and Eastern—are in a healthy condition, as may be ascertained by the reports of their recent meetings appearing elsewhere in this issue of *The World*. The jobbers of the Middle West have kept steadily before them the practical benefits bound to accrue when a fixed object is kept in view. They sedulously avoided "bad breaks," with results most satisfactory to the members and the betterment of trade economies. The Eastern Association, inclined to be diffuse in their methods at the beginning of their career, suffered a temporary eclipse in consequence. The revival of interest in this excellent organization is evidenced by the increased membership and the return to the "simple life" and business-like methods. Associations conducted on the lines laid down by these two bodies are necessities which every careful jobber aiming to carry on a legitimate, profitable and honorable trade admits. Furthermore, manufacturers heartily approve of such organizations, and en-

courage their formation and maintenance, while the right-thinking and acting dealers are not at all averse to their existence so long as they are fair and just in the enforcement of the credit rules and regulations.

Talking machine men with an eye to the future regard the South American countries as the land of promise, one literally flowing with milk and honey, if properly developed. To be sure, exact information concerning the possibilities of the business is confined to those who have been on the ground and studied the situation. The few Americans sufficiently informed who are in this fortunate position are enthusiasts, and declare the exportation of talking machines, records, etc., can be trebled if gone about in the right way, and goods suitable to that market are made. This is being looked after now more closely and intelligently than ever before, and the results are beginning to show for themselves.

What *The World* had to say last month about "dubbing," or the counterfeiting of records, aroused no end of comment on the part of persons either directly interested or favoring the practice. People of this mind seem to be satisfied they can buy a record in the open market, and having acquired title by purchase are at liberty to duplicate it ad infinitum, providing the factory marks or identifying designations of the original manufacturer are not repeated. For example, they hold a Caruso record can be so treated, and no restraint can be invoked, either in law or equity, even if in the ordinary course of sale it is so represented. If such is a fact, why should anyone seek to secure exclusive rights in artist talent, if their work is open for spurious duplication by simply refraining to repeat certain marks of identification? The sound lines are the same absolutely, for every time a new reproduction is made another result is obtained, the human voice never being twice alike. It is an interesting question, no matter how it may be regarded, and doubtless legal advice of no mean caliber has been sought by partisans of the gentle art of "dubbing."

The results from the use of celluloid in records have not come up to expectations in the past, the material not lending itself to the smoothness of finish so greatly desired. Recently, however, experiments have been more successful, and the manufacturers aver some startling revelations may be looked for. The veterans in the record-making business, however, are skeptical.

A good story is told by a candidate for record honors who had been doing considerable church work. The relator is a talented woman, who requested a "test" of her voice, and visited one of the leading laboratories for the purpose. In speaking of the incident she said: "This is my first experience of the kind, but I was treated so courteously and deferentially that I could not help but contrast it with the treatment received at the hands of church committees before whom I have appeared for examination relative to my application for choir singing. The members of these committees on more than one occasion have almost openly insulted me by their remarks. The talking machine people, on the contrary, who are no doubt overrun by applicants, were politeness and patience personified, proving they must be a superior grade of men from those who are constantly being held up as models of all that is supposedly fine and elegant in life."

Music publishers should ponder this piece of advice from an expert: "The average arrangement issued by the music publisher is totally inadequate for recording purposes in the laboratories of the various talking machine companies,

owing to the fact that each laboratory has its own special musical organization, demanding special musical treatment. Many meritorious publications are rejected as unavailable for recording through not being instrumentally adapted." In other words, it is a unique branch of work.

Commenting upon the increased importation into the United States of shellac during the past couple of years, due to the increased consumption in the talking machine trade, the promoter immediately had a scheme for cornering the market. "Why," remarked the man with gray matter to burn, "it is easy as rolling off a log. There is but one source of supply, India, and all it requires is a little nerve and some money." But being long on nerve and short on finances, the plan has never developed beyond the incipient stage.

A group were discussing the mechanical feed in connection with the last decision on the Berliner patent covering the swinging arm or free-moving stylus, and several opinions were freely expressed that such a device was of easy accomplishment; in fact, several entirely successful appliances of this kind had been seen, etc., and so forth. Then one of the listeners, who had followed the mechanical side of the trade since a boy, spoke up: "Now, gentlemen, you can say what you please about mechanical feeds to get around the Berliner patent; but it is not practical. I know a thing or two about talking machine mechanics, and for the past month myself and a skilled man have devoted our time to originating or proving if such a movement is possible, and I tell you it is not. The reproducing point will travel in the groove and is controlled and governed by it, try how you may to avoid the movement." The silence that followed this ex cathedra announcement was dense enough to cut with a knife, and the conversation drifted into other channels immediately.

According to the most celebrated medical men of Paris the tenor voice is becoming rarer and rarer, and the most eminent authorities prophesy the speedy extinction of the species, hence we note again the value of the talking machine which preserves for all time the voice of the leading tenors of our time, insuring to those who love the tenor arias a continuance of that delight which comes to those who love to hear the high C of their favorite tenor singer.

An Englishman who had been visiting the United States learned a thing or two about New York apartments before his return to "the old country." On being asked by those of a curious turn of mind how he enjoyed his visit, he said dolefully: "All but the fact, that to save me soul I could not get a decent bath! Every time I got into the tub the talking machine in the next apartment commenced to play 'God Save the King,' and, of course, you can see for yourself I had to stand all through it."

\* \* \* \*

"We have barrels of records," is the sign in the window of one of the large talking machine warerooms in this city, and as a proof, a barrel filled with records is tipped over in the window and a number of records are scattered about, as if spilled out of the barrel. Other barrels, with the heads in them, with the inscription "records" in big letters painted on the sides, act as stands to display a large line of talking machines. Horns of all sizes and descriptions are scattered around, the whole making a very novel window display, and one that attracts attention. Another sign in the window reads: "If you are athletic and break a record bring it to us and we will make an allowance for it in exchange for a new one."

The voice by the fireside—

The world's greatest living artists sing for you in your home. Any time, anywhere, Eames, with her silvery soprano, Plancon, with his splendid bass, and a score of other stars, voice the lyric beauty of Gounod's great opera, "Romeo et Juliette," and a hundred other masterpieces of music.

You listen and forget it's the Victor; it is the perfect living voice. The foremost artists of the musical world have chosen the Victor to perpetuate their voices, because it reproduces every note, every tone, body and soul. The voice of the Victor is the human voice.

Every Victor "Red Seal" record is a masterpiece of music.

Victor Talking Machine Co., Camden, N. J.

Reg. U.S. Pat. Off.

"Voice"

A million dollars could not bring all these artists together for a single performance. Yet this \$40 Victor brings them as often as you like on your own record.

The Victor is the only instrument that actually reproduces—not "imitates"—the human voice with all its original sweetness, clearness, and individual quality.

"Why, that is the singer herself!" people exclaim on hearing the Victor for the first time. "That is Eames! That is Sembrich! That is Caruso! I never heard anything like that before."

Yet this wonderful Victor—which includes the music of all other instruments and of the world's greatest voices—costs only \$100 for this most beautiful and elaborate style; and other Victors range from \$10 to \$60.

Can you afford to do without this ideal enjoyment in your home?

## TALKING MACHINE MEN OPPOSE

Certain Sections of New Copyright Bill—National Phonograph Co. Join Opposing Forces—Paul H. Cromelin Bears Brunt of Fight.

(Special to The Talking Machine World.)

Washington, D. C., Dec. 14, 1906.

The hearings before the joint patents committees of the Senate and House were resumed on the 7th inst., and the sessions were of the most interesting character from start to finish. The talking machine people had a chance to present their arguments on the 10th, the previous days being given up to the book writers and music publishers. "Mark Twain" (Samuel Clemens), the world-renowned wit and humorous writer, made a strong plea for the bill Friday, the editor of "The Century," R. V. Johnson, following with an undivided advocacy of the entire measure.

Unexpectedly Frank J. Dyer, premier counsel for the National Phonograph Co., made a strong argument against subdivision G of section 1. This is the particular division of the proposed law against which the talking machine trade are contending. Its complete text follows, the italicized words presenting the amended parts since the first introduction in June last:

"To make, sell, distribute or let for hire any device, contrivance or appliance adapted in any manner whatsoever when *used in connection with any mechanism* to reproduce to the ear or to cause the said mechanism to reproduce to the ear the sounds forming or identifying the whole or any material part of any work copyrighted after this Act shall have gone into effect, or by means of any such device, *contrivance*, appliance or *mechanism* publicly to reproduce to the ear the whole or any material part of such work."

Mr. Dyer's statement was listened to closely, from the fact that at the previous hearings Horace Pettit, counsel for the Victor Talking Machine Co., surprised the automatic instrument manufacturers by advocating the passage of the bill with reservations. Paul H. Cromelin, vice-president of the Columbia Phonograph Co., General, stood the brunt of the fight, and being a lawyer of experience his address was followed attentively. An outline of his remarks may be gleaned from his circular to the trade, printed on page 48 of this issue of The World. The music publishers and composers were represented by a strong delegation, and at times the running debate was quite acrimonious. It now looks as if a compromise bill will be accepted, in which the talking machine interests will be exempt, the same as in the British copyright bill recently enacted.

## LOOK OUT FOR STOLEN MACHINE.

Thomas Riddel, of 151 Seventh avenue, Brooklyn, advises us that one of his customers to whom he sold a Victor Second No. 3722, latest model, has had his machine stolen. If this should be offered to any member of the trade for sale or repair, it will be well to hold it and advise Mr. Riddel.

## CAN YOU DECIPHER IT?

The following telegram was recently sent by the Sampson Music Co., of Boise, Idaho, to Graves & Co., Edison's jobbers, in Portland, Ore.: "Rush; express twenty Bullfrog; waiting:

preacher rockingchair; manmooncoon; softly; Fisher's, Sailor's, Jackson's, Chip, Campmeeting, Downfarm, Chowder, Housetops, Twobullfinches, Widowsplea, Turkeystraw."

At first sight it reminds one of the work of the literary inclined gent in Ward 8, Bloomingdale, but closer inspection indicates that each word represents the first word or words of the various record titles popular in Idaho.

## TALKER COMES IN HANDY

And Takes Place of Orchestra in Emergency Case in Western City.

A prominent vaudeville act consisting of manikins performing on a miniature stage, with elaborate scenery and beautiful electric lights, owed a large portion of its success to the remarkable way with which the figures keep time with the music.

Only long training made this perfection possible, and when upon opening up for a week in a western town it was discovered that the music had been lost or mislaid, consternation reigned. The local orchestra had only one piece out of the eight or ten used in the act, and to get satisfactory results at the first trial with new music was next to impossible.

As a last resort one of the attaches thought of the talking machine. The local dealer was visited and nine out of the ten pieces of music desired were found in his stock of records, and for the tenth, which, by the way, was "In a Cosy Corner," a very similar composition, "Laces and Graces," was substituted.

A large machine was rented and placed in the first entrance of the stage, where it gave better results than were often obtained by a full orchestra. Even when a duplicate supply of orchestra music was received later in the week it was not given out, but the "talker" was retained in service.

Upon coming back to the metropolis it is said the owners of the act will look over the various makes of "talkers" offered and will select a large machine and a supply of records to carry with them on their travels, in order to insure themselves against being caught "musicless" again. In all the smaller towns where poor orchestras are the rule it is proposed to use the talking machine exclusively.

## SOME "TALKER" LITIGATIONS.

The appeal of the American Graphophone Co. against the Universal Talking Machine Co. and the American Record Co., joint defendants, on the Jones patent, for duplicating disc records, was on the calendar of the United States Circuit Court of Appeals, second circuit, for a hearing Tuesday. Judge Hazel's opinion, rendered in the lower court February 19 last, declaring that the process alleged to be infringed had been anticipated by the prior state of the art, and dismissing the bill of complaint, is under review. Decision was reserved.

The suit of the Victor Talking Machine Co., Camden, N. J., against the Leeds & Catlin Co., New York, in contempt proceedings, was up before the United States Circuit Court, New York, November 30. Decision was reserved.

## DUTY ON TALKERS INCREASED.

According to the revised Canadian tariff list the rate of duty has been increased from 25 per cent. to 30 per cent. under the general tariff and from 16 2-3 per cent. to 20 per cent. under the preferential tariff on phonographs, graphophones, gramophones and finished parts thereof, including cylinders and records therefor and mechanical piano and organ players.

## TEA TRAY CO.'S NEW CATALOGUE.

The Tea Tray Co., of Newark, N. J., call attention, in a very beautifully and originally conceived advertisement on the cover page of this issue, to their new catalogue which has just been issued. It is a most interesting publication, and

contains illustrations and descriptions of all their specialties, which are so well and favorably known the world over. There are also some other announcements from this company in this issue of The World, which will interest the trade. The Tea Tray Co. are experiencing a great demand for their goods this season, and notwithstanding their tremendous resources they have been kept on the qui vive filling orders.

## EDISON'S MANY INVENTIONS.

Thomas A. Edison is said to have more inventions than any other living man. In the patent office at Washington there is a department marked Edison where an array of over 300 patents are to be found. Those who see this exclaim; "Oh, Edison can't last much longer. He is working himself to death." And yet every year finds additions. "Mr. Edison's work as an inventor," said Mr. Dyer, who has charge of the legal department of the Edison laboratory, "as shown by the records in my office, extends over a most varied field. In addition to his better-known patents granted in connection with the development of the electric lamp, the phonograph, telegraph, telephone, ore-milling machinery and storage batteries, I find that the inventions include vote recorders, typewriters, electric pens, vocal engines, addressing machines, methods of preserving fruit, cast-iron manufacture, wire-drawing, electric locomotives, moving picture machines, the making of plate glass, compressed air apparatus, and many others. In the line of phonographs he has secured 101 patents, on storage batteries 20 patents, on electric motors 20 patents, on telegraphs 147 patents, on telephones 32 patents, on electric lights 169 patents, on dynamo 97 patents, and on ore-milling machinery 53 patents. When it is remembered that an incandescent lamp consists simply of a carbon filament in an exhausted glass globe, the ingenuity in devising 169 different patentable modifications and improvements on such devices appears really marvelous."

## BRIEFLETS.

A. P. Petit, for a long time sales manager and buyer, is no longer connected with the Douglas Phonograph Co., New York, having resigned on the 6th inst., on account of poor health. After "A. P.," as he is familiarly known, has recovered his "robust," he will be back in the business with "four feet." His brother, A. S. Petit, having finished his special services with the Leeds & Catlin Co., has resumed charge of his Baltimore store.

New year's calendars have been received from T. Edens Osborne, the prominent talking machine factor of Belfast, Ireland, and H. C. Mehden, the cash register man, of 145 Amsterdam avenue, New York. They are both handsome productions.

Devereux Elmes, for a long time in charge of the order department of the Douglas Phonograph Co., New York, an expert of acknowledged attainments, is now with the Edison Storage Battery Co., at Orange, N. J., one of the big coming propositions and the very latest organization of the world's wizard, Thomas A. Edison.

The next meeting of the Eastern Talking Machine Jobbers' Association will be held January 16, at the salesrooms of the Jacot Music Box Co., 39 Union Square, New York.

The Schmelzer-Arms Co., Kansas City, Mo., have just issued a very complete catalogue of talking machines and supplies, which is worth investigating.

## WHAT MAKES A GOOD SALESMAN?

Is the Interesting Question Discussed in the Following Little Talk, Which Talking Machine Men Should Ponder Over.

"What makes a good salesman?" was the question which a well-known ambassador for a talking machine institution was asked the other day. He replied, instantly, "What makes him? Nothing makes him, he makes himself."

"What I mean is this. The gift of selling goods as a traveler, and in building up and holding a trade, is not bestowed by the waving of a wand, or any of this fairy godmother business. It comes through natural adaptability, hard work, reliability and a right point of view."

"For a dozen years I have been able to do one thing. To feel sure that no matter what questions might be asked or investigations pursued, I was in a position to make myself good at both ends of the line—with the house that sent me out, and the one to which I sold the goods."

"In other words, I have reported each transaction just as it was. If there is anything unpleasant to explain, I would rather sit down at the time and write the house all about it than to gloss it over or evade it until I got home, and then be hauled up about it. My people learned long ago that they knew all about my deals as I went along and that there were no strings hanging out to be gathered up or afterclaps to make trouble. And so with my customers. I tell them the exact truth, and they have come to take my representations as the truth. I have lost sales by it, but have more than made them up in the long run. A young traveler can make no greater mistake than to believe that the bird in the hand is worth more than all those other ones in the bushes; the effort he may make to get that one may drive the others away forever."

"That is as to reliability. How about industry?" was asked.

"It seems almost needless to discuss that,"

was the answer. "It is an essential of our business that a man should be industrious. No man can last a year at it who is not a hard worker. The house don't send a man out to look at the scenery. His pay and hotel bills are going on all the time, and other fellows are out looking for the business he is after. The house don't expect me to spend Tuesday night in bed in a hotel at Chicago when I can make time by putting it in on a sleeper between Chicago and St. Louis. Nor am I expected to spend the evening at a theatre in Philadelphia, when I can save a half day by going to Baltimore between dinner time and bed time. Of course, if I have to remain in Philadelphia over night, my going to the theatre is all right."

"I like to see you loaf around," said the old man to me once, 'as you seem to enjoy it so. But I want you to take your fill of it when here at the store, as I don't want to feel you are doing much of it outside.'

"Yes, hard work; more hard work; and still more hard work. That is the main thing in this line."

"Is it a serious business? Say, have you noticed one thing? The newspapers and the comic papers don't have one joke on 'the drummer' where there used to be a hundred. The public conception of the salesman—and in many respects the salesman himself—has changed immeasurably in the past decade and a half. The loud-voiced, drinking, dirty-story telling, flirting and offensive drummer of popular fiction is never heard of any more. He is gone entirely; if he ever existed in as unpleasant a state as he was painted. I admit that there were some men of that sort, but they have been frozen out, or are blacking boots somewhere."

"The traveling salesman who represents a house of any standing has got to be a proper representative of that house. He must, to win the best success, be a gentleman; be clean minded, temperate, educated to a certain extent; a good talker of good sense; a man who carries an impress of honesty of mind and respectability."

## DON GILBERTO'S PUBLICITY.

The Paducah, Ky., Dealer Goes President Roosevelt One Better in Simplified Spelling.

Talk about phonetic or simplified spelling, the official list is only a poor weak imitation, as a perusal of the following advertisement will prove. Opera goers will especially appreciate certain parts of this advertisement of a Paducah, Ky., talking machine dealer which came to our notice recently:

DON GILBERTO,

THE TALKING MACHINE MAN OF PADUCAH.

As we are in the midst of hot weather and sleeping is torture at the present time, and these beautiful moon-lights we have at present. Come one come all and hear his music at 606 S. 4th Street, produced by the only talking machine, not only of U. S., but of the world. The Victor and the Zon-o-phone talking machines from \$10 to \$100 put within the reach of the poor as well as the wealthy. Remember that these machines are the

LEADING MACHINES OF THE WORLD.

Remember my records for sale are 8-in., 35 cents; 10-in., 60 cents; 12-in., \$1.00.

We have high-class operatic records from \$1.00, \$2.00, \$3.00, \$4.00, \$5.00. All the latest leading opera singers from Addalena Patti, Marcella Sasembrich, Caruso and Sourate and Gazorz and a great many other celebrated artists of this kind. I will play any piece before purchasing it, so you can see that it is perfect. We don't sell second-hand machines or records. Every machine is guaranteed and every record is perfect and new. We don't give discounts nor CUTS in PRICES. We carry a full stock of needles and we will repair your broken machines at liberal prices. We will take pleasure in explaining the mechanism of your Zon-o-phone. I have 500 new and latest music from ragtime to the most celebrated operas, and from the greatest bands, both America and Europe and Orchestra pieces. My concerts will be from 7 p. m. to 10 p. m. No piece played twice and we play from 75 to 100 pieces every night. Remember that you can buy the Victor machine, it is no trouble but a pleasure. We will take pleasure in showing you about either the Victor or Zon-o-phone machines, also care of records.

I remain your talking machine friend

DON GILBERTO,

THE TALKING MACHINE MAN of Paducah, and don't you forget it. 606 S. 4th St., Paducah, Ky.

However, with all its faults, the advertisement is more convincing than many that are more grammatical and contain perfect spelling.

## NEILSON C. DURAND CHATS

Of the Improvements in the Edison Commercial Phonograph.

(Special to The Talking Machine World.)  
World Office, 195 Wabash avenue,  
Chicago, Ill., Dec. 10, 1906.

Nelson C. Durand, manager of the Edison commercial system of the National Phonograph Co., was in Chicago last week consulting with C. L. Hibbard, who has charge of the Western office or the "business phonograph." "We are continually striving to perfect the Edison system in the minutest detail," remarked Mr. Durand, "and any possible improvement looking to the convenience of dictator or operator is carefully considered and tested." As an instance, Mr. Durand produced a new dictation blank, on which, under the reproduction of the scale, are such legends as "listen for corrections," "cancel," "rush," "additions," "telegram," "extra carbons," etc., and from which lines are to be drawn to the appropriate point on the scale.

Mr. Nelson Durand demonstrated the latest improvement to the business phonograph, which consists of a neat and attractive crane detachable and quickly adjustable on the front of the cabinet holding a long, slender horn for receiving dictation which does not necessarily have to be spoken into the horn in the old method of using the speaking tube. The horn is connected to the phonograph by a ball joint, so that by a simple turning of the horn to the ear instant repetition is secured in case the dictator has been interrupted. Furthermore, the crane holds the horn in such a manner that it may be quickly swung out of the way and the cover placed on the machine.

## IMPERIAL RECORDS FOR DECEMBER.

10-in. disc; 60 cents each

BARITONE SOLO, FRANK C. STANLEY, WITH ORG. ACCOMP.	
45336 Star of Bethlehem.....	

An enormous sale has been reported by the Hawthorne & Sheble Manufacturing Co., of Philadelphia, on their new line of artistic flower horns. In these horns they have aimed to cater to a better class of trade, believing that the public would appreciate a high-grade, handsome horn of neat and attractive design.

## C. CUSTIN'S HANDSOME TALKING MACHINE STORE IN HAVANA, CUBA.

C. Custin, Havana street, No. 94, Havana, Cuba, has long been a center for talking machines, not only in the island, but for the West Indies. His establishment is well arranged, for

he is a large handler of musical instruments, and handsomely decorated. The accompanying view is that of the talking machine department of this institution.

## HERE AND THERE IN THE TRADE.

The National Phonograph Co. say: "It is with considerable satisfaction that we say that we are in splendid shape at the factory to take care of the needs of the trade. Never in the history of the phonograph has our factory been working so smoothly as it has for months past. It is difficult ourselves to believe that the output is fully 50 per cent. more than at the same time a year ago, when our entire manufacturing and selling forces were at their wits' ends to keep the trade appeased. While we are fully sold up all the time and cannot accumulate a surplus, the orders are so promptly filled that jobbers do not need to write letters begging for goods, and a world of correspondence and unnecessary work is avoided."

Next month the first series of Zonophone grand opera records will be put out by the Universal Talking Machine Mfg. Co., either "Cavalleria Rusticana" or "Faust," complete, and will run 16 records of the first named and 26 of the latter, in 12-inch size. A special 24-page bulletin, in which the scenes from the respective operas will be illustrated in half tones, accompanied by a description, will be issued in connection with each of the series.

A new edition of the numerical catalogue of records will be issued in January by the National Phonograph Co. It will be form No. 1020 and will have the January records and all changes in both domestic and foreign lists up to January 1. In addition to this numerical catalogue the company shall issue an alphabetical catalogue of domestic records to and including January. The latter is a new catalogue with the company.

J. Williams, of the American Talking Machine Co., Brooklyn, N. Y., who has invented several sound boxes of merit, is spoken of as one of the best informed men on the history of sound reproduction. His researches run back to the ancient Egyptians and his collection of data is curious and interesting.

Fred C. MacLean, general manager of the Sterling Debenture Corporation, who are marketing the securities of the American Telephone Co., New York, returned this week from a trip of several weeks' duration in the West. Mr. MacLean is giving special attention to the commercial development of the Telephonograph, work in which he is eminently successful.

On and after the first of December the general offices of the Universal Talking Machine Manufacturing Co. were removed from 28 Warren street, New York, to their factory, Camp and

Mulberry streets, Newark, N. J. The export department, under the management of F. Long, will remain permanently in New York, and at the Warren street address until the place is leased, which may be shortly, negotiations with another talking machine concern now being under way. Manager Macnabb will be in New York, between the laboratory and the downtown place, three days a week.

Well defined reports are in circulation that the final settlement of the legal controversy between the New York Phonograph Co. and the National Phonograph Co., and other Edison interests, are on the eve of definite completion. The suit has been dragging along in the Federal and State courts for years, and recently it reached a stage where the attorneys of the complainants got scrapping among themselves. The National Co. have lately secured advantages which are said will wipe the whole thing off the map in short order.

## RECORD CABINETS IN GREAT DEMAND.

Two or three years ago the sale of record cabinets was so small that dealers and jobbers did not find it advisable to carry a stock. This was not due to a lack of demand, but principally because the cabinets on the market at that time were so cheaply made that they could not be depended on, and were not worthy of consideration as cabinets.

About a year ago the cabinet field was recognized as a large and important one, and the result is that some jobbers are now carrying a stock of from one to two carloads on hand all the time, and making a special feature of this business. The Blackman Talking Machine Co., of 97 Chambers street, New York, are doing a very large business in cabinets, and have just issued a very handsome catalogue, illustrating 23 styles of record cabinets, which they furnish in either oak or mahogany. Their advertisement in this issue emphasizes the importance that is now placed on the cabinet business, and also shows the necessity of supplying the demand thoroughly.

## THE "KNOCK-DOWN" SEARCHLIGHT HORN

Our readers cannot fail to be interested in the illustration and description of the "knock-down" horn illustrated and described in the advertisement of the Searchlight Horn Co. elsewhere in this issue. It marks another step in the progress of this institution whose wares are apparently greatly in favor, judging from the constant enlargement of their establishment in Brooklyn. The demand for the Searchlight horn this winter is exceeding all expectations, according to the members of the company.

## TRADE NOTES FROM BOSTON.

Operatic Concerts All the Rage at Steinert Hall—Decorated Windows Attract Crowds—Eastern Talking Machine Co. Are Taxed to Fill Orders—Boston Cycle & Sundry Co.'s Trade System Popular—Osgood's Success—Expansion at Columbia Co.

(Special to The Talking Machine World.)

Boston, Mass., Dec. 12, 1906.

Full operatic concerts by means of the talking machine are the hit of the town just about now. The firm of M. Steinert & Sous, Victor agents here, tried the experiment of a Victor concert of "Il Trovatore" in Steinert Hall, and had the hall packed. Since then other firms have taken the cue, and operatic concerts are to be the rage here this winter. It will make a fine advertising feature.

An enormous increase in the demand for talking machines has been noticed here since the last week in November, the approaching holidays and the suitability of these instruments for presents being the dominant factor. The demand for high-grade goods continues to increase, notwithstanding the steady inability to get a sufficient supply from the factories.

The dealers here are awakening to the fact that one way to advertise at this time of the year is to make the exterior of the store and particularly the windows as attractive as possible with wreaths of holly and evergreen, etc., and most of them are rising to the occasion with vigor and judgment.

The recently enlarged shipping facilities of the Eastern Talking Machine Co. are being taxed to their utmost because of the demand for goods for which they are headquarters. Chief among these are the Mega flower horns, the Herzog disc and cylinder record racks and the wire racks and cabinets. The recently formed department for the sale of parts, etc., is making great headway. Both the Edison and the Victor lines are being pushed with vim.

Only the fact that they haven't got room enough to do any more business prevents the Oliver Ditson talking machine department from being one of the biggest propositions in the city. Plans are under way, however, to provide additional floor space, and then there will be some humping. The Victor line is handled exclusively here, and the demand is for the higher grade of selections—grand operas going particularly well.

The fine tray system which was invented by the Boston Cycle & Supply Co. has become a big factor in the business of the dealers, great or small, and this firm is continually enlarging its facilities for the manufacture of the trays and the carrying cases for records, which it makes also. Manager Andrews is one of the greatest hustlers in the business. He is making a special effort, too, on Searchlight horns.

"The talking machine as a big business proposition" is the subject which can be dwelt upon with profundity at the store of C. E. Osgood Co. Disregarding their famous catch-line advertisement, "When in Doubt, Buy of Osgood," the members were inclined to believe at first that such a branch would not be a success, so they gave it only a limited space. Within a year it had doubled the volume of its business, the room occupied by it had been enlarged, and now the manager says, "We must have more room, for we can't handle the business in this small space." C. E. Osgood Co. are headquarters for Edison goods and also for those of the Tea Tray Co. and Hawthorne & Sheble.

The Winchell Co. have given up their wholesale business until such time as they can secure an Edison contract, then they plan to boom things. Until then they are pushing the Regina instruments of all kinds and are making a big hit with them.

At the Columbia Phonograph Co. additional salesmen have been put on, because of the increased trade, and there is a general air of prosperity. Great attention is given at this store to the window displays, the two fine windows lending themselves well to such work. It is a rare thing to go down Tremont street and not have

one's attention attracted to some unique idea in window decoration in this store. Most of the attractive ideas thus presented are due to Manager Blakeborough.

There is little doubt but that the holiday trade this year will be bigger than ever before in the history of the business. Talking machines have now come to be a necessity rather than a luxury, and the multitude of ways in which they are of service adds to the volume of trade in both machines and records.

## THE BONCI VOICE ANALYZED.

Record Manufacturers Making Overtures for the New Tenor's "Talent"—Exalted Royalty Named—Opinions of His Voice.

Competition for the control of the Bonci records is by no means tame. The representatives of the European firm controlling the record rights of Alessandro Bonci, the new tenor of the Hammerstein Grand Opera Co., New York, are evidently driving stiff bargain, comparing the recent operatic star with the emoluments enjoyed by Caruso, whose vocal outpourings are the exclusive property of the Victor Talking Machine Co., for a period of years. Naturally the impression Signor Bonci would make concerned the American record makers, and his initial appearance in "I Puritani," was regarded in the nature of a test, as the talented Italian singer has been heralded as the "man with the pipes," far and away beyond the unfortunate hero of the monkey cage episode. It is said that a royalty of \$2.50 per record has been demanded for each and every Bonci record, a price that has given pause to even the most enterprising firm of the loftiest ambition to supply the American public with the newest musical sensation. Therefore, the opinion of competent critics on the Bonci voice will be interesting, and as a contribution to the intelligence of the situation the following is quoted from the New York Tribune:

"Comparisons are unavoidable, but those who are seeking for the highest pleasures that may be found in the singing of men will probably go to hear Signor Caruso, for the sensuous charm of his voice, and Signor Bonci, for an exemplification of much finer artistic skill. In nearly all the things which enter into the art of vocalization he is incomparably finer than his rival at the Metropolitan Opera House. His tones are impeccably pure, his command of breath perfect, his enunciation unrivaled by any singer now before the local public, his phrasing also, his sense of proportion, symmetry, repose, exquisite. The voice is a pure tenor, with a tinge of that pallid quality from a love of which we have been weaned by the tenors who have won our favor since Campanini was with us, but it has a fine nobility in the highest register, and in all its phases it is as completely under his command as are the keys of the pianoforte under the diabolically ingenious fingers of Roseuthal. He achieved a triumph."

## MOON'S HOLIDAY ADVERTISING.

Charles Moon, manager of the Columbia Phonograph Co.'s store at 704 West Walnut street, Des Moines, Ia., began his holiday advertising on December 1, and the present rush of business proves the wisdom of his course. The ads. are written with special regard to the fitness of Columbia machines for Christmas presents and their general superiority as means of entertainment.

H. C. Faber, Colfax, W. Va., advertises the Victor talking machines in his locality in a very effective manner by means of cards and dodgers. His forte is quality, and he dwells upon that point in a most convincing way, emphasizing especially the work done by the great grand opera stars for the Victor. Mr. Faber handles the entire Victor line from the ten dollar machines to the Auxetophone at \$500, and also the various sizes in records.

NEWARK, N. J.

## “Well Bought is Half Sold”

That's a sound old business proverb.

Half of business shrewdness and success consists in buying goods which are already half sold because a demand for them has been created. People know about them, want them, are asking for them. That's just the case with

## Columbia Cylinder Records

They are *half sold* as soon as they are put in stock. Liberal advertising explains to the public *why* and *how* Columbia Records are *superior to all others*. It creates a demand for these superior cylinder records which no other make of record *can satisfy*. Those who have used Columbia Records won't thereafter buy an inferior kind. It's Columbia or nothing. And for the dealer who does not carry Columbia Records *it's* that dealer's loss.

COLUMBIA RECORDS CREATE A TRADE OF THEIR OWN, and they hold the trade they create.

People *will* have the *perfect vocalization* found only in Columbia Records.

They *will* have the only records free from harsh, scratchy noises—the Columbia.

They *will* have the record that gives the *best operatic* artists at *their best*, the *WIDEST VARIETY* of entertainment, vaudeville or operatic, such as is offered *only* by Columbia Records.

Columbia Disc and Cylinder Records fit all machines. You don't have to lose a customer because you haven't the right record.

The Columbia Record is always the *right record* for any make of machine.

Here's the summing up of the advantages of Columbia Record trade:

**BIGGER SALES, INCREASED TRADE, PROTECTED PROFITS.**

Columbia Disc or Cylinder Records, remember, fit all machines.

Get in touch with us through your jobber or direct.

### COLUMBIA PHONOGRAPH COMPANY, Gen'l

90-92 West Broadway, New York

GRAND PRIX, PARIS, 1900

DOUBLE GRAND PRIZE, ST. LOUIS, 1904

GRAND PRIZE, MILAN, 1906

STORES IN ALL PRINCIPAL CITIES

DEALERS EVERYWHERE

Music Master—

“When I listen to the Columbia record, I wonder why anyone should buy the other kind.”

If you are the dealer who is not supplying the demand we have created for

## Columbia Disc Records

Then just a word with you, please.

You can make *two sales* of Columbia Disc Records where you can make but one of any other kind.

**YOU** can do it because others are doing it. At the same time you are giving your customers the best records made.

The smoothest, hardest, most durable of all Disc Records are the Columbia.

They are the most perfect in tone, articulation and enunciation; absolutely free from the grinding, scratchy, wheezy sounds which are so prominent in other records.

Here's the proposition: Sell Columbia Disc and Cylinder Records and *double your business*.

As Columbia Records fit all machines, you never have to turn away a customer because you are unable to satisfy him with a record.

One sale of Columbia Records is the germ of a profitable business. You can't sell anything but Columbia Records to those who have once used them. The dealer may say “Just *one* sale lost—that's a little thing.”

It's a *big* thing. It's a *customer* lost. The germ of a big trade lost. It's like destroying the one grain of seed corn which in the ripened ear multiplies a 'hundredfold. *The customer for Columbia Records comes back again and again and brings his friends.*

You can't know *what you lose* by not carrying a stock of Columbia Records. But you can easily *put in a stock of Columbia Disc and Cylinder Records and*

**FIND OUT HOW MUCH YOU GAIN.**

Give the jobber your order *now*, or write to us direct.

## BUSINESS ON BETTER FOOTING

In All Departments of the Talking Machine Industry—General Manager Geissler's Views on the Situation.

The factories in all lines are embarrassed with orders, and every facility is being employed to satisfy the demand, if only partially. To illustrate the manufacturing situation the following official statement, issued by General Manager Geissler, of the Victor Talking Machine Co., Camden, N. J., responding to an inquiry from their advertising department, reflects the general state of affairs:

"We are overwhelmed with orders. From all corners of the earth orders are pouring in upon us in such volume that we are compelled to apportion our product very carefully, and without discrimination. We must handle the distribution of the product of our factory during this temporary machine famine in a manner to acquit ourselves with unquestionable honor in the eyes of every distributor. In presenting these conditions to our distributors and dealers, you must be careful to explain to them that these partial shipments of their orders is their salvation as well as our only solution of the situation. Ask them to put themselves in our place, and reason out how in any other way we can appease the voracious appetite they are exhibiting for Victor goods. You must explain to our friends that we are doing all that we can to relieve the situation; show them in the pages of 'The Voice of the Victor' the new factory buildings under way—tell them of the increased facilities we will have for manufacturing Victors. Present these facts to our distributors and dealers in such a manner that they will be able to appreciate the subject as fully as though they were here and saw with their own eyes what we wish to impress upon them."

## THE EDISON EXCHANGE PROPOSITION.

The statement last month to the effect that the exchange proposition had been disposed of was hardly correct. It was a fact so far as the trade shipments to us were concerned, but it was far from correct as representing the situation at Orange. The men in the specially created "Exchange Department" have had the time of their lives in trying to straighten this matter out. It would be hard to imagine a greater tangle than these shipments were in early in November.

Scores upon scores of shipments arrived with one or two cases short. Such shipments could

only be set aside till the missing cases came in, and many shipments are still waiting for the missing parts. These broken up lots not only caused trouble, but they made it impossible to send jobbers and dealers credit for their shipments. Many complaints from the trade were received, but as the delay was beyond our control we could only explain the situation and ask the complainants to wait. Those still waiting will appreciate how impossible it is to send them the credit papers until we get the complete shipments. We are doing everything in our power to dispose of the whole proposition. —Edison Phonograph Monthly.

## HOUSTON A BUSY TEXAS CENTER.

Some Large Advertising Results from Discussion Over Shipments—The Annual Fall Carnival Attracted Fifty Thousand Visitors to City—Some Handsome Decorations by the Talking Machine Dealers Much Admired.

(Special to The Talking Machine World.)

Houston, Texas, Nov. 30, 1906.

This is the storm center of Texas in talking machine activity. For the past two years the trade has done heavy advertising, and sales of machines of all makes have been enormous. Although not quite as brisk trade as heretofore, no special complaints are offered. In one day last month an Edison dealer made 103 shipments. A rival disc dealer came out and asked for proof. A wager of \$100 was made, and the following Sunday all the newspapers contained three-quarter page ads. of the 103 shipments, with fac-simile letters from each of the express and railroad companies, stating how many shipments each one had forwarded on that date, the total of which made up the 103 shipments, thus verifying the claims made by the firm in its first ad. It happened to be a corporation, and each of the officers and directors signed the ad. Eight hundred dollars was spent in broadcast advertising of this matter, and it created the biggest sensation of the year in talking machine circles of Texas.

It is estimated that 50,000 strangers attended the annual fall carnival, called the No-tsu-oh (spells Houston reversed), which was held here from 12th to 17th. A great deal of decoration was indulged in by all the talking machine dealers. In addition to page ads. in the newspapers and carnival programmes, the Texas Phonograph Co. placed on all available buildings immense signs 50 feet long, with but two words, "Edison Phonographs." Together with Taylor

Bros. they had erected and obtained a permit from the City Council to erect across Main street the most gigantic sign ever seen here. One fellow said it reminded him of 23d street and Broadway, so great was the illumination. The daily papers commented on this enterprise most favorably.

## NEW COPYRIGHT BILL.

Important Circular Sent Out by the President of the American Musical Copyright League—Some of the Reasons Why Certain Sections Are Opposed.

Paul H. Cromelin, president of the American Musical Copyright League, under date of December 1, sent out the following circular letter to the trade:

"Permit us to bring to your special attention a clause in the copyright bill now pending before the Committee on Patents, which if enacted into law will be a direct blow at the owner of every piano-playing instrument, talking machine, music box or other mechanical playing instrument in this country.

"Section 1, sub-section G, is revolutionary and in violation of the Constitution of the United States, in that it extends the protection of copyright to mechanical devices which reproduce musical and other sounds, which devices belong exclusively to the domain of the patent laws. An attempt was made to convince the committee that this clause was inserted for the benefit of musical composers, but indisputable evidence was presented to prove that it was inspired by certain manufacturing interests who, through its passage, would be enabled to control the entire mechanical musical instrument trade, enriching themselves at the expense of the public by raising prices and jeopardizing the interests of independent manufacturers who have invested millions of dollars in their enterprises.

"Section 8, sub-section B, is also particularly vicious, in that it permits foreign composers to tax the American people, extending extraordinary copyright protection which they do not have in their own country, and which is not granted in any foreign country to American composers. On the contrary, the trend of legislation is in the direction of the greatest freedom to reproduce copyrighted compositions mechanically to the ear. The new German copyright law (1901), and the new British musical copyright act (1906), declare in express terms that mechanical reproductions shall not be construed to be violations of copyright.

"Modern mechanical players are distinctly American inventions. They are doing much good in an educational way, as they afford the masses an opportunity to have in their homes music which only the wealthy classes in the great cities could heretofore enjoy. The highest courts in this country and in England have decided that mechanical reproductions to the ear do not violate the copyright. We respectfully ask you to use your influence to insure to the American people not only the rights which they now enjoy, but that you will demand for them privileges equal to those enjoyed by citizens of other countries. This can best be done by using your influence in the committee to secure not only the elimination of the offensive sections now in the bill, but also the addition of an express provision such as found in the new British copyright bill, preserving to the people their liberty to reproduce copyrighted pieces mechanically to the ear.

## A CANADIAN VISITOR.

Arthur F. Tero, the Canadian manager of the Columbia Phonograph Co., of 107 Yonge street, Toronto, was a visitor to the headquarters of that company for a few days the closing days of last month. In speaking of the outlook in Canada, he said to The World: "The prospects are very bright for all classes of talking machines, and I look forward to a good fall business. The Canadians are proverbially slow in taking up anything new, but when they once get started, they go to the limit. They have just started in buying talking machines, and they will soon have the fever."

## PRACTICAL SUGGESTIONS AND COMMENTS.

### REGARDING PATENT EXTENSION.

We are in receipt of a letter from H. J. S., Detroit, Mich., asking if it is possible to get an extension of a talking machine patent and what it is necessary to do. In reply we may say that extensions are only grantable by special act of Congress and are very rare. An invention must be extremely meritorious and the circumstances work great hardship upon the inventor before any extension is likely to be granted. An inventor is entitled to an extension only when the rewards received by him are not commensurate with the benefit conferred by his inventive act. "The value of the invention must be demonstrated either by experience or by the nature of the process or instrument, and not rest upon any conjecture or on the mere assertion of the inventor." If the failure of proper compensation has resulted from negligence on the inventor's part, no reason exists for an extension, and the application would probably be denied.

### POLISHING AN ALUMINUM HORN.

A dealer in the South writes that he has a talking machine horn made of aluminum, and wants to know how it can be polished. One of the best methods that can be adopted for this purpose is as follows: Place in a bottle equal parts by weight of olive oil and rum. Shake until emulsified. This is used like an ordinary polishing paste. Another way is to mix together emery powder and tallow until a paste of suitable consistency for use with a rag is formed. The final polish of great brilliancy is given by using rouge and turpentine on a mop. The third method is to use Vienna chalk on chamois skin and finish with the rouge.

### AN IMPROVED HORN THE LATEST.

A horn which is intended to be an improvement on the ordinary article of this kind has been invented by G. H. Young, of Glasgow, Scotland. It is his opinion that a majority of the horns now on the market are lacking in timbre and quality and emit a metallic sound, even when provided with more or less globular enlargements between the apex and the mouth. His proposition is to so shape a horn that it is provided with a space corresponding to the human palate or to the belly of the violin, by means of which the sounds produced may be properly developed and a closer reproduction of the original obtained. In carrying out the invention the horn is provided, intermediate be-

tween the apex and the mouth, and preferably on its upper side, with a chamber which approximates in width to that of the ordinary horn and rises above the normal outline of an ordinary horn. The chamber merges by returning curves into the apex of the horn at one end, and into the mouth at the other end. Between the chamber and the actual mouth of the horn is a throat of somewhat lesser area. The mouth is elliptical, the major axis of the ellipsis being horizontal. With a view to obtaining the full effect due to the shape the horn is preferably made of thin glass.

### METHOD OF PACKING DISCS.

Dealers and jobbers in talking machines have had considerable trouble from time to time in the matter of packing shipments for transmission with care, and it is interesting to note how a correspondent of our London contemporary, the Talking Machine News, treats the subject: "In the case of single-sided records put two back to back in a record envelope—Columbia envelope preferred. Take cardboard box; put twenty envelopes in the bottom of it, lace on the top of these the records in the envelope. Put two empty envelopes over these and then two more records enclosed again in envelope back to back. As many as eighteen can safely be sent in this way. No space should, of course, be left in the box, but it should be filled up with envelopes—not shavings—or paper the size of the envelopes, care being taken not to crumple in any way. Then put cardboard box into a wooden case, which should be only slightly larger, and fill up all round with shavings. In the case of double-sided records one only should be put in the envelope. On no account should pieces of paper smaller than the record be placed between the surface of the record and the envelope, as this smaller piece of paper is sure to leave an impression on the record with the result that the record will scratch horribly."

### POSITION IN MAKING RECORDS.

A subscriber of The World in Los Angeles writes: "In the course of my business here as a talking machine dealer, I have had a number of inquiries regarding how best amateurs might make their own records, and would like a little enlightenment on the following subjects: 1. In making a record, how close should one stand in singing a solo and how close for a quartette? 2. Should one use a recording horn? 3. Should

one use different recorders for single voice, quartette and banjo music? 4. At what speed should machine run in making records? 5. Do you harden the records in any way after making them? I notice that blank records are of a lighter color than molded records.

If we mistake not, this subject has been covered in part or in whole in former issues of The World, but it will bear repeating again. Our reply, courtesy Edison Phonogram, is as follows: 1. Both should stand as close to the horn as possible without causing the high notes to blast. Professionals who have been making records for years have to experiment for distances with every master record made, and you must do likewise to get the exact information. 2. Yes, to get the best results. 3. This is done in professional record making, but unless you have had considerable experience with recorders you will probably do as well with our regular recorder. 4. 160 revolutions a minute. 5. The master records are not hardened. They are used to make molds, and from these molds are manufactured the Edison gold-molded record. This is made of a harder, darker-colored composition.

### CLOGGING OF THE SAPPHIRE.

James S. Stetson complains that after running a disc record several times the sapphire becomes clogged with small pieces of hair or wool. The remedy for this is almost obvious. The disc should be kept perfectly clean. If this cannot be accomplished by means of a camel's hair brush we would advise using recordite where the records are absolutely dirty and the tracks clogged. In the past good effects were secured by means of benzoline.

### ABOUT SPEED REGULATION.

Inquiries about speed regulation seem always "live," and we have had no less than three letters on this subject from different parts of the country within the past few weeks. In a recent issue of The World a simple but effective plan of calculating speed was mentioned, namely, to let the machine run for one and one-quarter minutes with record off, and speaker arm down. If the machine has traveled two inches in that time the speed is correct, namely, 160 revolutions to the minute. This method does away with complicated fractions, and according to those who have tried it, is absolutely correct.

### EXPERIMENT IN VIBRATIONS.

Talking machine men who are interested in acoustics and in the practical side of the business generally will be interested to know that if you strike a thin wine glass while you hold it by its stem it will emit a certain note, in most cases a pretty deep note. On approaching the glass rapidly to your mouth and shouting into it the same note as loudly as possible, the vibrations of the glass being thereby extended, it will be shattered into fragments. This used to be a favorite experiment of Lablache, the famous singer, who would thus break, one after the other, as many glasses as were handed to him.

### IMPORTANCE OF CLEANING RECORDS.

"Recordite," a new product in the talking machine field, is fast proving itself indispensable to those dealers and jobbers who have tested its value in keeping the disc stock in perfect condition. It may be said that what soap is to the body "Recordite" is to the disc. One might just as soon conceive of cleansing himself and removing all dirt lodged in the minute pores of the skin by lightly dusting with a cloth, as to think that the same process would accomplish satisfactory results with a dirty disc record. It is marvelous the amount of new life Recordite adds to old records, too. There is now a large demand for Recordite, and any dealer can make a nice fat profit by handling it. The announcement of the Recordite Co. elsewhere is worth reading.

### IMPROVEMENT ON REPRODUCERS.

Curtis A. Smith, of Elgin, Ill., is working on an improvement on reproducers for talking machines of which great things are expected. Mr. Smith was recently granted a patent on a sound modifier which is very simple. The sound,

# More Sales

More sales and profitable sales are what the average business man is seeking, and it is a fact that more sales have been made by the wise men in the trade who have handled the various products of the Regina factory this year than during any previous twelve months in the history of the music trade.

There are good reasons for this.

To begin with, the Regina Family never was so attractive as at present, and never before covered so fully every possible specialty. Each Regina product fills a certain requirement in the trade, and each special creation has a definite purpose.

Space does not permit us to enumerate the many excellent selling qualities of the various Regina products, but here are some specialties which will be of peculiar interest to talking machine men and novelty merchants everywhere.

Do you know what the REGINAPHONE is?

If you have not seen it, you have missed a money-maker. It is a music box which plays the sweetest tunes, and a talking machine—combined. It is an ornament to any parlor, and has given intense delight to thousands of users all over the land. It is really an attractive feature in your warerooms, and many talking machine dealers have found it to be a big seller.

Another notable Regina product is a NEW AUTOMATIC REGINAPHONE which will play six cylinder records. This coin operating novelty has sprung into instant popularity, and it has been difficult to supply the demand for the machines as rapidly as they are desired by dealers to be placed in cafes, arcades, depots and all kinds of public resorts.

There is nothing like this on the market, and it has the charm of novelty together with the strength of the REGINA name.

The REGINA MUSIC BOXES—and the REGINA is the acknowledged queen of the music box family—have been found to be splendid sellers by those dealers who have exploited their merits properly.

There is no instrument to compare with the Regina for musical sweetness, and it is made in an almost endless variety of styles to suit every taste and every pocketbook.

If you have a REGINA alliance you can rest assured that your business will have an added selling strength by reason of the attractive specialties which we put forth.

We shall be glad to mail catalogues covering in detail information concerning all members of the REGINA family.

THE **REGINA** CO.

95 Summer St., BOSTON

Manufacturers of Regina Music Boxes, Reginaphones, Regina Chime Clocks, Reginapianos, Regina Sublima Pianos : : Also Distributors for the Victor Talking Machine Company : :

after coming from the reproducer, is sent through a tube and then into the horn. In this way the blasting and blaring which is so objectionable in many machines now is eliminated, and a soft, well rounded sound results. The shrill sound of high notes is also softened by this invention. The modifier is so constructed that by opening a valve the sound goes straight to the horn, without going through the tube. His reproducer is more complex, and, owing to the fact that patents are pending on it, Mr. Smith is keeping its construction a secret. He has a model of it completed, and in connection with his modifier it produces ideal music.

### ACOUSTICON USED IN CONGRESS.

Invention of K. N. Turner, of New York, by Which Members Will be Able to Sit in Their Offices and Hear All the Debates in the House—Herbert Parsons Its Sponsor.

(Special to The Talking Machine World.)

Washington, D. C., Dec. 8, 1906.

Representative Herbert Parsons, Chairman of the New York County Committee and the successor of B. B. Odell as the Republican boss of New York State, made a speech in the House yesterday two hours after the House had adjourned. The purpose was to test an acousticon placed on the Speaker's desk and connected by wire with the room of the Committee on Ways and Means.

The experiment was a great success, and Eliot Woods, the architect of the Capitol, will install 24 acousticon in the House and connect it with the new office building more than a block distant. By this means members will be able to sit in their offices in the new building and hear all the debates in the House.

The acousticon is the invention of K. N. Turner, of New York. It is a black disc resembling the ear piece of a telephone and about as big around as a tomato can. The instrument is much more sensitive than the telephone, and records and multiplies every sound. The sound is delivered through an ear piece something like a telephone ear piece. If wished, the acousticon will spout out the conversation through a horn in a tone clearly audible in a large room; by simply turning a switch the sound is muffled so that it can only be heard through the ear piece.

Mr. Turner is also the inventor of the dictograph, which he has installed in the office of Mr. Woods in the Capitol. This is on the same principle as the acousticon. It is connected by wires with the desks of stenographers, clerks

or secretaries in other rooms. A person talks in an ordinary tone of voice in any part of the room, and the sound is transmitted to the person for whom it is intended. A conversation can be carried on, as there is a horn attachment to the dictograph. It is similar to a telephone, except that it is not necessary to talk into a transmitter nor hold an ear piece to the head.

### A "TALKER" ENTHUSIAST

Is Napoleon Washington Williams, Who Is the Owner of 11 Machines and 4,500 Records.

Some persons might think that Napoleon Washington Williams leads a lonely existence in the big three-story brick house at the southwest corner of Greene and Apsley streets, Germantown, Pa., of which he is the sole occupant. But Mr. Williams says he never experiences a sense of solitude.

Why should he when, at a moment's notice, he can secure for his amusement the greatest singers in the world, the most famous musical organizations of the present time, the comedians and vocal entertainers of all degrees and conditions? That appears to be the philosophical view which Mr. Williams takes of his hermitage.

Mr. Williams, who is past the allotted three score and ten years, may not have the personal acquaintance of the famous opera singers, and others who help him while away the long hours of the day and night, but that he has been entertained by them, and in his own house, too, more frequently than any other individual in Philadelphia is a certainty. He enjoys their company through the medium of the phonograph.

In 1890 Mr. Williams first listened to a talking machine. He liked it and bought one. Then he bought another. As the new makes were placed on the market he added one of them to his collection, until now he is the happy possessor of eleven machines and 4,500 records.

These records include every variety of canned sound, from the minstrel monologist's humorous vociferations to the soul-inspiring compositions of the great masters. Mr. Williams possesses a breadth of appreciation seldom contained in the individual make-up. Hence his unusual assortment of talking machines and records.

Nor is he content with the amplitude of his present collection. He is constantly adding to it, and hopes to make it the greatest of its kind in the world.

Being something of an inventor, Mr. Williams

has improved on many of his talking machines. He has devised a number of sound chambers which, he says, make for purity of tone and increase the value of the machine. His inventions, however, are not for sale. He uses them principally for his own enjoyment, but many of his acquaintances who possess talking machines benefit by his ingenuity.

"No; the neighbors don't object," said Mr. Williams in answer to a query as to whether there had ever been any complaints concerning the continuous operation of the phonographs.

"Why," he continued, "I have seen as many as eighteen baby coaches in front of my house while the machines have been working, and children frequently line-up on the sidewalk to enjoy the music."

"Often, when the neighbors have company they come to me and ask me to start the phonographs going. In summer time I have had a machine at the front window, another at the back window, and a third at the side window, all going at the same time. The neighbors appear to enjoy it."

### HAYNES BUYS OUT MAGRUDER

In Richmond—Adds Zonophone Line to Stock—Delighted With Richmond—Business Outlook Good With This Progressive Dealer.

(Special to The Talking Machine World.)

Richmond, Va., Dec. 7, 1906.

C. B. Haynes has purchased the entire stock of Magruder & Co. at 729 East Main street and added it to his already complete store at 602 East Main street. This makes Mr. Haynes one of the largest exclusive talking machine dealers in the South. The Magruder Co. was formerly the Ray Co., and was for a long time managed by C. D. Warren.

It will interest the many friends of Mr. Haynes to learn that he is delighted with Richmond and considers it one of the best distributing points in this section of the country—it is the gateway to the South.

Mr. Haynes has also added to his extensive Edison line the Zon-o-Phone machines and their entire catalogue of 10-inch disc records.

Business with Mr. Haynes is simply immense, and he expects this activity to continue for some time to come.

### THOS. C. HOUGH'S NEW STORE.

(Special to The Talking Machine World.)

Minneapolis Minn., Dec. 8, 1906.

J. W. Jones, formerly manager of the talking machine department for William Donaldson & Co., has become manager of the new store just opened in the Orpheum Theater Building, 27 South Seventh street, by T. C. Hough, the oldest and best-known Edison dealer and jobber in the Twin Cities. The new store will have a complete stock of both Edison and Victor machines and records, and the best facilities for displaying and hearing the same. Mr. Hough has purchased the complete stock of William Donaldson, who has discontinued the talking machine business.

### EDISON OPENS RECORDS FOR FEBRUARY.

Supplement No. 5, of Edison grand opera records, which will be shipped in time for delivery before January 28, 1907, include the following selections:

- B. 41—"Nobil donzella." "Gil Ugonotti" (Meyerbeer)  
Sung in Italian, orch. accom. ....  
By Mario Ancona, Baritone
- B. 42—"Guardate, pazzo son." "Manon Lescaut" (Puccini)  
Sung in Italian, orch. accom. ....  
By Florencio Constantino, Tenor
- B. 43—"Gebet, "Allmächtige Jungfrau." "Tannhäuser"  
(Wagner) Sung in German, orch. accom. ....  
By Mme. Rappold, Soprano
- B. 44—"Bello siccome un angelo." "Don Pasquale"  
(Donizetti) Sung in Italian, orch. accom. ....  
By Antonio Scotti, Baritone
- B. 45—"Willst du jenes Tags." "Der Fliegende Holländer"  
(Wagner) Sung in German, orch. accom. ....  
By Alois Burgstaller, Tenor

J. Frank Stanton is the latest addition to the traveling staff of the National Phonograph Co., and will look after trade in Delaware, Maryland, West Virginia and Virginia. Mr. Stanton was formerly a dealer at Bridgeport, Conn.

## THE TALKING MACHINE IN EGYPT.

Also a Short Talk on the Attitude of the Press  
Toward the Talking Machine.

The ever-increasing popularity of the talking machine is given no better demonstration than that of its presence in the countries considered somewhat slothful by us strenuous Americans.

A friend of mine fresh from a tour of the Holy Land informs me that he was astonished at the number of talking machines he encountered while on his trip. In Cairo especially it was looked upon as a thing of wonder and enjoyment. He spoke of an Egyptian vender who went about the streets with a phonograph strapped on in front, pausing wherever he found an audience to play some selection which he thought might delight his hearers to the purchase point.

"The last I saw of him," said my friend, "he was explaining the wonders of his instrument to a demure little maid, who, leaning from a

balcony with an antiquated music box in her dainty hands, was vivaciously dickering for a trade."

I simply mention the above to show that the talking machine is gaining prestige so fast that ere long even the most skeptical will be forced to admit that it is an instrument of merit and not a toy or mere mechanical wonder.

I fail completely to understand why so many people of intelligence, and particularly the gentlemen of the press, continue in their apparent ignorance of the great improvements that have taken place in the talking machine during the past few years. In one of the leading magazines for November, 1906, there was published a lengthy article entitled, "The Phonograph," which ended as follows: "The graphophone possesses the same essential principles of the phonograph, the greatest difference being that it employs a wax-coated cylinder of pasteboard instead of one of all wax." Note the positive absurdity of this statement, and yet it was probably written conscientiously and with no intention to be inaccurate. There is nothing that is hurting the talking machine industry more at the present time than newspaper and magazine articles written by people who do not know their subject thoroughly and who consequently make gross mis-statements. And there is no excuse whatever for

this, because in the very magazine from which the above quotation regarding the graphophone and phonograph was taken, there appeared a well-written advertisement which explained in a clear and pleasing manner the up-to-date talking machine and records. However, the time is not far off when this greatest instrument of modern times will become so necessary as well as entertaining that even these gentlemen of the press will brush the cobwebs from their brains and learn with surprise that graphophone records are not pasteboard.

The whole world is recognizing the talking machine. Not only does the Egyptian vender appreciate its value and laud its name through the streets of Cairo, but even the African chieftain hears his favorite war song chanted by his warriors through the horn of the talking machine, and I am willing to wager my worldly goods that to-day he is in closer touch with the workings of both machines and records than some of our learned American journalists.

This state of affairs is sad but too true.

HOWARD TAYLOR MIDDLETON.

## OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines  
Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., Dec. 10, 1906.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

## NOVEMBER 12.

Batavia, 11 pkgs., \$786; Berlin, 233 pkgs., \$1,930; Bombay, 11 pkgs., \$313; 6 pkgs., \$124; Bradford, 77 pkgs., \$494; Buenos Ayres, 8 pkgs., \$461; Callao, 9 pkgs., \$359; Cienfuegos, 12 pkgs., \$158; Colon, 5 pkgs., \$271; Corinto, 10 pkgs., \$212; 7 pkgs., \$505; 3 pkgs., \$196; Hamburg, 1 pkg., \$100; Havana, 10 pkgs., \$202; Havre, 7 pkgs., \$302; La Guayra, 8 pkgs., \$100; Leeds, 97 pkgs., \$624; Liverpool, 4 pkgs., \$490; London, 14 pkgs., \$745; 3 pkgs., \$427; 2,256 pkgs., \$21,027; Manchester, 189 pkgs., \$1,128; Melbourne, 5 pkgs., \$203; Milan, 20 pkgs., \$1,089; Newcastle, 82 pkgs., \$544; Rio de Janeiro, 6 pkgs., \$281; Sheffield, 57 pkgs., \$362; St. Petersburg, 10 pkgs., \$346; Vienna, 10 pkgs., \$336.

## NOVEMBER 19.

## NOVEMBER 26.

Acajutla, 5 pkgs., \$131; Berlin, 235 pkgs., \$1,691; Bombay, 37 pkgs., \$608; Bradford, 23 pkgs., \$148; Bristol, 40 pkgs., \$567; 60 pkgs., \$438; Brussels, 85 pkgs., \$610; Calcutta, 11 pkgs., \$425; Cardiff, 50 pkgs., \$323; Glasgow, 81 pkgs., \$1,237; 33 pkgs., \$928; Guayaquil, 1 pkg., \$121; Havana 10 pkgs., \$423; 5 pkgs., \$123; 31 pkgs., \$433; Havre, 18 pkgs., \$835; Hong-Kong, 4 pkgs., \$160; Hamburg, 12 pkgs., \$89; La Guayra, 3 pkgs., \$117; Leeds, 95 pkgs., \$623; Lodz, 6 pkgs., \$128; Liverpool, 192 pkgs., \$1,215; London, 67 pkgs., \$5,028; 77 pkgs., \$1,782; 2,185 pkgs., \$18,500; Manchester, 157 pkgs., \$949; Milan, 5 pkgs., \$132; 12 pkgs., \$213; Newcastle, 81 pkgs., \$522; Rio de Janeiro, 6 pkgs., \$102; Santos, 9 pkgs., \$110; Shanghai, 74 pkgs., \$309; Sheffield, 55 pkgs., \$354; St. Petersburg, 47 pkgs., \$2,526; Vera Cruz, 8 pkgs., \$132; 13 pkgs., \$840; Vienna, 45 pkgs., \$2,069; Warsaw, 9 pkgs., \$304.

## DECEMBER 3.

Berlin, 270 pkgs., \$3,183; Bradford, 96 pkgs., \$592; Bremen, 2 pkgs., \$100; Brussels, 85 pkgs., \$610; Buenos Ayres, 102 pkgs., \$5,384; Campeche, 2 pkgs., \$244; Cardiff, 50 pkgs., \$312; Christiania, 5 pkgs., \$174; Cienfuegos, 23 pkgs., \$426; Colon, 2 pkgs., \$130; Corinto, 11 pkgs., \$160; Hamburg, 5 pkgs., \$220; Havana, 7 pkgs., \$224; 12 pkgs., \$334; Havre, 102 pkgs., \$638; Leeds, 30 pkgs., \$246; Limon, 7 pkgs., \$290; Liverpool, 310 pkgs., \$1,931; London, 25 pkgs., \$1,875; 2,045 pkgs., \$22,513; 5 pkgs., \$1,135; Manchester, 176 pkgs., \$1,022; Newcastle, 13 pkgs., \$112; Rio de Janeiro, 27 pkgs., \$378; St. Petersburg, 27 pkgs., \$899; Tampico, 2 pkgs., \$173; Valparaiso, 4 pkgs., \$480; Vera Cruz, 25 pkgs., \$1,036; Vienna, 28 pkgs., \$724; Warsaw, 9 pkgs., \$332.

## RECEIVER FOR ILSSEN &amp; CO.

(Special to The Talking Machine World.)

Cincinnati, O., Dec. 8, 1906.

Judge Littleford in the Common Pleas Court of Hamilton County, Ohio, on the petition of George Ilsen, has appointed Scott Bonham receiver for the business of Ilsen & Co., the well-known Edison jobbers at 2537 West Sixth street. He gave a bond for \$33,000 covering the estimated value of the assets. The business is being continued by the receiver.

The business troubles of Ilsen & Co. were brought about through some differences between George Ilsen and his brother Oscar. The former claims that the latter has not furnished sufficient capital, and moreover opinions differed as to the methods of conducting the business. While the liabilities are large, it is claimed that the assets will be ample.

Everything points to a big winter trade in "tireless musicians" ("talkers").

## Rapke Horn Crane, No. 15

**S**IMPLEST and best ever produced. Will support any horn up to and including 36 inches. Is nicked throughout, and fits into small space. Weighs only 13 1/4 lbs. Can be attached in an instant to any Phonograph without injury to cabinet.

## PECULIAR LAWS IN TEXAS.

Chicago and New York Jobbers Have Had Bad Luck Shipping Goods to Unreliable Dealers—Trade Not Quite as Good as Last Year—No Talking Machine Exhibits at the 'Recent National Fair—Appreciation of H. M. Holleman—Other News of Interest.

(Special to The Talking Machine World.)

Sau Antonio, Texas, Dec. 1, 1906.

Although the winter season has opened well, business is not near as brisk as last year this time. This is a mystery to most dealers, since it is a well-known fact that good times prevail over the entire State. It may be by reason of the fact that a large number of new dealers have opened up, thus causing additional competition and a consequent division of business generally. There are now eleven dealers in Sau Antonio, and it is reported another jobber will open here soon.

Mr. Leeds, of Leeds & Catlin Co., New York, passed through here recently en route home from a successful trip to the Pacific Coast, where he states trade is booming.

C. W. Noyes, of Chicago, representing Hawthorne & Sheble Manufacturing Co., called on the trade throughout Texas last month.

M. A. Grant has opened a talking machine store in Galveston under the name of Unique Talking Machine Co., handling the Hawthorne-Sheble line.

Chicago and New York jobbers have had bad luck shipping goods to unreliable Texas dealers, and considerable has thus been lost. Under the Texas laws merchandise cannot be attached, and when shipment is made and goods get in a dealer's store it is apparently up to him whether or not he cares to pay for them, so far as forcing settlement by law is concerned. One Texas jobber states that he has 52 bad accounts on his books for past twelve months, some of the dealers actually defying him to collect the bill. In one instance gun-play came nearly into a mix-up, but the jobber lost out, and although he has a judgment against the merchant he cannot touch any of his goods nor his \$10,000 residence, Texas homestead law making it exempt.

At the recent International Fair held here none of the dealers made a talking machine display. Last year five dealers exhibited. Thousands of country people came into the city, and it would seem as if there were plenty of opportunities to sell talking machines.

When talking machine men like H. M. Holleman, president of Texas Phonograph Co., get to making speeches the papers marvel. Here's what the Houston Daily Post of recent date says:

"A speech by H. M. Holleman upon the subject of 'Publicity,' delivered recently at a meeting of the South and Southwest Texas Industrial Development Association, held in Yoakum, attracted considerable attention, inasmuch as it embraced some pointed ideas, and new methods of publicity. He advocated various kinds of publicity in special cases, but stated that for steady results, general publicity and actual solid returns nothing compared with the daily paper and nothing ever would. He stated that the person who did not get results from advertising in the daily papers did not rightly utilize the space he purchased. The right kind of copy will, in every instance, bring the results. The advertiser might as well learn that indiscriminate advertising is like indiscriminate purchasing, generally useless.

"Mr. Holleman is not a theorist, but a practical advertiser. Three years ago when he came to Texas and advertised Sylvan Beach extensively its patronage increased marvelously. He then began a systematic and extensive campaign of publicity for the Texas Phonograph Co., of Houston, exploiting the Edison phonograph. Two years ago there were only a few of this type of machines in Texas. To-day there are thousands as a result of the advertising they did. Many a Texas merchant can learn a great deal by investigating the success of these peo-

ple. The company has paid 3 per cent. quarterly dividends regularly and last year passed over to the surplus account several thousand dollars. They are shipping hundreds of machines every month. On one day last month their shipments ran up to 103. Mr. Holleman saw the force of such an argument, immediately engaged nearly a page of space in this paper and let the world know about it. In order that no one could doubt the accuracy of the claims, he secured receipts from the express companies, had facsimile etchings made thereof and included these in the ad., giving additional strength.

"With the bountiful crops just harvested in Texas advertisers can certainly get results now and no mistake will be made in using large space, is the opinion of Mr. Holleman."

## THE PETMECKY MULTI-TONE NEEDLE.

Arrangement Made to Expand the Business Materially—Headquarters Now Located at New York Life Building, Kansas City.

(Special to The Talking Machine World.)

Austin, Tex., Dec. 9, 1906.

The great demand for the Petmecky Multi-Tone Self Sharpening Talking Machine Needle (upon which United States patent has been allowed and foreign patents are pending), has made it necessary to increase the facilities for its manufacture and distribution, and to that end the Petmecky Multi-Tone Self Sharpening Needle business, and the patent on the needle for the United States and all foreign countries have been sold by Mr. Petmecky to strong Kansas City, Mo., interests, and hereafter the sale and distribution of the needle will be from the general offices of the Petmecky Co., Suite No. 505-506-507, New York Life Building, Kansas City, Mo., to which address all orders and communications from now on should be sent.

As the factory output of these needles will forthwith be materially increased, all orders for needles hereafter will be completely and promptly filled, thereby relieving the dealer from the delays which have so often occurred in the past. The standard quality which has always been one of the strong points of the Petmecky Multi-Tone Needle since its introduction will be maintained.

At the fair recently held in San Antonio, Tex., there was exhibited the Dubinski automatic phonograph, a talking machine contrivance for use in public places. These phonographs are made in San Antonio.

## McGREAL BROS.' GREAT BUSINESS.

Selling from Forty to Seventy-Five Machines a Day—Higher Priced Instruments in Demand—Senator Spooner's Purchase.

(Special to The Talking Machine World.)

Milwaukee, Wis., Dec. 7, 1906.

L. E. McGreal, of McGreal Bros., in talking about trade conditions to-day, said: "Our business is very good indeed, both wholesale and retail; in fact, our wholesale business is much stronger at this time than we expected it would be, as we were not looking for any especial rush until about the 10th or 15th. Since the first of the month, however, orders have been piling up on us at the rate of 40 to 75 machines a day, and large quantities of records. Our trade seems to be running altogether to the higher priced instruments, both Edison and Victor, and we can notice that the more wealthy class of people are beginning to realize the advantage of talking machines for home entertainment."

McGreal Bros. had the good fortune to sell Senator John C. Spooner a \$100 outfit a day or two before he left for Washington.

Will Hope, representing the National Phonograph Co., was in Milwaukee this week. He reported business as excellent all through Wisconsin and the Northwest.

## SELLING MACHINES IN SMALL TOWNS.

Several of the large talking machine dealers have taken up the question of the wisdom of selling machines and records in districts in which there is no dealer through the medium of local agents on a commission basis. Under existing contracts with some of the companies this method of doing business is practically prohibited, as they are not allowed to make any rebates. But they believe that if they could follow out their business on this line they could greatly increase their sales. A New Jersey dealer has been making a bid for business by giving concerts at the various homes in his locality, and says that when he has once got a family thoroughly interested in a talking machine as an entertainer the rest comes so easy that it seems a shame to take their money.

The board of governors of the Vienna Conservatory have arranged for a library of talking machine records made by the pupils of each graduating class who have won prizes for the work in the conservatory. Voices of many ex-students who have become prominent will also be placed in the collection.

## THE OLD AND THE NEW METHOD

Of Carrying a Record Stock Discussed by J. Newcomb Blackman Who Speaks Further of the Necessity of Up-to-Date Equipment.

In a recent interview with J. Newcomb Blackman, proprietor of the Blackman Talking Machine Co., the subject of the necessity of a proper system for carrying records was discussed, and Mr. Blackman gave his experience as follows:

"When I first started in the talking machine business in 1897 a record catalogue was issued, but to find a dealer who carried a complete catalogue stock was like looking for a four-leaf clover. We used to carry our records in peg boxes, offering a selection of bands, orchestras, vocal solos, etc., and a customer did not consult a catalogue as a rule. It was a case of looking over the dealer's assortment and making a choice accordingly. This plan continued very largely until the introduction of the dealer's contracts, which made it impossible to offer any price inducements, either by a cut in price or otherwise, and by the time the moulded record was placed on the market, the public expected and were satisfied to pay the restricted price. They were satisfied not only because they knew they were buying at rock bottom prices, but the quality of the goods proved that they were getting full value.

"It was realized by the dealer as well as the public that competition must exist, however, even in the face of restricted prices, and enterprising dealers, therefore, knew the advantage a dealer, who carried a complete stock, would have over a competitor who had only a small part of the catalogue. It was natural for the record buyer to give his patronage to the dealer who offered him a complete catalogue stock to select from. The service cost no more, and the record was purchased for the same price. The increased demand, together with the larger stocks necessary, soon gave the successful dealer confidence, and the old plan of stocking records is now as much a back number as one of the records of that time would be if offered for sale at the price of a moulded record. A customer now buys his records very much as he asks for a railroad ticket. He does not expect any special price, but he does insist on your having what he calls for and without delay.

"I have carefully watched the success of our dealers in the last two years, and almost, without exception, found that a dealer, carrying a complete stock and using a system, whereby all records are in numerical order, so that any number can be found immediately, or the customer informed that it is not in stock, he has made steady progress, and usually at the expense of other dealers in his locality who did not adopt up-to-date methods. It has also been proven that the use of record labels, containing the number and name of the record selection on the front of wire racks, or record trays, not only removes the desire to put off ordering records, but really makes it a pleasure, for every vacant space, together with the label, tells the complete story. It also provides a wall catalogue and encourages the customer to purchase records, which his eye might not locate in the catalogue. A system of carrying records, together with the attractive appearance of a store always wins with the customer, and the dealer who uses every spare moment in learning every point regarding machines and records he sells, enjoys the confidence of the prospective customer.

"In most cases where dealers accuse their competitors of using unfair methods and cutting prices, their principal argument has been the loss of a certain sale that they think they should have made. They do not seem to realize that the impression that they make on the prospective buyer not only by their remarks, but by the appearance of their store and their methods, either encourages or discourages a purchase. The sooner the dealer realizes that, to get the full benefit of his profit which the price restriction is intended to give him, he must give his customer

a full measure of service, his sales will increase and his complaints will be less. My policy as a jobber is not to simply sell a dealer as much as possible, but help him in turn to get his profit, for it is the continued patronage that insures success.

"Dealers and jobbers are selling restricted goods, and the service is what counts. The jobbers that are giving the best service are reaping the benefit, and in a town where there are several dealers, the up-to-date ones, who are always awake to use a method that insures the best service, are making fast inroads on the business of their competitors. The talking machine business is a paying one, but a dealer who expects to make a big success must not overlook any small details that will cause his customer to go elsewhere."

## TWENTY-TWO STORES IN TOLEDO.

A City Well Provided With Talking Machine Establishments—Berdue's Clever Window Display—Concerts Much in Vogue.

(Special to The Talking Machine World.)

Toledo, O., Dec. 8, 1906.

Complaints are being heard among talking machine dealers here regarding the overcrowded condition of that field. Despite the fact that there are already twenty-two stores in the city, more than in any city of much greater population, there are rumors that a new store is about to be opened. At present, however, despite the number of dealers in the field, business is reported as being very good.

C. E. Berdue, who has a store on Cherry street, has attracted considerable attention recently through the handsome window displays he arranges. He changes them frequently, and keeps the public wondering what next.

The J. L. Flanery Piano Co. have built up a great business, aided largely by their plan of giving talking machine concerts in their hall, which are always well attended.

The Whitney & Currier Co. are also giving a series of "talker" concerts on the fourth floor of their building, where a hall has been arranged, and called the Victor Concert Hall. The concerts will be held every afternoon.

## NEW USE FOR TALKING MACHINE.

That the talking machine may be used as a means of livelihood very satisfactorily, even without the elaborately decorated environment of an arcade, is proven by a negro couple who may be seen on the central west side almost any evening. The man, who is blind, carries the large machine and horn, together with a number of records. When a suitable corner is reached his wife places the machine on the pavement, adjusts the horn, and puts on a record, which, by the way, represents the latest and best selections, and a large crowd is immediately attracted by the music. The man extends his hat for contributions, which are generally quite liberal. When the prospect of more money ceases to be evident the woman packs up the apparatus and her husband carries it to a fresh locality. The couple say they make an excellent living out of it, and incidentally raise themselves above the rank of ordinary mendicants.

Grand opera artists visiting New York these days are enthusiastic over the talking machine.

The Theo. F. Bentel Co., of Pittsburg, Pa., who have been prominent in the talking machine business for the past ten years, state that they were the first to receive and show samples of both the Victor Auxetophone and the Victor Victrola in that city.

We are advised by the Gramophone & Type-writer, Ltd., London, that a statement made in The World to the effect that they had taken the agency for the Searchlight horn for Europe is incorrect.

## THE NATIONAL PHONOGRAPH CO.'S RECORDING DEPARTMENT

Said to Be One of the Best Equipped Departments of Its Kind in the World—A Description That Will Doubtless Interest Lovers of Talking Machines.

One of the most interesting parts of a talking machine factory is the recording department, and that of the National Phonograph Co., specially equipped with the latest appliances in the Knickerbocker Building, Fifth avenue and 16th

street, New York, is spoken of as a model. From The Edison Phonograph Monthly's description of the plant the subjoined facts are gleaned: "We believe that it is beyond a doubt the finest and most completely equipped recording plant in the

world. It was built especially for the uses of our department. It comprises a suite of ten rooms, each arranged for some special feature of the department's work. A handsomely furnished reception room is finished in hardwoods. Expensive rugs cover the floor and interesting pictures hang on the walls. One of the latter is a mammoth frame containing the photographs of all the Edison talent.

"The first door on the left opens into the private office of Walter H. Miller, manager of the department. Mr. Miller entered the employ of Mr. Edison when the latter built his laboratory at Orange, N. J., nearly twenty years ago. He has since been continuously in the service. He has taken part in all of the important experimental work in record making at the Edison laboratory. Few men in the harness to-day have had as many years' experience in record making as he, and none in the entire world are better informed on the subject. Rugs, mission furniture, a handsome desk and more pictures of special interest comprise the room's fittings. Passing along the corridor the next door on the left opens into the rehearsal room. Here the regular Edison artists 'run over' their music with a pianist if they feel uncertain about being prepared for their work with the orchestra accompaniment. Here, too, the new vocalists get their first 'try-out.'

"Beyond the rehearsal room is one of the test rooms. This in turn adjoins the largest of the two recording rooms. It is the recording room used for band, orchestra and other instrumental work. This recording room is equipped with devices, hangings, etc., that remind one of the rear of a theater stage. The Edison military band is making a record. The day is warm and the work is arduous and unromantic. Sans coats and vests the men are quite prosaic in appearance. But how they can play!

"When the recorder reaches the end of the record the band stops. The record is removed and carried by an assistant back to the test room. A Triumph phonograph stands on a table at one end of the room. The horn faces several men sitting on the opposite side. These are W. H. A. Cronkhite and his assistants. Their function is to pass judgment upon the work of all Edison artists. Mr. Cronkhite is the official critic of the department. Since he entered the employ of the company nearly five years ago no master record has been turned over to the manufacturing department that has not first had his seal of approval. Mr. Cronkhite is a trained musician, a cornet player of no mean ability, and he possesses a well rounded, varied musical knowledge that makes him invaluable in his position.

"As the wax master record is played over all present listen intently and critically. Defects are pointed out and suggestions made. It may be too loud or too weak as a whole. One instrument may be too strong or the balance may be off. Or it may have any one of a dozen other defects. Back to the recording room go the men. The errors are explained to the band, individually or as a whole, and another record is made. Another test, and more criticisms and

suggestions. Back and forth go the wax masters until the right results are secured. Then the required number of masters are made for the factory. It's no easy task to make master records up to the Edison standard—records that must later be played at the Edison laboratory before a committee of twenty men, most of whom have devoted years to the mastery of record making problems of all kinds.

"Diagonally across the hall is another and somewhat smaller recording room. This is used for vocal work. It also has its own peculiar equipment of traps and things that look odd to the uninitiated. A partition runs across one corner. A recording horn projects through a curtained opening in this partition. The artists see only this horn into which they sing. The phonograph attached to the horn stands back of the partition. How it is equipped and how it does its work are department secrets that even the artists are not permitted to know. Adjoining this recording room as we work back toward the entrance is the receiving and shipping room. Its name tells its function. Then another testing room. Circumstances occasionally make it necessary to have two 'dates' at the same time. Therefore the reason for two recording rooms and two test rooms. When two 'dates' are on at the same time Mr. Cronkhite and his people have a strenuous day.

"The next room toward the entrance is Mr. Cronkhite's private office, quietly but handsomely furnished. A feature of this room is a cabinet containing the music of nearly every record in the Edison catalogue. The remaining room of the suite is the experimental machine shop, with lathes and other machinery, microscopes and a lot of other paraphernalia, only to be found in a department of this peculiar character. Their recording department came into an official existence shortly after the incorporation of the National Phonograph Co. For several years its work was conducted at the Edison factories in Orange. This was eventually found inconvenient for the 'talent,' and three years ago the top floor of 65-69 Fourth avenue was leased and fitted up for the work of the department. These quarters proved inadequate to meet the demands of our rapidly growing business, and some months ago the department moved to its present location."

The Southern California Music Co., with headquarters in Los Angeles, Cal., who do a very large talking machine business, report prospects for the holiday trade to be the best ever in that line, and they expect to surpass all records for the season.

## WESTERN JOBBERS' ASSOCIATION.

**Hold Quarterly Meeting in Indianapolis—Large Attendance and Much Business of Importance Transacted—The Next Meeting to be Held on Feb. 12 in Chicago—Jobbers Enthusiastic Over Future.**

(Special to The Talking Machine World.)  
Indianapolis, Ind., Dec. 6, 1906.

The quarterly meeting of the United States Talking Machine Jobbers' Association was called to order at the Hotel Dennison, Indianapolis, November 12, at 10 p. m., and every jobber in the Central West, which comprised western Pennsylvania, Ohio, Indiana and Michigan, was present, either in person or by proxy. The session was continued the following day. It was not only a well attended but a very enthusiastic meeting in every respect, and the business transacted was of the most vital importance to the talking machine business in general, and especially to the members of the association. The meeting was harmonious in every respect. By an exchange of credits bad debts were kept down to a minimum. The Hawthorne & Sheble Manufacturing Co.'s price scale was adopted. Chicago, Ill., and February 12 were the place and time set for the next meeting.

Speaking of the meeting and the aims of the association, a prominent member said: "We are going to Chicago with a solid and united front, at which time we hope to be able to show the jobbers of that city the importance of becoming members. Should we succeed in this, as we have in everything else so far undertaken, we feel that the Central States Association has then accomplished more within the period of one year than has ever been achieved by any similar body. Furthermore, we feel that we have finished the hub from which possibly the future will show the wisdom of forming a national association with the Central States as the balancing wheel.

"It is, indeed, gratifying to note how earnest and enthusiastically every member of this association throws his whole force, both personal and financial, in the interest of this association. While at first the tendency was to hold over to see what few of the leaders were going to do, since then this feeling has all been dispelled, and the desire of each man is to put his shoulder to the wheel, as the action of the association in its every move has been guided by good common sense and judgment, and every member is now a leader to further cement the relationship.

"I had the pleasure of hearing a number of jobbers say that the association has made more for them in dollars and cents than the expense

and time devoted to the meetings would amount to in years. One of the most important questions taken up at the meeting was that of a strict maintenance of prices on supplies, or, as one jobber put it, 'Why not make money on supplies as well as on machines and records?' and the unanimous reply was, 'Why not?' We, therefore, decided to stand unitedly on the maintenance of this policy."

About twenty-two members were in attendance. P. E. Ashton, Detroit, Mich., the president, occupied the chair, and Perry B. Whitsit, of Perry B. Whitsit Co., Columbus, O., the secretary, looked after the official recording of the proceedings in his customary thorough manner. The usual dinner or banquet was served at the hotel.

## RAY CO. SUE FOR \$10,000.

**Claim Their Business Has Suffered That Amount Owing to the Negligence of City Officials in Not Looking After Streets.**

(Special to The Talking Machine World.)  
Louisville, Ky., Dec. 3, 1906.

C. A. Ray & Co., operators of a phonograph establishment at 650 Fourth avenue, set up a claim for \$10,000 damages against the city in the form of a suit in which they allege that their business has suffered to that extent during the past year on account of the blocked condition of the avenue. They charge that the city's charter imposes upon it the duty of keeping the streets open for free and uninterrupted use of vehicles and pedestrians. On account of the large amount of construction of new buildings which has been going on along the street the plaintiffs allege that the movement of people has been greatly interfered with, and that for this reason their business has been damaged in the amount sought.

## HIS REALISM CAUSED TROUBLE.

Two young men of Brooklyn, N. Y., Joseph Dandred and Frank Gomes, met in Gomes' room recently to listen to the music of a talking machine. Among the records tried was one containing a robber's song, which was punctuated by a pistol shot. To make it more realistic Gomes produced a revolver and announced that he intended to fire it at the proper moment. Dandred protested.

"There is nothing to be afraid of," said Gomes, pointing the revolver at his friend's stomach, "I will just do this," and he pulled the trigger. The bullet struck and severely injured Dandred, who was taken to the Brooklyn Hospital and Gomes was arrested.

The incident should be a warning to all talking machine enthusiasts to be satisfied with the effects contained in the records, which are produced by experts and are not dangerous, except occasionally, when the neighbors get excited.

## SUCCESSFUL WOMAN CANVASSERS.

Jewish women canvassers, says Musical Opinion of London, are said to be among the most successful sellers of talking machines in Italian industrial centers. The machines are generally disposed of on the weekly payment system, and many are sold at twopence halfpenny per week. One of the reasons of the Jewish women's success is that they never ask for references or make any inquiries concerning the honesty or otherwise of their customers. Inquiry offends the excitable Italian workman or woman. A smart Jewess not long since confessed that it was better to lose ten machines in every hundred than not to sell any at all.

In a recent interview with Mr. Kraus, of the Ideal Fastener Co., he remarked that they have found it necessary to considerably increase their facilities for the manufacture of the O. K. horn cranes. This crane has met with such favor in the trade that the firm have been practically swamped with orders, but with their increased plant they are now in a position to fill all demands promptly.

## Holiday Anticipation

We are all primed for the rush of holiday trade. We have endeavored to anticipate every possible emergency and are prepared to take care of eleventh-hour orders. Our record bins are filled to their utmost capacity, and our stock of machines, horns, cabinets and other supplies so complete that we have no fear that our customers will suffer for lack of goods in this busiest month of the year, as far as we are concerned.

WE HAVE MADE MANY CUSTOMERS ON PROMPT  
SHIPMENTS AND EFFICIENT SERVICE. TRY US

THE PARDEE-ELLENBERGER COMPANY

96 to 104 State Street, NEW HAVEN, CONN.

## CLEVELAND TRADE IS VERY SATISFACTORY.

Sales of the Expensive Outfits the Order of the Day—The Talking Machine a Big Holiday Seller—Moving Picture Business Thriving—Municipal Authorities Cause Trouble for Proprietors of Arcades—Big Call for Twentieth Century Graphophones—Talking Machine for Demonstration Room of Buckeye Stereopticon Co.—Other Items of General Interest.

(Special to The Talking Machine World.)

Cleveland, O., Dec. 6, 1906.

Talking machine trade conditions in this city are good, and satisfactory with the single exception of the dealers' inability to procure promptness in the execution of orders, especially for the machines of latest production, the manufacturers being unable to meet the large and growing demand. The volume of sales is large and growing, and the business is of the most gratifying quality. Larger sales of the more expensive outfits are being made by customers who fix the limit of their outlay by their desire for the best, and with the large sales of cheaper grades the season's business is proving a winner.

The dealers generally of this city aim to carry a complete line of machines and records, and there is rarely a complaint from a customer of his inability to procure the record desired.

A number of practically minded citizens are purchasing machines for holiday gifts, which will prove not only acceptable to the recipient but a lasting source of pleasure. In several instances dealers have made sales of Victrolas, and not having them in stock have issued Christmas certificates of purchase, to be presented by the donor, for delivery as soon as they can be procured from the manufacturers. In this way, possibly as many will be disposed of as though they were in stock.

W. J. Roberts, Jr., corner of Erie and Huron streets, is a very busy man these days. He is compelled to keep open late at night to accommodate customers who are unable to leave their business during the day. He stated business was fine. He has sold a number of Victor Victrolas, and is having a fine trade all along the

line, their demand for records being unusually large.

The moving picture show business is thriving wonderfully, but the penny slot machines are not doing so well. Operation of moving picture machines on Sundays is a problem that may stir up considerable excitement in law observation circles in the near future. It is about a year since the establishment of these machines in store rooms fitted up somewhat on theatre plans became prominent in the city.

In the first instance business was devoted to the more congested downtown sections, and little or no objection to the operation of these places on Sunday was heard. Gradually, however, the business has grown until it has spread all over Cleveland, and the recent opening of a resort on Wade Park avenue near 89th street has focused the agitation on this subject. There had been little objection until these show people gave a Sunday exhibition. People living near by complained to their councilman, who is now investigating the matter. Since then other councilmen have been approached by their constituents on the same subject, and the churches have taken the matter up. It is quite probable official action in favor of or against the places will soon be demanded. These moving picture show places are now familiar sights in all districts, and it is claimed by the Sunday observance people that the gradual foothold Sunday performances in them are gaining will soon grow so strong that after a while it will be impossible to dislodge them without bitter fights. The question is one fraught with considerable interest.

Flesheim & Smith, 161-163 Ontario street, are selling a large number of Zonophones and Edi-

son machines and state business is good and improving as the holidays approach. They say there is a fine demand for records all the time.

They are having a rush of trade at the Columbia Phonograph Co.'s, covering the entire line of machines, while the call for records is unparalleled. Mr. Probeck, manager, said: "The Twentieth Century Graphophones are at a premium, and all the better grades of machines are selling best. We are just getting in an entire supply of all the new disc records. The December list is very fine and taking exceptionally well."

Mr. Probeck has constructed two booths in the center of the store, so built as to leave a passageway entirely around them. They are practically soundproof, and not only attractive but a pleasure as well to customers as the company, furnishing ample space and comfort for demonstrating purposes.

T. H. Towell, manager of the Eclipse Musical Co., stated that business had opened up very fine indeed, and that trade was good. Aside from the very satisfactory conditions he said there was nothing specially new to report. With their new demonstrating booths and enlarged record racks they are in the finest kind of position to handle the trade. In their wholesale department they are kept busy with an increasing patronage which is constantly extending.

"Business is extremely good and improving day by day," said W. H. Buescher, of Buescher & Son, 242 Erie street. "We are selling a good many machines, and the call for records is unusually large for both Victor and Edison. We are well pleased with the way trade is coming in, and the holiday trade will be unusually large. Victrolas are in great demand—we are making sales from the catalogues for future delivery. We are overcrowded in handling records."

The Buckeye Stereopticon Co., who do an extensive business in their line, contemplate using a talking machine in their demonstration rooms, 1314-1318 Schofield building. It will lend additional attractiveness and aid in their sales.

The Automatic Stamping Machine Co., of this city, slot machine manufacturers, have brought

## GROWING POPULARITY of HEBREW RECORDS

Since the last issue of this publication, much progress has been made in the quality of our Hebrew records and the latest numbers are destined to prove most popular. Dealers and particular purchasers who have examined them are more than pleased with the results.

**They are the clearest records made and delight people wherever they are sold.**

We now have out twenty new numbers which will be fully as popular as those which we have previously issued, and dealers who have a demand for this kind of records should lose no opportunity in placing their orders

at once. We are prepared to take care of our trade demands properly, and everyone doing business with this concern may be assured of the most liberal and satisfactory treatment in every way.

**DEALERS CAN MATERIALLY INCREASE THEIR RECORD TRADE IF THEY HANDLE THE HEBREW RECORDS WHICH WE OFFER FOR SALE**

If you will send for a sample order of our records you will be amazed to find how quickly they will sell. You can handle them to advantage and no stock of records is complete to-day unless it contains a fair amount of Hebrew records.

# THE UNITED HEBREW RECORD CO.

LOUIS ROSANSKY, Prop.

251-257 Grand Street

NEW YORK, N. Y.

an action in Common Pleas Court against John N. Chandler for \$2,861.13, alleging that he failed to carry out a contract to operate the company's machines at the St. Louis Fair.

W. J. Roberts, Jr., has made arrangements to do a jobbing business in the Tea Tray Co.'s products. He is also handling the Hawthorne & Sheble Mfg. Co.'s horns, which are meeting with a ready sale, especially the higher priced ones.

The Smith & Nixon Piano Co. report Christmas business starting in fine shape, and that all indications point to a big holiday trade.

H. E. Jones, manager of the commercial graphophone department of the Columbia Phonograph Co., reports that business along the particular lines of this department continues to be very active. With the arrival of the new type commercial graphophone, which is of peculiarly powerful and sensitive recording quality, he states a material increase in the already active business is to be looked for. He also notes a considerable amount of interest being taken in this graphophone by firms in outlying towns in the vicinity of Cleveland, and altogether it would seem as though the approaching year should mark the most prosperous era that the commercial machines have ever known.

Collister & Sale report business very good and daily improving. They stated there was a big demand for Victrolas and Victor Second machines, and that they found it impossible to secure a sufficient supply from the manufacturers. They are doing a fine record business, and said the December list was an exceptionally good one. Flower horns they reported taking well.

The undiscovered uses to which the talking machine will ultimately be utilized are undoubtedly many. With the certainty of death in the near future, Mrs. Edward J. Munyen, wife of a wealthy oil speculator of Fostoria, O., is daily registering her thoughts on records, so that when she has passed away, her voice from the phonograph may cheer her sorrowing husband. Together Mr. Munyen and his wife have made a tour of the world, and in each place of interest they visited, Mrs. Munyen has recorded upon the cylinder her impressions, besides much of the conversation between herself and husband.

When, some time ago, physicians pronounced her health beyond their power of relief they said her life would probably be lengthened if taken to other climates. Thereupon, though Mrs. Munyen is seventy-one years of age, she and her husband set out on the globe encircling tour. A few days ago they arrived home, and Mrs. Munyen's first act was to repeat into the phonograph her impressions of the sights between here and the Pacific coast. She has a little chest in which she keeps records, which contain comments neither her husband nor any one else have ever heard.

These will be repeated to him by the machine after Mrs. Munyen's death. "It will be like making another tour of the world with my wife," he said. He is about the same age as his wife, but is possessed of a rugged constitution and in good health.

C. H. Wilson, representative of the National Phonograph Co., stopped off in this city on his way to Cincinnati November 23.

Clement Bucroft, of the Tea Tray Co., of Newark, N. J., was visiting the talking machine dealers November 24.

### TALKER FOR SURGERY WARD.

An Innovation in the City Hospital Which Has Proven Most Popular With Patients.

(Special to The Talking Machine World.)

St. Louis, Mo., Dec. 10, 1906.

A phonograph purchased some time ago by Miss E. L. Warr, head nurse of the ward at the city hospital devoted to chronic surgery cases, has proven popular with restless patients. Two or three afternoons a week "phonograph matinees" are given. Patients in other wards are now clamoring for like entertainments. Among the patients in the ward presided over by Miss Warr is Johnny Cottle, aged 8 years, whose recovery from burns received on August 18 last is largely attributed to the introduction of these entertainments. Prior to the innovation he had full sway in the ward, and was pretty much of a pet. The result was that he was continually getting hurt. He sits by the hour now listening to popular melodies, and there is hardly one that he has not memorized.

Simply another instance where the talking machine has proven a boon to humanity, and such cases are becoming very frequent.

One doctor expressed the opinion that certain music should be applied for certain ills, as, for instance, "Bill Simmons" for St. Vitus' dance. For pericarditis, "I'm Wearing My Heart Away for You" or "Way Down in My Heart I've Got a Feeling for You"; for melancholy, "Wait 'Till the Sun Shines, Nellie"; alcoholism, "Coming Through the Rye"; mumps, "Swell Time at Coney"; chicken-pox, "C-h-i-c-k-e-n; That's the Way to Spell Chicken"; heartburn, anything sentimental—either that or a dyspepsia tablet. Cold feet—no cure.

### NEW STORE IN BOSTON.

The Tosi Music Co. is a recent acquisition to the talking machine stores in Boston, having opened handsomely equipped quarters at 279 Hanover street, corner Richmond, where they have a number of special rooms for trying the

various records as well as small parlors for ladies' use especially. They are carrying a full line of Edison, Victor, Columbia and Zonophone machines and records. Humbert F. Tosi, manager of the concern, is a wide-awake, progressive gentleman, who is destined to be heard from.

### B. G. ROYAL NOW PRESIDENT

Of the Universal Talking Machine Mfg. Co., of New York Succeeding H. B. Babson.

B. G. Royal, for a number of years connected with the Gramophone and Typewriters', Ltd., London, Eng., is now president of the Universal Talking Machine Mfg. Co., vice H. B. Babson resigned. Mr. Royal, though an American, has resided abroad for a long time, and is regarded as one of the best-posted men in the mechanics of the talking machine business, having introduced a number of valuable improvements, and for a while was closely associated with President Johnson, of the Victor Co. He will not remove his family to New York until the first of the year.

C. B. Haynes, of Richmond, Va., and Ray Co., Louisville, Ky., are new Zonophone jobbers created by H. N. Macminimen. H. R. Bruder, formerly with Henry Horton, of New Haven, Conn., is on the road for the Universal Co., and will travel Pennsylvania and New York State.

### SHELLAC FOR TALKING MACHINE.

(Special to The Talking Machine World.)

Washington, D. C., Dec. 7, 1906.

Out of 13,000 tons of shellac exported from India, during the fiscal year, over 6,000 tons came to the United States, a great increase over previous records. According to Consul-General Michael at Calcutta, who made the report, the increase of shellac for the United States is due directly to its increased use in talking machine records.

Mr. Michael says further that there is a great field for the talking machine in India, thousands of them being already in use, mostly of American make, and every native wants a machine as soon as he can raise the price. Records of native songs are especially in demand.

### STAFF OF MEN INCREASED.

The National Phonograph Co. have enlarged their staff of men, who are engaged in the campaign of introducing their commercial phonograph in New York City. This department of their business has developed to such an extent that several new branches have been established to handle it properly, and with the new men out in the field still more rapid advancement is expected. The commercial phonograph is no longer a novelty, but is becoming an actual necessity, as with such a machine inaccuracy in transcribing notes is practically impossible. Stenographic notes may be read incorrectly and frequently are, but a spoken message cannot be mistaken.

### WILL ENTER RETAIL FIELD.

Owing to the fact that he has an unusually large stock of Edison machines and records on hand, Chas. F. Craig, who does a jobbing business under the title of the Indiana Phonograph Co. in Indianapolis, Ind., has announced his intention of entering the retail field, although still continuing wholesaling. Mr. Craig has in stock every record in the Edison catalogue, and is still ordering in order to insure against a shortage of stock when the heavy season is on, and believes he is thoroughly equipped to meet the extra demands of a retail business.

### IS THERE A SURPRISE IN STORE?

Talk of a mysterious great company, with ample capital and prospective field of magnitude to operate in, still continues to be heard. Those on the inside speak knowingly of a surprise being in store for the trade. Names, please!

**BLACKMAN TALKING MACHINE CO.**

J. NEWCOMB BLACKMAN, Proprietor

97 CHAMBERS STREET

NEW YORK CITY

This Marvelous Instrument Recently Exhibited  
at the Business Show Highly Praised by Ex-  
perts—Its Commercial Possibilities Greatly  
Developed—Winning Recognition.

At the recent Business Show held in Madison Square Garden, New York, the Sterling Debenture

tracted unusual attention. Since this marvelous instrument was first shown the public, about two years ago, the improvements made have placed it in the category of a practical commercial possibility, according to the views of competent electrical engineers, who were present and witnessed the telegraphone's performances. To quote the official description:

"By the telegraphphone, the great Poulsen inven-

the invisible influence of electro-magnetism. The sound waves, even to the minutest whisper or respiration, are electrically projected into the molecules of the metal—there to remain and be reproduced until removed at will by a stronger magnet. It is the perfect talking machine, which was foreshadowed when Edison discovered the phonograph's power of doing a few of the things on cumbersome wax records that the telephone, by the use of magnetism, accomplishes with scientific exactness. It completes the telephone, where now lacking, because it makes a permanent record of all telephone transmissions."

The accompanying illustration is that of the telegraphone (spool wire type) recording a telephone conversation. This record is permanent, and may be laid away for years, or used repeatedly (its clearness and strength is not dissipated or weakened in the slightest), or the record can be obliterated instantly, and the wire used again and again. The voice or sound is recorded absolutely, and the expression of tone is flexible and true. The other type of telegraphone is the disc machine, by which the record is made on a thin steel disc, that may be sent through the mails at letter rate of two cents, without affecting the recorded sound in the slightest, and they may be used again indefinitely. It is also intimated that remarkable results have been obtained in amplifying the sounds recorded by the telegraphone. Of its many and various uses there appears to be no doubt, which are interestingly detailed in a handsomely illustrated catalogue issued by the Sterling Co. last week. The telegraphone is certainly one of the marvels of the age.

The Western Talking Machine Co., of 41-43 North Ninth street, Philadelphia, of which Adolph Weiss is the proprietor, was the subject of a column article recently in the Journal of Commerce of that city. The company have been carrying on a successful business for several years with both Edison and Victor lines and recently found it necessary to almost double the size of their quarters.

Telegraphone making a record of conversation over the telephone in a Wall Street office. Everything that passes over the line is stored on the spool wire of the machine for permanent record.

Corporation, 56 Wall street, New York, who are marketing the securities of the American Telegraphone Co., exhibited the telegraphone, the working principles and operations of which at-

tion, the human voice is recorded and stored on a simple wire, or thin sheet of steel, without wax, without indentation, without a pin scratch or mark, without the use of any agency other than

## TALKING MACHINE CONCERTS

Seem to be All the Vogue on the Pacific Coast—Clark Wise & Co.'s Good Work—Sherman-Clay Expansion—Collections Very Good—Bacigalupi's Big Trade in Edison Goods—Columbia Co. Plans for Expansion—The Cry Is for More Goods—Other News Items.

(Special to The Talking Machine World.)

San Francisco, Cal., Dec. 3, 1906.

Talking machine concerts are the thing now, and evidently the popularity of these concerts will increase during the winter months, for although nine theatres are open, nothing better than vaudeville is offered, and many of the better class of citizens turn to the talking machine concerts in order to enjoy the higher grade of music.

Clark Wise & Co., who recently inaugurated an elaborate series of concerts with the Victor and Talkophone, have been simply flooded with requests for tickets on every occasion, and the hall has always been packed almost uncomfortably. The sale of numerous high-priced outfits has resulted from demonstrations of the entertaining qualities of the talking machine during the concerts.

Sherman, Clay & Co. have found their talking machine business increased to such an extent that larger quarters are absolutely necessary, and two additional rooms are now in preparation.

As with the piano dealers, the talking machine trade find collections very good, a large number of people dropping in every month and thereby saving the collectors a great deal of work. There is a movement under way in the various branches of the music trade in this city, the talking machine dealers included, to do away with the semi-monthly collections that have been the rule for the past fifty years, and institute a monthly collection system, thereby cutting collection expenses about in half.

Speaking of Sherman, Clay & Co.'s growth suggests the fact that there is equally prosperous

conditions throughout the "talker" trade on the Coast. Peter Bacigalupi & Sons, the representative strictly wholesale house, have been improving and enlarging their quarters. The sales in Edison goods made by this house have been of record size. Heydenfeldt & Co., who recently took on the Victor line, have been rushed continually, and from present appearances they also will have to enlarge the space devoted to this part of their business. The Columbia Phonograph Co. have stocked the local branch with an extensive line of both machines and records for the holiday trade, and have arranged with agents in neighboring towns to give graphophone concerts, as it has been found such concerts are always productive of business in the rural districts.

The present situation is perfectly satisfying. Shipments are being disposed of shortly after arrival and the cry is always "more goods."

## FRENCH GOVERNMENT'S ACTION.

In Starting the Collection of Records of the Voices of Famous Singers Highly Commended—Will Be Preserved in National Museum for the Benefit of Posterity.

The French Government has made a step in the right direction when it started a collection of records of the voices of famous singers for preservation in a museum. The collection was started with a record of Tamagno, the great Italian singer, and the making of the record is interestingly told as follows:

"Some three years ago Francesco Tamagno, the Italian singer, approached a talking machine company with the hope of obtaining a few records of his voice to leave as a legacy to his children. He wished them to enjoy his voice in the future, when he himself would no longer be able to sing to them. Tamagno himself was skeptical of the result, as well he might have been, for it was the first time a really great singer had sung into a talking machine, but the records were successfully made and have since

become universally known and admired. The entire laboratory staff of the talking machine concern went by invitation to Tamagno's palace at San Remo on the Riviera, where an improved recording plant was erected, and there, in his own palace, at his leisure, he made the records which are to preserve his voice for all future generations. Upon Tamagno's death, which occurred so suddenly toward the end of last year, these records possessed at once an added interest, and the French Government immediately considered the question of founding a museum wherein the voices of the greatest singers of the present day could be recorded for the edification of future generations.

"In taking the initiative in this matter, the French Government has followed the best traditions of its predecessors, who have always guarded so jealously all works of art. Tamagno's voice is the first to have been so recorded. The method employed is interesting. The records themselves, which have been made on specially prepared plates, have been enclosed in hermetically sealed metal boxes containing a chemical compound to protect them for future years. These boxes have been engraved with the date upon which they are to be opened—one in fifty years, another in one hundred years, and so on, the dates having been chosen to conform with the musical festivities which will undoubtedly take place at that time. This means that future generations will be able to enjoy the voices of artists long since dead, and who, otherwise, would have been to them only a name, and they will be able to compare the singers of their own times with those of bygone generations. We know that Malibran was one of the greatest sopranos of her time, and yet we are unable to judge whether she is to be compared with the Adelina Patti of our own days. This uncertainty will not exist in the future, for the records will permit of absolute comparison—thanks to the perfection now attained in the recording of the voices which are being placed in the museum at the Opera."

## THE STUDY OF LANGUAGES

Among the American People Is Steadily Growing Owing to the Splendid Work of the International Correspondence Schools—An Interesting Chat With Prof. Dunne.

(Special to The Talking Machine World.)

Providence, R. I., Dec. 5, 1906.

One of the recent visitors to this city was Professor Brian Dunne, of the International Correspondence Schools, of Scranton, Pa., who gave a most interesting demonstration of the use of the phonograph in teaching modern languages at the parlors of the Outlet Co.'s store in this city to an audience that was most enthusiastic in its appreciation of the value of this language medium. In the course of his opening remarks, Professor Dunne said in part:

"There has been considerable discussion as to the most useful phrase for globe-trotters." Some tourists maintain that it is 'Give me something to eat,' but those who have visited Italy and Turkey and India maintain that our plain, Americanized translation of 'Go away,' good, simple '23' or 'skiddoo,' is worth more than all the words on the bill of fare. The Italian knows the value of 'Va via,' and so I might take nation after nation, down to the Chinese, with their 'kiu pa' and the Japs with their 'ike,' which is close to our 'hike.' I presume, however, Italy still has a corner on the beggar market, and '23' is a valuable phrase in their midst.

"Speaking of traveling abroad, brings me to the most just criticism of United States Consul Paul Nash, of Venice, who recently reported to the Department of Commerce and Labor that not

one-tenth of the hundreds of well-educated Americans who pass through Venice yearly are capable of speaking a dozen connected words of anything but English.

"Who will dispute that this condition exists? What is the cause of this 'laxity' in language study? It is not laziness. We all know how hard many of our college men pore over their grammars and burden their minds with irregular verbs and rules. But after one, two, three, four and even five years the majority leave college or even their universities and are 'deaf mutes' as far as understanding and speaking a foreign language is concerned. This is due to the family methods in vogue and the mistaken and old-fashioned idea that the eye instead of the ear is the proper organ through which to 'acquire' pronunciation.

"Cardinal Mezzofanti did not use the eye method. He learned by speaking to, wounded foreign soldiers he visited in the Italian hospitals. Other successful linguists tell a similar story. The ear must be first used to catch the sound, and then the tongue made to repeat and imitate it. The eye is merely an auxiliary to assist in the work.

"Of course, most of us who would learn languages are, not able to visit sick foreign soldiers with time on their hands to put us through 'Language Conversational Exercises,' but we have a means now in the phonograph that is wonderfully efficient.

"By it any one who is not deaf can hear a French, German, Spanish or English lesson as pronounced by a great scholar in that language, and, apart from the small cost, the convenience of the tours must appeal to every would-be lin-

guist or polyglot. 'Professor Phonograph' requires but a tap on the 'shoulder' and he will speak to you, repeat phrases for you and even answer your questions."

## THAT TWO MILLION CORPORATION.

Something of the Personnel of the Atlantic Phonograph Co., in Which Messrs. Irish, Adrien and Reed Are Interested.

Speculation is very active concerning the two-million Atlantic Phonograph Co. The rating agencies have been requested for special reports, and "inside" information is eagerly absorbed. The company are located in Room 1404 at 71 Nassau street, New York, and A. L. Irish is the president, according to the statement made to The World by the accomplished lady in charge. J. L. Adrien is the secretary and O. Clayton Reed, formerly manager of the Talk-o-phone Co.'s New York office, is the assistant secretary, who is now in Toledo. B. V. D. Manley, a Toledo banker, also figures as an Atlantic Co. official. In fact, reports from reliable sources are that the Atlantic Phonograph Co. is the reorganization of the Talk-o-phone Co., taking over the plant, good-will, etc. Inquiry at the office failed to find any definite information concerning the whereabouts of Mr. Irish, and in his absence the tip seems to be one of complete silence as to the mysterious company's position in the trade or its intentions.

A new talking machine store has been opened at 219 Upper Sixth street, Evansville, Ind., by W. L. Hollingsworth.

For a Powerful Organ-like Tone the New

## M. Hohner "TRUMPET CALL" Harmonica

Surpasses any mouth-organ that has ever been placed on the market.

No. 220. This instrument which has lately been offered to the trade is endowed with a phenomenal amount of tone power. The reeds are directly connected with a wooden sound-box, into which the tone passes, and finds an outlet through five Brass Trumpet Horns which protrude from the box. No Harmonica of this kind has ever been shown to the trade before, nor is there any which increases the tone so wonderfully. In the hands of an expert player this instrument can be made to sound like a church organ. In producing this instrument the house of Hohner has again shown great results from its constant effort to bring the Harmonica on the level with a high-class musical instrument. The mouth-organ has 10 double holes, 40 reeds, brass plates and is full concert.

### COURT ADMITS PHONOGRAPH.

Michigan Supreme Bench Decides Its Evidence  
Is Legal.

(Special to The Talking Machine World.)

Detroit, Mich., Dec. 5, 1906.

The Michigan Supreme Court has decided that a phonograph may be admitted as evidence in court to reproduce sounds which are the subject of controversy.

Frank Anderson, a hotel proprietor of Boyne City, brought a phonograph to court with records of engine tooting and car rattling to prove that the presence of a railroad near his property was a nuisance and lessened its value.

Justice Blair held that the introduction of the phonograph was permissible, provided the authenticity of the records was established.

### THE TELEPHONE CARRIES MUSIC.

Novel Entertainment Provided at a Chicago  
Park—Patrons Hear a Concert Given in a  
Distant Hall as if the Singers Were Present.

A novel method of employing the telephone as a means of furnishing entertainment for the public was adopted with success recently in a public amusement park in Chicago. The instrument by which this was accomplished is known as the transmitophone, and consists of a set of powerful apparatus by which sound as usually received in the telephone ear piece can be conveyed through the use of a megaphone to a large number of people indoors or out of doors.

The instrument was used for transmitting vocal and instrumental solos from a room in a concert hall to three different points in the garden. The reproducing instruments were suspended in trees above the lamps and were painted black so they could not readily be seen. When used, the music sounded as if the soloists were concealed in the trees.

The producer consists of a telephone receiver specially adjusted for this class of work and provided with a large megaphone centered in the earpiece. Rubber-covered wire is used for connecting the reproducer with the sending station. The wire is run directly into the receiver, and wrapped with rubber tape to prevent moisture entering the receiver. The accompanists' transmitter is suspended in the orchestra stand. This transmitter is made highly sensitive, and is connected by a separate circuit to the sending station with the soloists' head receiver.

The reproducing receivers are connected on what is known as a closed secondary circuit; that is to say, both terminals of the secondary winding are connected to the receiver or receivers. The switch box in this installation is provided for three reproducing circuits, consisting of three cam lever keys and arranged so that the transmitting circuit can be switched to any one of the three receivers or to any two or to all three at one time. The switch box is also provided with binding posts and terminals, so that the various circuits may be readily connected.

The battery box is a neat oak case arranged for the capacity of two sets of 18 cells, with each set connected in series and arranged so that it can be connected in the circuit with 12, 18 or 24 volts to meet the necessary requirements. The batteries are connected to a spring jack so that connection with the telephone circuit can readily be made with a cord and plug.

The accompanists' transmitter circuit at the

sending station is also provided with a spring jack so that the head receiver can readily be connected with a cord and connecting plug, and in order that the transmitter may be promptly disconnected when the instrument is not in use. The granular carbon is made of the very hardest coal grains, broken in the proper size, highly polished and thoroughly cleaned to prevent frying or sizzling.

The carbon is of such a high quality that one transmitter was in use the entire summer season. At each evening's entertainment, when used continually for 15 or 20 minutes, it would become so heated from the heavy battery current that one could not bear to touch the outer cup or frame, yet the instrument has shown no signs of deterioration, and has never failed to operate.

### GRAND OPERA IN LITTLE ROCK.

Il Trovatore Heard Through the Victor Talk-  
ing Machine.

(Special to The Talking Machine World.)

Little Rock Ark., Dec. 1, 1906.

The music lovers of Little Rock, and particularly those who are especial lovers of grand opera, discovered one evening last week that a real treat was in store for them when the first few strains of the great Verdi opera, "Il Trovatore," floated out into the auditorium at Houck's music house from the new Victor Auxetophone.

The event was notable for two reasons. It was the first time the Auxetophone was heard in the city, and also the first time a complete opera was heard through the medium of talking machine records.

The entire opera of four acts was rendered on the machine, and to do this twenty records were used. The records used with the exception of two choruses and the "Di quella pira" were recorded in Milan, Italy, the home of Italian opera, and in making them the services of a caste of well-known and competent artists was used as well as the famous chorus of La Scala Opera House and an orchestra directed by Carlo Sabaino.

The concert caused considerable favorable comment regarding both the machine and records and the progressiveness of the O. K. Houck Co. in introducing these improved talkers into the city. S. H. Field, the manager of the talking machine department, was in charge of the concert.

The American Graphophone Co. have declared their quarterly dividend of 1¼ per cent. on the common stock, payable December 15.

## ATTENTION

### Edison and Victor Dealers

WE ARE KNOWN all over Pennsylvania as the largest Edison and Victor jobbers in the State.

WE ARE PIONEERS in the Talking Machine business and among the first to sell both these lines and OUR EXPERIENCE COUNTS in YOUR FAVOR.

IN ADDITION to machines and records we sell supplies of all kinds. We particularly call your attention to our fine line of CYLINDER and DISC CABINETS and our SUPER NEEDLES.

PRODUCTION OF SOUND-RECORDS. Isidor Kitsee, Philadelphia, Pa. Patent No. 836,510.

This invention relates to an improvement in records which are produced by what is called the "cutting-stylus," and the systems now employed differ from each other in that one reproduces the sound-waves by the depth of the cut and the others reproduce these sound-waves by removing an etch-resisting film on a solid plate. In all these cases a resistance is offered to the movements of the stylus, and through this resistance these movements are greatly retarded. The records therefore cannot reproduce the voice in its natural amplitude. It is the aim of this invention to obviate these difficulties.

The underlying principle of this invention consists therein that an etch-resisting material is deposited on a solid surface in accordance with the vibrations of the diaphragm produced by the generated sound-waves, and as the most simple manner of depositing this etch-resisting material consists therein that the same is dissolved in a fluid and the following method is preferred: First dissolve a shellac, rosin, or other free-dissolving etch-resisting material in a fluid, preferably one which quickly evaporates, and preferably a solution of shellac in alcohol or rosin in

to the surface of said plate a plastic material capable of receiving impressions and hardening after such impressions are made.

Where it is desired that the evaporation of the etch-resisting fluid should be accelerated, the solid plate may be through artificial means raised to the required temperature; but in some cases it may be preferred not to use any evaporating fluid, and in such cases wax is heated so as to become fluid, and in this case the reservoir from which this heated wax issues should always be kept at the required temperature; but the plate on which the wax is deposited may then be cooled by any of the well-known means.

The great advantage of this process consists therein, first, that the stylus is not subjected to the retardation to which it is subjected in the processes of to-day, and, second, that the original is produced in the negative, making it possible to produce directly therefrom any desired number of positives.

In order to explain this invention more clearly, the accompanying drawings are referred to: Fig. 1 is a plain view of a diaphragm embodying the invention. Fig. 2 is a cross-section of a recording mechanism with the invention attached thereto. Fig. 3 is a plan view of part of a record. Fig. 4 is a cross-section of a recording mechanism with the device in modified form.

PHONOGRAPH. Eugene C. Smith, New York, assignor to Hawthorne & Sheble Mfg. Co., Philadelphia. Patent No. 836,470.

This invention relates to phonographic devices, and more particularly to a device to be carried

toy; and the invention consists, broadly, in the use, with a handle, of a phonographic record and a "transmitter" connected to a stylus arm or lever, the transmitter or record having rotary motion, whereby the stylus is caused to pass over the phonogram and the transmitter is actuated.

Preferably this invention consists in mounting the record non-rotatively on the handle and yoking the transmitter freely to the handle, so

hydrocarbon. A stylus is provided which is supported by the vibrating diaphragm of a recorder with an orifice and allow the etch-resisting fluid to issue from a reservoir in close proximity thereto. Beneath the stylus is then placed the solid plate to receive the record. The etch-resisting fluid should issue from the reservoir in a very thin stream, and as the stylus, with its orifice, has to vibrate in accordance with the vibration of the diaphragm proper it is obvious that the liquid will be deposited on the solid surface in a manner so as to reproduce these vibrations. After having deposited thereon the required recording-lines the plate is subjected to the process of etching, whereby such parts of the metallic plate as are not protected by the etch-resisting fluid will be depressed, leaving such parts as are protected by the fluid in relief. The so-prepared record-plate is in reality a negative of the sound-waves generated, and to produce from same a positive it is only necessary to apply

in the hand which, when whirled about will reproduce in sounds the phonograms impressed upon a phonographic "record." The object of the invention is to provide such a device of simple and cheap construction, easily manufactured, portable, and adapted to answer the purpose of a

that on whirling the device about, the transmitter will have a movement of rotation concentrically about the axis of the record.

Fig. 1 is a top view of the toy. Fig. 2 is a side elevation of the same. Fig. 3 is a transverse section of the phonographic cylinder and feathered spindle on which it is carried; and Figs. 4 to 8, inclusive, are views, partly in side elevation and partly in section, illustrating other embodiments of the invention.

APPARATUS FOR MOULDING SOUND-RECORDS. Walter S. Tyler, Bridgeport, Conn., assignor to American Graphophone Co., same place. Patent No. 836,417.

This invention relates to improvements in apparatus for producing duplicate cylindrical sound-records by impressing blank cylinders against the inner surface of a matrix, and particularly blank cylinders having a thin wall and made of materials such as celluloid, their object being generally to improve the efficiency of such apparatus in forming upon the record-blank an accurate impression of the surface of the matrix. The improvements constituting the invention may be readily comprehended from the detailed description and drawings. Fig. 1 is a vertical sectional view of the apparatus, and Fig. 2

**A Merry Xmas to All**  
Edisonia Co., Newark, N. J.

**TALKING MACHINE SUPPLIES**

is a schematic view of means adapted to be used in preparing blank record-cylinders for use in the apparatus of Fig. 1.

PHONOGRAPH FOR DUPLICATING PHONOGRAPH RECORDS. Frank L. Capps, Newark, N. J. Patent No. 836,089.

This invention relates to improvements in phonograph-machines, and particularly to a machine for duplicating phonographic records. One of the most important features in the invention

is the device for supporting the reproducing and recording styli in operative relation to the cylinders. The device is so arranged and constructed that the recording stylus will be free to move under the control of the reproducing stylus in a direction approximately perpendicular to the

tangent of the record-blank at the point of contact of the recording-stylus therewith and will at the same time be held against movement in the direction of the tangent. This result is accomplished, preferably, by a lever mechanism comprising two levers pivoted together in the line approximately perpendicular to the tangent of the record-blank at the point of contact with it of the recording-stylus, one lever supporting a reproducing-stylus and the other lever a record-

ing-stylus, and independent supports for said levers. The support for one of the levers is preferably an adjustable one, and a weight is also preferably applied to one of the levers to insure uniform operation. This lever device couples the styli together and enables them to automatically adjust themselves to cylinders of different sizes and thicknesses. This arrangement affords a free vibration for the recording-stylus in a direction (perpendicular to the tangent) least affected by the rotation of the blank, and the device is therefore particularly free from choking and is capable of faithfully recording all of the delicate rich tones which render a record full and satisfactory. These fine tones are lost if the recording-stylus is not free to vibrate under the influence of the reproducer.

Another feature of great importance in this invention is the shape and manner of supporting the recording-stylus to produce a clean shearing cut in the record as distinguished from a scraping cut. The stylus is formed with an enlarged frusto-conical cutting-head, and is so supported that the cutting edge will recede from the perpendicular to the tangent at the point of contact with the blank. A stylus of this structure supported in this manner and free to vibrate perpendicularly to the tangent, as above explained, produces a perfect record.

The invention will be understood by reference to the accompanying drawings, wherein Fig. 1 is a front elevation of the improved record-duplicating phonograph-machine. Fig. 2 is a sectional end elevation of the same. Fig. 3 is a detail plan elevation. Fig. 4 is a detail end view showing the removable centering, journal pins for the two mandrels. Fig. 5 is an enlarged longitudinal sectional view of the recording-stylus. Figs. 6 and 7 are detail views of a modified arrangement for supporting the reproducing and recording styli. Fig. 8 is a detail representation of another modification. Figs. 9 and 10 are detail views representing a portion of the reproducing stylus arm pivoted to the main portion to allow a slight sidewise movement.

PHONOGRAPH. Charles W. Noyes, Cincinnati, O., assignor to Hawthorne & Sheble Mfg. Co., Philadelphia, Pa. Patent No. 836,940.

This invention relates to an improvement in phonographs, and its prime object is to devise a machine particularly organized and adapted for office amanuensis and known to the trade as the "commercial" phonograph.

One of the objects of this invention is to provide means in connection with the main drive of the record, reproducer, and the recorder which is under the full control of the operator when in

use, so that it can be instantly started and stopped. Another object is to provide improved means for supporting the record-cylinder. Another object is to provide means for readily in-

serting and withdrawing the record and maintaining a constant initial position without destroying or varying its accuracy relative to the reproducer or recorder.

Various other features of this invention are set forth in the description of the accompanying

drawings, in which Fig. 1 represents a central sectional view, partly in elevation, illustrating the main drive for the various parts, together with the electrical connections. Fig. 2 represents a cross-sectional view showing a portion of the main power driving shaft in connection with a train of gears for traversing the recorder and

reproducer mechanism. Fig. 3 is an end elevation, partly in section, showing the means for operating the reproducer and recorder traversing mechanism for controlling the direction of traverse. Fig. 4 is a section on line x x, Fig. 3. Fig. 5 is a front elevation of a portion of the traversing mechanism for the reproducer and recorder. Fig. 6 is a top plan view, partly in section, of the recorder and reproducer supporting arm. Fig. 7 is a central vertical section of the tail-stock for supporting the record.

PROCESS OF MANUFACTURING SOUND RECORDS. Thomas H. MacDonald, Bridgeport, Conn. Patent No. 836,646.

This invention relates to the production of sound-records in a metallic tablet, and more particularly to records of the disc form. Its object is to produce with commercial economy metallic sound-records of superior quality. In carrying out the invention an original sound-record (preferably a record of varying depth) is made in the usual way—i. e., by engraving upon a tablet of the ordinary wax-like material. From this original an electrotype master is made in the usual way—that is, by first coating the wax record with a coating of plumbago or other conducting ma-

terial and then depositing thereon electrolytically a layer of suitable metal, such as copper. The copper master is separated from the wax original and after careful cleaning and polishing is plated with a plating of metal, such as silver, which is acted upon by a metalloid. This silver-plating is preferably applied by means of the "washing" method—i. e., applied by a camel's-hair brush—rather than by electrodeposition. The copper plate is thoroughly cleaned and a silvering paste brushed over its surface. This paste is prepared by dissolving silver nitrate in water, precipitating the silver in the form of a chlorid by means of common salt, washing the precipitate and dissolving it in potassium cyanid. The solution is filtered, if necessary, and mixed with enough whiting to make a thin paste. In practice it is found that twenty-two parts of silver nitrate to forty-two parts of cyanid of potassium give good results. The metallic negative is now used for obtaining duplicates by the direct electrodeposition of the metal upon the silver-plated master or negative. To make this operation commercially successful it is necessary that a separating-film should intervene between the negative and the electrodeposited positive or duplicate, so that the two may be separated without injury to either. This film must be exceedingly thin, so as not to obliterate or modify the

form of the sound-vibrations, and it should be uniform, continuous, and capable of being readily applied and renewed. These and all other conditions necessary to insure success are met by subjecting the silver-plated negative to the action of a chemical agent, such as the sulfid of an alkali or alkaline earth. Potassium sulfid has given the best results thus far obtained. Sulfur fumes have also been successfully used. In carrying out this part of the operation a weak solution of potassium sulfid prepared by dissolving one-half ounce of the sulfid in one gallon of water is flowed over the metal negative and at once poured off. This causes the formation of an exceedingly thin but uniform and continuous light-brown film of a sulfid of the metal acted upon (in this case sulfid of silver). The surface is then washed with clean water and placed in the plating-bath. A duplicate record of the desired thickness is now deposited electrolytically, copper being the metal preferred. The surfaces of the negative and positive can now be readily separated by introducing the blade of a knife between the edges at any point. The duplicates may be then polished and finished in any suitable way, as by nickel-plating. Duplicates made in this manner are not only very durable, but they have acoustical qualities of a very superior order, readily distinguishable by the ear from records made in wax or other plastic material. The noticeable characteristics are fidelity to the original sounds and a very rich and agreeable tone quality.

The formation of the separating film (in the form of a salt or compound of the metal constituting the surface of the negative) may be accomplished in other ways. For example, the silver surface may be oxidized by heat or other method of oxidation and fair results obtained; but the best mode now contemplated of applying the principle of said invention is that stated above. Other modifications will readily suggest themselves to persons skilled in the art to which the invention relates. The negative can be used for the production of a large number of duplicates; but the separating-film must be renewed after every two or three duplicates.

For the purpose of graphically illustrating the invention, reference is made to the accompany-

ing drawings, in which Fig. 1 is an isometric sectional perspective view showing a tablet with a record formed thereon having an electrodeposition superimposed upon the record-face of the tablet, and Fig. 2 is a cross-sectional view showing the negative formed by the electrodeposition properly backed and a record electrically deposited thereon with a separating film between the metallic negative and the record thus deposited.

GRAPHOPHONE. Justin J. Hammer, Red Bluff, Cal. Patent No. 836,032.

The invention relates to an improvement in graphophones comprehending specifically a means for intensifying the sound reproduced by the instrument.

The main object of the present invention is the production of a sound-box of a particular construction, in the use of which the sound-waves are

taken from each side the diaphragm, whereby to intensify the quantity and improve the quality of the sound.

Fig. 1 is a plan view showing a graphophone provided with improved sound-reproducer. Fig. 2 is an enlarged section on line 2 2 of Fig. 1. Fig. 3 is a section on line 3 3 of Fig. 2.

SOUND REPRODUCER. Thomas H. MacDonald, Bridgeport, Conn., assignor to American Graphophone Co., same place. Patent No. 835,544.

This invention has reference to the construction of sound-reproducers for use with sound-records of the varying depth type. Such reproducers have heretofore been constructed so that the reproducer as a whole or the stylus-carrying member thereof is pivoted and rests by gravity on the sound-record. This gravity-reproducer has certain well-known utilities, such as adjusting itself to and faithfully tracking the sound-groove and bearing with uniform pressure upon the tablet. These results are practically indispensable to successful sound-reproduction in talking machines.

Efforts have heretofore been made to substi-

tute spring tension for the weight and at the same time secure the above-mentioned indispensable results. These efforts have not been entirely successful from a commercial standpoint, since the structures were either too complicated

for use in the hands of any but skilled experts or else were too expensive to manufacture, and in some instances both of these objections obtained.

The object of the present invention is to secure by the use of spring tension the same practical results heretofore obtained by the use of a weight, while at the same time providing a structure which is simple in operation and may be cheaply constructed.

The inventive idea involved in the present invention may find some variety of mechanical expression, but, generally speaking, it consists in combining with the diaphragm and a stylus connected therewith a pin journaled to turn in the frame of the reproducer in a plane approximately perpendicular to the diaphragm, which pin carries a spring tending to press the stylus against

the sound-record. This affords a structure that may be cheaply manufactured, is perfectly simple in operation, and is thoroughly effective

## Use "3-in-One" Oil "Oil" by Itself

"3-in-One" never should be mixed with any other oil. It's in a class all by itself—has been for 12 years. Keep it so for best results. Use it to lubricate, brighten and polish the various parts of all kinds of talking machines. Use it to keep disc and cylinder records clean. The "3-in-One" Book tells details. Get a copy from us or your jobber.

"3-in-One" is not only the best oil for your customers to buy—it's the best oil for you to sell. 50 and 100 per cent. profit—any reason why you shouldn't make it, same as other talking machine dealers are doing? 10c. and 25c. bottles. Your jobber is ready to supply you.

FREE sample bottle of "3-in-One" sent to any dealer on request. Just write to

**G. W. COLE COMPANY,** Sole Makers  
of "3-in-One"  
Broadway and Liberty Street, New York City.

since the spring and all the connected parts move with the pin, which is journaled in the frame as above described.

Furthermore, the present invention not only secures high efficiency in sound-reproduction, but it results also in an economical and durable construction. The floating weight is dispensed with and its place is taken by a relatively light plate to which the stylus-bar is pivoted. Moreover, the spring acts when the reproducer is not in use to hold the supporting-plate firmly against a stop, thereby preventing rattling and greatly diminishing the liability to injury. A reproducer of the improved construction can operate at one angle to the horizon as well as at another, whereas the ordinary gravity-reproducer will only operate advantageously at the particular angle for which the weight has been calculated.

In the best form in which the invention has thus been applied, the reproducer and diaphragm have no movement perpendicular to the tablet, the stylus being pivoted to a supporting-plate hinged so as to move perpendicularly to the tablet, and the spring being applied to this supporting-plate. When the reproducer is brought into its operative position, the pressure of the stylus on the tablet lifts the supporting-plate from its rest or stop and puts the spring under tension or compression, as the case may be.

The spring is attached not to a fixed part of the frame, but to a pin or bar which is hinged or swiveled to turn on an axis at right angles (or approximately so) to the diaphragm. The stylus is pivoted to this same bar, so that the spring being carried entirely by the swinging part of the reproducer has no tendency to force the reproducing-point out of the sound-groove. On the contrary, experiment shows that the construction herein described gives better results in tracking than reproducers previously in use.

Fig. 1 is a sectional view through the center of the diaphragm, illustrating a reproducer constructed in accordance with the invention. Fig. 2 is a bottom plan view thereof. Fig. 3 is a partial end view of the hinge. Fig. 4 is a detail of the guard and stop. Fig. 5 is a view in cross-section of a modified form of the mounting. Fig.

6 is a detail in section of the hinge thereof.

**SEPARABLE PHONOGRAPH-HORN.** Edward Weislowits, New York, assignor to Nettie Weislowits, Newark, N. J. Patent No. 835,338.

This invention enables a horn to be brought to practically flat condition or its elements or sections to be slipped apart and superposed to occupy but little space.

This invention is illustrated in the annexed

drawings, in which Fig. 1 is a longitudinal section of a horn embodying this invention. Fig. 2 is an enlarged view of part of Fig. 1. Fig. 3 is a section along x x, Fig. 1. Fig. 4 shows a horn element or section partly out of place or not slipped fully home. Fig. 5 is a view of two sections of horn elements partly engaged. Fig. 6 is a detail. Fig. 7 shows a modification.

**DUPLICATING PHONOGRAPH RECORDS.** Varian M. Harris, Chicago, Ill., assignor of one-fifth to Robert Burns, same place. Patent No. 837,061.

The present invention relates to that method or process of manufacturing duplicate phonograph records of celluloid or other like material in which a mold is used having a negative matrix formed in its interior surface or bore and into which negative matrix surface the duplicate phonograph record in the form of a thin-walled cylinder is pressed to impart to the periphery of such cylinder a positive impression from such negative matrix surface; and the object of the present improvement is to provide a simple and efficient method for use in the manufacture of their cylindrical phonograph records and with which the production of the duplicate records can be effected in a rapid, certain and positive manner.

In the accompanying drawings, illustrative of the present invention, Fig. 1 is a longitudinal section on line x x, Fig. 2, of an apparatus adapted to carry out the present method; Fig. 2, a transverse section of the same at line x' x', Fig. 1.

#### TALKING MACHINES FOR CHILDREN.

Helicou Hall, the Socialistic colony established on the outskirts of Englewood, N. J., by Upton

Sinclair, of "Jungle" fame, is fully up to date in one particular at least. There is a large room on the ground floor devoted entirely to talking machines, where children and their elders may go in idle moments and hear the latest compositions rendered in approved style. Not a half-bad idea for keeping the colonists contented with their peculiar lot.

#### PARSONS' LATEST INVENTION.

**A Pneumatic Device for Increasing the Volume and Richness of the Tone of Stringed Musical Instruments.**

A recent cable from London conveys some information regarding another invention of Chas. A. Parsons, the inventor of steam turbines, and several devices for improving the talking machine. It reads as follows: "Two huge trumpets resembling ventilating shafts on an ocean steamer, which have been in use during the past week in the Queen's Hall Orchestra, have been looked upon by many promenade concert patrons as part of an improved system of ventilation.

"The supposed ventilators are, however, parts of a new invention by the Hon. Charles Parsons, called the auxetophone. The auxetophone is a pneumatic device for increasing the volume and richness of the tone of the stringed instruments, and is worked by air supplied by a blower in the basement of the building.

"The auxetophone consists of a small comb-like valve made of aluminum, which is connected to the front wood of the instrument near the 'bridge,' and vibrates in response to the natural tones produced by the player. This valve controls the exit of the air from a small box fed from the blower into a large spiral shaped trumpet, which emits sound waves identical in quality and intonation, but richer in tone and larger in volume than those produced by the instrument itself unaided by the auxetophone."

The inventor claims that the device is practicable not only for the double bass but for every instrument in the string band. It suggests the possibility of decreasing the often prohibitive cost of producing modern works in which the orchestration is so elaborate that a large number of strings are required to balance the brass and wood. The auxetophone may make it possible for a quartette to do the work of the sixteen first violins and twelve seconds.

#### TO TRANSMIT HUMAN VOICE.

**Denison Man Invents Instrument for the Purpose.**

(Special to The Talking Machine World.)

Denison, Tex., Dec. 1, 1906.

J. L. Bowman, of this city, says he has perfected an instrument for transmitting the human voice through space without the aid of wires. He will leave soon for San Francisco to investigate inventions about the same line. Mr. Bowman's instruments will transmit the voice but a short distance through space, but he expects to overcome that difficulty. He claims that his invention is superior to one lately perfected in France, in that no batteries are used.

## Some Facts Worth Considering

**T**HE talking machine man frequently asks, "How can I increase my business?" The answer is easy. Place on a side line which takes but little space, which is attractive, and a standard in its particular line. Take the **Black Diamond Strings**, for instance. Steel and wound. New process. They are the finest manufactured. They are used by all of the prominent artists, and you will have a trade coming your way when it is known that you handle the "Black Diamond." Music dealers all over America, and all over the world for that matter, know full well the value of this product.

## With the Makers and Sellers of Automatic Specialties

### IMMENSE GROWTH OF BUSINESS.

Closing the Greatest Year in the History of the Automatic Specialty Trade—The Industry Broadening Out and a Wider Recognition Obtains of the Merits of the Musical Specialties Now Put on the Market—Arcades in Southern States—Municipal Authorities Not Treating the Industry Fairly—Amusing Incident in China—Slot Machines Strong Favorites With Arcade Men and Everything of Merit Selling Well.

With the close of the present month we turn our backs on what has been the most prosperous year this trade has ever known, and one which will long be remembered as the "great automatic renaissance". Some might think this statement merely word painting, but to one who has studied minutely the marvelous growth of this industry from the oblivion into which it had sunk, and saw it gather in its harvest from all parts of the globe, the propriety of using that term will be apparent. Many extensive changes have been brought about during the year of 1906, and as the industry grows new fields of effort seem to open out before it.

Arcades which for some time have found foothold in the Southern States have been compelled in many instances to exclude the negro from among the patrons on account of the deep animosity between the two races. It is, therefore, apparent that a large amount of custom was lost by parlor managers in these sections. Taken as a whole, the negro is music loving, and will, without a thought for the morrow, spend his last sou for the sake of a hearty laugh or a new tune from the talking machines. Then again in many localities his race is by far in the majority. Yet it was but very recently that the slot machine has been utilized by the race as a lucrative investment, and it remained for a negro to see the opportunity and gather together capital to undertake the enterprise in a proper manner. In foreign countries the slot machine undoubtedly has a brilliant future, though at the present time a number of difficulties present

themselves which, to say the least, are perplexing. Location has nearly everything to do with the success of an arcade. Unlike a theater its one great attraction lies in the seductive glare of its electric lights, the bright colored signs or the sound of music from the automatic pianos and talking machines. Situated on a lively thoroughfare with crowds constantly passing it will invariably prove a gold mine. But placed on the quieter side streets its intake is bound to be limited, for few even among its most enthusiastic devotees will take the time to hunt one up. The arcade is one of those things that draws us to it on the impulse of the moment, not by any prematurely defined thought. It is in securing a location that the arcade man finds his greatest difficulty in Europe. Here the peculiar laws in vogue governing leases on property offers a bulwark both annoying and hard to surmount. Leases on nearly all property are taken out covering a span of ninety-nine years. These locations are handed down from father to son, or in a few cases sold to an outsider; but the purchaser is liable for the time remaining until the expiration of the lease. Desirable locations on the large avenues are held mostly by old established houses. These, unless in the case of a failure, would not relinquish their proprietorship. Then again, although the arcade is undoubtedly a wonderful money making venture, an inventor must needs think twice before tying himself down to a centennial contract.

\* \* \* \*

Slot machines hold a strong attraction for the public of to-day, but they are not a necessity, and taking into consideration all the advancements possible during a century to come, it would be a far-sighted seer indeed who could gauge their effect on the people of twenty hundred and six. China has proved a most fertile field for these devices, many elaborate arcades having been fitted out in Peking, Shanghai and other of the large cities. Automatic pianos, talkers, illustrated songs, moving pictures and vending machines have proven the most popular. But for the strength testing apparatus, the Chinaman has little use.

An amusing incident, which occurred in one of the arcades located in the Celestial Empire, is worthy of note. When the vibratory machine called "The Doctor" first came on the market the enterprising manager of this arcade promptly sent in his order. This machine is built in the form of a man of giant size, with amazing muscular development, and is gilded and gotten up in striking style. In his hands rests an iron bar, which the operator takes hold of, after depositing his coin, and receives the vibrations. Soon after its installation up walked a pigtailed son of Confucius to inspect this new wonder from the land of the "Melicanman." Curiosity finally got the better of him, and being egged on by his countrymen, who had gathered around, he took his stand and deposited a coin. At once the machine commenced to get in its work. With a rumble and a jar it promptly started to shake the Chinaman in the most approved manner, not, however, wholly appreciated by him, for with a shriek of terror he prostrated himself before this unknown god from over the seas, and on recovery beat a hasty retreat. As funny as it may seem, this did not prove so amusing to the manager, for it was many a day and only after the greatest efforts that he could convince his superstitious patrons that his place was not "velly blad medicine," to be given a wide berth.

\* \* \* \*

In this country arcade men are having more or less trouble with the municipal authorities. The question whether the parlors must obtain theatrical licenses is now before the courts. Some of them have none and others are operating under showman's licenses, for which they pay \$25 a year. The police contend, however, that they must obtain theatrical licenses, which cost \$500 a year.

In the meantime, these minions of the law, instead of enforcing other legal ordinances, disregarded right under their noses and fastening down the lid, make themselves unusually officious when dealing with arcade men.

### BIOGRAPH HAS CAUGHT PARIS.

Becoming Quite a Fad—Budding Playwrights Are Sorry Now That They Quarreled With the Boulevard Managers.

A dispatch from Paris says that young French playwrights are in despair. Parisian audiences prefer the cinematograph to their curtain raisers. Hitherto a young dramatist took his first step on the ladder to fame when some indulgent manager consented to use his virgin effort as a curtain raiser. Then when he attempted a four-act play his name was already familiar in theatrical circles, therefore his chances of success were naturally greater than if he had been entirely unknown.

A recent quarrel between several boulevard directors and the Society of Dramatic Authors, which is all-powerful in France and which furnishes all curtain raisers, resulted in an unexpected innovation.

"We had to have something to act as prelude to the big performance of the evening," one well-known manager explained. "When our source of supply for one-act plays was cut off, we looked about for something else. I happened to be passing a cinematograph establishment one night, and the dense crowd in front of it suggested to me that a half hour's amusement of that sort would take just as well in the legitimate as in vaudeville."

His scheme proved to be a happy one, for after the theatre-goers began to grow accustomed to this novel entertainment they welcomed it with more enthusiasm than they did the traditional curtain raiser. It was especially popular with the "family circle." Then after a time it was

## THE CARD PRINTER

Prints any desired name on five cards for one cent

It is the latest and most popular coin-controlled machine. It has met with the unqualified approval of all slot-machine people and where placed on exhibition has been continually surrounded by crowds waiting their turn to print their names.

This machine is not a novelty, one that will loose its earning power within a month or two, but a machine furnishing a useful article in constant use. This machine will pay in any location such as hotels, railroad stations, waiting rooms, summer resorts and department stores, as well as any amusement place such as penny arcades, theatres, summer parks, etc.

As a money maker it has no equal. It will pay dividends of from one hundred to five hundred per cent. per annum, according to location and the coin used. It has earned \$42 a week operated with a penny. The Card Printer can be changed to operate with a five-cent piece.

The cost of material for cards and ink is nominal and shows an enormous profit. It is the most attractive slot machine now on the market. The entire works and all movements made by the mechanism in setting up type and in feeding, cutting and printing the cards are in plain view of the operator.

The works are nickel-plated and enameled. The cases are quartered oak. The Printer occupies floor space of fifteen by twenty inches. Weight boxed and ready for shipping 150 lbs.

For further particulars, address

NEWARK, N. J., U. S. A.

noticed that the box owners, who usually appeared just as the curtain was falling on the short opening play, began to arrive at 8.30. Decidedly the cinematograph was a success.

The quarrel between the Society of Dramatic Authors and the managers has ended, but the latter are so delighted with their new arrangement that they refuse to return to the old way.

"What chance have we now?" complained one young dramatist to The World correspondent. "Before the managers tried this cinematograph scheme they hadn't any idea that their audiences would endure such a thing. If this difference between them and the society hadn't come up, we should never have had this difficulty to contend with. Our profession is hard enough, but now it is worse. It is only natural that, when a manager sees that such a comparatively cheap device as moving pictures draws the crowd, he won't go to the expense of staging a play, paying the actors and the Dramatic Authors' Society, to say nothing of the fees he must give us, the authors."

The military governor of Paris, Dalstein, complains that the cinematograph is responsible for making the regulation army uniform ridiculous. Civilians dressed as sergeants, corporals and privates are posed against a background of barrack walls and, before the photographers, perform all manner of unseemly antics which are later shown for the amusement of the boulevard theatre-goers. When Prefect of Police Lepine heard that fun was thus poked at the dignity of the army he ordered the photographers and their accomplices, the bogus soldiers, locked up.

#### BIOGRAPH CO. DOUBLE OUTPUT.

Increase Factory Facilities and Install a Remarkable Equipment.

The Biograph Co., keeping pace with the enormous demand for its film productions, has just completed alterations and improvements in its Hoboken, N. J., factory, which will result in

the doubling of the company's output. The factory is a modern four story steel and brick fireproof structure, and the automatic machinery used in the development, printing and drying of films is so remarkable that one of the big technical magazines has now in preparation an extensive article describing it. Everything used in the manufacture of biograph films, i. e., cameras, printers, perforators, developers, dryers, etc., is the product of the Biograph Co.'s own mechanicians. It is said that the recently installed battery of automatic printers have a speed fully double that of any hitherto in use. The dark rooms are all substantially dust proof and are so arranged that they can be as completely cleaned and sterilized as a modern hospital operating room. Up to the present time a night shift has been working on biograph films, but it is hoped with the increased capacity of the plant night work will not be necessary. The Biograph Co. report phenomenal sales abroad, as well as in this country, on "The Tunnel Workers," its latest sensation.

#### RECENT INCORPORATIONS.

#### HERE AND THERE IN THE TRADE.

Some of the Latest Developments in the Trade Interestingly Set Forth for the Benefit of Our Readers.

The American Mutoscope & Biograph Co., 11 East 14th street, this city, have brought about an exchange of their mutoscopes with the Automatic Vaudeville Co., whereby they will substitute their new type "E" machines for the "D" type now being used by the latter company. This will leave on their hands a large number of the "D" machines, which, though second hand, are in perfect condition and are great money getters.

These machines, which this company are now offering at rock bottom figures, are a great bargain for any one entering in this field.

Augustus C. Faulkner, a prominent negro in the South, has collected a large amount of capital for the purpose of opening arcades in Birmingham, Ala.; Richmond and Norfolk, Va., and Washington, D. C., that will cater exclusively to the negro population.

The pistol range is a new automatic contrivance which has many attractive and meritorious points to recommend it. It offers an endless

## SKELLY MANUFACTURING CO.

81 South Jefferson Street = CHICAGO

*You can make more dollars with the Regal Agency than with any other automatic music producer on the market.*

# REGAL

The Regal Player is the best on the market! It operates easier than any other, and it will make money wherever it is located in places of public resort. The agency of this wonderful creation is worth many dollars to the up-to-date dealer.

Don't overlook it.

The Regal "44"

The above illustration will give a fairly correct idea of one of the Regal styles. It is splendidly finished, attractively cased, and is an ornament which the owner of any cafe or public resort will be delighted to have in his place. It earns more money than any other coin operating machine on the market. We have hundreds of letters on file to demonstrate the truth of this statement.

# REGAL

Talking machine dealers can largely increase their income by a Regal alliance. It makes money easy, and it's money that most men are in business for. The coin operating business blends perfectly with the talking machine trade, and dealers who have secured the agency for this popular product have been more than pleased with the splendid results which they have obtained through the Regal.

## THE REGAL PIANO AND PLAYER CO.

889 Southern Boulevard, NEW YORK, N. Y.

amount of entertainment and pleasure to the public, and is adapted for arcades, parks and cafes for practising the most popular art, marksmanship. The coin is placed in the slot of the pistol, aimed and shot against the slot bull's-eye. If the coin enters the slot the player gets it back, else it drops in the cash box inside the cabinet. The best marksman will make about one bull's-eye to three miss shots. The pistol range consists of an elegant hardwood case, on which is mounted a neatly finished metal and glass case containing the shooting apparatus, with nickel-plated revolver in front. The rear can be easily opened with a key to adjust the slot or bull's-eye attachment.

One of the most complete lines of slot machines in this industry is that carried by the Caille Bros., of Detroit, Mich. Their specialties are noted throughout the trade for their money making features, and they have won a reputation for always keeping abreast of the times. Their new automatic battery changer will save time, money and mistakes. Twenty dollars, or any desired amount of change, is placed in one drawer to make change from. Money received to be given change in full dropped in coin slot above drawer. For pennies, cuts off five pennies at once. For nickels, cuts off either two or five nickels at once. Arcade men will find this device of great help to the cashier in making change during rush hours.

The Automatic Stamping Machine Co., of Cleveland, O., are now manufacturing a useful and popular slot device. This machine will print and emboss any name and address on aluminum medals for five cents. The medals are made in various styles, and are used for identification key rings, trunk and baggage checks, souvenirs of cities and expositions, pocket pieces, umbrella marks, etc.

The New York Vitak Co. are now busily engaged in perfecting a motion picture machine which will retail at about \$30. This machine will compare with any machine on the market and can not only be used for home use, but for entertainments and public events of all kinds. "The Vitak," their small machine, has met with the universal approvement of the talking machine trade. Jobbers and dealers who are handling them have found them great sellers. In

**\$63.45** IN **ONE WEEK**

A Talking Scale in Kinsley's Restaurant, Chicago, took in this amount gross, leaving the owner \$47.59 clear profit after paying the location 25 per cent. of the receipts.

#### EXTRACT FROM NEW YORK SUN

"The man in the box is the hit of Broadway. The bars are crying for more of him. Not since the gambling machines were pulled out and sent to junk has there been such a nickel eater."

#### AT THE WORLD'S FAIR

At the Louisiana Purchase Exposition, held at St. Louis, Mo., one hundred Talking Scales were operated in competition with a like number of other coin-operating automatic weighing machines, the receipts from which were nearly 100 per cent. more than those of any other scale. This fact establishes the superiority of the Talking Scale. It is the biggest money-getter of any legitimate coin-operating machine in the world. Send for illustrated circular.

fact the demand has been so large that notwithstanding their greatly increased facilities; they have found it impossible to make shipments promptly.

The Rosenfield Manufacturing Co., 591 Hudson street, this city, are busily engaged in fitting out some new arcades in Europe and Shanghai, China. This company are among the oldest in the industry, and their product is universally used and liked. They are now about to place on the market a new weighing machine, which they claim is by far the most accurate ever made, every one of which is guaranteed as to accuracy and wearing qualities.

The card printer manufactured by the Card Printer Co., 79 East 130th street, this city, has proven itself one of the greatest money makers ever produced. One very desirable feature about the machine is its perfect adaptability to any location. Talking machine men could add materially to their income by installing one of these card printers in front or in their stores. For further particulars see their advertisement which appears in this issue.

The Valiquet Novelty Co. are just completing another gem, "The Gypsy Queen." This automatic lady nods her head, shuffles the cards, and in a low sweet tone tells you all about your faults, when you're going to marry, how many times the stork will pay you visits, etc., etc., and incidentally takes all the pennies you have. She sure is on to her job and will coin money for her owner. The Valiquet Co. have changed the name of their "Discophone" machine to "Music Phone."

One of the best paying coin operating machines introduced during the past ten years is the Talking Scale. This is an automatic device that calls out in a clear and audible tone the weight of the person standing on a scale. Sounds impossible, doesn't it? Well, that's just why everybody that sees it, whether or not they want to be weighed, step right up and drop their coins. This machine is a combination of two well-known inventions—the talking machine and a scale—and has proved a decided hit wherever it has been introduced. We quote the following interesting extract from the New York Sun: "The man in the box is the hit of Broadway. The bars are crying for more of him. Not since the gambling machines were pulled out and sent to junk has there been such a nickel eater." For further information see their advertisement which appears in this issue.

## TALKER AND ILLUSTRATED SONGS.

**How Earl Crabb of Indianapolis Utilizes the Talking Machine as a Singer of Illustrated Songs.**

Earl Crabb, manager of the Exhibit Parlors, Indianapolis, has the reputation of being a bright, shrewd young business man. For years Mr. Crabb held to the idea of using a talking machine as a singer of illustrated songs. To this end he made a number of experiments, trying out one new thing after another as they appeared, only, however, to meet with failure in every case. A year or so ago he abandoned the idea as hopeless and, so to speak, forgot all about it. Recently, and quite by accident, Mr. Crabb heard a BM (Twentieth Century Home) graphophone perform in an Indianapolis store. Right there and then the old idea came back to him and he reluctantly decided, as he himself puts it, to make one last experiment. Accordingly a BM graphophone was sent to the Exhibition Parlors for trial. The rest of the story is briefly told. Today the parlors contain a wooden box or stand covered with green plush and neatly trimmed in gold; upon this is mounted a BM graphophone equipped with a \$50 silk finished flower horn and over all is a nickel rod or rail bearing a sign which reads "The Humanophone." To quote Mr. Crabb: "The vocalist who sings for the graphophone possesses talent of a much higher order than I can obtain locally, and now that I am able to get a machine which does the singer ample justice, I can see no reason in the world why I should adhere to the old-fashioned plan. Besides, I need the money."

## THE BLOT REMOVED.

The duke's manner was visibly constrained in the presence of his affianced.

"I cannot marry into a family," he was saying as gently as possible, "whose wealth was accumulated in trade."

She trembled in spite of her efforts to appear calm.

"Do you lay that imputation upon my house, your grace?" she asked.

He bowed sadly.

"'Tis false!" she shrieked. "The money that came from the cafe only paid expenses. The profit was all in the Peerless nickel-in-the-slot piano."

"Darling, can you ever forgive me?" he exclaimed, sinking upon one knee.

"Edward!"

# WHEN AN EDISON PHONOGRAPH DRAWS A CROWD

**I**T IS AN INTERESTED CROWD, not merely a curious one. The Edison impresses even chance listeners with its superiority. It attracts trade because it attracts favorable attention.

The talking machine for you to push is the one that is the easiest to sell, the one that has the widest range, which gives the most perfect reproduction of sounds, which has the most convenient and distinct records.

That machine is the Edison Phonograph, the one which Edison himself has perfected.

If you carry the Edison line, put it to the front. If not, put it in and thus strengthen your position and add to your revenue.

It is not alone the advertising we are doing that makes it easy to sell the Edison Phonograph, it is also the Edison Phonograph, which once heard is its own best advertisement.

Write for catalogue, terms and the name of a nearby jobber who can supply you.
